

AHD

The Blind Factory

Product Catalog | Volume VI

WELCOME

To Our Partners and Customers,

The COVID-19 pandemic is affecting every single one of us. This is a challenging time for people and businesses around the globe. While many of us are feeling uncertainty in our lives, I have every confidence that we'll rise up to the challenges this crisis presents and come out stronger on the other side.

The well-being, health, and safety of people remains our top priority. We are doing everything we can to keep our employees and communities safe while we continue to support our customers and do our part to help combat this pandemic.

We are truly grateful for your support and partnership during this time as we all face this unprecedented challenge together.

Because of your continued support and business for 25 years, AHD Blind Factory has been able to prosper and make our success as a company possible.

To showcase our quality products, we at AHD Blind Factory would like to introduce our new catalog to our loyal customers that have ensured our continued growth.

POLY SHUTTERS

The next revolution: Poly solid PVC shutters offer a modern alternative to traditional wood window coverings. The insulating construction is moisture and fire resistant, providing greater longevity for the shutters and increased safety for homeowners. Incredibly adaptable for many different types of installations, Poly shutters are especially well-suited in kitchens, bathrooms, and children's bedrooms. The solid component is built durably for a lifetime of beauty.

Poly shutters are very energy efficient. In fact, homeowners often find that poly shutters pay for themselves through reduced heating and air conditioning costs. A perfect choice for the consumer who requires light control, elegance, and privacy.

FEATURES & CONFIGURATIONS

MATERIALS

Solid PVC

AVAILABLE LOUVER SIZES

- 2 1/2"
- 3 1/2"
- 4 1/2"

LIGHT CONTROL

- Full privacy in closed position

AVAILABLE CONFIGURATIONS

- Single Panel
- Hinged Bi-Fold Panels
- Sliding Bi-Fold Panels

DESIGNER FRAMES

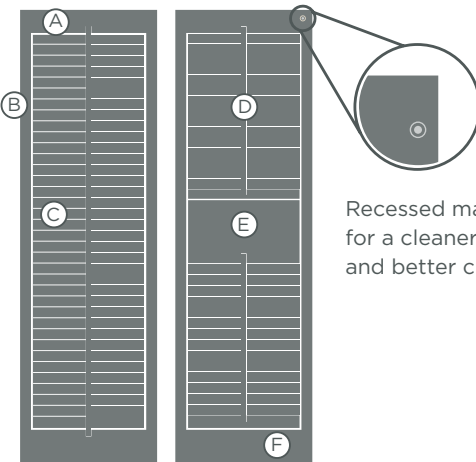

Z Frame L1 Frame L2 Frame

BASIC PANEL CONFIGURATION

LOUVER SIZE	2 1/2"	3 1/2"	4 1/2"
MIN. PANEL WIDTH	10"	10"	10"
MAX. PANEL WIDTH	26"	32"	34"
MAX. PANEL HEIGHT WITHOUT MID DIVIDER	60"	66"	75"

SHUTTER ANATOMY

Recessed magnets for a cleaner look and better closure.

- A. TOP RAIL**
3" to 5.25" standard height
- B. STILE**
1" standard thickness, rabbeted stiles are standard on orders with more than one panel
- C. LOUVER**
Flat or tapered in 2 1/2", 3 1/2" and 4 1/2"
- D. TILT ROD**
Made to move easily
- E. DIVIDER RAIL**
Necessary when shutter is more than 72" high
- F. BOTTOM RAIL**
3" to 5.25" standard height

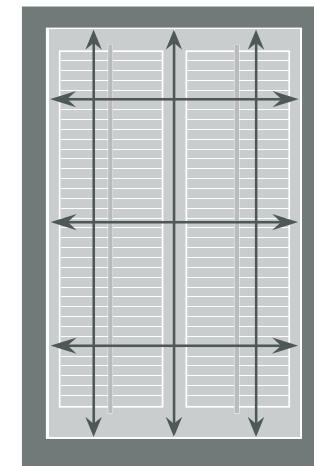

MEASURING INSTRUCTIONS

BASIC GUIDELINES

Before you begin measuring, choose whether the shutters will be an inside mount or outside mount. Inside mount shutters attach and hang inside the window frame. Outside mount shutters hang outside the window opening, either on the trim itself or beyond the trim. Outside mounting can make a window appear larger, or hide unattractive window trim. If the diagonal measurements on your window vary more than 1/4", we suggest using an outside mount.

INSIDE MOUNT

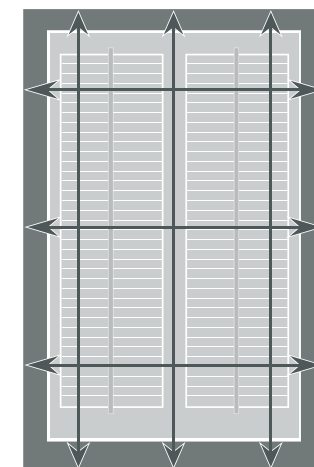

Inside mount for Z, L1, L2 frames and hanging strips

First measure the width of the window opening in three places, order the smallest width.

Next, measure the height of the window opening in three places, order the smallest height.

OUTSIDE MOUNT

Inside mount for frames L1 and L2 frames

First measure the width from the intended outer edge of the shutter frame in three places, order the largest width.

Next, measure the height of the intended outer edge of the shutter frame in three places, order the largest height.

Ultra View tilt option

Introducing Ultra View, an invisible gear system tilt rod control to adjust and control light without having the tilt rod. Cleaner look and exposure. Available on 3 1/2' and 4 1/2" louvers.

Colors

27 of most popular colors as our standard colors . Custom color match is available at \$100 surcharge per color.

PLANTATION WOOD SHUTTERS

Details like hand-sanded louvers and fine finishes distinguish our wood collection plantation shutters from others. State of the art machinery not only improves the quality and accuracy, but also allows us to minimize our production time. Our solid wood construction is lighter in weight and more rigid than most composite materials, allowing the capability to manufacture wider, more durable panels that resist warping. These beautiful shutters will bring a warm, traditional look to your space.

MEASURING INSTRUCTIONS

BASIC GUIDELINES

Before you begin measuring, choose whether the shutters will be an inside mount or outside mount. Inside mount shutters attach and hang inside the window frame. Outside mount shutters hang outside the window opening, either on the trim itself or beyond the trim. Outside mounting can make a window appear larger, or hide unattractive window trim. If the diagonal measurements on your window vary more than 1/4", we suggest using an outside mount.

INSIDE MOUNT

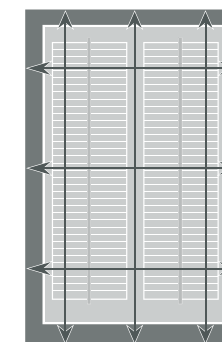

Inside mount for Z, LZ, L1 frames and hanging strips

First measure the width of the window opening in three places, order the smallest width.

Next, measure the height of the window opening in three places, order the smallest height.

OUTSIDE MOUNT

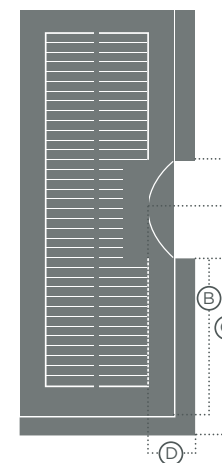

Inside mount for frames L1, L2, L3 and H frames

First measure the width from the intended outer edge of the shutter frame in three places, order the largest width.

Next, measure the height of the intended outer edge of the shutter frame in three places, order the largest height.

CUT-OUTS

Ultra View tilt option

Introducing Ultra View, an invisible gear system tilt rod control to adjust and control light without having the tilt rod. Cleaner look and exposure. Available on 3 1/2" and 4 1/2" louvers.

Colors

27 of most popular paint colors and 10 stain colors as our standard colors. Custom color match is available at \$100 surcharge per color.

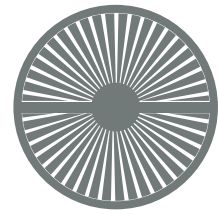

HINGES

SPECIALTY SHAPES

Please specify any special requests on your order form. Framed specialty items require an extra 20% surcharge. All specialty items can be routed at no extra charge. Specialty items any length greater than 80" will require a divider rail. All specialties available with horizontal louvers instead of sunburst pattern.

Regarding templates for arched panels; please mail templates to AHD at the time of order placement. Templates must be on brown butcher paper, rolled and shipped in a mailing tube. This procedure keeps the integrity of the actual sizes of the arch sizes and protects the template from damage.

CIRCLE
A classic shape, these shutters offer a moderate louver rotation.

OVAL
Louver tilt is 90 degrees with this product.

RAKE TOP
Adds a finished look to specialty applications.

EYEBROW WITH LEGS
Square sides, with a slight radius to a full radius top. Side louvers have almost full rotation.

HALF CIRCLE SUNBURST
These are true arches with almost total rotation of the louvers.

ELONGATED EYEBROW ARCH
Rotation of louvers is limited on both ends, but offers almost full rotation of the louvers in the center.

HONEYCOMB SHADES

Our Honeycomb Shades are crafted from a plush spun lace fabric, lending a distinctly soft and delicate feel to the hand. Durable and reliable even in intense sunlight, Honeycomb Shades remain consistent to their true, rich colors while offering the same beneficial light filtration, privacy and increased sound absorption properties as other types of honeycomb shades.

A tabbed fabric back creates a uniform look for the exterior of the home and assists crisp pleat retention. Touch, feel and explore: experience the difference of Honeycomb Shades.

OPERATING SYSTEMS

LIFT & LOCK™ CORDLESS

Eliminates the danger of exposed cords and is easily adjusted by simply lifting or lowering the shade with a gentle push or pull on the bottomrail.

PREMIUM CORDLESS

Privacy is maintained while allowing natural light in, this shade stacks neatly at the bottom of the window when fully open. This top-down feature provides a unique look to a window.

MOTORIZED SHADE

Perfect for hard-to-reach windows, motorized shades not only offer convenience, but also eliminate cords for a safer option.

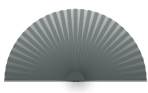

VERTICAL HONEYCOMB

Side-to-side operation is perfect for sliding doors, room dividers and rectangular windows. Unique design eliminates the danger of cords.

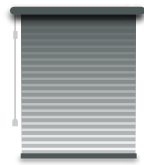

SKYLIGHT SHADE

Perfect for hard-to-reach skylights and can be paired with motorized system for easy access.

SPECIALTY ARCHES

Fan-style arches, quarter circles and top-down options for a classic look with added privacy.

STANDARD SHADE

Traditional cord operated Honeycomb Shade that raises from the bottom and stacks at the top for a simple, classic approach.

CONTINUOUS CORD

A continuous cord loop opens and closes the shade smoothly and evenly. Eliminates the traditional dangling cord, making for a neater appearance. Ideal option for larger shades.

DAY-NIGHT SHADE

This shade provides a variety of light control and privacy options by a translucent fabric on the top and a blackout fabric on the bottom, connected by a moving rail.

TOP-DOWN

This shade can be opened from both the top and the bottom. This style is ideal for letting natural light in through the top while preserving privacy below.

TOP-DOWN/BOTTOM-UP

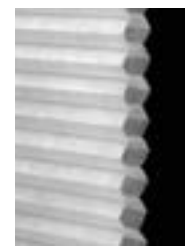

This shade can be opened from both the top and the bottom. Ideal for letting natural light in through the top while preserving privacy below.

2-ON-1 HEADRAIL

For very large single windows, or two large windows side by side, this specialty shade provides the appearance of a single shade, with two sections operating independently.

CELL SIZES

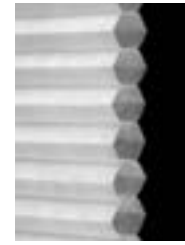

3/8" SINGLE CELL

Select this size for small to mid-size windows and shallow depths.

9/16" SINGLE CELL

Select this size for small to mid-size windows and shallow depths.

3/4" SINGLE CELL

Select this size for large windows and sliding glass doors; our most popular cell size.

DOUBLE CELL

Select this innovative construction for more energy efficiency.

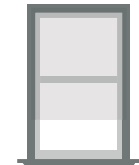

GRAND PLEAT

Select this size for large windows and sliding glass doors.

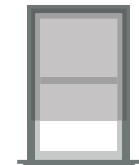

LIGHT CONTROL

Honeycomb shades come in a variety of fabric types that offer different privacy and light control options.

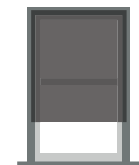

SHEER

- Transmits light with clear view through
- Does not provide privacy
- Available in 3/4", single cell

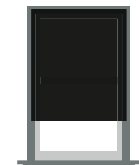

SEMI SHEER

- Transmits light with limited view through
- Does not provide privacy
- Available in 3/4", single cell

TRANSLUCENT

- Transmits filtered light with no view through
- Provides a moderate amount privacy
- Available in 3/4", 3/8" and 9/16", single cell and double cell

BLACKOUT

- Blocks 99% of outside light
- Provides complete privacy and light control
- Available in 3/4", 3/8" and 9/16", single cell and double cell

FABRIC COLLECTIONS

Drop refers to shade fully extended. Stack refers to shade fully raised. Measurements do not include headrail or bottomrail. Add stack height to rail measurement to get total height.

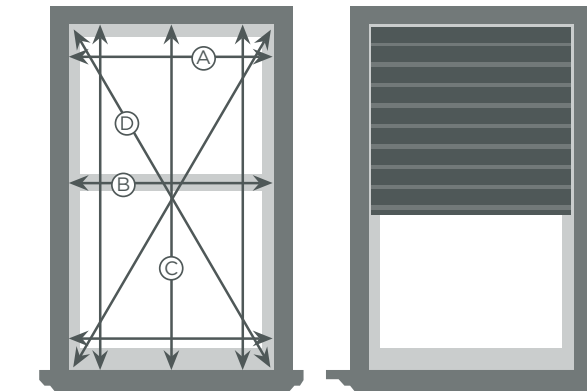

MEASURING INSTRUCTIONS

BASIC GUIDELINES

Accurate measurements are essential, for both correct pricing and proper fit. Use only a hard-edged ruler or steel tape, never a cloth tape. For inside mounts, width measurements (A) should be rounded down to the nearest 1/8" to prevent blind from binding against the window casing.

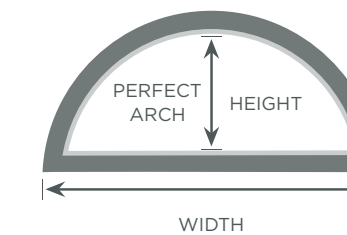

INSIDE MOUNT

Use a steel tape to measure the opening width **A** at three different places, and use the narrowest dimension when ordering. Be exact! The factory will make the shade 3/8" narrower so it will not rub against the window casing. Measure the height **B** of the window from the top (soffit) down to the sill.

ARCHES

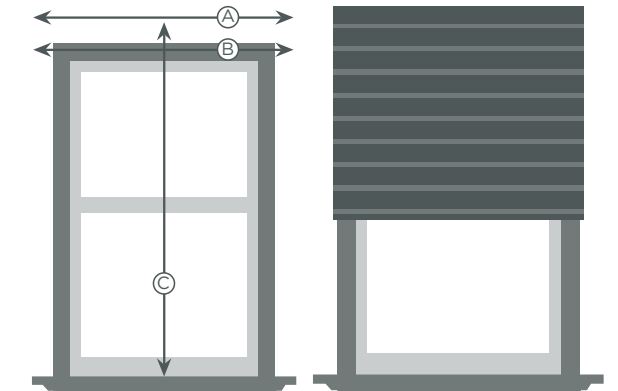

TEMPLATE REQUIRED

For inside mounts, measure the exact width and height inside the window opening.

For outside mounts, measure the desired width and height. Measure the height at its tallest point.

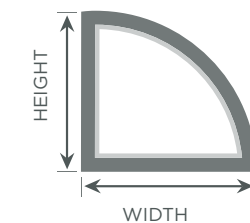

All arch openings can only be for perfect arches where the height will equal one-half of the width.

OUTSIDE MOUNT

Use a steel tape to measure the exact width (**A**) and height (**B**) of the area to be covered. It is recommended that the shades overlap the window by at least 1 1/2" on each side. When installation has no sill, allow the shade to overlap the bottom of the window casing by at least 1 1/2". Shade fabric will measure width and height indicated on the order.

QUARTER CIRCLE

TEMPLATE REQUIRED

For inside mounts, measure the exact width and height inside the window opening.

For outside mounts, measure the desired width and height. Measure the height at its tallest point.

For all quarter circles height must equal the width.

SWATCHES

ROLLER SHADES

The classic simplicity of roller shades has led to their status as a long standing favorite among window coverings. At AHD, we have updated the classic standard of these quality custom shades with new fashion fabrics, streamlined mechanisms and specialized sun control products.

Our Roller Shades offer a modern look to your interior while the simple function makes them a breeze to operate. With so many patterns and textures, Roller Shades are the perfect option for adding style and energy efficiency to your room.

OPERATING SYSTEMS

CORDLESS

A semi-automated option with an adjustable rate of speed, the Cordless system raises and lowers the shade to the desired height with a slight tug on the bottom rail.

MOTORIZED SHADE

Our motorization system allows you to easily and conveniently close or open shades all with the touch of a button all while offering enhanced child and pet safety.

POWERWAND

Powerwand is a battery operated, motorized system that is easily installed and operated. Powerwand's touch button control is a easy to use cord free option.

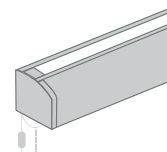

STANDARD CLUTCH

A continuous chain mechanism is used for easy control that locks the shade at desired height. This option requires less force to lift heavy shades and ensures smooth operation.

DESIGN SPECIFICATIONS

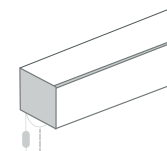

CASSETTES & FASCIAS

Our cassette and fascia options are the perfect choice for a clean, polished look.

CASSETTE

A traditional option, the cassette is rounded and covers the roller and brackets for a clean, coordinated look. An optional fabric insert offers even more design control.

FASCIA

Offering simple, clean lines for a more sophisticated look, the fascia is a square aluminum fascia that covers the roller and brackets.

FABRIC ORIENTATION

The fabrics used to make roller shades are of a limited width (see individual price guides).

STANDARD ORIENTATION

Shades that are ordered within the maximum width of the fabric will be made with the fabric vertically oriented.

TURNED WIDTH FOR HEIGHT

Shades that are ordered wider than the maximum fabric width available will be made with the fabric turned width for height - horizontally oriented.

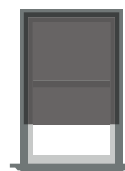

LARGE SHADES

Shades ordered larger than the maximum fabric width will be made with a visible seam. This only applies to fabrics that can be turned width for height (railroaded).

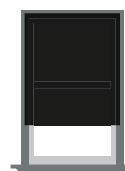

LIGHT CONTROL

Our fabrics allow varying degrees of light into your room, depending on the pattern you choose. Some sheer and screen fabrics allow full light access to your room during the day while blackout pattern options keep your room dark and block most of the outside light. Consider desired opacity level when choosing your fabric.

SHEER/SCREEN

- Gently filters light and reduces glare

BLACKOUT

- Eliminates light and keeps room dark

MOUNTING REQUIREMENTS

SIZE STANDARDS*

NORMAL FABRIC ORIENTATION

MINIMUM WIDTH	12"
MAXIMUM HEIGHT	120"
MAXIMUM WIDTH (depends on fabric)	72" TO 118"

TURNED WIDTH FOR HEIGHT

MINIMUM WIDTH	12"
MAXIMUM HEIGHT (120" with visible seam)	64"
MAXIMUM WIDTH	121"

*If possible, when a wide shade is ordered, all shades in the order made with the same fabric will be cut width for height for the best possible match.

STANDARD FACTORY DEDUCTIONS*

All allowances are taken from ordered dimensions and may vary slightly by fabricator.

INSIDE MOUNT FABRIC

ordered width less 1 1/8"

OUTSIDE MOUNT

ordered width

*If you need help determining which size clutch will be used on your shades, please contact your fabricator.

STANDARD MOUNTING REQUIREMENTS

MINIMUM MOUNT DEPTH	5/8"
FLUSH MOUNT	2"
MINIMUM FLAT VERTICAL SURFACE	5/8"x1 3/8"

INSTALLATION BRACKETS

Traditional brackets are used without the cassette. These brackets come with a custom flag locking mechanism to ensure a sturdy hold on your shade. Cassette brackets are spring clips which provide the option of a mount from the top or back of the cassette. Fascia brackets are box brackets.

INSIDE BRACKET MOUNTS*

MINIMUM MOUNTING DEPTH	1 1/2"
MINIMUM MOUNTING DEPTH (FLUSH MOUNT)	2 1/2"

*Add 1" for shades over 26 square feet.

OUTSIDE BRACKET MOUNTS*

MINIMUM MOUNTING DEPTH	1"
------------------------	----

*For flat, vertical surface.

MOUNTING BRACKETS

SHADE WIDTH	# OF BRACKETS
18" to 40"	2
40" to 72 1/4"	3
72 1/4" to 96"	4
2 ON 1	4

MEASURING INSTRUCTIONS

BASIC GUIDELINES

Measuring for Roller Shades is similar to measuring for most window coverings. Follow these basic guidelines to ensure a smooth installation:

- Always use a steel tape measure, preferably 3/4" to 1" wide.
- Measure width first, then height.
- Measure each window separately, even if they appear to be the same size.
- Survey the window area carefully and make additional measurements, if necessary and record your measurements on a worksheet.

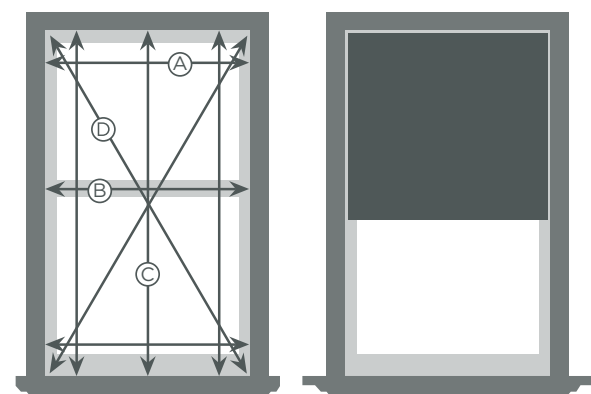

INSIDE OR OUTSIDE MOUNT

How you take your measurements will vary depending upon whether the shade fits within the window opening or overlaps the window opening. With inside mounts, note that the shade fabric will be about 1 1/4" narrower than the window opening, so if complete privacy and light control is desired, drapery side panels should be installed over the shade.

ROUNDING YOUR MEASUREMENTS

Dimensions on the order form should be accurate to within 1/8". Generally, round your measurements up to the nearest 1/8". However, with inside mounts, always round the width measurement down to the nearest 1/8". Rounding up could result in a shade that is too wide to fit within the window opening. For example, for an inside mount, 3/16" would round to 1/8".

INSIDE MOUNT

A. Measure the width about 1 1/4" down from the top of the window, which typically is where the installation brackets will be mounted. Remember to round down to the nearest 1/8". This measurement is the ordering width of the shade. Do not make any deductions from this width - all necessary deductions will be made automatically when the shade is fabricated.

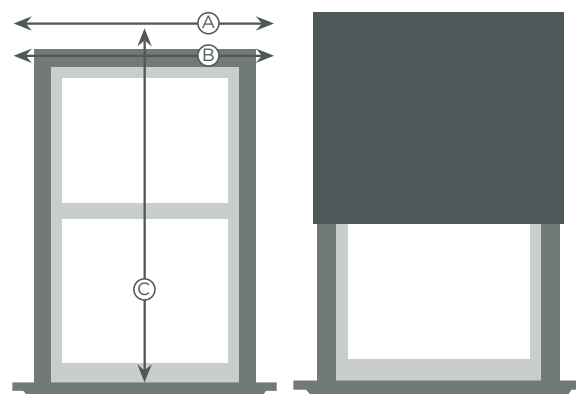

B. Measure the width at the center and bottom of the window. If the width narrows by more than 1" from the top measurement, the customer should consider an outside mount.

C. Measure the height of the window opening at three locations, as shown at right, and order the shortest measurement. Again, make no deductions. All necessary deductions will be made when the shade is fabricated.

D. Measure window on the diagonal. If the two diagonal dimensions are not exactly the same, it may be more appropriate to specify an outside mount shade for optimal light control and privacy.

E. Measure depth of window for mounting brackets.

OUTSIDE MOUNT

A. Measure the desired width and height. To minimize light leakage, it is recommended that the shade overlap the window opening at least 1 1/2" on each side, as well as at the top and bottom. As with inside mounts, do not make any deductions from your measurements. **tran****B.** Measure the width at the location where you want the shade, and use this measurement as your ordering width for the shade.

C. Measure the height from where the top of the roller will be located to where you want the bottom of the shade.

PHIFER ROLLER SHADES

Managing the sun's heat and glare can be accomplished with Phifer's SheerWeave® interior sun control fabrics. SheerWeave's® light-filtering qualities diffuse light, reduce glare and help control solar heat gain to make your room a more comfortable environment.

As SheerWeave® filters and diffuses light, it also helps reduce the fading of textiles and interior furnishings. While lighter color fabrics reflect light and illuminate the interior with just the right amount of light, darker fabrics provide excellent outside view and absorb light making them ideal for viewing computer and television screens. SheerWeave® fabrics are offered in a variety of openness factors to allow optimal light in commercial buildings or provide more privacy for such applications as hospitals and offices.

OPERATING SYSTEMS

CORDLESS

A semi-automated option with an adjustable rate of speed, the Cordless system raises and lowers the shade to the desired height with a slight tug on the bottom rail.

MOTORIZED SHADE

Our motorization system allows you to easily and conveniently close or open shades all with the touch of a button all while offering enhanced child and pet safety.

POWERWAND

Powerwand is a battery operated, motorized system that is easily installed and operated. Powerwand's touch button control is a easy to use cord free option.

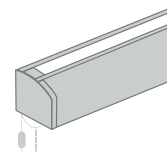

STANDARD CLUTCH

A continuous chain mechanism is used for easy control that locks the shade at desired height. This option requires less force to lift heavy shades and ensures smooth operation.

DESIGN SPECIFICATIONS

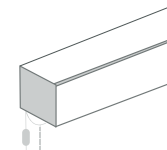

CASSETTES & FASCIAS

Our cassette and fascia options are the perfect choice for a clean, polished look.

CASSETTE

A traditional option, the cassette is rounded and covers the roller and brackets for a clean, coordinated look. An optional fabric insert offers even more design control.

FASCIA

Offering simple, clean lines for a more sophisticated look, the fascia is a square aluminum fascia that covers the roller and brackets.

FABRIC ORIENTATION

The fabrics used to make roller shades are of a limited width (see individual price guides).

STANDARD ORIENTATION

Shades that are ordered within the maximum width of the fabric will be made with the fabric vertically oriented.

TURNED WIDTH FOR HEIGHT

Shades that are ordered wider than the maximum fabric width available will be made with the fabric turned width for height - horizontally oriented.

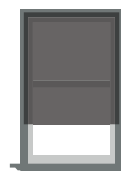

LARGE SHADES

Shades ordered larger than the maximum fabric width will be made with a visible seam. This only applies to fabrics that can be turned width for height (railroaded).

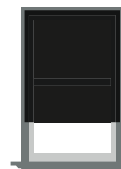

LIGHT CONTROL

Our fabrics allow varying degrees of light into your room, depending on the pattern you choose. Some sheer and screen fabrics allow full light access to your room during the day while blackout pattern options keep your room dark and block most of the outside light. Consider desired opacity level when choosing your fabric.

SHEER/SCREEN

- Gently filters light and reduces glare

BLACKOUT

- Eliminates light and keeps room dark

MOUNTING REQUIREMENTS

SIZE STANDARDS*

NORMAL FABRIC ORIENTATION

MINIMUM WIDTH	12"
MAXIMUM HEIGHT	120"
MAXIMUM WIDTH (depends on fabric)	72" TO 118"

TURNED WIDTH FOR HEIGHT

MINIMUM WIDTH	12"
MAXIMUM HEIGHT (120" with visible seam)	64"
MAXIMUM WIDTH	121"

*If possible, when a wide shade is ordered, all shades in the order made with the same fabric will be cut width for height for the best possible match.

STANDARD FACTORY DEDUCTIONS*

All allowances are taken from ordered dimensions and may vary slightly by fabricator.

INSIDE MOUNT FABRIC

ordered width less 1 1/8"

OUTSIDE MOUNT

ordered width

*If you need help determining which size clutch will be used on your shades, please contact your fabricator.

STANDARD MOUNTING REQUIREMENTS

MINIMUM MOUNT DEPTH	5/8"
FLUSH MOUNT	2"
MINIMUM FLAT VERTICAL SURFACE	5/8"x1 3/8"

INSTALLATION BRACKETS

Traditional brackets are used without the cassette. These brackets come with a custom flag locking mechanism to ensure a sturdy hold on your shade. Cassette brackets are spring clips which provide the option of a mount from the top or back of the cassette. Fascia brackets are box brackets.

INSIDE BRACKET MOUNTS*

MINIMUM MOUNTING DEPTH	1 1/2"
MINIMUM MOUNTING DEPTH (FLUSH MOUNT)	2 1/2"

*Add 1" for shades over 26 square feet.

OUTSIDE BRACKET MOUNTS*

MINIMUM MOUNTING DEPTH	1"
------------------------	----

*For flat, vertical surface.

MEASURING INSTRUCTIONS

BASIC GUIDELINES

Measuring for Roller Shades is similar to measuring for most window coverings. Follow these basic guidelines to ensure a smooth installation:

- Always use a steel tape measure, preferably 3/4" to 1" wide.
- Measure width first, then height.
- Measure each window separately, even if they appear to be the same size.
- Survey the window area carefully and make additional measurements, if necessary and record your measurements on a worksheet.

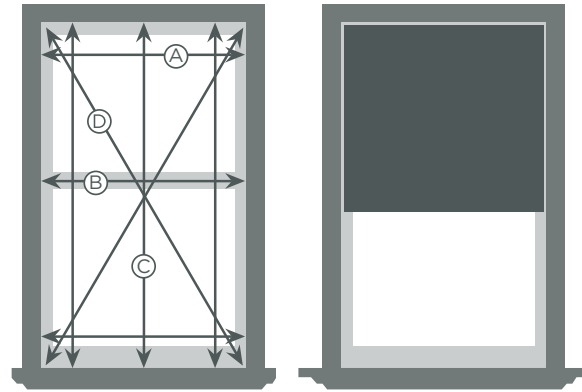

INSIDE OR OUTSIDE MOUNT

How you take your measurements will vary depending upon whether the shade fits within the window opening or overlaps the window opening. With inside mounts, note that the shade fabric will be about 1 1/4" narrower than the window opening, so if complete privacy and light control is desired, drapery side panels should be installed over the shade.

ROUNDING YOUR MEASUREMENTS

Dimensions on the order form should be accurate to within 1/8". Generally, round your measurements up to the nearest 1/8". However, with inside mounts, always round the width measurement down to the nearest 1/8". Rounding up could result in a shade that is too wide to fit within the window opening. For example, for an inside mount, 3/16" would round to 1/8".

INSIDE MOUNT

A. Measure the width about 1 1/4" down from the top of the window, which typically is where the installation brackets will be mounted. Remember to round down to the nearest 1/8". This measurement is the ordering width of the shade. Do not make any deductions from this width - all necessary deductions will be made automatically when the shade is fabricated.

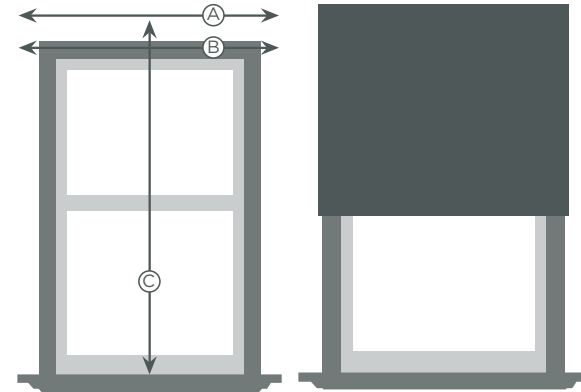

B. Measure the width at the center and bottom of the window. If the width narrows by more than 1" from the top measurement, the customer should consider an outside mount.

C. Measure the height of the window opening at three locations, as shown at right, and order the shortest measurement. Again, make no deductions. All necessary deductions will be made when the shade is fabricated.

D. Measure window on the diagonal. If the two diagonal dimensions are not exactly the same, it may be more appropriate to specify an outside mount shade for optimal light control and privacy.

E. Measure depth of window for mounting brackets.

OUTSIDE MOUNT

A. Measure the desired width and height. To minimize light leakage, it is recommended that the shade overlap the window opening at least 1 1/2" on each side, as well as at the top and bottom. As with inside mounts, do not make any deductions from your measurements.

B. Measure the width at the location where you want the shade, and use this measurement as your ordering width for the shade.

C. Measure the height from where the top of the roller will be located to where you want the bottom of the shade.

REVOLVE TRANSITIONAL

Revolve Transitional provides a fashionable alternative to the traditional roller shade. Featuring a stylish, yet functional fabric panel that combines sheer and solid fabrics to offer even more control of light and desired privacy levels.

Closed, these versatile shades offer complete light control and privacy. Raise the shade and align the sheer fabrics to allow light to filter through, while maintaining some privacy. Raise the shade completely into the sleek designer headrail for a perfect, clear view through.

OPERATING SYSTEMS

POWERWAND

Powerwand is a battery operated, motorized system that is easily installed and operated. Powerwand's touch button control is a easy to use cord free option.

MOTORIZED SHADE

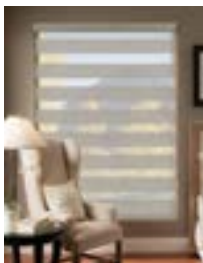

Our motorization system allows you to easily and conveniently close or open shades all with the touch of a button all while offering enhanced child and pet safety.

STANDARD CLUTCH

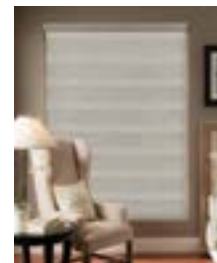

A continuous chain mechanism is used for easy control that locks the shade at desired height. This option requires less force to lift heavy shades and ensures smooth operation.

DESIGN SPECIFICATIONS

OPEN

While Revolve Transitional shades are open, they'll provide view through while filtering light with some privacy.

CLOSED

When closed, complete privacy and light control is obtained, all while still adding style to your space.

RAISED

When raised these shades provide light filtering, a clear view through and privacy all simultaneously.

MOUNTING REQUIREMENTS

SIZE STANDARDS*

The Revolve Transitional Shades Collection are designed to fit rectangular window openings in a vertical orientation. The maximum width and height of the shade vary with type of fabric. The shades may be installed inside or outside the window opening or mounted to the ceiling.

*See individual prices grid for information by fabric.

NORMAL FABRIC ORIENTATION

MINIMUM WIDTH	12"
MAXIMUM WIDTH	VARIABLE BY FABRIC
MAXIMUM LENGTH	120"

INSTALLATION BRACKETS

Cassette brackets are spring clips which provide the option of a mount from the top or back of the cassette. See installation instructions.

OUTSIDE MOUNT

ordered width

MOUNTING REQUIREMENTS WITH CASSETTE 100

MINIMUM MOUNT DEPTH	1 5/8"
FLUSH MOUNT INSIDE MOUNT	3"
MINIMUM FLAT OUTSIDE MOUNT	1 3/8"

MEASURING INSTRUCTIONS

BASIC GUIDELINES

Measuring for Revolve Transitional Shades is similar to measuring for most window coverings. Follow these basic guidelines to ensure a smooth installation:

- Always use a steel tape measure, preferably 3/4" to 1" wide.
- Measure width first, then height.
- Measure each window separately, even if they appear to be the same size.
- Survey the window area carefully and make additional measurements, if necessary. Record your measurements on a worksheet.

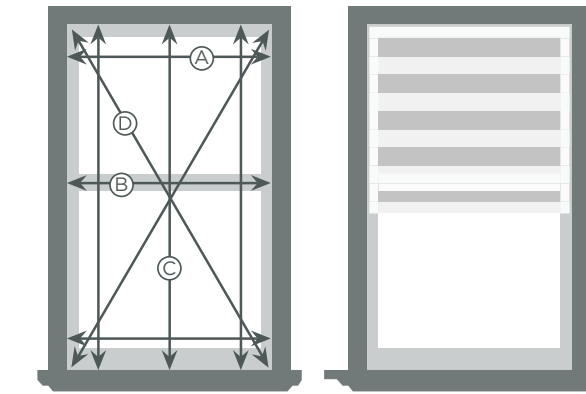

INSIDE OR OUTSIDE MOUNT

How you take your measurements will vary depending upon whether the shade fits within the window opening or overlaps the window opening. With inside mounts, note that the shade fabric will be about 1 1/4" narrower than the window opening, so if complete privacy and light control is desired, drapery side panels should be installed over the shade.

ROUNDING YOUR MEASUREMENTS

Dimensions on the order form should be accurate to within 1/8". Generally, round your measurements up to the nearest 1/8". However, with inside mounts, always round the width measurement down to the nearest 1/8". Rounding up could result in a shade that is too wide to fit within the window opening. For example, for an inside mount, 3/16" would round to 1/8".

INSIDE MOUNT

A. Measure the width about 1 1/4" down from the top of the window, which typically is where the installation brackets will be mounted. Remember to round down to the nearest 1/8". This measurement is the ordering width of the shade. Do not make any deductions from this width - all necessary deductions will be made automatically when the shade is fabricated.

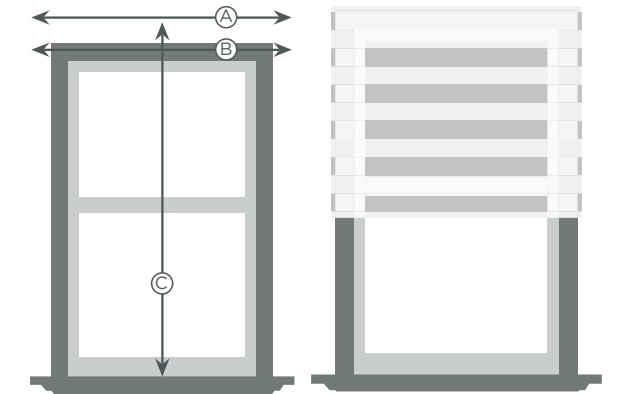

B. Measure the width at the center and bottom of the window. If the width narrows by more than 1" from the top measurement, the customer should consider an outside mount.

C. Measure the height of the window opening at three locations, as shown at right, and order the shortest measurement. Again, make no deductions. All necessary deductions will be made when the shade is fabricated.

D. Measure window on the diagonal. If the two diagonal dimensions are not exactly the same, it may be more appropriate to specify an outside mount shade for optimal light control and privacy.

E. Measure depth of window for mounting brackets.

OUTSIDE MOUNT

A. Measure the desired width and height. To minimize light leakage, it is recommended that the shade overlap the window opening at least 1 1/2" on each side, as well as at the top and bottom. As with inside mounts, do not make any deductions from your measurements.

B. Measure the width at the location where you want the shade, and use this measurement as your ordering width for the shade.

C. Measure the height from where the top of the roller will be located to where you want the bottom of the shade.

SHEER SHADINGS

Our Sheer Shadings offer a unique technology by blending beautiful fabrics with the functionality of blinds to create a soft, luxurious view for any room.

Horizontal fabric vanes float between two layers of soft, knitted fabric sheers to soften your view outside. With plenty of color options, Sheer Shadings are an exquisite choice that will enhance your room with an elegant combination of beauty and performance.

OPERATING SYSTEMS

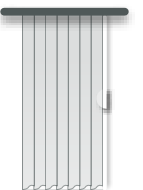

CORDLESS

Eliminates the danger of exposed cords and is easily adjusted by simply lifting or lowering the shade with a gentle push or pull on the bottomrail.

MOTORIZED SHADE

Perfect for hard-to-reach windows, motorized shades not only offer convenience, but also eliminate cords for a safer option.

VERTICAL SHADINGS

Side-to-side operation is perfect for sliding doors, room dividers and rectangular windows. Unique design eliminates the danger of cords.

CONTINUOUS CORD LOOP

A continuous cord loop opens and closes the shade smoothly and evenly. Eliminates the traditional dangling cord, making for a neater appearance. Ideal option for larger shades.

DESIGN & OPERATION

VIEWING OPTIONS

CLOSED TOP, OPEN BOTTOM

By partially lowering the shade from the fully raised position, the upper portion of your window will become semi-opaque while allowing light to filter in.

FULLY PRIVATE

When lowered completely, the shade provides complete privacy and softly diffuses light.

PARTIALLY OPEN

Opening the shade slightly will gradually increase the level of light and allow varying levels of "view-through."

VIEW-THROUGH WHEN LOWERED

By completely opening the vanes, the shade provides a softened, veiled view to the outside.

SIDE-BY-SIDE ALIGNMENT

When sheer shades are installed side-by-side, vane alignment can be guaranteed within 1/4" only if:

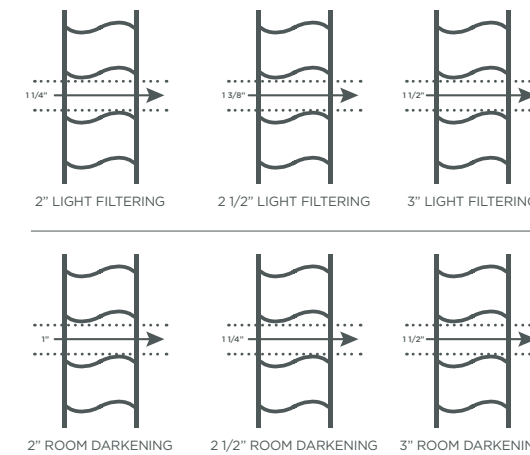

- Shades are the same color and are ordered at the same time.
- The sum total of the widths of all shades needing alignment is less than 102".
- Side-by-side lineup must be specified when the order is placed.

LEVELING THE SHADES

Sheer shades are leveled and weighted in the factory. When installed level, the fabric will not skew when raised. If the headrail is not installed level, skewing can occur that can damage the edge of the fabric. Be sure to follow the installation instructions carefully to ensure correct and balanced operation.

VANE OPENING

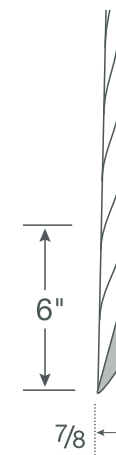

Vaness on the six styles of sheer shade fabrics open to slightly different degrees. Consequently, there are variations in visibility through the shades when the vanes are tilted to their maximum open positions. The variations among the product are shown in the illustration below, when looking through the shading 1/4 of the way up from the bottom.

VANE CLOSURE

Sheer shade fabric vanes overlap and provide privacy when closed. However, the inherent nature of the fabric will cause a slight increase in the distance from the front sheer to back sheer as you move further down the shade. These vanes do not form a perfect seal against light leakage which is most visible toward the bottom of the shade.

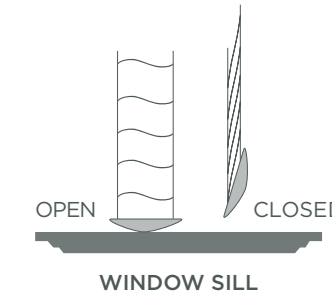

Vane closure is measured as the distance between the front and rear fabric sheers 6" up from the lowest point of the bottom rail, with the shade fully lowered and the vanes closed. For sheer shades, the maximum distance from the front sheer to the back sheer when closed is 7/8". Room darkening fabrics, the distance is 5/8". Vane closure on all 3" fabrics will have a distance of 1".

HEIGHT CONSIDERATION

The manufacturer will fabricate your window shading to the exact height ordered, when the vanes are in the open (or view-through) position. When the vanes are rotated to the closed position, the shading will become 3/8" longer. When closed on an inside mount, a slight puckering can occur on the lower most sheer section because of contact with the sill. To compensate, slightly raise the shading until the rail begins to lift off the window sill.

If preferred, AHD Sheer Shadings can be ordered 3/8" less than the window opening's measured height. In this case, the bottom rail will be positioned 3/8" above the sill when the vanes are in the open position, as shown in the illustration below. Rotating the vanes closed will cause the bottom rail to touch the window sill, closing any space.

SIDE (END) MOUNT

HEADRAIL	- 11/16" ordered width
FABRIC	- 1 5/8" ordered shade width

OUTSIDE MOUNT

HEADRAIL	+ 3/16" ordered width
FABRIC	- 3/4" ordered shade width

EXACT END TO END MOUNT

HEADRAIL	+ 15/16" ordered width
FABRIC	- 1/8" ordered shade width

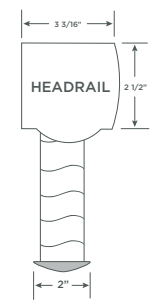

MOUNTING REQUIREMENTS

STANDARD SHEER HEADRAIL

- Available on all Standard Sheer Shades.
- Aluminum color coordinated headrail with fabric insert and color coordinated end caps.
- Operating systems: Cordless, Cord Loop, Retractable or Motorized System.

- INSIDE MOUNT**
Minimum flush with install brackets.....3 3/4"
- SHALLOW MOUNT**
Minimum mounting surface.....3/4"
- SIDE MOUNT**
Minimum mounting surface.....1 1/4"
Maximum shade width side mount.....48"
- OUTSIDE MOUNT**
Minimum mounting surface.....3/4"

VERTICAL SHEER HEADRAIL

- Fits rectangular windows or doors.
- Aluminum color coordinated headrail with fabric insert and color coordinated end caps.
- Operating systems: Wand/Cord, Moving Wand.

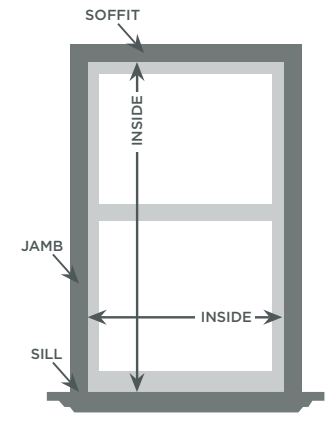

- INSIDE MOUNT**
Minimum mounting depth.....1"
Minimum mounting depth, full recess.....1"
- OUTSIDE MOUNT**
Minimum mounting surface height, standard bracket.....1 1/8"
Minimum mounting surface height, extension bracket.....1 3/8"
Recommended top overlap.....5"
Recommended minimum overlap per side (and bottom overlap when product does not hang to floor).....5"
Recommended bottom clearance when product hangs to floor (deduct before ordering).....5"

MEASURING INSTRUCTIONS

BASIC GUIDELINES

Precise width and height measurements are critical. Fabric width cannot be altered after the shading is fabricated. Please use a metal tape measure for accuracy from home to factory.

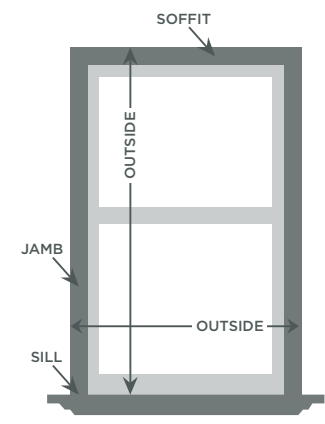

The headrail must be installed perfectly level and installed evenly to ensure smooth operation. On an inside mount, it is recommended that you check to see that the mounting surface is level and consistent. If your soffit needs to be leveled, this should be done before measuring.

INSIDE MOUNT

Measure across the width of your window opening in three different places - top, middle and bottom. Measurements should be taken within the window jamb. Provide the smallest of the three measurements to your fabricator. Be exact. Your fabricator will make the necessary deductions to fit the window opening.

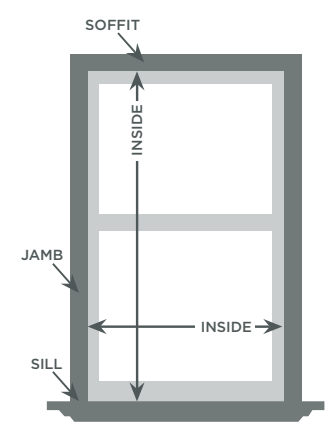

Measure the height of the window opening from the underside of the soffit to the surface of the window sill in two places - use the smallest of these two measurements.

OUTSIDE MOUNT

Measure the exact width and height of the area to be covered. On the width, allow at least 1 1/2" of an overlap on each side. An overlap of 3" on each side is recommended.

Be sure to take into consideration any obstructions such as window trim, molding, locks and window cranks.

SIDE MOUNT

Sheer shades may be side mounted using "L" brackets. For side mounts, follow the instructions for inside mounts. An additional 1/2" will be taken off the standard inside mount deduction to allow room for the "L" brackets.

The maximum shade width utilizing the side mount option is 48".

WOOD BLINDS

A classic style choice, wood blinds bring warmth and beauty to any room. We offer a variety of whites and stains so it's easy to find the perfect blind to match your decor. Made from 100% real kiln-dried basswood, these blinds are incredibly durable, yet lightweight, which makes them a perfect option for a long-lasting blind that'll be in style for years to come.

OPERATING SYSTEMS

LIFT & LOCK™ CORDLESS

Eliminates the danger of exposed cords and is easily adjusted by simply lifting or lowering the shade with a gentle push or pull on the bottomrail.

STANDARD CORD LOCK

Traditional cord operated blinds that raise from the bottom and stack at the top for a simple, classic look.

2-ON-1 HEADRAIL

For large single windows, or two large windows side by side, this specialty shade provides the appearance of a single shade, with two sections operating independently.

3-ON-1 HEADRAIL

For very large single windows, or three large windows side by side, this specialty shade provides the appearance of a single shade, with three sections operating independently.

CLOTH TAPE

Our signature edge banding is a fashionable option for your Woven Woods. These cloth tapes will add a more tailored and complete look to your Woven Wood shades and are available in standard and deluxe widths.

Offered in fifteen colors that coordinate with your shades to give you a finished look to your overall decor. Standard cloth tape is equivalent to 1" of tape on the front and back of the shade.

DECORATIVE TRIMS	7 3/4"	9 1/2"	11 1/4"	13"	14 3/4"	16 1/2"	20"

Headrail and bottomrail included in measurements. Measurements are approximate.

CONTROL OPTIONS

STANDARD	OPTIONAL
Tilt Left (L), Cord Right (R)	Tilt Right (R), Cord Left (L)
	Tilt Right (R), Cord Right (R)
	Tilt Left (L), Cord Left (L)

Blinds less than 10 1/2" wide (net) will have a center tilt only (no lift cord).

Blinds less than 22 1/2" wide (net) must have split controls (L/R or R/L).

Multiple blinds on one headrail may be ordered with a single tilt control for all blinds, if desired.

MEASURING INSTRUCTIONS

BASIC GUIDELINES

Accurate measurements are absolutely essential. The measurements you provide are used first to price the blind, and then to fabricate it to the specified size. Follow these basic guidelines to ensure a smooth and accurate installation:

- Always use a steel tape measure, preferably 3/4" to 1" wide.
- Measure width first, then height.
- Measure each window separately, even if they appear to be the same size.
- Survey the window area carefully and make additional measurements, if necessary.

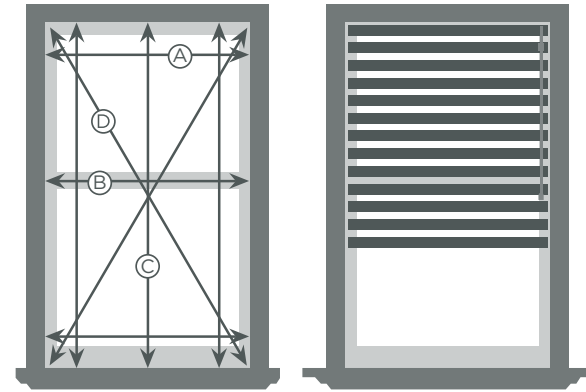

INSIDE OR OUTSIDE MOUNT

How you take your measurements will vary depending upon whether the blind fits within the window opening or overlaps the window opening.

ROUNDING YOUR MEASUREMENTS

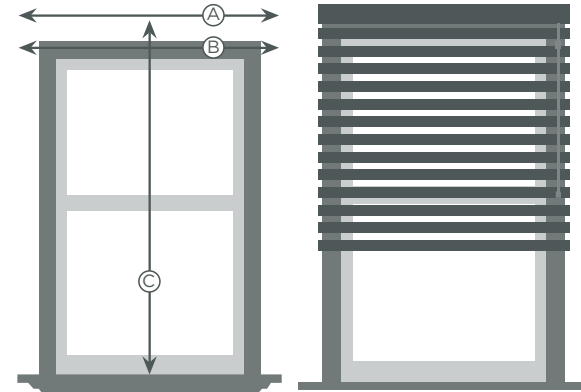

Dimensions on the order form should be accurate to within 1/8". Generally, round your measurements up to the nearest 1/8". However, with inside mounts, always round the width measurement down to the nearest 1/8". Rounding up could result in a shade that is too wide or too long to fit within the window opening. For example, for an inside mount, 3/16" would round to 1/8".

INSIDE MOUNT

- A.** Measure the width about 1 1/4" down from the top of the window, which typically is where the installation brackets will be mounted. Remember to round down to the nearest 1/8".
- B.** Measure the width at the center and bottom of the window. If the width narrows by more than 1" from the top measurement, the customer should consider an outside mount.
- C.** Measure the height of the window opening at three locations, as shown at right, and order the shortest measurement.
- D.** Measure window on the diagonal. If the two diagonal dimensions are not exactly the same, it may be more appropriate to specify an outside mount shade for optimal light control and privacy.
- E.** Measure depth of window for mounting brackets.

OUTSIDE MOUNT

- A.** Measure the desired width and height. To minimize light leakage, it is recommended that the blind overlap the window opening at least 1 1/2" on each side, as well as at the top and bottom.
- B.** Measure the width at the location where you want the blind, and use this measurement as your ordering width for the shade.
- C.** Measure the height from where the top of the blind will be located to where you want the bottom of the shade. A flat vertical surface at least 1 3/4" high is needed.

CUT-OUTS

A cut-out is a small rectangular area removed from a blind to avoid obstructions, usually from one of the corners or from the bottom.

Measure a cut-out like a standard rectangular blind, but also provide detailed measurements of the area to be removed. In addition, mark the measurements on a sketch of the cut-out to ensure accuracy.

SIZE STANDARDS

BOTTOM CENTER CUT-OUT

MINIMUM WIDTH (A)	18"
(C) & (E) MUST BE AT LEAST 7"	
MAXIMUM BLIND WIDTH (A)	96"
MAXIMUM BLIND HEIGHT (B)	126"

Top of cut-out raises to headrail.
Blind may have three bottomrails.

BOTTOM SIDE CUT-OUT

MINIMUM WIDTH (A)	18"
(E) MUST BE 6" OR LESS	
MAXIMUM BLIND WIDTH (A)	96"
MAXIMUM BLIND HEIGHT (B)	126"

Top of cut-out raises to headrail.
Blind may have two bottomrails.

HEADRAIL CUT-OUT

MINIMUM WIDTH (A)	18"
(D) MUST BE 6" OR LESS	
MAXIMUM BLIND WIDTH (A)	96"
MAXIMUM BLIND HEIGHT (B)	126"

Blind raises to bottom of cut-out, if (E) represents window obstruction.

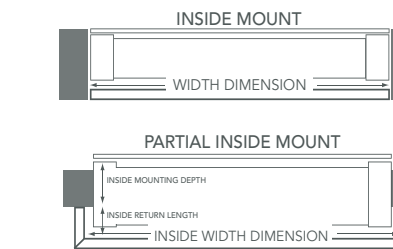

MEASURING FOR VALANCES AND CORNICES

Since valance and cornice profiles vary in thickness, manufacturing standards and allowances are always taken from the flat, back side of the profile. The shortest available return length is 1/2".

INSIDE MOUNT

- Valance or cornice is fully recessed in opening as a fascia to cover the front of the headrail. Standard width is 1/8" narrower than ordered blind width.
- If a width dimension other than the standard is required, indicate this in special instructions, along with the notation, "exact, no allowances".

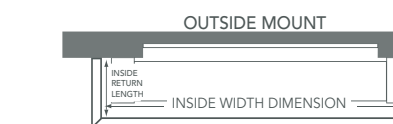

MINIMUM MOUNTING DEPTH	1 1/8"
MAXIMUM MOUNTING DEPTH	2 1/8"

OUTSIDE MOUNT

- Standard width, without extension brackets, is the blind width + 3/4". The standard valance return length is 2 5/8".

- If a width dimension and/or length other than the standard is required, provide the back inside dimensions for width and return, along with notation, "exact, no allowances".

NOTES

- We recommend that our actual fabric and paint samples be used for color matching.
- Our wood blinds are made from 100% kiln-dried basswood. Variations in color, grain, texture and stability should be expected due to the nature and characteristics of all woods. These variations will be especially visible in light color stains. The variations are natural and normal, and conform to industry standards. Due to the improved closure of blinds with routless privacy feature, slight bowing may become more noticeable when the slats are closed.

POLY BLINDS

Designed to perform, AHD's Everpoly collection offer the natural look of wood blinds with even more durability. Made from materials other than wood, these blinds won't warp or crack, even in humid conditions, making these blinds ideal for applications such as kitchens and bathrooms. Featuring a variety of natural looking finishes to compliment your style, these blinds are a stylish, economical alternative to wood blinds.

OPERATING SYSTEMS

LIFT & LOCK™ CORDLESS

Eliminates the danger of exposed cords and is easily adjusted by simply lifting or lowering the shade with a gentle push or pull on the bottomrail.

STANDARD CORD LOCK

Traditional cord operated blinds that raise from the bottom and stacks at the top for a simple, classic look.

2-ON-1 HEADRAIL

For large single windows, or two large windows side by side, this specialty shade provides the appearance of a single shade, with two sections operating independently.

3-ON-1 HEADRAIL

For very large single windows, or three large windows side by side, this specialty shade provides the appearance of a single shade, with three sections operating independently.

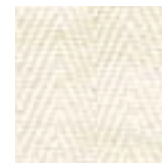

CLOTH TAPE

Our signature edge banding is a fashionable option for your Woven Woods. These cloth tapes will add a more tailored and complete look to your Woven Wood shades and are available in standard and deluxe widths.

Offered in fifteen colors that coordinate with your shades to give you a finished look to your overall decor. Standard cloth tape is equivalent to 1" of tape on the front and back of the shade.

MEASURING INSTRUCTIONS

BASIC GUIDELINES

Accurate measurements are absolutely essential. The measurements you provide are used first to price the blind, and then to fabricate it to the specified size. Follow these basic guidelines to ensure a smooth and accurate installation:

- Always use a steel tape measure, preferably 3/4" to 1" wide.
- Measure width first, then height.
- Measure each window separately, even if they appear to be the same size.
- Survey the window area carefully and make additional measurements, if necessary.

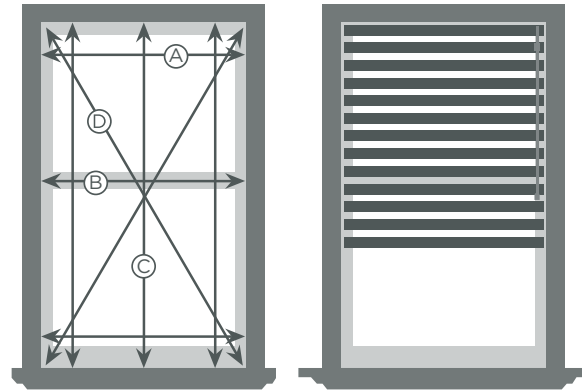

INSIDE OR OUTSIDE MOUNT

How you take your measurements will vary depending upon whether the blind fits within the window opening or overlaps the window opening.

ROUNDING YOUR MEASUREMENTS

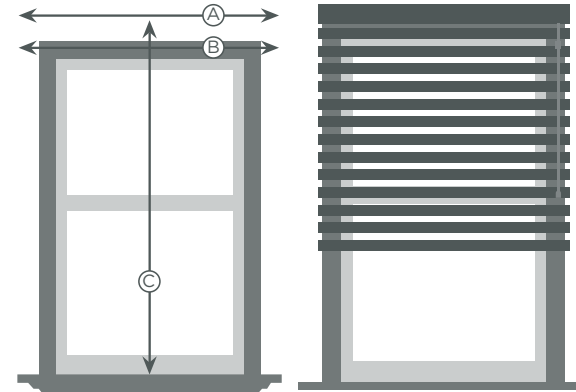

Dimensions on the order form should be accurate to within 1/8". Generally, round your measurements up to the nearest 1/8". However, with inside mounts, always round the width measurement down to the nearest 1/8". Rounding up could result in a shade that is too wide or too long to fit within the window opening. For example, for an inside mount, 3/16" would round to 1/8".

INSIDE MOUNT

- Measure the width about 1 1/4" down from the top of the window, which typically is where the installation brackets will be mounted. Remember to round down to the nearest 1/8".
- Measure the width at the center and bottom of the window. If the width narrows by more than 1" from the top measurement, the customer should consider an outside mount.
- Measure the height of the window opening at three locations, as shown at right, and order the shortest measurement.
- Measure window on the diagonal. If the two diagonal dimensions are not exactly the same, it may be more appropriate to specify an outside mount shade for optimal light control and privacy.
- Measure depth of window for mounting brackets.

OUTSIDE MOUNT

- Measure the desired width and height. To minimize light leakage, it is recommended that the blind overlap the window opening at least 1 1/2" on each side, as well as at the top and bottom.
- Measure the width at the location where you want the blind, and use this measurement as your ordering width for the shade.
- Measure the height from where the top of the blind will be located to where you want the bottom of the shade. A flat vertical surface at least 1 3/4" high is needed.

CUT-OUTS

A cut-out is a small rectangular area removed from a blind to avoid obstructions, usually from one of the corners or from the bottom.

Measure a cut-out like a standard rectangular blind, but also provide detailed measurements of the area to be removed. In addition, mark the measurements on a sketch of the cut-out to ensure accuracy.

SIZE STANDARDS

BOTTOM CENTER CUT-OUT

MINIMUM WIDTH (A)	18"
(C) & (E) MUST BE AT LEAST 7"	
MAXIMUM BLIND WIDTH (A)	96"
MAXIMUM BLIND HEIGHT (B)	126"

Top of cut-out raises to headrail.
Blind may have three bottomrails.

BOTTOM SIDE CUT-OUT

MINIMUM WIDTH (A)	18"
(E) MUST BE 6" OR LESS	
MAXIMUM BLIND WIDTH (A)	96"
MAXIMUM BLIND HEIGHT (B)	126"

Top of cut-out raises to headrail.
Blind may have two bottomrails.

HEADRAIL CUT-OUT

MINIMUM WIDTH (A)	18"
(D) MUST BE 6" OR LESS	
MAXIMUM BLIND WIDTH (A)	96"
MAXIMUM BLIND HEIGHT (B)	126"

Blind raises to bottom of cut-out, if (E) represents window obstruction.

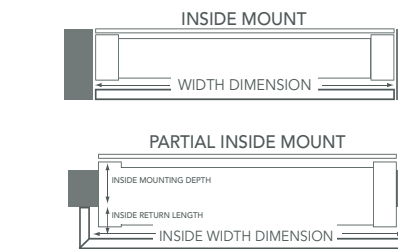

MEASURING FOR VALANCES AND CORNICES

Since valance and cornice profiles vary in thickness, manufacturing standards and allowances are always taken from the flat, back side of the profile. The shortest available return length is 1/2".

INSIDE MOUNT

- Valance or cornice is fully recessed in opening as a fascia to cover the front of the headrail. Standard width is 1/8" narrower than ordered blind width.
- If a width dimension other than the standard is required, indicate this in special instructions, along with the notation, "exact, no allowances".

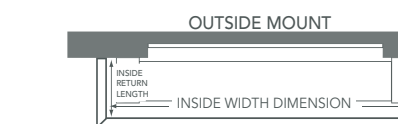

MINIMUM MOUNTING DEPTH	1 1/8"
MAXIMUM MOUNTING DEPTH	2 1/8"

OUTSIDE MOUNT

- Standard width, without extension brackets, is the blind width + 3/4". The standard valance return length is 2 5/8".

- If a width dimension and/or length other than the standard is required, provide the back inside dimensions for width and return, along with notation, "exact, no allowances".

MINI BLINDS

The first choice in window coverings, our Aluminum Blinds combine cost-effective features and fabrication options to offer you versatile window covering option.

Not only are these blinds incredibly durable, they also provide more energy efficiency option than most window coverings. With a variety of styles and colors, aluminum blinds are a perfect choice to add to your throughout your home.

OPERATING SYSTEMS

1" DELUXE

- Spring-tempered 8 gauge slats
- Heavy-duty headrail with integrated valance a smooth, reliable operation
- Privacy option
- Crash-proof cordlock and cast metal slip-clutch tilter provide smooth, reliable operation.

1" TRADITIONAL

- Spring-tempered 6 gauge slats
- Selection of 8 gauge slat colors also available
- Heavy-duty standard headrail with crash-proof cordlock and cast metal slip-clutch tilter ensures a smooth, reliable operation
- Two slat valance and clips or two slat channel valance

1" BASIC

- Spring-tempered 6 gauge slats
- Heavy-duty standard headrail with crash-proof cordlock and cast metal slip-clutch tilter ensures a smooth, reliable operation
- Two slat valance and clips standard

1" VALUE

- Spring-tempered 6 gauge slats
- Heavy-duty standard headrail with crash-proof cordlock and cast metal slip-clutch tilter ensures a smooth, reliable operation

MEASURING INSTRUCTIONS

BASIC GUIDELINES

Accurate measurements are absolutely essential. The measurements you provide are used first to price the blind, and then to fabricate it to the specified size. Follow these basic guidelines to ensure a smooth and accurate installation:

- Always use a steel tape measure, preferably 3/4" to 1" wide.
- Measure width first, then height.
- Measure each window separately, even if they appear to be the same size.
- Survey the window area carefully and make additional measurements, if necessary.

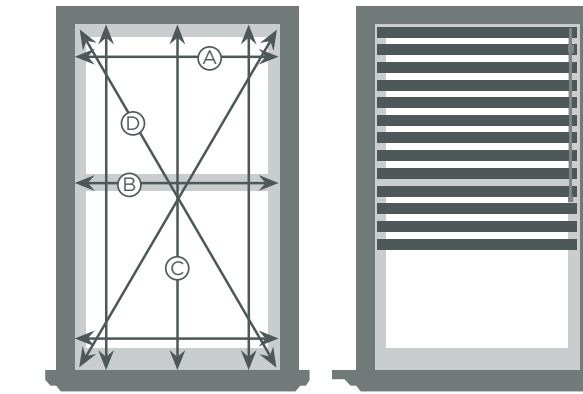

INSIDE OR OUTSIDE MOUNT

How you take your measurements will vary depending upon whether the blind fits within the window opening or overlaps the window opening.

ROUNDING YOUR MEASUREMENTS

Dimensions on the order form should be accurate to within 1/8". Generally, round your measurements up to the nearest 1/8". However, with inside mounts, always round the width measurement down to the nearest 1/8". Rounding up could result in a shade that is too wide or too long to fit within the window opening. For example, for an inside mount, 3/16" would round to 1/8".

INSIDE MOUNT

A. Measure the width about 1 1/4" down from the top of the window, which typically is where the installation brackets will be mounted. Remember to round down to the nearest 1/8".

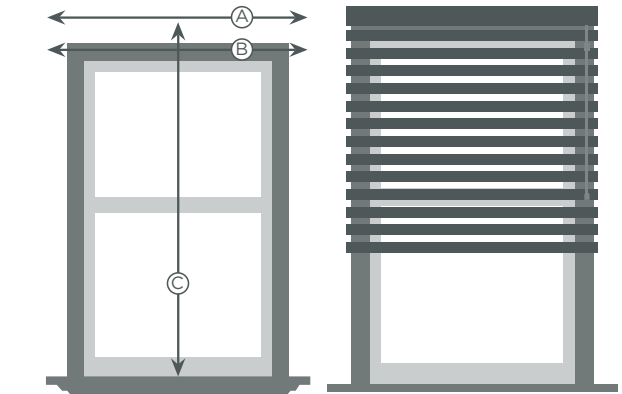

B. Measure the width at the center and bottom of the window. If the width narrows by more than 1" from the top measurement, the customer should consider an outside mount.

C. Measure the height of the window opening at three locations, as shown at right, and order the shortest measurement.

D. Measure window on the diagonal. If the two diagonal dimensions are not exactly the same, it may be more appropriate to specify an outside mount shade for optimal light control and privacy.

E. Measure depth of window for mounting brackets.

OUTSIDE MOUNT

A. Measure the desired width and height. To minimize light leakage, it is recommended that the blind overlap the window opening at least 1 1/2" on each side, as well as at the top and bottom.

B. Measure the width at the location where you want the blind, and use this measurement as your ordering width for the shade.

C. Measure the height from where the top of the blind will be located to where you want the bottom of the shade. A flat vertical surface at least 1 3/4" high is needed.

WARRANTY

AHD warrants all products to be free of defects in material and workmanship for as long as the original purchaser owns the products, provided that:

- (1) such products were installed in residential dwellings;
- (2) AHD recommendations were followed with regard to limitations and specifications.

Slight warpage, as well as natural variations in color and grain effect are normal with wood products are not considered defects. The obligation of AHD is limited to repair or replacement of the blinds or components found to be defective and excludes shipping charges incurred for the return of the products to consumer by AHD and any other incidental expenses incurred in the removal and reinstallation of the products.

This warranty does not cover and losses or damages resulting from accidents, alterations, misuse, abuse or water damage caused by condensation or failure to follow our instructions with respect to cleaning or proper maintenance.

Warranty claims must be accompanied by the proof of purchase, as well as details regarding the nature of the problem, location of the product and any additional information. In no event shall AHD or its distributors be liable or responsible for incidental or consequential damages, loss, cost, expense or fee. This is the complete warranty by AHD and no other express warranty is valid against AHD. This warranty gives you specific legal rights and you may have other various rights.

GENERAL PRODUCT GUIDELINES

WEAR AND TEAR

It is completely normal that with regular use, window coverings experience a certain amount of wear and tear. Use the following guidelines to determine if your window coverings fall within AHD's limited lifetime warranty.

- Painted Wood Products: 5 years against fading, paint chipping, discoloration or warpage.
- Aluminum Slats: 20 years
- Cords and Ladders: 5 years
- Roller Shades Spring/Chain Mechanism: Lifetime
- Roller Shade Fabric: 3 years
- Tilt and Lift Mechanisms: 5 years
