## Liposome-mediated target gene transfer into mouse endothelial cells *in vivo*

We have developed an endothelial specific gene delivery *in vivo* system (Catalog No. EG6389) by combination of liposome mediated gene delivery and endothelial specific expression promoter vector to ensure target genes transferred in endothelial cells only for studying target gene functions in endothelial cell proliferation, differentiation and death *in vivo*.

### Known endothelial genes

CD31, VE-cadherin, Tie 1 and 2, VEGFR-1/FLT-1, VEGFR-2/FLK-1, VEGFR-3, ETV2, HIF-1 $\alpha$ , HIF-2 $\alpha$ , Runx-2, YAP, etc.
