Several suffix codes are used in conjunction with the basic certificate of conformance number which always remains the same. These codes are necessary to indicate special kinds of certificates and when changes are made to a certificate. These codes are explained below.

A Identifies an addendum to a certificate when changes are made to the certificate's contents. A number following the letter "A" designates the number of addenda that have been issued for the certificate. Inconsistencies of format exist in certificates generated over the years. Standard practice now dictates the addenda sequence as follows: xx-xxxA1, xx-xxxA2, xx-xxxA3, etc.

P Identifies a provisional Certificate of Conformance. Provisional certificates are issued based on manufacturers' data when Participating Laboratories cannot fully test devices to insure compliance with Handbook 44. When the test capabilities become available, the devices covered by the provisional certificates are to be resubmitted to complete the type evaluation and to convert the provisional certificates to full Certificates of Conformance. The addenda sequence for provisional certificates is as follows: xx-xxxP, xx-xxxPA1, xx-xxxPA2, xx-xxxPA3, etc.

PN Identifies a Pre-NTFP certificate which has been issued under the NTFP policy of accepting results of type evaluation by individual State jurisdictions before the NTFP program was established. After a period of six months, if no information is received indicating the device does not comply with Handbook 44, the certificate is to be upgraded to a full certificate.

Amended - Corrections may be made to certificates to correct an error or for editorial purposes. In these cases the word "Amended" will follow the certificate number.

The specific load cells in this family covered by this certificate are identified by the model number which includes the load cell capacity as a prefix to the SCD or SCD-C identification. The only difference b/t the SCD & the SCD-C load cells is that the SCD-C has a connector rather than the cable being attached directly to the load cell. Models: 50K-SCD, 100K-SCD, 50K-SCD-C & 100-SCD-C.

Description: The "Digital Motion Stabilizer" package is a digital filter software package for electronic digital indicators.										
91-024	02/01/91	Weigh-Tronix, Inc.		Indicating Elements	WI-190M	III	5000			Indicator Electronics
The Model WI-190M is the main electronics module that contains the analog to digital converter, microprocessor controller, and calibration storage.										
91-062	04/15/91	Weigh-Tronix, Inc.		Indicating Elements	WI-114	III/III L	10,000			Digital Electronic
The WI-114 is a weight display that sums the weight values from up to 3 separate Model WI-110 weight Indicating elements. It is intended to be used on a vehicle scale with up to 3 individual weighing elements to provide axle-load weights plus the gross weight of the vehicle to comprise a single weighing system.

						The specific models of load cells covered by this Certificate are 5103-B10-XXK-YYY where XXK is the capacity code in thousands of pounds (e.g., 10K) and YYY is a designator for the electrical cable length, wiring color code, and private level variation s. The number following the "B" may be less than 10 since it corresponds to the maximum number of divisions for which individual load cells comply with Handbook 44.

90-083	05/15/90	Artech Industries, Inc.	Load Cell	80210 Series	III L	10,000	20,000 - 200,000	Double Ended Shear Beam
<p>80310 - The difference between the Models 80210 and 80310 is in the manner of contact of the load cell to the mounting assembly. The 80210 has a semicircular indentation in the middle of the bottom of the cell where the cell rests on a semicircular rod. The point of contact is the semicircular areas. The bottom of the 80310 is flat and the semicircular is turned upside down so the flat area is in contact with the load cell. The semicircular rod makes contact with a flat plate in its mounting assembly</p>
