

June 15, 1998

Mr. Kevin Gillen, Senior Engineer
Rhode Island Department of Environmental Management
235 Promenade Street
Providence, RI 02908-5767

**Reference: Addendum to April 18, 1998 UST Closure Report
Plasticizer Tank Removal
Cooley, Inc.
50 Esten Street
Pawtucket, RI**

Dear Mr. Gillen:

On April 18, 1998, ENPRO Services, Inc. (ENPRO), on behalf of Cooley, Inc., submitted an Underground Storage Tank (UST) Closure Assessment Report to the Rhode Island Department of Environmental Management (RI DEM) documenting the removal of three plasticizer USTs at the site referenced above. During subsequent discussions, you have requested supplemental information, including recommendations as to whether further actions are required at the site and an updated soil stockpile disposal plan. This letter is intended to provide you with the information you requested and as such it will serve as an addendum to the April 18, 1998 report.

Plan for Soil Disposal

As indicated in my May 12, 1998 letter to you, the stockpiled soil has been transported to the following disposal facility in Maine:

Facility Name: Waste Management Disposal Services of Maine -
Crossroads
Facility Address: P.O. Box 629, Route 2
Norridgewock, ME 04907
Facility Contact: Mike McCloskey
Contact Number: (603) 330-0217

ENPRO began transporting the soil to the Waste Management facility in Norridgewock on May 13, 1998. On June 3, 1998, ENPRO completed soil transportation. A total of 710.37 tons of soils were transported to the Waste Management Norridgewock facility. Copies of the non-hazardous waste

ENPRO Services, Inc.

manifests utilized to document transportation of soil from the Cooley, Inc. site are attached.

Recommendations Regarding Further Actions

No evidence of plasticizer release from the USTs was noted during their removal. The piping/tank connections appeared to be tight, with no obvious rusting or breaks in the piping, and no obvious disconnections between the tanks and the piping. While dark staining was noted in surface soils throughout the UST area and in subsurface soils at the piping end (north end) of the tanks, as much surface and subsurface stained soil as could be removed without undermining the building (to the north) a gas pipe (to the east) and a transformer (to the west) was excavated. No groundwater was encountered at the site to a depth of 20 feet. No impacts to nearby receptors (storm drains, private wells, basements, surface water) were noted during tank closure.

Based on the conditions noted in the UST area and the actions taken during tank closure, the following actions are recommended with respect to the area of the Cooley, Inc. property from which the three plasticizer USTs were removed:

- **Middle and Southern End of Plasticizer Tank Excavation (area in which Samples "Cooley Center" and "Cooley Street" were collected – Figures 2 and 3):** No further action with respect to the three plasticizer USTs is indicated in this area at this time, based on the visual inspection and specific chemical analysis performed on soil samples from the excavation floor and walls.
- **Northern End of Plasticizer Tank Excavation (area in which Sample "Cooley Building" was collected):** No further action with respect to the three plasticizer USTs is recommended in this area at this time, based on the fact that as much surface and subsurface stained soil as could be removed without undermining the building was excavated during tank removal/installation. However, if future construction projects in this area involve excavation of stained or otherwise impacted soils which were previously inaccessible (due to the presence of the building foundation), it is recommended that the soils be evaluated, segregated, managed, and disposed of properly.
- **Areas East and West of Northern End of Plasticizer Tank Excavation:** No further action with respect to the three plasticizer USTs is recommended in this area at this time, based on the fact that as much surface and subsurface stained soil as could be removed without undermining the gas

ENPRO Services, Inc.

pipe (to the east) and a transformer (to the west) was excavated during tank removal/installation. However, if future construction projects in this area involve excavation of stained or otherwise impacted soils which were previously inaccessible (due to the presence of the utilities), it is recommended that the soils be evaluated, segregated, managed, and disposed of properly.

Please note that these recommendations apply only to site conditions associated with the three plasticizer tanks in the area of the Cooley, Inc. property from which the tanks were removed. The recommendations are based on observations by ENPRO personnel, laboratory analysis of soil samples collected from the tank excavation, and professional judgement. Pursuant to the Rhode Island Department of Environmental Management's July 1992 UST Closure Assessment Guidelines, these recommendations are not intended to characterize the full extent of any contamination which may exist in the tank excavation area or any other area of the site.

I trust that this addendum provides the supplemental information you requested. If you have any questions or require any additional information, please do not hesitate to call me at (978) 465-1595.

Sincerely,

Geoffrey A. Brown, Ph.D.
Environmental Engineer/Project Manager
