## AFW & HI-SEAS - NOW IN ONE CATALOG

*Line and leader are the critical link between you and the fish. For over 28 years we've been providing serious freshwater and saltwater anglers like you with the finest quality line, leader, and rigging products. This year we've combined our AFW and HI-SEAS line and leader products in this single catalog, making it easier for you to shop.*

*Our AFW range is the largest selection of wire line and leader products in the industry. We still produce all of our own wire, strand, and cable at our factory in the United States. Our quality exceeds our competition and our products are proven to withstand the powerful, unsympathetic bite of toothy fish like Barracuda, Bluefish, King Mackerel, Pike, Shark, and Wahoo. Whether you're in a stream or on a boat, our range of wires are tailored to suit your specific needs - from the stealthy 6 lb. test of knottable Surfion Micro Ultra, to the whopping 900 lb. test of the mighty 49 Strand cable.*

*And when it comes to fishing line, our HI-SEAS range has you covered with more choices than ever before. We offer a variety of lines specifically designed and formulated to meet any fishing challenge. From our micro-thin, low stretch champion White Lightning, to our big fish tough, Grand Slam monofilament and braid. If you are looking for line that fish can't see, you need look no further than our 100% Fluorocarbon Line, super strong Quattro Plus, and our I. G. F. A. rated, super-thin Black Widow.*

*This season we are pleased to bring you many new products, including HI-SEAS WildFire - a new thermally fused superline that combines the best qualities of both mono and braid. WildFire outcasts conventional braids, knots like mono, and has virtually no stretch. This revolutionary new line is made of Spectra fiber and it has a round, full body. Plus, WildFire is colorfast so it retains its color longer even with repeated fishing. Also new this season, we are excited to introduce AFW Titanium Leaders in both single strand and 1x7 constructions. These stealthy black leaders stretch and recover on hook set and can be fished over and over without kinking. And be sure to check out our new AFW Mighty Mini 100% Stainless Steel Swivels and Snap Swivels. These technologically advanced swivels are smaller and 3x's stronger than brass swivels. These new products are so revolutionary, they will likely change the way you fish.*

*When it comes to quality line, leader, accessories, and rigging products, the pros count on and choose AFW and HI-SEAS "When the Money's on the Line". You can count on us for every fishing trip! So get connected and get closer to the action. Upgrade your terminal tackle with AFW and HI-SEAS and watch your catch rates soar.*

MADE WITH SPECTRA FIBERS

# WildFire

**THERMALLY BONDED BRAID**

- SMOOTH CASTING
- EASY HANDLING
- ROUND, FULL BODY
- KNOTS LIKE MONO
- COLORFAST

**NEW!**

WildFire is a superline that combines the most desirable properties of Spectra braid with the easy handling of monofilament. The smooth surface and unique construction allow you to cast WildFire further than ordinary braid on both spinning and baitcasting tackle with whisper-quiet precision. Best of all, you can tie your favorite mono knots and handle the line with the ease of monofilament. The line is compact, sensitive, and holds its shape cast after cast, fish after fish, without fraying. WildFire is made by braiding Spectra fiber around a proprietary core material. The line is then passed through a thermal process which bonds the fibers around the core from the inside out. This special finishing gives WildFire a rounder, fuller-body that resists wind knots and behaves like monofilament. WildFire has virtually no stretch and is more than twice as strong as monofilament of the same diameter, allowing you to feel every nibble and quickly set your hook. The line is colorfast. There are no dyes or outer coatings to come off on your hands, and the line will hold its original color even with repeated fishing. WildFire is so revolutionary, it will literally change the way you think about braided line.

*"WildFire is the best casting braid I've ever used. It casts farther without the friction and noise associated with other braided lines and is more abrasion resistant than any braid or fused line I've used...and it only gets better with use instead of losing shape like regular braids."*

-Cliff Pace, Elite Pro Angler

Green

Fluorescent Yellow

WildFire is colorfast - since there are no dyes or outer coatings to come off on your hands, the line will hold its original color even with repeated fishing!

*"WildFire is absolutely the smoothest and best casting superline on the market! When I'm rippin' a lipless crankbait out of the grass, this is the line I'm using every time!"*

*-Jeff Connella, Elite Pro Angler*

### WILDFIRE PRO ANGLER TIPS

- WildFire is a great choice for transitioning to a braided line due to its superior casting distance, simple knot-tying, and superior color holding.
- WildFire is smoother than other braided lines, causing less friction in rod guides, in-turn improving casting distance.
- Ideal for any finesse application, such as drop shotting with a fluorocarbon leader, shaky heads, or wacky rigs.
- Heavier lb. tests are perfect for fishing heavy cover.

# Grand Slam<sup>®</sup> BRAID

Filler Spool

- SUPER THIN DIAMETER
- GREAT CASTING LINE
- HOLDS KNOTS WELL
- NO MEMORY

When you want the ultimate in sensitivity and bone-jarring hook sets, there's only one line to have on your reels - HI-SEAS Grand Slam Braid. The line that gives you more of what you buy a super braid for! Made with the finest Spectra fibers and manufactured using a process that weaves it into the tightest braid pattern possible, this remarkable new line is guaranteed to perform like no other. Braiding Spectra under extreme pressure is a time-consuming process that costs more, but the benefits are evident from the first time you use it. Grand Slam Braid is thinner, rounder, and packs more uniformly on spinning and conventional reels. The line will not bury in reels, knots are stronger and don't slip, and abrasion resistance is greatly enhanced. Its compact diameter reduces wind knots and rod tip wraps. In other words, it solves the problems anglers have been experiencing with other braids! You'll cast further and feel your lures working like never before with unprecedented performance. Because the line has near zero stretch, even the most subtle bites will be transmitted back to your hands for immediate response. When it's time to set the hook, a flick of the wrist will do the job! Grand Slam Braid is the absolute pinnacle of fishing performance. Its a line that can make anyone fish more like a pro!

**-Cliff Pace, Elite Pro Angler**

**GRAND SLAM BRAID  
PRO ANGLER TIPS**

- Ideal when you’re fishing extreme cover: thick vegetation, heavy brush, thick grass. Cuts through grass easily, acting like a mini saw blade. If a bite occurs in this cover, you won’t have to worry about a break off.
- Excellent crankbait line around cover. The thin diameter creates less friction, and better casting distance, giving the bait a better depth and also better action.
- Ideal line choice for top-water baits (walking, popping, frogs) due to floating action, low stretch, and smaller diameter which creates less friction.

# Grand Slam<sup>®</sup>

## MONOFILAMENT

-Kim Bain-Moore,  
Pro Angler

**BIG FISH TOUGH!**

Filler Spool

From ultra-light to big game, Grand Slam is up to the challenge! Its formulation provides high impact strength, excellent abrasion resistance and superior knot strength. It's equally at home on conventional and spinning tackle. Every yard is computer checked for consistent diameter and breaking strength to provide you with an unequalled level of performance - performance you can rely on. That's why we say with confidence - Grand Slam is BIG FISH TOUGH!

1/4 lb. Spool

1 lb. Spool

2 lb. Spool

5 lb. Spool

- **IDEAL SENSITIVITY & CONTROL**
- **HIGH KNOT STRENGTH**
- **ABRASION RESISTANCE**
- **SMOOTH CASTING**

### GRAND SLAM MONO PRO ANGLER TIPS

- Grand Slam Mono is excellent for top water line. It floats, which equals a low sink rate.
- Excellent "maintenance line" useful all around, when visibility, cover, feel isn't an issue.
- Great spinnerbait line around shallow cover. Also a good buzzbait line.
- Good line for slow moving top-water baits in clear water (ex. walking lures, poppers).

-Jason Bordelon, Professional Bass Angler

# Grand Slam<sup>®</sup> LEADER

100 Yard Coil    50 Yard Bracelet Spool

For everyday use in fresh or salt water, there's Grand Slam Leader, the leader that's at-home bottom fishing as it is trolling for tuna. An advanced monofilament extruded with properties that make it supple, yet extra tough - Grand Slam Leader performs! Unsurpassed for tying rigs for everything from flounder fishing to deep dropping for monster grouper. Grand Slam Leader can be used as leader material for offshore trolling as well.

- **IDEAL SENSITIVITY & CONTROL**
- **HIGH KNOT STRENGTH**
- **ABRASION RESISTANT**

## Grand Slam Monofilament Leader

## GRAND SLAM ALUMINUM SLEEVES

These Tournament Grade Sleeves are manufactured to exacting tolerances and are the crimp of choice for use with monofilament. Extruded from the perfect alloy so they will compress consistently without cracking, these sleeves are sized to match the diameter of Grand Slam Leader. You can't buy a better sleeve!

### Grand Slam Aluminum Sleeves

SKA National Champion and Hall of Fame Member*

LOW-VIS 4-COLOR CAMO

# QUATTRO PLUS LEADER

100 Yard Coil

50 Yard Bracelet

Quattro Plus is a unique blend of four scientifically selected colors extruded in short lengths which break up its visual pattern underwater so it blends into the background. Quattro Plus Leader is the ultimate leader for use inshore and offshore and costs a fraction of the price of fluorocarbon. Great for chunking tuna and striped bass, making rigs for bottom fishing and leaders for offshore trolling! Quattro Plus Leader is moderately soft, yet incredibly abrasion resistant. Supple enough to make rigging fast and easy, whether you're tying knots or using sleeves, and tough enough to stand up to any finny creature.

- **LOW-VIS 4-COLOR CAMO LEADER**
- **SUPER STRONG**
- **VIRTUALLY ABRASION PROOF**
- **DISAPPEARS UNDER WATER**

### IS A LEADER NECESSARY?

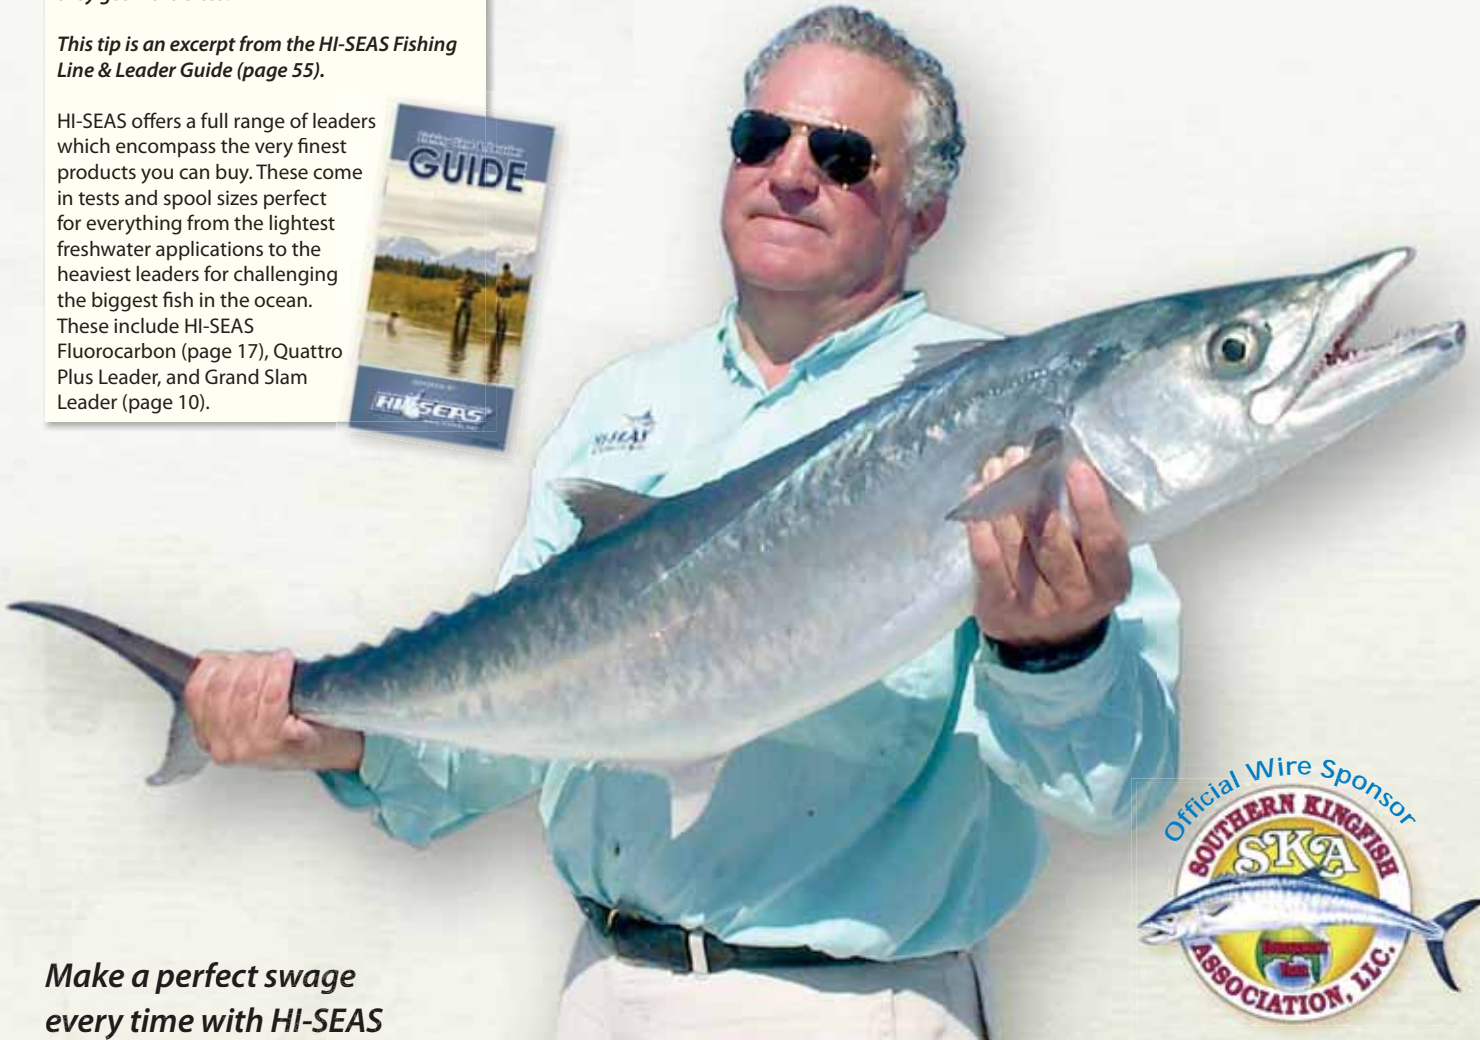

For many types of fishing, anglers wouldn't think of making a cast or dropping-back a trolling lure or bait without a leader system. In almost all saltwater fishing situations, leaders are the norm - from casting shock leaders for surf casting to intricate leader/double-line affairs for tuna and marlin. Today, bass, walleye, and trout fishermen are arming their lines with fluorocarbon leaders simply because they get more bites.

This tip is an excerpt from the HI-SEAS Fishing Line & Leader Guide (page 55).

HI-SEAS offers a full range of leaders which encompass the very finest products you can buy. These come in tests and spool sizes perfect for everything from the lightest freshwater applications to the heaviest leaders for challenging the biggest fish in the ocean. These include HI-SEAS Fluorocarbon (page 17), Quattro Plus Leader, and Grand Slam Leader (page 10).

***"Quattro is the finest leader material I've ever used. I can always put the pressure on knowing that Quattro is tough enough to handle it!"***

***Make a perfect swage every time with HI-SEAS Hand Swagers (page 26) and Grand Slam Aluminum Sleeves (page 11).***

# 100% FLUOROCARBON

**NEW!**

1,000 Yard Filler Spool

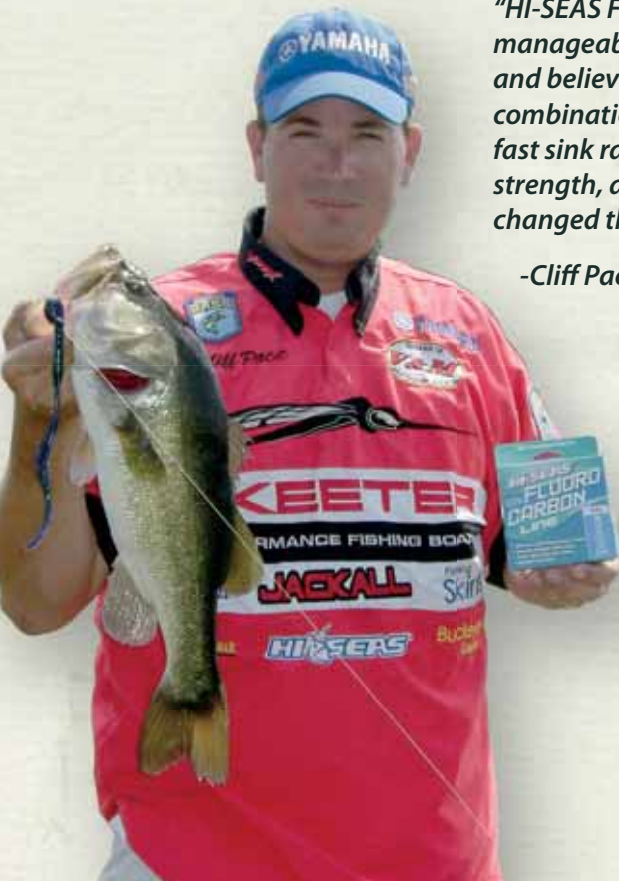

200 Yard Filler Spool

- **MATCHES LIGHT REFRACTIVITY OF WATER**
- **VIRTUALLY INVISIBLE UNDERWATER**
- **FASTER SINK RATE THAN MONO**
- **ABRASION RESISTANT**

HI-SEAS 100% Fluorocarbon is made from the highest grade of pure polyvinylidene fluoride and extruded to exacting quality control standards. It matches the light refractivity of water making it virtually invisible. Supple and easy to cast, HI-SEAS 100% Fluorocarbon is an excellent specialty running line. Pro bass anglers are using it for a variety of finesse techniques in super clear lakes because it sinks faster than mono, it's undetectable by fish, and remarkably tough. It's also ideal for use as invisible leaders - if you use braid or colored line, adding a leader of HI-SEAS Fluorocarbon increases hits and provides extra security against chafe and abrasion.

*"HI-SEAS Fluorocarbon is the strongest, most manageable fluorocarbon line I've ever fished, and believe me, I've used them all! It has the right combination of strength, limpness, low memory, fast sink rate, incredible sensitivity, great knot strength, and low visibility. It is so good, it has changed the way I fish!"*

*-Cliff Pace, Elite Pro Angler*

*Watch it disappear! HI-SEAS 100% Fluorocarbon matches the light refractivity of water making it virtually invisible underwater!*

### FLUOROCARBON LINE PRO ANGLER TIPS

- Fluorocarbon is best used when visibility is an issue in any water conditions.
- After Braid, it is the second most sensitive line available
- Ideal line for almost all techniques except top-water bait applications
- Its extreme sensitivity, low visibility, and low stretch is what makes it well rounded for any application

# I.G.F.A TRUE-TEST RATED **BLACK WIDOW**<sup>®</sup> CO-POLYMER

Black Widow has been a favorite with fresh and saltwater anglers since its introduction. It's a thin-diameter, premium co-polymer monofilament that incorporates multi-color camouflaging technology, so fish don't see it. But that's only one of the reasons you'll love it. Black Widow is a supple line that lies beautifully on any reel and casts with near zero friction. It has low memory, so it won't coil up after sitting on the reel for extended periods, and it's a tough line that provides solid fish-fighting performance. For the record-conscious angler, it's I.G.F.A. True-Test rated. Whether you jig for smallmouths, troll for walleyes, plug stripers, or chunk tuna, Black Widow is a proven performer that won't let you down when the fishing heats up.

## BLACK WIDOW PRO ANGLER TIPS

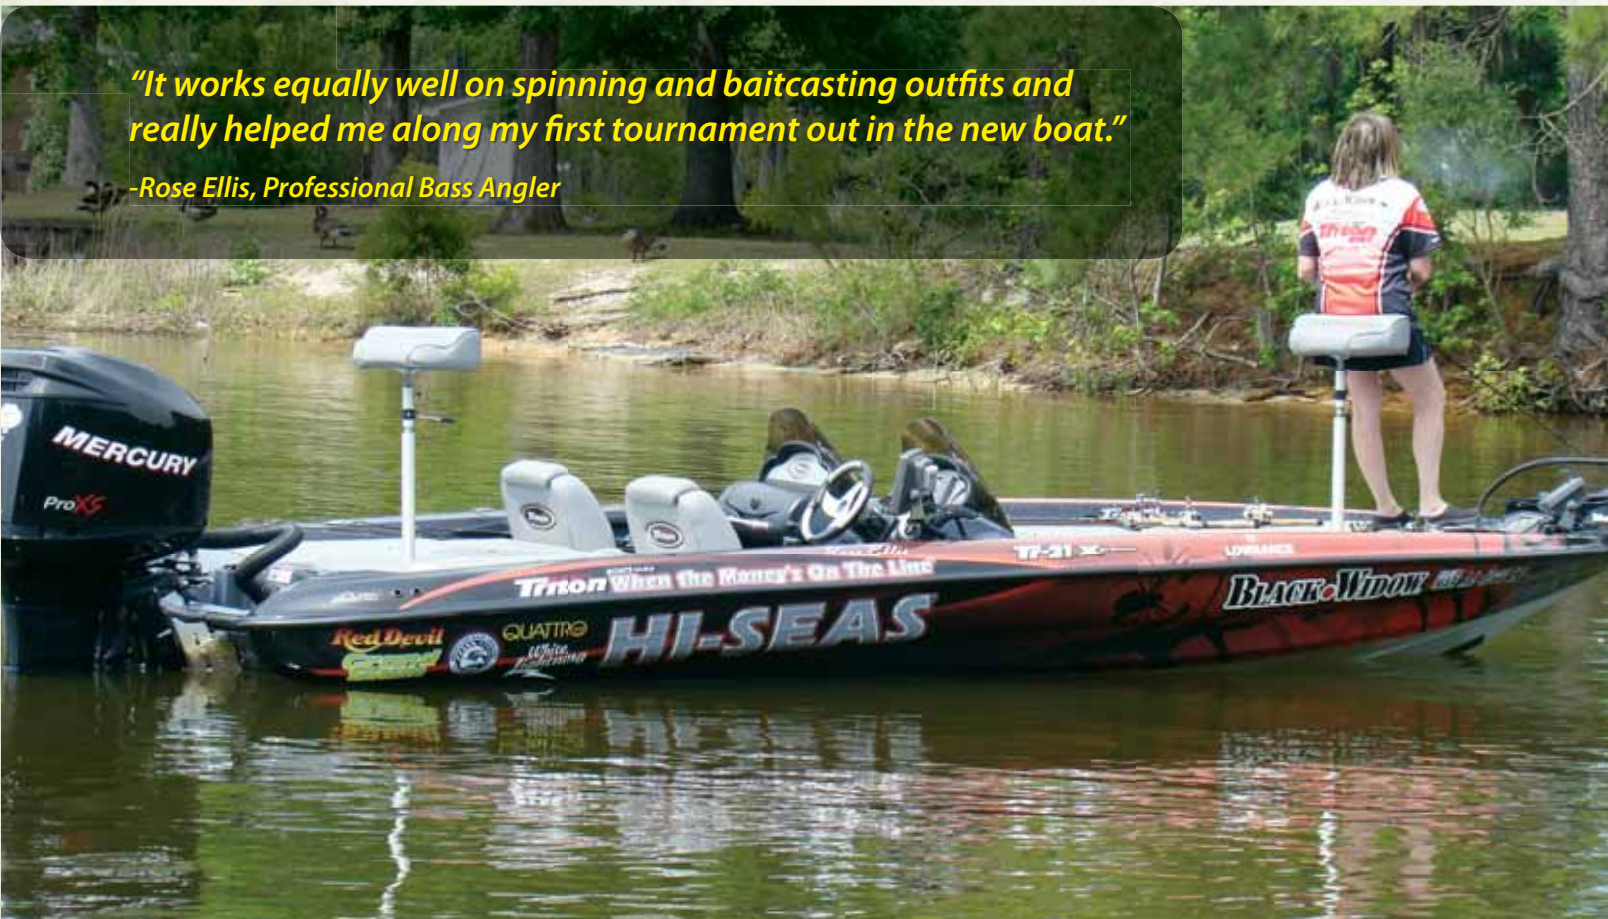

- Ideal line for the Record-Conscious Angler because of I.G.F.A. True-Test Rating.
- Useful when Fluorocarbon line isn't needed.
- Good flipping line.
- Great multi-purpose thin diameter line for low visibility in fresh and salt water applications.

Extra-thin diameter and unique Low-Vis Black, Grey, and Red color greatly reduce visibility below the water.

*"It works equally well on spinning and baitcasting outfits and really helped me along my first tournament out in the new boat."*

*-Rose Ellis, Professional Bass Angler*

# White Lightning<sup>®</sup>

ADVANCED CO-POLYMER

Filler Spool

White Lightning is a true-test rated, fluorescent-clear, micro-thin diameter monofilament with sensitivity that rivals braid. White Lightning narrows the performance gap between mono and braid. It's engineered from a new co-polymer matrix making it incredibly thin, remarkably strong, and yielding less stretch than many other mono lines. White Lightning has incredible knot strength using common knots, and its supple texture lays perfectly on spinning and conventional reels while flowing-off smoothly without tangles. Its diameter to strength ratio makes it a stand out, capable of handling big fish. Perfect for freshwater applications - from ultralight outfits for trout and panfish, to heavier tests for fishing bass and walleyes. Its improved sensitivity means you'll feel the subtlest pick up and set the hook with power to spare. White Lightning is the line you can count on to provide the sensitivity you demand and the performance you deserve.

1 lb. Spool

2 lb. Spool

- **TRUE TEST, MICRO THIN DIAMETER**
- **SUPPLE, LOW MEMORY**
- **GREAT CASTING LINE**
- **REDUCED STRETCH**

## WHITE LIGHTNING PRO ANGLER TIPS

- White Lightning's small diameter allows baits to run deeper in water, yields better bait action, and is far casting
- Useful when Fluorocarbon line isn't needed.
- Good flipping line.
- Suitable line for strength, sensitivity, and high knot strength.

- Jeff Connella, Elite Pro Angler

*"While fishing with 12 lb. test White Lightning, I landed this amazing 5lb. 6oz. Speckled Trout. Needless to say, at 25 inches long with a 12.5 inch girth, I was pretty excited! White Lightning is my freshwater choice!"*

*-Pat Carey, Pro Angler*

*"I use White Lightning for all of my crank baits. The high strength to extremely low diameter ratio allows me to fish my baits at the depth I need, without dropping down to a lower pound test line."*

*-Travis Foster, Collegiate Angler*

# OFFSHORE RIGGING COMPONENTS

## LUMINOUS GLOW BEADS

These are the green glow beads used by more rig makers than any other. Not only do they work great for rigging high-speed trolling lures, they increase bites when used on bottom fishing rigs for snapper, grouper, sea bass, blackfish, cod, rockfish, tilefish and pollock - and they can't be beat on deep drop rigs. Buy them by the bag, add them to your rigs and watch your catch rates soar!

	Size	I.D. mm	Color	No. Pieces	Part #
<b>A</b>	Small	2.4	Light Green	10	HA-BD-SGR
<b>B</b>	Large	2.8	Light Green	10	HA-BD-LGR
<b>A</b>	Small	2.4	Light Green	1000	HA-BD-SGR-B
<b>B</b>	Large	2.8	Light Green	1000	HA-BD-LGR-B

## LUMINOUS RATTLE

Scientists know that game fish are attracted to certain sound waves. That's why these unique rattles are so popular with offshore anglers. They contain a single large ball bearing inside a tuned chamber of luminescent plastic that puts out a distinct click as it rolls from one side to the other. No shark or swordfish rig is complete without one, and even marlin and tuna anglers are using them. Charge them under a light source and they glow in the dark.

<b>C</b>	50.0	2.75	Light Green	1	HA-LUMRAT
<b>C</b>	50.0	2.75	Light Green	50	HA-LUMRAT/50

## LUMINOUS THIMBLES

Luminous Thimbles are recommended to protect line from wear on small and big game rigs. Thimbles fit monofilament line sizes up to 2.2 mm diameter. Thimbles glow in the dark.

	Shape	Maximum Line Size mm	Color	No. Pieces	Part #
<b>D</b>	U	up to 2.2	Light Green	10	HA-TH-PT10
<b>D</b>	U	up to 2.2	Light Green	1000	HA-TH-PTB

## MINI DOUBLE BARREL COPPER SLEEVES

Mini Double-Barrel Sleeves, available in black finish, are excellent for use with big game mono leader material and can also be fitted to wire leader and other various lines. Burr-free nonabrasive finish combined with high strength and corrosion resistance makes HI-SEAS Sleeves the preferred choice of professional leader, lure, and tackle manufacturers.

## SPRING WIRE LOOP PROTECTORS

No loop connection is complete without some type of anti-chafing gear to protect leader material from friction and abrasion that can be caused by hooks or swivels under extreme pressure. Spring Wire Loop Protectors are recommended for use with monofilament leader material and act as a barrier to protect and increase line longevity.

## SEAGRIP® SUPERFABRIC® OFFSHORE GLOVES

The Sea Grip Offshore Glove is the ultimate in protection for your hands. It features an extended 3-ply SuperFabric fingertip wrap-around plus a generous area of 4-ply SuperFabric protection on the palms. Whether you're leading a thousand-pound marlin, grabbing a toothy fish at boat side, or filleting a pile of fish, this multiple layer protection is extremely resistant to punctures and cuts, yet flexible for excellent dexterity. The outer layer makes gripping slippery fish a snap, and provides protection when leading large game fish to the boat - even with wire leaders! These are the best protective gloves available anywhere and they are a SeaGrip exclusive. Sold as a Pair.

HG-TP3000

Pair

Features SuperFabric brand material by HDM, Inc.

## A. NON-SLIP GLOVES PATTERN

Made from heavy-duty woven cotton, the outside surface is reinforced with a checkerboard pattern of soft, adhesive "rubber" that gives you an incredible grip no matter how wet they get. Use them for everything from cutting bait to washing the boat and stop worrying about things slipping out of your wet hands. Machine washable.

HG-404-L

A

## B. PREMIUM NON-SLIP GLOVES

Woven from a heavy-duty cotton-poly blend, these water-friendly work gloves have an ergonomically designed, form-fitting rubberized gripping surfaces. Great on the boat, in the workshop, or for almost any kind of chore. Machine washable.

HG-310-L

HG-310-XL

B

## C. NON-SLIP GLOVES SOLID

Woven from a heavy-duty cotton-poly blend, these water-friendly work gloves have rubberized gripping surfaces. Great on the boat, in the workshop or for almost any kind of chores. They are a real value so buy them by the bag and always have a pair on hand.

HG-502-L

C

## D. DOT GLOVES

Woven from 100% heavy-duty cotton and covered top and bottom with a pattern of closely spaced rubberized dots, this glove provides a non-slip grip under most conditions. They are quick drying and breathe to keep your hands comfortable. Reversible for longer wear, each glove fits either hand so you can get them on in a flash.

HG-454-L

D

## E. VINYL WATERPROOF GLOVE

These are the same cloth-backed vinyl work gloves used by commercial fishermen for the toughest, nastiest jobs. They feature a double-dipped, seamless PVC non-slip surface from the wrist to the fingertips and a high-top cuff that extends up your arm to keep your sleeves dry while providing excellent grip. Remains flexible in cold temperatures and is completely waterproof, impervious to most chemicals, and roomy enough to fit a light pair of cotton gloves inside for extra warmth. The next time you get stuck having to cut bait, these are the gloves to wear.

HG-620-L

HG-620-XL

### A. BENCH CRIMPER

This Bench Crimper is ideal if you find that hand crimpers strain your hands or you simply have several rigs to make. The longer handle gives you increased leverage and crimping power - great for crimping large, bulky rigs. Six positions available ranging from 3.6mm to 7.0mm.

HT-750-6

Hole Size	Sleeve Size
3.6mm	1.7mm
3.9mm	2.0mm
4.3mm	2.3mm
4.6mm	2.8mm
5.7mm	3.3mm
7.0mm	4.2mm

B

### B. HEAVY DUTY HAND SWAGING TOOL

The ultimate hand tool for rigging mono or cable. Its articulated, five position precision jaws compress sleeves evenly with the ideal pressure every time. Handles sleeves from 0.8 to 3.3mm. If you're serious about offshore rigging, this is the tool you want on your workbench.

HT-450-5

C

### C. STAINLESS STEEL MINI HAND SWAGER

The same as our popular Carbon Steel model only drop forged from stainless steel. Features spring-loaded, articulated jaws for perfect compression, cushioned comfort grips, side cutters and safety lock for crimps and sleeves from 0.5 to 2.3mm.

HT-250-4S

D

### D. CARBON STEEL MINI HAND SWAGER

A value-priced hand swager that fits in your tackle box or on your belt. Spring-loaded, articulated jaws, cushioned comfort grips, side cutters for wire or light cable and a safety lock mechanism make it a snap to use. For crimps and sleeves from 0.5 to 2.3mm.

HT-250-4

E

### E. STAINLESS STEEL MINI MONO CUTTER

Put this little jewel in your tackle box or on your belt and it will quickly become your favorite fishing tool. Non-slip grips and super-sharp jaws cut all sizes of monofilament and super-braid cleanly. Not meant for wire or cable.

HT-HC-10

F

### F. STAINLESS STEEL BENT NOSE PLIERS

A smart addition to your workshop or tackle box, these 4" (10cm) bent nose pliers are great for handling small parts when doing reel service and come in handy for a wide variety of other uses. Non-slip grips and built-in light wire cutter makes them even more versatile. Stainless steel resists corrosion.

HT-LNPB-4S

Make a perfect swage every time with Hand Swagers.

### A & B. STAINLESS STEEL LONG NOSE PLIERS

Nothing beats a great pair of pliers, and these are our favorites. Available in 8" (20cm) and 6" (15cm), these pliers feature comfort grip no-slip handles, long-nose design, and wire cutters. Super handy for fishing or on the boat. Stainless steel so they stand up to the harsh saltwater environment.

HT-LNP-8S

HT-LNP-6S

### C. & D. CARBON STEEL LONG NOSE PLIERS

A good tool at a great price, these carbon steel pliers include comfort grip no-slip handles, long-nose design with wire cutters. Pop a pair in your tackle box or keep them on your tackle bench at home. Great for 1001 uses. Available in 8" (20cm) and 6" (15cm),

HT-LNP-8

HT-LNP-6

### E. MONO RIGGING AND CUTTING PLIERS

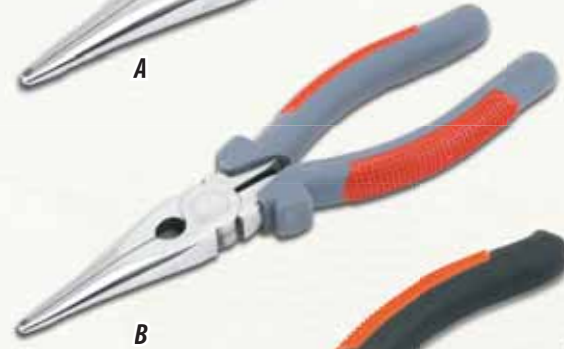

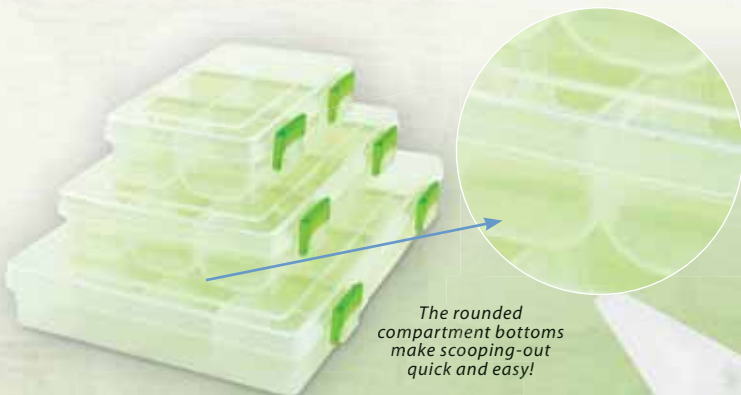

This all-around performer features articulated jaws and a side cutter perfect for clipping light wire and mono. Spring loaded for fast, easy use and featuring cushioned rubber, non-slip grips it's a tool every angler wants and needs.

HT-MRP-5

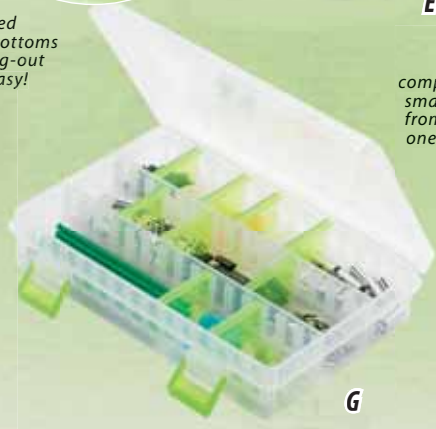

### F., G. & H. TACKLE BOXES **NEW!**

Keep your tackle organized (or at least try) with these value-priced tackle boxes. With removable dividers, you can adjust the compartments for different sizes or amounts of sleeves, components, bait, or other fishing items. Available in Small, Medium, and Large. Tackle not included.

	Moveable Dividers	Height cm	Length cm	Width cm	Part #
<b>F</b>	4	3.8 (1.5")	8.9 (3.5")	15.2 (6")	HA-BOX4
<b>G</b>	9	3.8 (1.5")	12.7 (5")	20.3 (8")	HA-BOX5
<b>H</b>	12	3.8 (1.5")	17.8 (7")	25.4 (10")	HA-BOX6

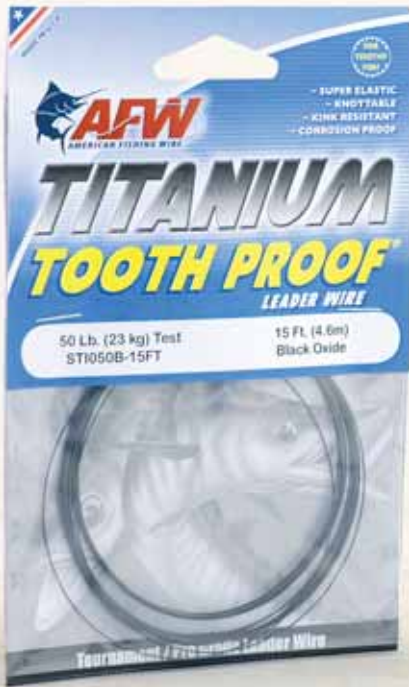

Tight-Fit compartments keep small components from shifting from one compartment to another

# TITANIUM TOOTH PROOF®

## TITANIUM SINGLE STRAND LEADER WIRE

**○** Raise your angling success to a higher level with Titanium Tooth Proof Leader Wire! This revolutionary leader wire stretches and recovers to set hooks and prevent bite-offs. Special smoke-black finish hides beneath the water ready to capture Barracuda, King Mackerel, Wahoo, and other toothy big game fish. The technologically advanced titanium alloy delivers dramatic kink resistance and flexibility. No more haywire twisting - you can tie Titanium Tooth Proof to bait and line using the Clinch and Albright knots. AFW's special blend of Titanium combines unequalled corrosion resistance and tremendous strength.

### Titanium Tooth Proof®

# TITANIUM LEADERS NEW!

## TITANIUM SINGLE STRAND LEADERS

**○** AFW's new super-elastic Titanium Leaders stretch to absorb the strike of a fish, then snap back and recover during the hook-set. These leaders are made with AFW's special blend of Titanium alloy wire - engineered to deliver tremendous strength along with dramatic kink resistance. Fish with confidence knowing these are among the highest quality leaders available. Crimped ends are covered with black shrink wrap for a smooth, low profile, stealthy design. Leaders are made with AFW's new 100% stainless steel Mighty Mini Swivels (see page 46) with a compact design that is up to 3x's stronger than brass swivels – providing less drag and smooth rotation. Snaps are high strength stainless steel crosslock style for maximum security. Use single strand leaders for the best bite protection, and 1x7 leaders for the best kink resistance. Both varieties offer superior flexibility and unmatched kink resistance.

# TOOTH PROOF®

## STAINLESS STEEL SINGLE STRAND LEADER WIRE

 Tooth Proof leader wire lives up to its name and provides maximum protection against the ferocious jaws of Barracuda, King Mackerel, Wahoo and other toothy fish. Made from specially controlled Type 304 stainless steel alloy to be hard, but not brittle, and to deliver the perfect combination of flexibility and strength. Tooth Proof possesses incomparable abrasion resistance and tames the toughest toothy fish. AFW's unique pre-straightening process eliminates cast, providing a straighter leader wire with improved kink resistance. Special Camouflaged Brown finish vanishes in deep water. Tournament tested tough, this proven leader wire continues to put anglers on the winner board!

### Tooth Proof

# SURFLON® MICRO SUPREME

## NYLON COATED 7X7 STAINLESS STEEL LEADER WIRE

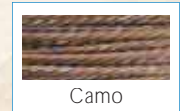

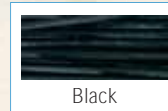

Perhaps the best leader wire available! Surflon Micro Supreme is miniature 49 strand stainless steel wire that is extremely flexible and kink resistant. This wire is ideal for many types of sport fishing because it can be knotted to your bait and line like monofilament, it provides greater flexibility and less stretch than monofilament, and is generally smaller diameter per pound test, and therefore, less visible in the water. Surflon Micro Supreme is extra limp and has virtually no memory or stretch. The wire enhances the action of live and artificial baits and adds a level of realism never before attainable using wire or other leader materials such as monofilament and fluorocarbon. This wire is ideal for presenting life-like bait at any depth and can fool tackle-shy Billfish while withstanding the violent razor-sharp strikes of King Mackerel and Shark. Excellent for casting flies and tempting the most discriminating toothy fish to the surface. No other wire offers more realistic action both above and below the water. Low elasticity and high sensitivity allow you to set hooks faster and with more accuracy. Attach using common monofilament knots such as the Albright Knot, Clinch Knot, Nail Knot, Perfection Loop, Surgeon's Loop, or Uni-Knot.

### Surflon® Micro Supreme

# THE ORIGINAL KNOTTABLE LEADER WIRE SINCE 1995!

**Surflon Micro Wires  
Tie as Easy as Monofilament  
and Have the Strength of Stainless Steel!**

AFW's MINIATURE NYLON COATED 7x7 & 1x19 LEADER WIRE - While you do not need wire leader to catch prized species such as Billfish, Sailfish, Tarpon, or Striped Bass, many anglers use wire to prevent bite-offs from non-targeted toothy fish that often hit their bait. Single strand wire and other brands of multi-strand wire are stiff and can spook tackle-shy fish such as Billfish and Tarpon. AFW's miniature nylon coated 7x7 and 1x19 stainless steel wires behave more like monofilament and provide an increased level of natural bait action along with a more realistic presentation. These wires can be knotted to your bait & line like mono, combine higher breaking strengths in smaller diameters, and deliver reduced visibility and maximum bite protection. Diameter for diameter, absolutely no other multi-strand fishing wires offer more flexibility and strength!

# SURFLON® MICRO ULTRA

## NYLON COATED 1X19 STAINLESS STEEL LEADER WIRE

 Surflon Micro Ultra 19 strand is more flexible than our Surflon 1x7 (page 34), but not as flexible as our Surflon Micro Supreme 7x7 (page 32). Surflon Micro Ultra has a smooth nylon coating that adds kink resistance, provides longer life, and makes the wire easy to knot. You can attach this leader wire using common monofilament knots such as the Albright Knot, Clinch Knot, Nail Knot, Perfection Loop, Surgeon's Loop, Uni-Knot, etc... Low stretch and high sensitivity allow for fast hook sets and remarkable performance. The limp, supple qualities make it especially well-suited for fly fishing tippet and predator leaders where life-like bait presentation is required along with strong bite protection. Surflon Micro Ultra is an economical alternative to Surflon Micro Supreme and an excellent leader wire for Barracuda, Billfish, Bluefish, King Mackerel, Shark, Wahoo, and other game fish.

# SURFLON®

## NYLON COATED 1X7 STAINLESS STEEL LEADER WIRE

Surflon 1x7 is a great all-around leader wire for toothy fish. This wire is our Surfstrand 1x7 stainless steel with a smooth coating of nylon. A specially selected grade of nylon, tough yet flexible, is used to seal out water, reduce visibility, and improve the life of the line. Compared to old style 1x3 construction, Surflon's 1x7 construction offers higher break strength and more realistic action. Surflon 1x7 is an effective leader wire for hard-charging, toothy fish such as Bluefish, Muskie and Mackerel.

# BLEEDING LEADER™ WIRE

## BLOOD RED NYLON COATED 1X7 STAINLESS STEEL

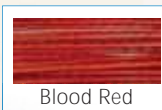

Bleeding Leader Wire is the World's First Blood Red nylon coated leader wire. The unique red nylon coating mimics actual blood in top water fishing conditions to attract fish. In deeper water, the color Red is filtered out faster than other colors on the spectrum and 'vanishes' to fish. Bleeding Leader Wire is ideal for all types of toothy fish and is made from our strong Surfalon 1X7 stainless steel leader wire.

\*Add code for Spool Length (For example: 20 lb. Test, 30 ft Spool = C020RED-0).

Spool Length Code -0 = 30 ft. (9.2m) -4 = 300 ft. (91.5m)  
 -8 = 1,000 ft. -9 = 5,000 ft. (1525m)

### SINGLE BARREL SLEEVES CRIMPING INSTRUCTIONS

**STEP 1.** Thread wire through sleeve and part being connected.

**STEP 2.** Pass the wire back through the sleeve to create a loop. Align wires next to each other inside the sleeve.

**STEP 3.** Firmly crimp the sleeve and wire using special crimping pliers. Two side-by-side compressions may be necessary if the sleeve is longer than the width of the crimping tool.

**TIP:** When matching sleeves to wire, use single-barrel sleeves with an inside diameter of more than twice the wire diameter you are crimping. For double-barrel sleeves, use a sleeve size slightly larger than the wire diameter.

# BLEEDING LEADERS™

BLOOD RED NYLON COATED 1X7 STAINLESS STEEL

## BLEEDING LEADERS™ SNELLED HOOKS

A lethal combination for toothy fish...Unique Blood-Red leader wire snelled to Eagle Claw® Saltwater Series Red hooks.

# SURFSTRAND® DOWNRIGGER WIRE

Surfstrand Downrigger Wire is specially stranded 1x7 Stainless Steel wire that provides the flexibility and resistance to bending fatigue required for use on downriggers. Wire is available with and without prerigged assemblies. The Complete Assembly includes a stainless steel thimble and a 225 LB (102.3 kg) stainless steel coast lock snap swivel. The Shock Kit Assembly includes a protective spring, two stoppers, and a 225 LB (102.3 kg) stainless steel coast lock snap swivel. Surfstrand Downrigger Wire is ideal for fresh and saltwater use and is designed for all makes of manual and electric downriggers. Available in Bright stainless and Camouflaged Brown finishes.

# DOWNRIGGER BRAID

If you're really serious about fishing with downriggers, it's time to get the Downrigger Braid advantage. This braided Spectra® fiber line will help get your lures deep while providing a more stealthy approach to wary game fish. Downrigger Braid "cuts" the water smoothly with less resistance than cable or monofilament and it is thinner per rated test than either material. That means you'll experience less blow-back at trolling speeds. Less blow-back equals greater depth capabilities. Plus, it won't generate the hum or bubble stream associated with downrigger cable which can spook some game fish. Downrigger Braid is the best improvement to controlled depth fishing since the invention of the downrigger.

## Downrigger Braid

Green

Peel Open Label to Reveal Knotting Instructions!

## KNOT FOR ATTACHING BRAID TO DOWNRIGGER

1. Pass Downrigger Braid through the reel arbor. (Be sure downrigger reel is suitable for superlines).

2. Tie an overhand knot around the standing line. Then, tie a second overhand knot on the tag end.

3. Pull tight and snip-off excess. Finally, snug-down the first overhand knot on the reel arbor.

## CAMO COLOR VARIATIONS

The purpose of the camouflage finish is to minimize light reflections and reduce the shine and brightness of the wire - making it less visible to fish. Our unique camouflaged brown finish is achieved through a natural oxidation process. Due to many variables in this process, the color will vary from light brown to a dark purple. Please see the photos to the left demonstrating this color variation.

- Thin Diameter-Less Profile
- Tough Abrasion Resistance
- Eliminates Trolling Hum
- Near Zero Stretch
- Hold Knots Well

# SURFSTRAND®

## BARE 1X7 STAINLESS STEEL LEADER WIRE

Surfstrand 1x7 is made of corrosion resistant, spring temper stainless steel. Compared to our competitor's old style 1x3 construction, Surfstrand's 1x7 construction offers higher break strength and more realistic action. The wire is specially stranded to deliver superior kink resistance, and the high strength of stainless makes this an excellent wire for leaders, lures, and trolling. Camouflaged Brown finish minimizes reflections and disappears beneath the water. Attach Surfstrand using crimping sleeves and crimping pliers or tie with a Figure 8 Knot.

FOLLOW THESE STEPS TO PREVENT FRAYING AND MAKE PROFESSIONAL QUALITY LEADERS WITH SURFSTRAND MICRO SUPREME AND MICRO ULTRA

- STEP 1:** Briefly heat the area to be cut with a lighter or small flame.
- STEP 2:** Cut the wire in heated section under no tension using razor-sharp cutters such as AFW Nipper Tool (TPNIP1). The result is a clean cut that will thread easily through sleeves.
- STEP 3:** Tie or use AFW miniature sleeves and the Micro Crimp Tool (TPCRIMP2) to make terminal connections.

-Travis Foster  
Collegiate Angler

# SURFSTRAND® MICRO SUPREME

## BARE 7X7 STAINLESS STEEL LEADER/TRACE WIRE

 Surfstrand Micro Supreme 7x7 feels more like thread than wire and is more flexible than our 1x19 variety. This miniature 49 Strand stainless steel trace wire slips through the water and has virtually no memory or stretch. Surfstrand Micro Supreme 7x7 is the preferred wire of professional European Pike and Walleye (Zander) anglers. Camouflaged Brown finish blends well in most rivers and lakes reducing visibility. An outstanding leader/trace wire for finicky toothy critters!

# SURFSTRAND® MICRO ULTRA

## BARE 1X19 STAINLESS STEEL LEADER/TRACE WIRE

 Surfstrand Micro Ultra is miniature diameter 1x19 stainless steel leader wire that is more flexible than 1x7, but not as flexible as 7x7. Surfstrand Micro Ultra is an economical alternative to Surfstrand Micro Supreme (above). This 19 Strand wire was originally designed for European Pike and Walleye (Zander) anglers. The extremely miniature diameters are practically invisible in the water. Ideal for catching toothy fish such as European Pike where delicate bait presentation is required.

**GREAT FOR TOOTHY FISH**

# STAINLESS STEEL TROLLING WIRE

**AFW's Stainless Steel Trolling Wire** is soft single strand wire carefully annealed for maximum flexibility and strength. The line sinks rapidly allowing the angler to get down deep using shorter lengths of line. It is kink and abrasion resistant and ideal for both fresh and saltwater trolling. The high strength of 300 series stainless steel results in a small diameter per pound test providing greater reel capacity. Great for reaching Stripers and other fish in deep waters.

**Great for Reaching Fish in Deep Waters!**

# MONEL TROLLING WIRE

**AFW's** single strand soft Monel Trolling Wire is the ultimate line for wire fishing. Special processing by AFW gives the wire exceptional kink resistance with excellent ductility and high strength. This nickel-copper alloy provides maximum corrosion resistance in fresh and saltwater and, due to its greater density, sinks more rapidly and stays deeper than stainless steel and other trolling lines. Excellent wire for dragging baits at depth and hooking hard-charging game fish such as Striped Bass and Wahoo.

## MARKING WIRE LINE FOR TROLLING

Wire line fishing is one of the oldest and most reliable techniques to control the depth of trolling lures. Typically stainless steel wire sinks at the rate of one foot of depth for every ten feet of wire in the water. This formula is based on a trolling speed of 3 to 4 knots using a medium weight trolling lure. Umbrella rigs tend to run deeper than lures and spoons, and heavier lures and spoons will run deeper than lighter ones. Variables such as boat speed, weight and shape of the lure, and water current will affect depth. The following method for marking trolling wire is used by anglers who specialize in pursuing striped bass and bluefish in Mid Atlantic waters and is based on 300' of stainless steel or Monel trolling wire rated at 40 to 60 pound test.

**STEP 1:** Purchase a length of telephone wire at any hardware or home improvement store and strip off a length of outer sheath. Then cut at least four sets of each color 5" long. Spool 200 yards of 50-lb monofilament backing on the reel. Hi-Seas Quattro Plus or Grand Slam monofilament is ideal.

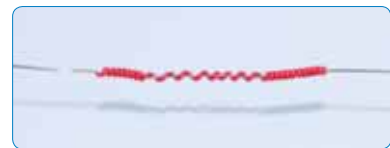

**STEP 2:** Attach a Mighty-Mini 100% stainless steel swivel to the end of the wire on the spool using a haywire twist (see AFW Haywire Twist Tool on page 53) and tie the monofilament backing from your trolling reel to the other side. Be sure the swivel you select fits smoothly through the guides on your trolling rod.

**STEP 3:** Measure the first fifty feet of wire and mark it. Using HI-SEAS long nose pliers, put about a dozen tiny bends in the wire being careful not to kink it.

**STEP 4:** The finished bends should look like this

**STEP 5:** Wrap a section of colored copper wire around the trolling wire as shown with the middle centered over the bends you just made.

**STEP 6:** Use a butane lighter to heat the plastic coating for a couple seconds so it fuses together. Do not burn it.

Repeat this with a different color wire at 100', 150', 200' and 250' intervals from the terminal end. This will provide different colored depth markers corresponding to 10', 15', 20' and 25'. The lure will be at approximately 30' when you are down to the mono backing and all 300' of wire is in the water.

# 49-STRAND

Made from high strength, corrosion resistant Type 304 stainless steel, 49-Strand 7x7 cable provides excellent protection against Shark and other big game toothy fish. This cable provides excellent kink resistance and bite protection. Oftentimes when a Shark strikes a bait, they twirl violently. This motion can kink single strand leader wire and can actually be more destructive to your tackle than the fierce bite. 49-Strand resists kinking, wrestles back, and allows you to hook up and haul in. Available in Bright and Camouflaged Brown.

# LEADER SLEEVES

Sleeves are made of Copper or Brass and are available Nickel plated and Black oxidized. Double Barrel Sleeves are available in standard thick wall in bare Copper and Black finishes. Thin Wall Double Barrel Sleeves, available in Black finish, are excellent for use with big game mono leader material. Sleeves can be fitted to wire, monofilament, and other various lines. Burr-free nonabrasive finish combined with high strength and corrosion resistance makes AFW's sleeves the preferred choice of professional leader, lure, and tackle manufacturers. Packaged in Retail Packs, 100, and 1,000 piece packages for resale, and 5,000 piece bulk packs for tackle manufacturers.

**TIP:** When matching sleeves to wire, use single-barrel sleeves with an inside diameter of more than twice the wire diameter you are crimping. For double-barrel sleeves, use a sleeve size slightly larger than the wire diameter.

# MIGHTY-MINI™ CRANE SWIVELS NEW!

## 100% STAINLESS STEEL CRANE SWIVELS

ACTUAL SIZE

## Superior Holding Power!

Mighty-Mini Swivels and Snap Swivels are 100% stainless steel and are 3 x's stronger than conventional brass swivels of the same size. Smart anglers know that terminal tackle can spook wary game fish. That's why AFW engineered this line of compact, 100% stainless steel crane swivels to be smaller and stronger than the leading brands of swivels on the market. Now you can use swivels for your rigs, and snap swivels for attaching lures, that are less visible and significantly more powerful. Mighty-Mini Swivels also have less drag and provide enhanced rotation for more strikes. For decades, crane swivels were manufactured from brass because it is a relatively corrosion resistant material and easy to manufacture. Still today, the leading brand of mini swivels continues to use brass bodies with stainless steel rings that cannot match the strength of Mighty Mini Swivels. Recent advances in manufacturing enable us to bring you these revolutionary, smaller and stronger components. Mighty Mini Swivels are available in gunmetal black finish with and without stainless steel tournament-grade snaps for the ultimate in connection protection.

## BRASS SWIVELS

Brass swivels are manufactured to exacting specifications to provide smooth rotation and prevent line twisting and kinking. Eyes are precisely formed to prevent pull-out under severe tension. Offered in Nickel (bulk only) and Black finishes. AFW swivels are quickly becoming the preferred brand! For our strongest swivels please see Mighty-Mini 100% stainless steel swivels on page 46.

**AFW Terminal Tackle retail packs come in convenient, reusable clamshells.**

# CRIMPING TOOLS

## A. MICRO CRIMPER

Unique 2-step micro crimping tool yields a secure attachment for #0 & #1 sleeves. Use the lower section to crimp and the upper section to round off sleeve.

TPCRIMP2

## B. LIGHTWEIGHT CRIMPING PLIERS

Designed to crimp AFW's single barrel leader sleeves up to size No. 4. An inexpensive tool for light-duty rigging.

TPCRPLT

## C. 5½" CRIMPING & CUTTING PLIERS **NEW!**

This mini crimping and cutting tool gives you the functionality of our larger 8.5" model in a convenient pocket size. Use these mini pliers to crimp AFW sleeves up through size 6. The front nipper is for lightweight use and it will cut mono, single strand soft wire, and multi-strand leader wire. This tool fits easily into small tackle boxes and your pocket. Drop forged steel construction.

TPCRP5.5

## D. 8½" CRIMPING & CUTTING PLIERS

This tool has three crimping dies designed for crimping AFW's single barrel leader sleeves up to size No. S5. Front diagonal cutter will cut soft single strand and multi strand leader wire. Drop forged steel construction.

TPCRP8.5

## E. 9½" CRIMPING & CUTTING PLIERS

This tool has three crimping dies and is designed to crimp all AFW single barrel leader sleeves. Front diagonal cutter will cut soft single strand and multi strand leader wire. Longer length handles provide better leverage. Drop forged steel construction.

TPCRP9.5

## F. BIG GAME CRIMPING PLIERS

These Carbon Steel crimping pliers have four dies designed to crimp AFW's double barrel leader sleeves. Dual-action hinge provides increased leverage. Two side cutters cut leader strand and cable cleanly, without fraying. An economically priced tool for big game rigging!

TPCRPHD

# CUTTING & RIGGING TOOLS

## A. HEAVY DUTY 10" (25.4 cm) HOOK REMOVER

Pappy Jim's Heavy Duty Hook Remover is a safe and effective way of removing hooks or lures without ever touching the fish. Protect your hands from hooks, teeth, and gills. It's the perfect catch and release tool!

TPHOOKR1

## B. PROFESSIONAL CABLE CUTTER

Unique triangular jaws eliminate frayed ends by pulling strands together towards the center. Designed to cut wire and cable up to 3/32" (2.4mm). If you make Shark rigs, this tool should be in your tackle box!

TPCABCUT

## C. TOOTH PROOF® WIRE CUTTER

Kingfish can't bite through Tooth Proof®, but this tool can! Tempered steel blades shear spring hard wire and cable clean leaving a flat, safe-to-handle straight edge. Spring operated hinge provides comfort by reducing fatigue. A great tool for tournament anglers and bait riggers!

TPTPCUT

## D. NIPPER TOOL

Designed to cut Micro Wire and other soft lines. Sharp angled blades cut cleanly and prevent fraying. Spring hinge ensures long life, dependable use, and fast cuts.

TPNIP1

## E. SPLIT RING PLIERS

Designed for opening AFW's split rings and making terminal tackle attachments fast and easy. Hardened steel nose separates rings and keeps them separated while you secure components. Spring hinge increases comfort by reducing fatigue.

TPSPLTRG1

## F. HAYWIRE TWIST TOOL

Now you can wrap leader wire into clean, even twists, just like the pros with the Haywire Twist Tool! Use this tool to rig Tooth Proof #3 through #14 and other single strand stainless wire diameters .012" (0.30mm) - .033" (0.84mm). Sold 6 per Box. Not for use with Titanium Tooth Proof. Detailed instructions provided in package!

TPTWISTR1

All AFW Tools are Retail Packaged and provide usage instructions on the back.

## BULK WIRE FOR TACKLE MANUFACTURERS

American Fishing Wire has the experience, skill, and desire to help you with your special fishing wire and cable requirements. We can supply wire, strand, and cable cut to length, in bundles or hanks, or on a large selection of coil and spool dimensions and weights not listed in this catalog. For more information please contact our Sales office.

## PLANOGRAM PROGRAMS

We can design custom planograms around you and your customers' store requirements. We can prepare large, full line planograms containing a broad variety of items, or smaller, more product-specific panels. Most of our retail products are dimensionally correct for merchandising on pegboard and slatwall. Some of our larger, heavier retail products can be shelved. All retail products contain UPC labeling.

## PEGBOARD SPINNERS

The 2-sided and 4-sided spinner displays are the perfect solution for retailers looking to add a comprehensive range of tackle in a limited space. Our 2-sided, free-standing spinner takes up little more than one square foot of floor space, and can hold a good selection of products. We can provide custom header signs for your store (see examples below). Both displays are durable and easy to assemble.

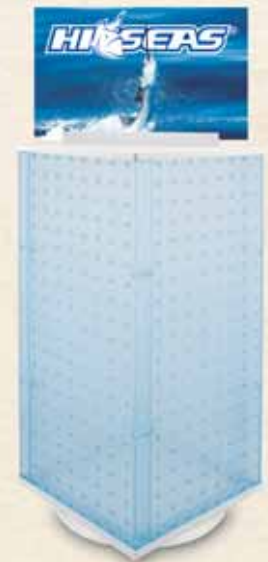

### *Two-Sided Pegboard Spinner*

- 16" wide x 60" high (40.64 cm x 152.4 cm)
- Revolving base
- Blue (translucent)
- Ships flat in two boxes
- Easy assembly, no tools required 37.4 lb (17 kg)
- 100, 4" metal hooks and header included

### *Four-Sided Pegboard Spinner*

- 8" wide x 8" deep x 20" high (20.3 cm x 20.3 cm x 508 cm)
- Revolving base
- Blue (translucent)
- Ships assembled at 7 lb (3.2 kg)
- 50, 4" metal hooks and header included

## MERCHANDISING

AFW and HI-SEAS merchandising is available! Choose from a variety of visors, caps, short-sleeve and long-sleeve tee-shirts, vinyl boat stickers, tote bags, vinyl banners, key floats, rub-on tattoos, and a Fishing Line and Leader Guide. Much of the apparel can be ordered in a variety of colors in addition to what is shown here. Call and speak to a sales representative for more information.

HI-SEAS Visor - Red

AFW Cap - Sand

HI-SEAS Visor - Navy Blue

AFW Cap - White

HI-SEAS Vinyl Banner with corner grommets - 12" x 36"

Short Sleeve Tee-Shirt

Long Sleeve Tee-Shirt

AFW Vinyl Banner with corner grommets - 12" x 36"

HI-SEAS Key Float

HI-SEAS Vinyl Boat Sticker 15" x 4"

HI-SEAS Rub-on Tattoo

HI-SEAS Vinyl Boat Sticker 7" x 2"

AFW Vinyl Boat Sticker 14" x 5.5"

The Fishing Line & Leader Guide is designed to help consumers understand the basic features of monofilament, fluorocarbon, and braided line, the benefits each offers, and the conditions or applications where they are best suited. It also features several illustrated knots, explains their uses and benefits, and shows a simple knotting system for working with fishing line. 16 Pages.

AFW/HI-SEAS Embroidered Tote Bag
