ATTENTION SOIL DELIVERY CUSTOMERS

The dumping of soil will be in the DRIVEWAY unless previous arrangements have been made. Deliveries are up to the driver's discretion. *(If driver deems delivery could cause damage to property or equipment such as narrow driveways, low wires, unsafe pavement areas, low tree limb, etc., he may refuse dumping.)*

DELIVERY POLICY

Sunshine Growers offers delivery service Monday thru Saturday on plant material and soils between 7 AM – 3 PM

Delivery is to your driveway

WE DO NOT INSTALL

If plant material needs to go to the backyard arrangements can be made in advance so driver has proper equipment.

BULK MATERIALS

We have bulk materials available 1/2yd. (13.5cu.ft) or 1yd. (27cu.ft.).
 If you don't need a delivery or don't have the minimum for delivery you must
 bring an open bed truck or trailer for the safety of forklift operators.

We carry soil amendments, Bark products, and rock in bulk.

Check out Pg. 9 for prices on all our bulk materials.

Colored Rock 1 cu. ft. bag \$7.99 each

*If large quantities of bagged colored rock are needed. Call one of our 3 locations to make sure we have in stock, or we can bag to have ready to pick up.

BULK MATERIALS

Bulk Materials are Available for Pickup and Delivery with 5 Yard Minimum Local

TOPSOIL: Clean, sandy loam, used for building up soil level.

COMPOST: Composted blend of organic matter, used to amend poor soils.

HALF & HALF: half topsoil, half compost, used for filling planters and raised beds.

70/30 MIX: 70% topsoil, 30% compost, used for sod prep when retotilling is not possible.

PLANTING MIX: Our blend of topsoil, compost, wood shavings, used in raised beds, containers and landscape.

NURSERY BLEND: Special planter mix with 7 lbs. fertilizer mixed in.

KELLOGG'S CERTIFIED ORGANIC SEEDTOPPER: Fine screened and ground organic compost for covering lawn seed and general landscape/garden.

FOREST MULCH: Forest mulch is a recycled wood product great for slopes, hills, and any landscape area.

GORILLA HAIR/SHREDDED MULCH: Gorilla hair ideal for planted for areas as a finished top dressing also used as insect and weed control, hold moisture & insulates roots.

SUNSET RED MULCH: Sunset red mulch is a dyed nontoxic reddish color bark perfect for accenting any garden/planted area.

WALK ON BARK: Walk on bark is ideal for use in planted areas, its shredded texture holds moisture and insulates roots

SMALL DECORATIVE BARK: Small decorative bark with its natural reddish brown color is a premium bark to enhance any garden/planted area.

MEDIUM DECORATIVE BARK: Medium decorative bark with its natural reddish brown color is a premium bark to enhance any garden/planted area.

NEW Zeon Zosia	\$1.32 per sq. ft.
Korean Grass	\$4.95 per sq. ft.

INTRODUCING A NEW SOD VARIETY THAT FILLS THE NEED FOR A LOW WATER USE

AND SHADE TOLERANT LAWN

Southland Sod Farms is the exclusive California grower of **Zeon** zoysia. Zoysi warm-season grasses and as such use a minimum 25% less water than cool-season Zeon has the added benefit of sustaining itself in up to 75% shade. It has beautiful green color and medium fine texture similar to bluegrass. It can be mowed high to its hybrid bermuda cousin without building up thatch. Yet, it has high turf and density giving it great wear resistance and recovery.

MARATHON GRASS SEED

	1lb	5lb	25lb
Mara I	\$6.99	\$31.99	\$119.99
Mara II	\$7.99	\$33.99	\$139.99
Mara III	\$8.99	\$35.99	\$159.99

BULK SEED

Sunshine	\$2.99/lb	50lb	\$144.99
Red Fescue	\$3.99/lb	50lb	\$159.99
Shady Mix	\$4.25/lb	50lb	\$199.99

Marathon® Sod

Standard tall fescue. Very durable. Tolerates daily wear. Fast growth. Excellent recovery from injury. Coarse texture. Medium green color. Tolerates up to 40% shade. Also available in soil-less Lite Sod.

All members of the Marathon Family stay green year round and are deep rooted, drought resistant, and very well adapted to varying Southern California climates and soils.

Marathon® II

Dwarf tall fescue. Durable. Tolerates weekend activity levels. Slightly reduced growth rate. Good injury recovery. Medium/coarse texture. Medium dark green. Tolerates 25% shade.

Marathon® III

Extra dwarf tall fescue. Use ornamentally where there are low activity levels. Slow injury recovery. Substantially reduced mow-dippings. Medium/fine texture. Dark green. Do not use in shade.

St. Augustine

Very coarse thick stemmed runners. Used primarily where shade tolerance is the top priority. Native to the southern United States where humid conditions do not permit cold-season lawn varieties to flourish. Considerable thatching. Requires intensive fertilizing for optimum appearance in winter.

Tiffgreen

Hybrid bermuda. Excellent as athletic field or recreational turf. Often used on golf course putting greens. Very dense, low-growing, fine textured. With consistent care and mowing will create an attractive "mini-carpet" look. Develops fratch that requires concrete borders for containment. Becomes dormant in winter.

18LB. \$21.99

Water New Marathon Sod-(Dry Regions)

Water sod lightly after each 200 square feet is installed, to prevent wilting. After all the sod is down and rolled, turn on your sprinklers and let them run until sod is good and soaked. To keep it that way, for the first week, water until runoff begins, once every three hours at 7AM, 11AM and 2PM. During the second week water twice a day at 7AM and 2PM. During the third week water at 7AM. Eventually taper back to once every day.

Adjust according to weather and season – water more frequently during warm or windy weather. After your lawn has become established (approximately 6 to 8 weeks), water according to the following guidelines:

- As infrequently as possible (once or twice a week in the cooler months, three or more times per week in warmer months), to maintain a healthy green condition.
- For as long as possible to get deep soil penetration (10 to 15 minutes). It may be necessary to cycle irrigate if runoff occurs after a short time. Water until runoff occurs, and then stop and wait for the water to penetrate (about an hour) then repeat.
- Water as early as possible between 7AM and 10 AM.
- DO NOT water areas in the shade as frequently as areas of lawn that receive full sun.

In addition, be sure to watch for blue-gray tint and limp areas of your lawn. This is not Fungus. It is caused by dehydration and is an indication that immediate watering is needed. This usually occurs on tops of mounds and where sprinkler coverage is not adequate.

(It is acceptable to water grass in the full sun; it will not burn the blades)

Lawn Renovation Checklist

Before Sod Arrives:

- ❑ Kill old lawn. For best results, first water and fertilize your lawn so that it is in a vigorous growth mode. Then spray entire lawn with Roundup®, carefully following directions on the packaging. Roundup is a highly effective herbicide that enters the plant through its foliage and is translocated all the way down to its root system. One thorough treatment will usually completely kill your old lawn and weeds.
- ❑ Remove dead lawn. Using a sod cutter, strip away dead turf. Roll or section dead turf and discard. (Sod cutters can usually be found at a local rental yard or nursery.)
- ❑ Rototill soil and install or repair sprinklers. Only after removing rocks or debris, rototill soil to a depth of 4" - 6". Consult local nurseryman for soil amendment and irrigation system recommendations.
- ❑ Rake and fine grade. Rake to break up large clods and remove any remaining debris. Fine grade by scraping across the surface to smooth uneven areas. Finished grade should be 1/2" below walkways, driveways, and/or patios. Please Note: Sod is uniformly machine-cut and will conform to any irregularities left in the grade.
- ❑ Apply Marathon Sod & Seed Starter™. Distribute the Marathon fertilizer evenly over prepared area, either by hand, or by using a "whirlybird" style applicator. Avoid applying under windy conditions. For best results, follow directions on bag.
- ❑ Roll soil. Roll soil to settle and firm the surface. Fine grade again, if necessary. (Rollers are available from a local nursery or rental yard.) Soil should be dry to avoid compaction.

After Sod Arrives:

- ❑ Lay sod immediately upon delivery. Begin laying sod adjacent to the longest boundary of the area to be covered. Stagger each new row of sod so that seams are offset, as in a brick wall. Butt ends and edges tightly together.
- ❑ Conform to curved surfaces. Cut sod with heavy knife to conform to curved boundaries, planters, etc. After first 200 square feet are installed, water sod lightly to prevent wilting.
- ❑ Roll sod. When all the sod is installed, use a roller to ensure a good contact between the sod and native soil.
- ❑ Water thoroughly. To avoid having dry patches in your lawn and to promote even growth, sprinkler system pattern should provide "head-to-head" coverage as indicated by arrows.
- ❑ Watering New Marathon Sod. Water Sod lightly after each 200 square feet are installed, to prevent wilting. After all the sod is down and rolled, turn on your sprinklers and let them run until the sod is good and soaked. To keep it that way, for the first week water until runoff begins once every few hours at 7 am, 11 am and 2 pm. During the second week water twice a day at 7 am and 2 pm. During the third week water at 7 am. Eventually taper back to once every two or three days. Adjust according to weather and season – water more frequently during warm or windy weather. After your lawn has become established (approximately 6 to 8 weeks), water according to the following guidelines:
 - As infrequently as possible (once or twice a week in the cooler months, three or more times per week in the warmer months).
 - For as long as possible to get deep soil penetration (up to 30 minutes). It may be necessary to cycle irrigate if runoff occurs after just a short time – water until runoff occurs, then stop and wait for the water to penetrate (usually 1 to 2 hours), then repeat.
 - As early as possible – first thing in the morning.
- ❑ Mowing. Mowing should begin one week after installation.

For more information contact Southland Sod Farms, P.O. Box 579, Port Hueneme, CA 93044-0579, (805) 488-3585. Marathon I, II, III are registered trademarks of Southland Sod Farms, ©1993 Southland Sod Farms. Roundup is a registered trademark of The Agricultural Group of Monsanto Company. www.sod.com

Here at Sunshine Growers we support waterwise gardening. We feature many plant varieties to help grow your water-wise garden, everything from lawns to planters and landscape. Water-wise means a plant needs to be watered at most once every two weeks after establishment. It still retains its aesthetic characteristics.

We are encouraging you to invest your time into saving water in your community. It saves money, water, and maintenance. In addition to choosing low water use plants cultural practices like mulching inhibit weed growth and reduce soil evaporation. Design for conservation, group plants with same watering needs together in areas of the garden that best suits their needs.

Azaleas

Tips for success with Azaleas, Camellias, Gardenias, Hydrangeas, Japanese Maples & Edible Blueberries

(In an alkaline soil.)

1. Always be generous with **ACID PLANTING MIX**, when planting and at least once a year as a top-dress. We recommend Gardener & Bloom Acid Planting Mix.
2. Fertilize with an **IRON** type fertilizer at least twice a year. This will help maintain a healthy green throughout the year. We recommend Ironite or Liquinox Iron & Zinc...
3. Fertilize with **Soil Acidifier** type fertilizer about every 2 months, withholding any at bloom time... Fertilizing during bloom can cause rapid flower loss... We recommend Gro-More Water Soluble Soil Acidifier or Kellogg's Azalea Camellia Granulated Fertilizer...

*Water-wise plants indicated.

Tips on Planting Native

Step 1

Prepare garden beds for your native plants in fall. Select sunny places in your yard and mark off beds by pounding a wooden, plastic or metal stake at each corner and then tying string to form a rectangle. Make beds at least 2 feet wide by 4 or 6 feet long. Pull all weeds and unwanted plants from the bed area.

Step 2

Spread a 2- to 3-inch layer of any type of organic compost and other organic materials, such as peat moss, on top of the soil in your bed areas. Turn it under to a depth of 8 to 12 inches and then water the area with a sprinkler for 20 minutes or longer.

Step 3

Broadcast seeds of many native species in fall. Follow seed packet instructions for correct planting depths, distances apart and other particulars regarding each type of seed. Water well for 15 to 20 minutes.

Step 4

Dig planting holes for bedding plants that are large enough to accommodate the roots of each plant. Leave sufficient space between plants, based on their mature size. Then, set the native bedding plants into their planting holes and cover them with the soil/compost mixture. Water well for 15 to 20 minutes.

Step 5

Spread a 2- to 3-inch layer of compost or other organic material on the ground around your plants to serve as a mulch to help keep the soil warm and moist and keep weeds away.

Step 6

Control snails and slugs by scattering iron phosphate granules or diatomaceous earth on the soil around your new plants and sprouting seeds. If aphids or other insects attack your plants, spray them with insecticidal soap every other day until all signs of the insects are gone.

Garden Tip Calendar – Monthly Garden Guide

January:

Plant Roses and Trees
Prune and spray Existing Roses
Prune Trees & Shrubs
Start spring seeds indoors for transplanting in late Feb. early Mar.
Lawns- Fertilize and mow @ 2" during cooler months.
Apply dormant spray on deciduous trees

February:

Continue planting Roses and Trees.
Start planting Shrubs & Natives.
Lawn: Mow regularly @ 2" water according to weather. Overseed at this time.
Citrus & Avocados- In warmer inland areas feed now. Deciduous Fruit Trees feed now.
Ornamental Grasses- Cut Back
Prune- Evergreens (junipers, pines etc.)
Woody Overgrown Perennials - Cut back now.
Fertilize-Roses and Perennials, consider using a systemic product to keep insects from invading spring blooms.
MULCH- 2" to 3" layer of Cedar Mulch or Bark Chips will prevent weeds and help retain soil moisture.

March:

Continue planting Container grown Trees, Shrubs, Perennials/Annuals, Natives and Groundcovers.
Plant Vegetables-tomato peppers squash etc.
Apply Preemergents to flower beds and groundcovers to stifle weeds. Try Amaze.
Start Container Gardens
Divide Perennials: Daylily, Flax, Grasses
Fertilize-Lawn and Mow @ 2" Over seed now.
Fertilize- Roses and Perennials water well
Fertilize-Citrus and Fruit trees in Coastal areas at this time.
PRUNE: Camellias after bloom has finished.
Pinch tips on fuchsias to promote bushiness.
SNAILS: Eggs are hatching time to bait try Sluggo or That's It.

April:

Continue planting Trees, Shrubs, Perennials, Roses Annuals & Vegetables.
This is time to start corn, cucumbers, melons and beans.
LAWN: Warm Season Grasses (St. Augustine & Bermuda) should be de thatched and fertilized.
Fescue and Ryegrass should be let grow to 3" to prepare for summer Temps also fertilize.
Fertilize- Roses Citrus Fuchsias and perennials
Dead-Head Flowers to promote more blooms.
If conditions are dry watch for Spider Mites.
SNAILS- Continue bait for Snails during this active period.

May:

Continue planting warm season Natives Annuals, Vegetables and Perennials.
Lawn: Fertilize and Mow regularly to keep it thick and healthy. Fescue should be mowed @ 3" in warm weather.
Prune- Winter flowering trees and shrubs once they are finished blooming.
Watering: Keep up on it with approaching warm days.
Keep an eye out for yellowing leaves or pale leaves with green ribs. This is a sign of IRON Deficiency apply an Iron product such as Ironite or Liquinox Iron Zinc.
MULCH: If you haven't yet you should NOW.
2 to 3 inches of Cedar Mulch over planters and groundcovers can keep weeds down the soil moist longer and also keeps the soil cooler so plant roots thrive.

June:

Plant Heat Loving Tropical's and Palms and warm season Annuals/Perennials.
Drought tolerant and Native plants need only deep infrequent watering now through fall. Every 10- 14 days.
Continue Dead-Heading flowers to promote more blooms and for a tidier look.
Cut back overgrown Perennials to promote another round of blooms and clean up messy looking areas.
Lawn: Water Regularly (Temps above 90 degrees daily)
Mow @ 3". Rake once a month Fertilize every 6 weeks.
Avoid fertilizing during Warmer spells.
MULCH: Your plants are crying for it.
2" to 3" layer of mulch can protect the roots of your plants.

July:

As the weather gets warmer Garden in the early morning or late afternoon both you and the plants will appreciate it.
Plant Pumpkins now for Halloween harvest.
Continue Dead-Heading Flowers if not daily at least once a week.
When perennials and annuals get scraggly cut back 1/3 or more to rejuvenate for Fall.
Keep new plantings well watered.
Fertilize Acid Loving plants Such as Azaleas, Gardenias, Camellias and Blueberries.
Fertilize Container Plants and Vegetables.
LAWN: Mow & Water Regularly Light Fertilizer if Temps are below 85 degrees

August:

Watering is most IMPORTANT CHORE this month. Remember Watering Basics:

1. Water Early in the morning (between 7AM and 10AM).
2. Water the Soil Not the leaves - Best to use bubblers in planters and beds.
3. Water infrequently and deeply not shallow and often.

Check Irrigation for any repairs to be made.
Containers- Soak Well if they still look wilted move them to a shadier area until cooler temperatures arrive.
LAWN: Mow and water regularly. If above 85 degrees no fertilizer.
Fertilize- Roses, Citrus, Acid Loving Plants and Fruit Trees now.
Watch for Iron Deficiency and feed with Iron product if needed.

Garden Tip Calendar – Monthly Garden Guide

Snapdragons

English Primrose

September:

Start planting fall annuals (pansies calendula, snapdragons, cyclamen, stock, primrose, alyssum) and Mums.

Keep up watering September is still warm and the Santa Ana winds are near. If you know the winds are going to blow Soak well before they arrive, hydrated plants withstand wind better than dry plants.

Fertilize: Roses Acid Loving Plants and containerized plants. Lawn Mow @ 3" and water regularly.

Prepare areas to be planted this fall or winter with fresh organic soil amendments.

Cyclamen

Our 10" H/B

October:

As the days grow shorter and temps cool reduce the frequency of watering but don't reduce length of time system runs.

Time to plant Trees, Shrubs, Perennials and Groundcovers again. Continue planting cool season annuals. Cooler Temps help plants establish for next season.

Prune trees and shrubs for winter. Shaping and removing dead or dying wood. Cut Back Geraniums.

Lawn: Think about overseeding all lawns at this time. For fescue and ryegrass use like seed. Bermuda and St

Augustine use annual winter Rye seed.

Fertilize and lower the mower height to 2" for cooler months on Fescue and Ryegrasses

Pansy

Poinsettia

November:

Adjust watering schedule according to weather. Water less frequent but for as long as normal. Most Trees and Shrubs only need water once a week during the cooler months. Citrus and Avocados only once a month if there has been no rain. Begin planting Trees shrubs groundcovers and perennials if you haven't already. Divide Perennials and Cut back Ornamental Grasses.

Lawn: Mow @ 2" fertilize and water regularly. Snails and Slugs: Lay their eggs at this time so fighting them now is essential to having fewer snails in the spring when eggs hatch. Try Sluggo.

Prune deciduous fruit trees and shade trees and seal all larger cuts. Spray with Dormant Spray or Neem Oil to prevent disease and Insects.

December:

Poinsettias are ready! Happy Holidays... Roses- Withhold water this month and stop fertilizing to harden them off for winter. In warmer areas they may need a drink or two. Now is the time to move roses from one place to another.

Pruning- If plants are damaged by frost resist the urge to prune. The damage may protect the rest of the plant from further frost.

Prune Fruit Trees if you haven't already done so. Seal all larger cuts and spray with a Dormant

SPRAY.

Time for a second application for those of you who have sprayed once already. Cut back dormant Grapevines. Wisteria should have all the thin shoots from last season Cut back leaving two or three buds at the base

BAIT IN FALL TO REDUCE SNAILS IN SPRING

Bad Snails

Bait only when you don't see decollate snails.

Decollate snails eat other snails.

Plants For Wind Prone Areas

In Southern California there are many areas that are known for gusty afternoon winds and Heavy on the Santa Ana's. With that in mind the following list of plants are known to be durable in windy areas and can withstand the hot dry winds we sometimes get.

Perennials & Flowering Plants

Agapanthus-Lily of the Nile
 Aloe
 Asparagus Ferns-
 Meyer and Sprengeri
 Euryops Daisy-Margurite
 Erysimum- Wall Fower
 Felicia- Blue Marguerite Daisy
 Hemerocallis-Daylily
 Kniphofia-Red Hot Poker
 Statice- Sea Lavender
 Geraniums
 Flax- All
 Salvia

Echium

Kniphofia

Cotoneaster

Ceanothus

Nandina - Nand

Asparagus - Meyer

Trees

Acacia- Most Varieties
 Chilopsis-Desert Willow
 Cypress
 Eucalyptus
 Ficus Rubignosa
 Melaleuca
 Olea- Olive
 Palms- Most Varieties
 Parkinsonia- Palo Verde Tree
 Pinus- Pines MANY
 Quercus- Oak Trees

Shrubs:

Artemesia-Powis Castle	Berberis- Barberry	Buxus- Boxwood
Callistemon-Bottlebrush	Ceanothus-Ca. Lilac	Cistus- Rockrose
Coprosma-Mirror Plant	Cotoneaster	Dodonea-Hopseed
Echium-Pride of Madera	Eleagnus- Silverberry	Escallonia
Junipers	Laurus - Ca.Sweet Bay	Lavandula-Lavendar
Lavatera- Mallow	Leptospermum-Tea Tree	Leucophyllum-Texas Ranger
Ligustrum-Privet	Myoporum	Nandina
Pittosporum	Prunus- Carolina Cherry	Pyracantha- Firethorn
Raphiolepis-Hawthorne	Rosemary, Westringia-False Rosemary	Xylosma-Shiny Xylosma

Salvia Greggii

Tips for Conserving Water and Maintaining a Healthy Garden

1. A layer of Cedar Mulch or Bark Mulch 2" to 3" thick can add significant water conservation. In either newly planted landscapes or established ones. It reduces water evaporation from the soil and keeps the soil temperatures cooler during the hot summer months. It also discourages weed growth and soil compaction.
2. Conditioning the soil adds to its ability to retain water and nourish the plants. The best time to condition the soil is in the cooler months of winter and early spring. Aerating the soil at this time will also help fertilizers and water to be used better by the plants in your yard. Don't condition and aerate after March it will increase evaporation as the plants need the moisture even more during hot days.
3. During Dry Windy periods watering should be watched a little more closely. Adding A few extra minutes to the timer on blustery days may be necessary or even an extra cycle 20 min after the normal cycle.

Plants That Tolerate Shady Areas

The following is a list of plants that will do well in a mostly shaded area. Some direct sun will be okay for most of the plants listed. Remember most shade plants are acid loving and need a little special care when planting. Use Gardener & Bloome Acid Planting mix with everything you plant in the shade. The soils in our area are generally poor so you should mulch twice a year with acid mix and feed regularly with an acid fertilizer. Also using an Iron supplement can greatly improve your success in the shade.

Fuchsia

Shrubs:

Abutilon-Flowering Maple
 Aucuba- Gold Dust Plant
 Azalea- Shade Varieties
 Brunfelsia-Yesterday Today & Tomorrow
 Buxus -Boxwood All Var.
 Camellia-Japonica or Sasanqua
 Coprosma-All
 Fatsia Japonica- Arailia
 Fuchsia
 Gardenia-All Var.
 Hydrangea
 Ilex- Holly
 Loropetalum -Chinese Fringe Flower
 Mahonia – Oregon Grape
 Nandina - All Var.
 Osmanthus-Sweet Olive & Var. False Holly
 Philodendron-Selloum and Xanadu
 Raphis excelsa-Lady Palm
 Ternstroemia
 Viburnum – All Varieties

Yesterday Today & Tomorrow

Cycleman

Vinca

Viburnum Snow Ball

New Guinea Impatiens

Groundcovers:

Ajuga-All Var.
 Australian Violets
 Hedera-Ivy All
 Baby Tears
 Campanula-All
 Mondo Grass-Dwf & Reg
 Moneywort
 Star Jasmine
 Vinca-Major
 Vinca-Minor

Perennials & Bulbs

Aspidistra-Cast Iron Plant
 Astilbe
 Begonias- Tuberous and Bedding
 Bergenia
 Caladium
 Cineraria
 Creeping Charlie
 Cycleman
 Dicentra-Bleeding Heart
 Elephant Ears- Alocasia
 Ferns- All Varieties
 Geranium-Cranesbill
 Heuchera-Coral Bells All Varieties
 Hosta-Plantain Lily All Varieties
 Impatiens New Guinea & Bedding
 Lamium-All Varieties
 Liriope- All Varieties
 Lobelia Cardinalis- Red Lobelia

Trees:

Acer Palmatum-Japanese Maple
 Lauris Nobilis-California Sweet Bay
 Palms-Some
 Podocarpus-All Varieties
 Schefflera-Tupidanthus
 Tree Ferns- Australian, New Zealand
 Murraya- Orange jessamine Patio Tree

HOW TO ATTRACT

Hummingbirds

Butterflies

Vines:

Clematis
Honeysuckle
Morning Glory
Passion Vine
Red Trumpet

Trees:

Albizia-Mimosa
Chilopsis-DWillow
Coral Trees
Ficus Benjamina
Eucalyptus- All

Trees:

Apple-All
Citrus-
All Varieties
Maple-All
Salix-All
Willows

Shrubs:

Abelia
Agapanthus
Buddleia
Caryopteris
Ceanothus
Escallonia
Grewia
Hebe - Veronica
Toyon

Hi-Yield®

Brands You Can Trust • Available Exclusively to Independent Retailers

HY Weed & Feed 33408

Controls over 200 Listed Broadleaf Weeds, Roots and All including Dandelion, Chickweed, Plantain, Knotweed, Henbit and Spurge.

HY Super Concentrate Kill•Zall II 33704

Contains 41% Glyphosate Systemic Weed & Grass Kiler. Kills many annual and perennial grasses and broadleaf weds. Visual effects on most annual weeds occur within 2 to 4 days, but perennial weeds may not occur for 7 days or more.

HY Super Concentrate Kill•Zall Weed & Grass Killer 33692

Kills weeds and grasses down to the root. Ultra formula with surfactant. Rain fast in 2 hours.

FL Rooting Powder 10639

Speeds root development. Gives cuttings a fast start. Grow new plants from cuttings of your favorite plants, including: Philodendron, Poinsettia, Geraniums, Chrysanthemums and many other houseplants and ornamentals.

FL Weed Free Zone RTS 10527

Consistently FAST – Controls tough weeds like Clover, Plantain, Ground Ivy, Spurge and other listed weeds. Proven cool weather performance.

FL Weed Free Zone Concentrate 10525

Consistently FAST – Controls tough weeds like Clover, Plantain, Ground Ivy, Spurge and other listed weeds. Proven cool weather performance.

TRUSTED SINCE 1926

BONIDE®

Scan here for your
free lawn and garden
problem solving app

For nearly 90 years and three generations, our family has provided solutions to home lawn & garden pest problems. Whether its natural or synthetic, liquid, dust or granule, concentrate or ready-to-use, Bonide will always provide you the best solution to your pest problem.

Everything for lawn, garden, home & ranch
