CN-TECH™ Nitride 135° Split Point

- Cryogenic treatment creates a more uniform "grain" structure by transforming retained austenite into martensite.
- Modifies the carbon micro-structure through precipitation of carbides increasing resistance to wear.
- Nitride process diffuses nitrogen into the surface to create a case hardening resulting in superior tool life and exceptional corrosion resistance.

Parabolic Flute

Type 190-P

Heavy-Duty - 135° Split Point - Black Oxide

Parabolic flute drills are designed to allow deep hole drilling without frequent drill removal to clear chips. These drills perform best in low to medium tensile strength materials. The split point and heavy-duty design provides superior performance by permitting higher feed rates and continuous drilling of deep holes.

Gold Oxide - High Performance Reduced Neck Spiral Point Taps

Type 29-AG - High-Speed Spiral Point

Designed for difficult materials including: stainless steel, alloy steels and high carbon steel, special tool geometry creates less torque, better removal of chips and runs cooler. Necked design enhances flow of cutting fluid to cutting teeth and reduces surface contact between the tool and workpiece for more efficient threading.

Spira-Broach™ Annular Cutters

Types 14 M35 Cobalt Cutters Gold Finish

M35 Cobalt cutter will cut more accurate holes with longer tool life. Annular cutter only cuts material at the periphery of the hole, rather than converting the entire hole to shavings. As a result the energy required to drill the hole is less than that for a traditional twist drill.
