## ONE GREAT PORTFOLIO.

### Choose The Best Fit For Your Needs.

The Meritor® all-makes air systems replacement components portfolio offers more than 1,000 new and remanufactured components for tractor, truck, bus and trailer applications. It offers you different levels of value, including Meritor replacement parts and Meritor Reman parts. Each designed and engineered to meet exacting OE quality specifications, while also meeting your duty cycle and application requirements.

Our single source complete portfolio includes over 120 all-makes air dryers and kits, over 600 reman air compressors, over 100 new air valves and over 120 reman air valves. Each is designed to replace competitive products and meet OE quality specifications.

### Performance Advantages:

- Provides a single source for over 1,000 all-makes air systems components
- Includes air systems components for tractor, truck, bus and trailer applications
- Complete portfolio of new and remanufactured OE-quality aftermarket air systems components designed to replace competitive products with pricing options
- Includes aftermarket new/core-free and remanufactured air valves, air dryers, cartridges and service kits, air compressors, air hose assemblies and fittings, air tanks and more

### Features and Benefits:

- Saves you time and money when you consolidate purchasing with Meritor vs. various suppliers
- Maintains vehicle braking performance and compliance, while reducing operating costs
- New/core-free products save you time, cost and space by eliminating core management
- Quality remanufactured products, including air compressors, air dryers and cartridges, as well as air valves, all competitively priced
- Meritor all-makes air systems components provide the same form, fit and function as OE parts
- Fully supported with the industry's most advanced parts and information site – [MeritorPartsXpress.com](http://MeritorPartsXpress.com)
- Unsurpassed service provided throughout North America by our industry-leading Customer Care team

#### Compressors:

- All replacement parts meet or exceed exacting specifications
- Inlet seats are replaced
- Cylinder bore crosshatching angle is maintained 100%
- Cylinder blocks are machined to meet exacting specifications
- All connecting rods are compatible with turbocharging
- New ring sets and pistons are matched to reconditioned cylinder blocks
- Exhaust seats are machined to meet exacting specifications
- The head assembly is completely disassembled, inspected, cleaned and machined to meet exacting standards
- All units are dynamometer tested

#### Air Dryers:

- Cartridges are freshly charged with all-new desiccant that meets or exceeds exacting specifications
- Filters and O-rings are replaced 100%
- A new purge valve, relief valve, heater and springs are installed on all new dryers
- All dryers are tested in charge and purge cycles
- All new dryers have soft seat pistons to help handle higher turbo boost pressure
- Pop-off valves are precisely machined to avoid leaks
- Standard and coalescing dryer cartridges available
- Feature heavier-gauge metal to ensure integrity

#### Valves:

- All units have N70 Nitrile elastomer rubber and seals to withstand wide temperature extremes
- OEM synthetic grease is used on all units
- All pistons have a proven long-life design equivalent to the OEM units
- All crack pressures meet exacting specifications
- All-metal construction meets exacting specifications for each unit in the program
- Units are batch-tested to ensure quality before goods are sold in the marketplace
- All threads are tested to ensure they meet exacting standards

## YOU DESERVE COMPLETE AIR SYSTEMS SUPPORT.

From warranty support to comprehensive product information to unsurpassed customer care, Meritor delivers.

Meritor all-makes air systems replacement components are covered by our complete Meritor 1-year aftermarket warranty. Meritor all-makes air systems remanufactured components are covered by our Meritor Reman 1-year aftermarket warranty.

Get the attention you deserve with Meritor's extensive customer support services. For complete product information and specifying assistance, training and technical support, count on our expert field sales force. Meritor's industry-leading Customer Care team provides an all-purpose, one-call solution for customer satisfaction.

For more information, call the Meritor U.S. Customer Care Center at 888-725-9355. In Canada, call 800-387-3889. Or visit [MeritorPartsXpress.com](http://MeritorPartsXpress.com).

## FUNCTION

1

Air brake tubes and hoses are the arteries of a vehicles air system. Their purpose is to transfer air from the air tanks to valves and brake chambers. They are designed to carry the correct volume and pressure to assure balanced effective braking. Tubing and hose are used for different purposes even though they perform the same task. Tubing is manufactured out of stiff materials like copper and nylon and are used on the vehicle where no movement occurs. Hose is manufactured to work with the vehicles suspension, connections, and points of movement. Layers of synthetic rubber and synthetic reinforcement give hose its strength and flexibility as illustrated in the image below.

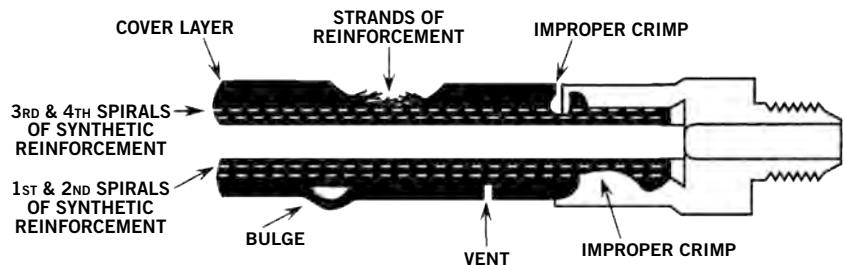

This design meets United States Department of Transportation (DOT), Society of Automotive Engineers, and the National Highway Traffic Safety Administration requirements.

## INSPECTION

An air leak is usually a sign that a hose needs repair or replacement. Hearing an air leak is not the only reason for replacing an air hose. Prevention of your vehicle being put "out of service" on the road is another reason. "Out of service" criteria is in place to prevent problems associated with hose failure on the highway. Brake lock up, tire flat spotting, brake imbalance and accidents are a few of those problems. The published out of service criteria includes the following reasons:

- Bulging and/or swelling with air applied.
- Improper splice - hose forced over pipe and using hose clamps to secure.
- Crimp, twist or turn causing restrictions.
- Cut, wear, damage through rubber cover and outer reinforcement ply.

Some manufacturers will use small vent holes to eliminate air from between the cover layer and the third and fourth spiral reinforcement layers. These vent holes will cause no problems in the life of the hose or the safety of the vehicle, and do not represent an "out of service" condition.

## MERITOR AIR HOSE ASSEMBLY PART NUMBERS

Meritor Air Hose Assembly part numbers consist of a four digit base number followed by a dash and two additional digits. The four digit base number designates the size of the air hose and type of end fittings. The last two digits designate the overall length of the hose, per "A" above. Air hoses are sold unpackaged as designated by -BK after each part number.

AIR BRAKE HOSE BASE PART NUMBER		
Meritor Base No.	Air Hose I.D.	End Fitting Type
R955502	3/8"	1/4"-18 NPTF, one fixed, one swivel end
R955503		3/8"-18 NPTF, one fixed, one swivel end
R955504		3/8"-18 NPTF, both ends swivel
R955505	1/2"	3/8"-18 NPTF, one fixed, one swivel end
R955506		1/2"-18 NPTF, fixed end; 3/8"-18 NPTF, swivel end
R955507		3/8"-18 NPTF, both ends swivel

# AIR HOSE ASSEMBLY WALL DISPLAY RACKS

Meritor Part No. R955074

1

- Holds up to 48 Air Hose Assemblies
- 6 Hooks for 3/8" Air Hose Assemblies & 6 Hooks for 1/2" Air Hose Assemblies
- Each Hook holds 4 Air Hose Assemblies
- 46 pre-printed Meritor part number labels and 20 blank labels included with each rack

**FREE**

**AIR HOSE ASSEMBLY WALL DISPLAY RACKS!**

Purchase An Air Hose Assembly Display Assortment and get a FREE R955074 Wall Display Rack!

- Each Air Hose Assembly Display Assortment includes 48 pieces of the most popular Air Hose Assemblies
- Perfect for installing in a Fleet or Jobber location
- "-BK" suffix denotes that hose is shipped unboxed

**R955075 ASSORTMENT**

Includes One FREE R955074 Wall Display Rack Plus:

**MERITOR POLYURETHANE GLADHAND SEALS**

- UV Resistant
- Petroleum Resistant
- Acid Resistant
- Ozone Resistant
- Salt Resistant
- Abrasion Resistant

**INDEPENDENT LABORATORY TESTED TO OPERATE IN EXTREME COLD CLIMATE CONDITIONS TO -35°F (-37°C) Made in U.S.A.**

Tests results prove that polyurethane gladhand seals withstand the rugged conditions of on-highway roads much longer than traditional rubber glandhand seals.

Minimize downtime with Meritor Polyurethane Gladhand Seals!

Meritor NO.	Description	Remarks
R950120	Gladhand Seal Set	Each set contains 2 red (emergency) and 2 blue (service) gladhand seals in a poly bag. 40 sets per box.
R950121	Blue (service) Gladhand Seal	Bulk packed, 100 per box
R950122	Red (emergency) Gladhand Seal	Bulk packed, 100 per box

**GLADHANDS AND RUBBER GLADHAND SEALS**

	R950116-PL	Universal Gladhand		Packed in Meritor Pails, 75 per Pail
	R950116		Haldex 11450 Phillips 12-010 Tramec 36301	
	R950117		Phillips 12-0103	With Black Polyurethane Seal
	R950118	Rubber Gladhand Seal	Haldex 10028 Phillips 12-012 Tramec 36001	
	R950119	Rubber Gladhand Seal with Excluder Flaps	Haldex 10024	

**IN-LINE FILTER**

	Part Number	Application Information
	S432 500 005 0	In-line filter (complete valve). Mounted at the Gladhand. Highly recommended for control line. Prevents contamination of the trailers's air system. Requires regular cleaning, but equipped with a bypass if needed.

## COILED AIR HOSE

1

Meritor No.	Coil Length	Tube O.D.	End Fittings		Pig Tail Length		Application & General Information
			Tractor	Trailer	Tractor	Trailer	
R95510743	12 ft.	1/2"	3/8"	1/2"	6"	6"	Includes one red and one blue coil assembly. Meets SAE J844 specifications.
R95510742	12 ft.	1/2"	1/2"	1/2"	6"	6"	
R95510745	15 ft.	1/2"	3/8"	1/2"	12"	12"	
R95510747	15 ft.	1/2"	3/8"	1/2"	40"	12"	
R95510744	15 ft.	1/2"	1/2"	1/2"	12"	12"	
R95510746	15 ft.	1/2"	1/2"	1/2"	40"	12"	

## AIR RESERVOIRS

Meritor No.	Diameter	Mounting Holes Center-To-Center	Capacity (Cu.In.)	Port Size			Application & General Information
				Side	Bottom	Ends (2)	
R95510732	8"	32"	1425	3/4"	1/4"	3/8"	Meets SAE J10 specifications. Rated at 150 psi working pressure.
R95510735	12"	29-1/2"	2850	3/4"	1/4"	3/8"	
R95510734	9-1/2"	27-1/2"	1488	3/4"	1/4"	3/8"

## Compressor Features

- All replacement parts meet or exceed exacting specifications
- Inlet seats are replaced
- Cylinder bore crosshatching angle is 100% maintained
- Cylinder blocks are machined to meet exacting specifications
- All connecting rods are compatible with turbocharging
- New ring sets and pistons are matched to reconditioned cylinder blocks
- Exhaust seats are machined to meet exacting specifications
- The head assembly is completely disassembled, inspected, cleaned and machined to meet exacting standards
- All units are dynamometer-tested

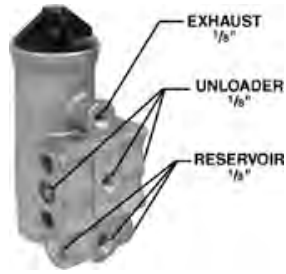

## AIR COMPRESSOR TROUBLESHOOTING GUIDE

SYMPTOMS	CODES							
Passing Excessive Oil	1	2	3	4	5	6	7	8
Knock or Rattle	9	10	11	12	13			
Slow Air Buildup	1	6	8	9	10	14	15	16
Will Not Unload	15	17	18					
Excessive Load/Unload Cycling	15	17	19	20				
Runs Hot	9	16	20	21	22	23	24	
Premature Carbon Buildup	6	17	21	23	24	25		

PROBABLE CAUSES	
1	Restricted air intake. Change air filter element, local or engine. Kinked air hose. Vacuum from engine turbocharger when the compressor air intake is hooked to the engine air intake. Use inlet check valve assembly.
2	Restricted or kinked oil return line. Return line size must be a minimum of 5/8" O.D. Check for silicone buildup in the drain hole. Excessive engine rotation may require a bottom drain on the compressor.
3	Poorly filtered air. Check for defective intake components.
4	Improper cooling. Restricted water flow, maximum coolant flow plumbed into the block and out the head. (Opposite sides)
5	No air dryer in the system. Drain reservoir tanks daily.
6	Excessive duty cycle. Check for system leakage, inadequate compressor size for vehicle application.
7	Excessive engine oil pressure and/or crankcase pressure.
8	Compressor worn out or defective
9	Restricted air discharge line - build up of oil heating to a hard carbon fibre.
10	Loose pulley or worn drive gear components.
11	Lack of lubrication has created excessive bearing clearances.
12	Mounting bracket vibration
13	Carbon formation on the top of piston/bottom of cylinder head.
14	Air dryer purge valve stuck open
15	Defective unloader mechanism and/or governor
16	Braided discharge line heat fatigued. Check with a soapy solution.
17	Discharge valve leakage. Excessive system leakage.
18	Governor reservoir or unloader line restricted.
19	Reservoir volume reduced. Drain water from system.
20	Brakes out of adjustment. Increased volume usage.
21	Improper cooling. Restricted water flow, maximum coolant flow plumbed into block and out the head (Opposite sides)
22	Insufficient air blast cooling. Clean cooling fans.
23	Carbon comes from heat. Look for restrictions. Early engines did not utilize inner coolers. Compressor inlet turbocharged to elevate temperatures.
24	Compressor is turbocharged at temperatures/pressures and RPM above acceptable limitations. Consult manufacturer for parameters.
25	Brand of multi-grade motor oil. Some oil brands allow carbon and varnish formation at lower temperatures.

**BENDIX D-2 GOVERNOR**

Meritor NO.	NEW/ REMAN	REPLACES	PRESSURE SETTINGS		PORT SIZE	CORE NO.	CORE GROUP	APPLICATION & GENERAL INFORMATION
			CUT-IN	CUT-OUT				
<b>R955275491</b>	New	Bendix 275491	100 psi	120 psi	1/8" Ports	XC1077	BN251	Standard Version. Pressure setting range is adjustable. Governor—Signals the unloading mechanism on the compressor when to build up air to the reservoir and when to halt air build up. Usually between 100 and 120 psi. Includes plugs for unused ports and gasket.

### Air Dryers and Cartridges

Desiccant style air dryers are basically in line filters that remove both liquid and vapor from compressor discharge air before it reaches the reservoir. As a result, only clean, dry air is supplied to the air system. This helps prevent freeze-ups and prolongs the life of air system components.

Cartridges are now offered in two different types; standard and oil coalescing. Standard cartridges remove moisture from the air via the desiccant material in the unit, while coalescing cartridges remove moisture as well as oil aerosol and particulate matter as air passes through filters in the unit. If a vehicle is equipped with an oil coalescing cartridge, this should be maintained for the life of the vehicle or contamination and/or damage of other components connected to the airline is possible including brake valves, emission controls, automated manual transmissions and more.

### Air Dryer Features

- Heaters available for 12 Volt and 24 Volt applications
- Heavy-gauge metal ensures integrity
- Precisely machined pop-off valves to avoid leaks
- Soft-seat pistons in all new dryers help handle higher turbo boost pressure
- Charged with 100% new desiccant that meets/exceeds compliance specifications
- New purge valve, relief valve, heater, and springs installed on all new dryers
- Testing of all dryers in both charge and purge cycles

# MERITOR® ALL-MAKES AIR DRYER TEST PROCEDURE

**STEP 1**

Plug the check valve to the air tank using a 1/2" NP plug.

**STEP 2**

Load supply line with shop air and allow unit to fill and stop.

**STEP 3**

After the dryer is completely filled, use another supply line and attach it to the control port. The dryer should purge out the bottom and stop within 20 seconds.

Repeat the process two times. If the dryer stops purging, the unit is functioning to proper specifications.

**Note to Tech**

On a truck, the compressor stops pumping when the governor sends air to the control port of the dryer. When the control port is activated, the supply air can be removed.

## AIR DRYER TROUBLESHOOTING GUIDE

**POP OFF VALVE IS BLOWING AT THE AIR DRYER OR THE AIR COMPRESSOR**

1	Restrictions between air dryer and supply reservoir.
2	Dryer cartridge needs to be serviced.
3	Discharge line from the compressor to the air dryer plugged or frozen.
4	Malfunction of the safety valve.

**CONSTANT EXHAUST OF THE PURGE VALVE**

1	Purge valve internal leak.
2	Compressor failing to unload.
3	Purge control line connected to wrong place, reservoir or wrong port on governor.
4	Purge valve frozen open, check heater is working.

3

**CANNOT BUILD SYSTEM AIR PRESSURE**

1	Inlet and outlet connections are reversed.
2	The check valve between the dryer and first tank may be restricted.
3	Excessive bends in discharge line, oil turns to carbon in line, water freezes in line between compressor and first tank.
4	Kinked or blocked discharge line.

**OIL PRESENT AT THE AIR DRYER**

1	Time for regular maintenance.
2	Air compressor needs repair.
3	Remember some oil is normal, if oil is getting past dryer to first air tank, compressor repair must be done and air dryer serviced.

**DESICCANT MATERIAL BEING EXPELLED FROM AIR DRYER OR BECOMES PASTE LIKE APPEARANCE**

1	Air dryer not securely mounted to frame causing vibration.
2	Malfunction or saturated desiccant.
3	Compressor passing excessive oil.
4	Chemicals such as alcohol added to discharge line before the air dryer.

**NOISE IN AIR DRYER DURING COMPRESSOR CHARGING CYCLE**

1	Defective check valve in air dryer.
2	Leaking turbo cut-off valve.
3	Leaking purge valve control piston o-ring.

**AIR DRYER IS CONSTANTLY CYCLING OR PURGING**

1	Test fitting, hoses, lines and connections with a soapy water. Tighten or replace as necessary.
2	Test accessories that are connected to supply reservoir.
3	Test governor for leakage, either internal or external leak.
4	Be sure dryer application is correct if you have QE or E-type Cummins Engin.
5	Test outlet check valve on air dryer.

**AIR DRYER DOES NOT PURGE OR EXHAUST**

1	Missing, broken, kinked, frozen, plugged or disconnected purge valve control line.
2	Faulty air dryer purge valve.

**AIR DRYER PURGE PISTON CYCLES RAPIDLY DURING COMPRESSOR UNLOADING CYCLE**

1	Missing, broken, kinked, frozen, plugged or disconnected purge valve control line.
---	--

## BENDIX PP-3 CONTROL VALVE

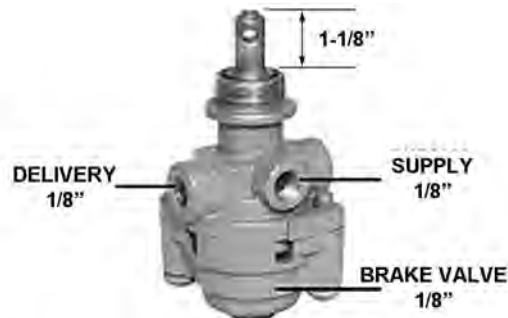

Push Pull Valve - Manually operable - Pressure sensitive, on/off valves which will automatically return to the button out (exhaust) position when supply pressure is below the required minimum. The PP-3 has a tripper that exhausts at 30psi and charges above 50psi. The plunger trips at 40psi and charges manually. The tripper prevents manual override of the emergency application of parking brakes.

## BENDIX PP-5 CONTROL VALVE

Push-Pull Valve - Manually operable - Pressure sensitive, on/off valves which will automatically return to the button out (exhaust) position when supply pressure is below the required minimum. Use PP-5 in conjunction with vehicle torque converter systems, engine speed control systems, and some parking systems. In addition to manual control, it employs a pilot air release feature which will allow the valve to be exhausted by applying a low pressure signal from another control valve to the control port.

## BENDIX MV-2 CONTROL MODULE

MV-2 Module

Spool Assy A

Spool Assy B

Control Module - Integrated control assembly normally mounted in the control panel of a truck tractor. It provides all the federal legal requirements for trailer air supply and parking brake control. It also permits the tractor parking brakes to be applied while air supplied to the trailer. The MV-2 consists of two push pull valves and a dual circuit supply valve. The valve is serviced by replacing the complete spool inserts shown above. The complete valve and the two spool assemblies are available.

**BENDIX  
MV-3 CONTROL MODULE**

Control Module - an integrated control assembly designed for control panel mounting in a truck tractor. This non-metallic assembly consists of two push-pull valves and a dual circuit supply valve. It provides all the federal legal requirements for trailer air supply and parking brake control plus an additional feature permitting the tractor parking brakes to be applied while air is supplied to the trailer. The MV-3 is designed to supersede the MV-2 valve.

## BENDIX E-2 • E-3 FOOT VALVE (Single Circuit)

Single Circuit Foot Valve - Normally used on pre FMVSS-121 vehicles. It is foot operated and controls the delivery of air to the brake chambers. Simply stated it provides the driver with a means of applying and releasing the brakes on a vehicle. The E-2 and E-3 foot valves are foot mounted and can be either treadle or lever actuated. The valves are identical except that the E-3 has a slightly longer plunger travel that provides a softer "feel" than the E-2.

## BENDIX E-5 FOOT VALVE (Single Circuit)

Single Circuit Foot Valve - Normally used on pre FMVSS-121 vehicles. It is foot operated and controls the delivery of air to the brake chambers. Simply stated it provides the driver with a means of applying and releasing the brakes on a vehicle. The E-5 foot valve is floor mounted and can be treadle or lever actuated. Used on pre-FMVSS-121 single circuit air brake system.

### BENDIX E-7 DUAL FOOT VALVE (Dual Circuit)

Dual Circuit Foot Valve - A dual foot valve has two separate circuits for service and secondary braking, and is used in dual circuit air brake systems mandated by FMVSS-121. Braking ability is maintained in the event that one circuit fails. The E-7 is a firewall mounted, suspended pedal foot valve. It is a dual circuit valve with two separate supply and delivery circuits. Threaded supply and delivery ports for both circuits are located on the back of the valve.

Furnished less treadle and mounting brackets.

# TRUCK/TRACTOR AIR VALVES

## AIR BRAKE RATIO VALVES

### BENDIX LQ-5 BOBTAIL RATIO VALVE

Ratio Valve - Automatically reduces application pressure to the front service brakes. As brake application pressure is increased, the percentage of reduction is decreased until a preset is reached. A preset "hold-off" pressure prevents the front brakes from operating until the "hold-off" pressure is reached. Used on post FMVSS-121 vehicles only.

The LQ-5 replaces existing front axle limiting valves on tractor systems only. During bobtail mode the LQ-5 delivers full application pressure to the front axle.

**NOTE:** The LQ-5 will not replace the BP-1 valve which looks identical. The LQ-5 will not function in the BP-1 system.

## TRUCK/TRACTOR AIR VALVES AIR BRAKE SPRING BRAKE VALVES

### BENDIX SR-1 SPRING BRAKE VALVE

Spring Brake Valve - A dual function valve. (1)Limits hold-off pressure to the spring brakes via a relay of quick release valve, generally 90-95psi. (2) Should a loss of pressure occur it provides a modulated spring brake application proportional to the service braking pressure delivered to the front axle. Commonly used on post FMVSS-121 systems.

Meritor NO.	NEW/ REMAN	REPLACES	RESERVOIR TRIP PRESSURE	CORE NO.	CORE GROUP	APPLICATION AND GENERAL INFORMATION
R955288063X	Reman	Bendix 288063X	30 psi	XC1113	BN101	The SR-1 is normally used on trucks and tractors with dual air brake systems. Parking functions are also controlled through the SR-1. (1) 1/4" PT delivery port. (1) 1/4" PT reservoir port. (1) 1/4" PT control port. (1) 1/4" PT supply port.

# TRUCK/TRACTOR AIR VALVES AIR BRAKE SPRING BRAKE VALVES

## MIDLAND FF2 FULL FUNCTION (Spring Brake/Relay Valve)

Spring Brake Valve - A dual function valve. (1) limits hold-off pressure to the spring brakes via a relay of quick release valve, generally 90-95psi. (2) Should a loss of pressure occur it provides a modulated spring brake application proportional to the service braking pressure delivered to the front axle. Commonly used on post FMVSS-121 systems.

**Note:** A heavy-duty walled 1/2" or 3/8" nipple must be used when mounting the Midland FFV.

The Midland Full Function Valve can be used with a single air tank, twin tanks or an axle by axle system on trailers. The valve combines a pressure protection valve, two one way check valves, spring brake valve with quick release, and a four port relay valve. Midland Full Function Valves must not be mixed with other service valves on the same trailer.

The Midland Full Function Valve does not release spring brakes until the reservoir is filled. This may take up to 90 seconds. Do not attempt to drive away prior to full spring brake release. Damage to the foundation brake system may result.

## TRUCK/TRACTOR AIR VALVES AIR BRAKE TRACTOR PROTECTION VALVES

### BENDIX TP-2 TRACTOR PROTECTION VALVE

Tractor Protection Valve - Protects the tractor air brake system under trailer breakaway conditions and conditions where severe leakage has occurred in the tractor or trailer. The valve is also used to shut off trailer service and supply lines before disconnecting the tractor from the trailer. The tractor protection valve is used in conjunction with a dash mounted control valve.

Used on pre FMVSS-121 vehicles in conjunction with TW-1 or PP-1 Valves. Regulations require the tractor protection system to function automatically between 20 and 45 psi as system pressure is reduced. The automatic system to accomplish this is built into the TP-2.

# TRUCK/TRACTOR AIR VALVES AIR BRAKE TRACTOR PROTECTION VALVES

## **BENDIX TP-4 TRACTOR PROTECTION VALVE (Formerly VM-1 Control Valve Manifold)**

Tractor Protection Valve - Protects the tractor air brake system under trailer breakaway conditions and conditions where severe leakage has occurred in the tractor or trailer. The valve is also used to shut off trailer service and supply lines before disconnecting the tractor from the trailer. The tractor protection valve is used in conjunction with a dash mounted control valve.

The TP-4 is used exclusively on Ford "L" model tractors and combines several functions. It is a combination of a tractor protection valve and two double check valves. This valve allows either of the two service brake circuits on the vehicle to apply the trailer brakes. It is used in conjunction with a PP-3 or PP-7 to perform the normal functions of a tractor protection valve. Porting for the installation of the stoplight switch, front axle limiting valve and the trailer emergency stoplight switch is incorporated in the valve.

## TRUCK/TRACTOR AIR VALVES AIR BRAKE TRACTOR PROTECTION VALVES

### BENDIX VM-3 MANIFOLD VALVE

Tractor Protection Valve - Protects the tractor air brake system under trailer breakaway conditions and conditions where severe leakage has occurred in the tractor or trailer. The valve is also used to shut off trailer service and supply lines before disconnecting the tractor from the trailer. The tractor protection valve is used in conjunction with a dash mounted control valve.

The VM-3 incorporates a pressure protection valve (PR-4) and a double check valve that allows it to function as a control manifold. It provides a central location for air lines passing between the cab and the engine compartment.

# MERITOR® AFTERMARKET AIR VALVES

4

### Streamline Your Ordering With Confidence.

With today's sophisticated commercial vehicles, compressed air requirements are increasing. Fleets and truck operators need air valves they can rely on to maintain peak performance. With a commitment to bringing high-quality solutions to the aftermarket, Meritor has been a master distributor of Sealco® valves for over 20 years. Sealco air valves combine OE quality and outstanding value, and all Sealco products are made right here in the U.S.A. Why purchase from multiple suppliers when you can consolidate to purchasing from one? Simplify your ordering process and add Sealco air valves to your next order.

### Features and Benefits

- All Sealco products are designed, engineered, manufactured and assembled in the U.S.A.
- Sealco valves are produced to the highest standards using primarily a zinc alloy that reduces porosity and results in stronger threaded ports
- 100% pneumatic and submersion testing is conducted on all air valves to ensure zero leakage
- In-house die cast and machine shop facilities allow for complete control of the product at every stage of the manufacturing process
- Save time and money with Sealco plug units that allow fleet customers to replace only a portion of a valve assembly instead of the entire unit

### Find Your Replacement.

Sealco valves can be used as a direct replacement for existing competitive valves for truck, tractor, bus and trailer applications. Choose from one of the popular air valves below or from our stock of over 100 part numbers.

## TRAILER AIR VALVES AIR BRAKE FOOT VALVES

### SEALCO FOOT VALVE (Single Circuit)

Single Circuit Foot Valve - Normally used on pre FMVSS-121 vehicles. It is foot operated and controls the delivery of air to the brake chambers. Simply stated it provides the driver with a means of applying and releasing the brakes on a vehicle.

## TRAILER AIR VALVES AIR BRAKE RELAY VALVES

4

### SEALCO RELAY VALVE

Relay Valve - Used to rapidly apply and release rear axle(s), service, or parking brakes. When signaled by the service brake valve, they graduate, hold or release air pressure from the chambers to which they are connected. The relay valve is used to balance the time of air application on the vehicle. This is determined by the factory preset "crack pressure" of the valve. Crack pressure is set on a relay valve by a "hold-off" spring that retards valve operation until a predetermined amount of air pressure is exerted.

# TRAILER AIR VALVES AIR BRAKE RELAY VALVES

## SEALCO LOV-4 RELAY VALVE (4 Port Delivery)

Relay Valve - Used to rapidly apply and release rear axle(s), service, or parking brakes. When signaled by the service brake valve, they graduate, hold or release air pressure from the chambers to which they are connected. The relay valve is used to balance the time of air application on the vehicle. This is determined by the factory preset "crack pressure" of the valve. Crack pressure is set on a relay valve by a "hold-off" spring that retards valve operation until a predetermined amount of air pressure is exerted.

# TRAILER AIR VALVES AIR BRAKE SPRING BREAK VALVES

## SEALCO SPRING BRAKE CONTROL VALVE (Protected Reservoir System)

Spring Brake Valve - A dual function valve. (1) limits hold-off pressure to the spring brakes via a relay of quick release valve, generally 90-95 psi. (2) Should a loss of pressure occur it provides a modulated spring brake application proportional to the service braking pressure delivered to the front axle. Commonly used on post FMVSS-121 systems.

### **Standard Meritor Aftermarket Warranty.**

We warrant all new parts for one year from date of shipment to the buyer against defective material or workmanship (but not against damage caused by accident, abuse or improper installation, maintenance or repair) when such parts are used on vehicles the specifications of which have been approved by our Engineering Department.

As the exclusive remedy under this warranty, we will, at our option, repair or replace such parts free of charge, or take back the nonconforming parts and refund the monies paid by buyer for such parts, if found on examination by us to be nonconforming and if any necessary return charges are prepaid.

If it is necessary to return any parts under this warranty, buyer agrees not to make any deduction on account thereof from remittances on current accounts while claims are in the process of disposition. Any expense incurred without our consent for repairs or replacement will not be allowed.

**THIS WARRANTY IS EXPRESSLY IN LIEU OF ALL OTHER WARRANTIES OR CONDITIONS, EXPRESS, IMPLIED OR STATUTORY, INCLUDING ANY IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR PARTICULAR PURPOSE. IN NO EVENT SHALL SELLER BE LIABLE FOR INCIDENTAL OR CONSEQUENTIAL DAMAGES OF ANY NATURE.**

Only Meritor-branded products, including genuine Meritor and its affiliated brands, are covered by this aftermarket parts warranty.

Product models, brands, names and trademarks depicted herein are the property of their respective owners and, except where otherwise indicated, are not in any way associated with Meritor Heavy Vehicle Systems, LLC, or any parent or affiliate, thereof.
