# Vegetables and Melons Situation and Outlook Yearbook

Gary Lucier and Alberto Jerardo

## Abstract

U.S. production of all vegetables, potatoes, melons, and pulse crops increased less than 1 percent in calendar year 2006. Although fresh and processed imports of these crops were also higher, inventories of processed vegetables coming into the year were lower. As a result, total supplies available for domestic consumption and export were down 1 percent to about 171 billion pounds in 2006. Lower supplies and higher energy costs pushed retail prices for all fresh and processed fruits and vegetables 5 percent above a year earlier—the greatest year-to-year increase since 1998. Because of the reduced supplies and a small gain in export volume, per capita net domestic use (disappearance) of all vegetables, potatoes, melons, and pulse crops declined 3 percent to 428 pounds (fresh-weight basis) in 2006. Canning vegetables, particularly tomato products, accounted for the majority of the decline in domestic vegetable use in 2006. On a fresh-equivalent basis, per capita disappearance of vegetables for processing (including potatoes and mushrooms) declined 10 percent to about 93 pounds led by a 12-percent reduction in processing tomato use. The decline in tomato use may have been an aberration caused by sharply higher wholesale tomato product prices during the second half of 2006, which slowed demand and prevented stocks from being drawn below year-earlier levels. Tomatoes accounted for about two-thirds of 2006 canning vegetable use. Fresh-market vegetable consumption (including melons, potatoes, sweet potatoes, and mushrooms) totaled about 222 pounds—down less than 1 percent from a year earlier. Fresh-market per capita use increased for commodities such as cauliflower, garlic, snap beans, cabbage, and bell peppers, and declined for spinach, head lettuce, onions, pumpkins, and celery. The U.S. vegetable and melon trade deficit widened in 2006 as the value of imports increased more than the value of vegetable and melon exports. In 2006, about 16 percent of all the vegetables and melons consumed domestically was imported, with 12 percent of potatoes and potato products being sourced from other nations, compared with 6 percent a decade earlier.

## Summary

### *Industry*

- Aggregate U.S. output of vegetables, melons, potatoes, and pulse crops rose less than 1 percent in 2006 to 130 billion pounds—largely unchanged from a decade earlier. Reduced production of lettuce, carrot, onion, and pulse crops (dry beans, dry peas, lentils) nearly offset stronger potato, sweet potato, and processing tomato crops.
- Harvested area increased 1 percent to 7.22 million acres due largely to a 15-percent surge in acreage devoted to dry edible peas. Potato and melon area also increased, outweighing declines in fresh and processing vegetable area.
- According to the Bureau of Labor Statistics, producer prices for vegetables averaged above a year earlier across most major product categories in 2006. Fresh-market vegetables (up 5 percent), canned vegetables (up 2 percent), frozen vegetables (up 2 percent), dehydrated vegetables (up 11 percent), fresh russet potatoes (up 32 percent) were higher, while prices for melons (down 5 percent) and pulse crops (down 20 percent) were lower.
- In 2006, retail prices for fresh and processed fruits and vegetables averaged 5 percent above the previous year, with the greatest increases in prices occurring during the winter (up 7 percent) and summer (up 5 percent) quarters. Retail prices for fresh vegetables were responsible for much of the increase, led by potatoes (up 10 percent) and tomatoes (up 8 percent). Changes in consumer prices for processed vegetables were more subdued in 2006, with canned vegetables averaging 3 percent more than the previous year and frozen vegetable prices up just 1 percent.
- According to preliminary data, cash receipts for all vegetables, potatoes, melons, pulses, and mushrooms rose 6 percent to \$18.9 billion in 2006, driven in part by larger revenues from the marketing of potatoes, tomatoes, lettuce, peppers, and melons.
- Imports of all vegetables, melons, pulse crops, and seed rose 10 percent to \$7.4 billion, led by increases for fresh vegetables, melons, and dehydrated vegetables. Mexico remained the top foreign source with 44 percent of import value, followed by Canada (24 percent), China (5 percent), and Peru (4 percent). Imports accounted for 16 percent of all vegetable, melon, and pulse crop disappearance in 2006, up from 10 percent a decade earlier.
- Exports of all vegetables, melons, pulse crops, and seed rose 9 percent to \$4.4 billion, led by increases for dry beans, potatoes, and fresh vegetables. Canada remained the top foreign market with 46 percent of export value, followed by Mexico (13 percent), Japan (12 percent), and Taiwan (2 percent). About 9 percent of total U.S. vegetable and melon supplies were exported in 2006—little changed from a decade earlier.
- In 2006, per capita disappearance of all vegetable, melon, and pulse crops fell 3 percent to 428 pounds (farm-weight basis). Potatoes remained the most popular vegetable crop in the United States (29 percent of total use), followed by tomatoes (20 percent), all lettuce (7 percent), sweet corn (6 percent), and onions (5 percent).

### *Fresh-market Vegetables*

- Production of 24 major fresh-market vegetables and melons (excluding potatoes, mushrooms, and pulse crops) declined 1 percent to 46.7 billion pounds in 2006. Much of the loss in output was due to a smaller head lettuce crop (down 7 million hundredweight (cwt)), caused by weather-reduced yields in California

and smaller planted area in response to lackluster 2005 prices. Production was also trimmed for a dozen other crops including tomatoes, spinach, onions, celery, asparagus, and artichokes. Increased output was seen in crops such as bell peppers, squash, leaf lettuce, and watermelon.

- Fresh-market production was down 2 percent in California, which accounts for 48 percent of annual fresh-market vegetable and melon output. Driven largely by lettuce and melon production, Arizona is the second-largest source of fresh-market vegetables and melons, with 9 percent of output. Florida, the third-largest-producing State, with 8 percent of annual output, saw 2006 output drop 8 percent as hurricane damage once again limited crop output.
- The farm value of production for the 24 top fresh vegetable and melon crops rose 3 percent to \$10.2 billion in 2006 as higher prices more than made up for lower production. More than half of all 2006 fresh-market vegetable and melon crops generated increased gross farm revenue, while the others had declining receipts. The top crop in terms of production value was fresh tomatoes at \$1.6 billion (about the same as a year earlier), followed by head lettuce at \$977 million (down 4 percent), dry bulb onions at a record-high \$962 million (up 13 percent), sweet corn at \$619 million (up 4 percent), and broccoli at \$617 million (up 9 percent).
- A cool, wet spring and extreme summer heat cut into yields in California, raising average farm prices and boosting the State's vegetable and melon farm value 11 percent to \$5.2 billion. California accounted for 51 percent of the national value of fresh-market vegetables, compared with 48 percent a year earlier. Production of fresh vegetables generated \$1.3 billion in crop value in Florida—down 19 percent from 2005 as both aggregate production and prices were lower.
- The farm value share of the retail cost of fresh vegetables increased 4 percent in 2006 to an estimated 18.9 percent. The farm value share increased for fresh potatoes, lettuce, and broccoli but declined for tomatoes. Despite recent weakness relative to the retail value, the shipping-point price of iceberg lettuce has averaged about 24 percent of the retail price this decade—slightly less than the 1990s but up slightly from the 1980s.
- Imports of fresh vegetables (excluding potatoes and melons) increased 11 percent to \$3.8 billion in 2006. Mexico accounted for 67 percent of import value, down from 73 percent a decade earlier. With strong U.S. demand for high-value greenhouse vegetables (largely tomatoes, peppers, and cucumbers), Canada continues to garner a larger share of the U.S. fresh-vegetable import market and now accounts for 19 percent of this market, compared with 9 percent a decade earlier. Peru (4 percent) and China (2 percent) have also increased their share of the U.S. fresh-vegetable import market over the past decade.
- The value of fresh vegetable exports (excluding potatoes and melons) increased 8 percent to \$1.6 billion in 2006. Export concentration has increased over the past decade, with Canada now accounting for 78 percent of U.S. fresh-vegetable export value—up from 69 percent a decade earlier. Japan accounted for 6 percent of the value of U.S. fresh vegetable exports in 2006, down from 14 percent 10 years earlier as nearby suppliers, such as China, ship more to Japan.
- On a per person basis, domestic disappearance for consumption of fresh-market vegetables (excluding melons, potatoes, sweet potatoes, pulses, and mushrooms) fell 1 percent to almost 146 pounds in 2006. Fresh use increased for crops like asparagus, snap beans, cabbage, cauliflower, bell peppers, garlic, and romaine and leaf lettuce and dropped for head lettuce, spinach, celery, onions, pumpkins, and tomatoes. In 2007, fresh-vegetable use is expected to rise slightly from that of a year earlier.

## *Processing Vegetables*

- Production of the major vegetables used for processing increased 2 percent to 15.95 million short tons in 2006. Although the majority of individual processing crops registered declines, gains in tomatoes, green peas, and lima beans were more than offsetting. Increased planted area drove tomato output up 4 percent to 10.6 million tons despite the second consecutive annual decline in tomato yields.
- For sweet corn, reduced area planted for canning outweighed a 2-percent gain in yield to pull production down. Production of sweet corn used for canned products fell 10 percent as processors cut acreage and contract prices in response to elevated stocks and continued soft demand. Production of sweet corn for frozen products increased 5 percent to 1.65 million tons as stronger yields reinforced a 1-percent gain in area. The national yield of sweet corn used for frozen products hit a record high of 8.57 tons/acre as processing yields in Washington and Minnesota set new yield standards.
- The value of production for processing vegetables rose 5 percent to \$1.32 billion due largely to higher prices for tomatoes, cucumbers, and snap beans. As with production, the top two crops in terms of farm value remain tomatoes (\$677 million) and sweet corn (\$206 million). The value of the processing-tomato crop rose 9 percent to \$677 million as both production and average price increased. California (up 12 percent to \$692 million), Minnesota (down 6 percent to \$109 million), and Wisconsin (up 6 percent \$104 million) remained the top three States for all processing crops.
- Producer prices for processed vegetables rose 2 percent in 2006, driven largely by 2-percent increases in both wholesale canned and frozen vegetable prices. In 2006, most of the wholesale price strength was with dehydrated vegetables which jumped 11 percent due to sharply higher prices for garlic powder, dried mushrooms, and onion powder.
- Consumer prices for processed fruits and vegetables rose 3 percent in 2006—the same increase experienced between 2004 and 2005. Retail prices for canned vegetables rose 3 percent in 2006, partly reflecting increased costs for processing inputs such as metal cans and energy. For frozen vegetables, retail prices rose 1 percent during 2006, with all of the gain coming during the first quarter. On average, retail prices for canned and frozen vegetables have risen about 2 percent annually since 1990.
- The value of processed vegetable (including potatoes) imports rose 9 percent in 2006 to \$1.7 billion. The top foreign sources remained Mexico (24 percent of the total), Canada (13 percent), China (12 percent), Peru (9 percent), and Spain (5 percent). Imports of canned vegetables (excluding potatoes and mushrooms) increased 9 percent to \$876 million, led by tomato products, which jumped 18 percent to \$200 million as prices increased during the year.
- Exports of processed vegetables (including potatoes) rose 8 percent to \$1.6 billion. The top destinations remained Canada (29 percent of the total), Japan (23 percent), and Mexico (13 percent). Frozen exports, which are dominated by potatoes, rose 12 percent in 2006 to \$682 million. Shipments of frozen vegetables to Japan, the top market, accounted for 37 percent of the total—down from 49 percent a decade earlier. While U.S. frozen vegetable exports to Japan have grown little over the past decade, shipments to Canada have risen from 11 percent of the 1997 total to 16 percent in 2006. Frozen shipments to Mexico were 13 percent of the 2006 total, compared with just 5 percent in 1997.
- Per capita disappearance of processing vegetables (excluding potatoes, sweet potatoes, and mushrooms) dropped 7 percent to 117 pounds in 2006 as a 10-percent decline in use of canning vegetables outweighed gains in use of

vegetables for freezing and dehydrating. The outlook for 2007 indicates a recovery in the use of processing vegetables led by increased use of canning tomatoes and pickling cucumbers.

### ***Melons***

- Production of the top three melon crops (watermelon, cantaloup, and honeydew) rose 4 percent in 2006 due to larger watermelon and honeydew crops. Harvested area for melon crops increased 2 percent to 255,600 acres, with the majority of the gain due to watermelon.
- The value of melon production fell 1 percent in 2006 to \$866 million as prices declined for watermelon and honeydew. The value of the watermelon crop fell 2 percent to \$435 million. Although watermelon prices fell 11 percent, they were the second strongest since the 2005 record high. Meanwhile, higher prices pushed the value of the cantaloup crop up 1 percent to \$341 million. According to BLS, producer prices for melons dropped 5 percent in 2006 with most of the downward price pressure coming from the watermelon market.
- The value of melon imports rose 13 percent to a record \$353 million in 2006. Mexico accounted for 46 percent of U.S. melon imports in 2006, with watermelon accounting for the majority of shipments. Guatemala (26 percent) and Costa Rica (16 percent) remained the next largest foreign melon suppliers to the United States, with cantaloup accounting for the majority of melon shipments from these two nations.
- In 2006, exports of melons fell 1 percent from the 2005 record to \$119 million, with watermelon accounting for half of the total. Canada (89 percent of export value), Japan (4 percent), and Mexico (4 percent) remained the top three foreign markets for U.S. melons. Despite a 15 percent reduction in watermelon export volume, the value of watermelon exports fell just 1 percent from the 2005 record high of \$61 million due to a 16-percent increase in average export unit value. The 20.2-cents-per-pound average export value was the highest for watermelon since 1991.
- Estimated disappearance of all melons totaled a record high 8.2 billion pounds in 2006—the second consecutive annual gain. On a per capita basis, domestic disappearance of the top 3 melon crops increased 6 percent from a year earlier to 27.3 pounds, driven largely by a 13-percent gain in watermelon use.

### ***Potatoes***

- U.S. potato production increased 3 percent to 435 million hundredweight (cwt) in 2006. Area harvested was also up 3 percent, while average yields were steady at 390 cwt per acre—just 1 cwt below the 2004 record. Idaho (28 percent of output), Washington (21 percent), and Wisconsin (7 percent) remained the top producing States in 2006. Yields reached record highs in Wisconsin, Nebraska, and Maine.
- According to preliminary estimates, the value of U.S. potato production rose 8 percent to a record-high \$3.2 billion in 2006. Gross revenue increased in all but 6 of the 31 surveyed potato States with production value rising in each of the top three producing States—Idaho (up 6 percent), Washington (up 1 percent), and Wisconsin (up 6 percent).
- The preliminary estimate of the 2006/07 season-average farm price for potatoes for all uses rose 5 percent to \$7.42 per cwt (equal to about 74 cents per pound). Despite a larger crop, demand was strong in 2006/07 and was reflected in higher prices for both fresh-market (tablestock) potato prices (up 1 percent) and for processing potatoes (up 6 percent to a record high).

- Retail prices for fresh white potatoes rose 13 percent in calendar year 2006 to a record-high 53.4 cents per pound (unadjusted for inflation). Retail prices in 2006 also reflected marketings from the short 2005 crop over the first half of the year. After declining the previous 2 years, retail prices for potato chips rose 3 percent to \$3.47 per pound in 2006.
- In 2006, U.S. potato exports expanded faster than imports, both in value and volume. A 13-percent gain in the value of all potato exports was due partly to higher export unit prices, which averaged 40 cents per pound, up from 38 cents in both 2005 and 2004. The net U.S. trade balance for potatoes jumped 75 percent in 2006 to a \$95-million surplus from \$54 million in 2005. Except for seed potatoes, frozen potatoes, and potato starch, the US net trade positions for fresh and other processed potatoes were all positive in 2006 and each grew at double-digit rates.
- In 2006, U.S. fresh and processed potato and potato product exports rose 13 percent to a record \$951 million. The top three markets remained Japan (26 percent of the total), Canada (24 percent), and Mexico (19 percent). Driven by higher potato prices, the value of fresh potato exports (excluding seed) rose 26 percent to a record \$129 million in 2006. Exports of frozen french-fried potatoes, the top potato export, reached record highs in terms of both volume and value, with export value rising 14 percent to \$467 million.
- Imports of all potato and potato products increased 9 percent to a record \$856 million in 2006. Canada remained the top foreign source, supplying 85 percent of U.S. potato and potato product imports, followed distantly by Mexico (7 percent) and the Netherlands (3 percent). Frozen french-fried potatoes accounted for 60 percent of all U.S. potato import value in 2006, with almost all entering from Canada.
- According to preliminary estimates, per capita disappearance of potatoes fell 1 percent in calendar 2006 to 124 pounds, with both fresh-market and processing potatoes registering declines. An increase in per capita use of all potatoes is expected in 2007 due partly to the influence of a modestly larger 2006 crop.

### *Sweet potatoes*

- U.S. sweet potato production increased 3 percent to 16.2 million cwt in 2006. Average yields increased 5 percent to a record 187 cwt per acre—the fourth consecutive year that yields have set a new standard. Area harvested fell 2 percent to 86,800 acres, with most of the reduction in Louisiana (down 21 percent) and Mississippi (down 10 percent), with summer drought and heavy fall rains (especially in Louisiana) increased acreage losses.
- The preliminary estimate of the value of the U.S. sweet potato crop indicated a gain of 6 percent in 2006 to \$298 million as slightly lower average prices were outweighed by a larger crop. Crop value in North Carolina, the leading producing State and the leader in sweet potato crop value, jumped 35 percent to a record \$114 million.
- The estimated marketing year-average price for sweet potatoes dropped 1 percent to 18.0 cents per pound. This was also 6 percent below the 2003 record high of 19.2 cents. With the exception of California (down 21 percent), state-level prices were higher than a year earlier in 2006/07.
- The value of U.S. fresh and frozen sweet-potato imports rose 24 percent to \$5.5 million. The Dominican Republic remained the largest foreign source of fresh and frozen sweet potatoes, with 84 percent of the 2006 U.S. import market.
- The value of fresh and frozen sweet-potato exports rose 33 percent to \$32 million, recovering all the decline experienced in 2005. Much of the gain was

the result of a 63-percent surge in the value of shipments to the United Kingdom. Canada and the United Kingdom remained the two top foreign markets for U.S. sweet potatoes in 2006, with 61 and 29 percent of export value, respectively.

- Despite strong export demand, the larger 2006 crop pushed domestic disappearance of sweet potatoes for all uses up 2 percent to 4.6 pounds per person. A small increase in per capita use is possible in 2007, with prospective harvested area rising, pushing output up.

### ***Dry Edible Beans***

- U.S. dry edible-bean production declined 9 percent to 24.2 million cwt in 2006 as per-acre yields fell. Area harvested increased slightly 1.54 million acres, while average yield per acre, dropped 10 percent to 15.77 cwt. North Dakota remained the top producer with 32 percent of the 2006 dry bean crop.
- Pinto beans remained the leading dry bean class in 2006, accounting for 40 percent of the U.S. dry bean crop. North Dakota produced 52 percent of the pinto crop, followed by Nebraska (14 percent) and Colorado (10 percent).
- Smaller production largely offset an 8-percent increase in the season-average price (estimated to be \$20.00/cwt) to leave the value of the U.S. dry bean crop up less than 1 percent at \$518 million in 2006/07. The value of the North Dakota dry bean crop was estimated to be \$139 million—27 percent of the U.S. crop value and 4 percent greater than a year earlier.
- Grower prices for dry beans increased in 2006/07, led by higher average prices for pinto beans (up about 50 percent) and Great Northern beans (up about 35 percent). Reflecting the types of beans produced and relative production costs, grower prices averaged the lowest in North Dakota at \$18.10 per cwt and highest in California at \$48.20 per cwt.
- The U.S. import value for dry edible beans rose 2 percent to \$84 million during calendar year 2006. Miscellaneous beans (e.g., yellow beans, blackgram, etc.), garbanzo beans, and black beans were the leading classes imported. Canada accounted for 30 percent of U.S. dry bean import volume, followed by China (20 percent) and Mexico (18 percent). Imports accounted for 12 percent of U.S. dry bean consumption in 2006, up from 5 percent a decade earlier.
- In 2006, about 20 percent of U.S. dry bean supplies were exported compared with 18 percent a decade earlier. The value of dry bean exports rose 26 percent to \$202 million in 2006. In terms of volume, Mexico (33 percent), Canada (11 percent), and the United Kingdom (8 percent) were the top foreign destinations. Pinto beans (267 million pounds), navy beans (117 million pounds), and black beans (87 million pounds) were the top three bean classes exported in 2006.
- Per capita use of dry beans increased 4 percent in 2006 to 6.4 pounds—the second consecutive annual increase after reversing a string of five consecutive annual declines last year. Little change is currently expected in net domestic dry bean use in 2007, with supplies remaining tight and prices high.
- In 2006, gains in per capita net domestic use were noted for both white (up 14 percent) and nonwhite bean (up 1 percent) classes. White beans (navy, Great Northern, lima, and small white) accounted for 21 percent of all dry beans available domestically—up from 19 percent a year earlier but down from 31 percent a decade ago. Although apparent market share was lower in 2006, nonwhite beans (e.g., pinto, dark red kidney, black, etc.) remained dominant, led by pinto beans, black beans, and the surging popularity of garbanzo beans (mostly kabuli chickpeas).

### ***Dry Peas and Lentils***

- Production of dry peas (including wrinkled seed peas but excluding chickpeas) and lentils declined 14 percent to 17.3 million cwt in 2006. Output of all dry peas fell 6 percent, while lentil production dropped 37 percent—after each had reached record highs in 2005. Per-acre yields were down from the relatively pedestrian levels of the previous year, especially in the upper Midwest where growing conditions were less favorable than a year earlier. Harvested area was up 15 percent for dry peas and down 7 percent for lentils.
- Based on preliminary estimates of season average prices, the value of all U.S. dry pea and lentil production (excluding marketing loans) totaled \$121 million in 2006/07—down 10 percent from a year earlier. All dry pea (dry peas, Austrian winter peas, wrinkled seed peas, and small chickpeas) crop value rose 4 percent to \$85 million as reduced production was outweighed by higher prices. The value of lentil output dropped 33 percent to \$36 million as a smaller crop outweighed a slight gain in the estimated season-average price.
- With a smaller crop for the first time in several years, the preliminary estimate of the 2006/07 season-average grower price for all dry peas rose 15 percent from a year earlier to \$5.49 per cwt. With large carryover stocks from the 2005/06 crop, lentil prices only increased 1 percent to \$11.10/cwt despite a 37-percent reduction in production.
- The value of dry pea and lentil imports jumped 46 percent to \$44 million during calendar 2006. In terms of volume, Canada (36 percent of the total), India (20 percent), and New Zealand (12 percent) were the top suppliers in 2006. Split peas (24 percent of the total), chickpeas (17 percent), and green peas (15 percent) were the top import classes in 2006.
- In 2006, the value of dry pea and lentil exports averaged 3 percent above a year earlier to \$149 million with lower average export prices being offset by an 11 percent increase in export volume. In terms of volume, India (16 percent of the total), Spain (14 percent), and Cuba (9 percent) were the top foreign destinations for U.S. dry peas and lentils in 2006. Whole green peas (32 percent of the total), yellow peas (30 percent), and lentils (21 percent) were the top export classes.
- Per capita disappearance of dry peas (excluding chickpeas) and lentils for domestic human food is estimated at 0.8 pound, about the same as the previous year. Annual export demand and all other uses (such as livestock feed) are each larger than estimated domestic food use.

### ***Mushrooms***

- In 2005/06, total U.S. mushroom sales volume declined 1 percent to 843 million pounds. The volume of agaricus mushrooms, which account 98 percent of all mushroom sales, declined 1 percent to 830 million pounds. Total agaricus area in production (fillings) declined 2 percent to 140 million square feet and was partly offset by a 1-percent gain in yield per square foot.
- Fresh-market agaricus sales volume rose nearly 1 percent to 701 million pounds, accounting for 84 percent of all agaricus sales. On the processing side, agaricus volume fell 9 percent after a rare increase the previous season—resuming the long run decline that began after the peak reached in 1992/93. Processing agaricus volume is now about half the 1992/93 peak.
- The sales volume of specialty mushrooms (excluding brown agaricus), most of which are sold in the fresh market, fell 10 percent to 13.5 million pounds as shiitake and oyster mushroom sales each declined.
- The brown agaricus mushroom category (including Portabello and Crimini varieties) continued its impressive growth trend of the last decade with sales

volume jumping 17 percent to a record 117 million pounds in 2005/06. The value of the brown mushroom crop also set a new standard, rising 17 percent to \$152 million.

- The total value of the 2005/06 mushroom crop was estimated to be down 3 percent to \$881 million, reflecting lower prices for both fresh and processing mushrooms. Growers in Pennsylvania accounted for 45 percent of the farm value of the agaricus mushroom crop followed by California with 20 percent.
- The season average price for fresh-market agaricus mushrooms declined 2 percent to \$1.12 per pound, while the unit value for processing mushrooms dropped 8 percent to 42.8 cents per pound—the lowest nominal dollar price since 1974 (40.9 cents).
- During the 2005/06 crop year, the value of all U.S. fresh-market and processed mushroom (excluding truffles and spawn) imports rose less than 1 percent to \$208 million. Import volume expressed on a fresh-weight equivalent basis dropped 12 percent to 341 million pounds. In terms of value, Canada (39 percent of the total), China (25 percent), and India (10 percent) were the leading foreign suppliers of all mushrooms and mushroom products. The value of canned mushroom imports declined 9 percent to \$97 million, with China (35 percent of the total), India (20 percent), and Indonesia (19 percent) the top sources.
- About 29 percent of all mushrooms used in the United States were imported in 2005/06, with substantially different situations in the fresh and processing markets. In the fresh market, 9 percent of mushroom consumption was satisfied through imports, while 69 percent of mushrooms consumed in processed form were imported. The import shares in both markets are trending higher.
- The value of U.S. mushroom and mushroom products exports (excluding spawn and truffles) fell 6 percent to \$23 million. The value of exports to Canada, the destination for 53 percent of U.S. mushroom exports, increased 15 percent in 2005/06.
- Disappearance of all mushrooms on a fresh-weight basis declined 5 percent to 1.17 billion pounds in 2005/06. On a per capita basis, use of all mushrooms fell 6 percent to 3.9 pounds, with a 16 percent drop to 1.3 pounds per person in mushrooms for processing outweighing a small increase in fresh-market use. For the 2006/07 season, per capita use of all mushrooms is projected to rise modestly from year-earlier levels to about 4.0 pounds, with small increases expected for both fresh-market and processing.

## Glossary of Specialized Terms

**Arrivals:** Quantity of produce received by wholesalers and chain stores in selected cities, as shipped from major production areas.

**Carryover stocks:** The quantity of product remaining in storage at the end of the crop year.

**Cash receipts:** The value of commodity marketings during the calendar year, irrespective of the year of production. For program crops, also includes net CCC loans (there are none for vegetables or potatoes).

**C.I.F. value:** (Cost, insurance, and freight). Terms of sale whereby the seller's (exporter) price includes the cost of the goods being sold and all transportation charges, including insurance expenses, to the destination point (importer).

**Cold storage:** The quantity of product in refrigerated warehouses at a given point in time.

**Constant 2000 dollars:** Expression of value in terms of purchasing power in the year 2000. Frequently referred to as deflated or real dollars.

**Contract acreage:** Area planted by agreement between processors and growers, generally at an agreed price and conditions, including quality.

**Customs Import Value:** Represents a value in the foreign country and therefore excludes U.S. import duties, freight, insurance, and other charges incurred in bringing the merchandise to the United States. This valuation is primarily used for collection of import duties and frequently does not reflect the actual transaction values (see C.I.F. value).

**Cwt:** Abbreviation for hundredweight, a unit of measure equal to 100 pounds.

**Dual-purpose vegetables:** Commodities that may be sold in fresh or processing markets. Dual commodities include (but are not limited to) asparagus, broccoli, cauliflower, celery, chile peppers, and bell peppers.

**Dumping:** The sale of a commodity in a foreign market at less than fair market value.

**Fall season:** Production period which mainly spans October to December.

**Farm weight:** The raw or unprocessed weight of a product in fresh form prior to any processing; also called fresh-weight, field-run, or orchard-run.

**F.A.S. (free alongside ship) value:** A price quotation that includes all costs of transportation and delivery of the goods to the dock alongside the ship (or other means of transport).

**F.o.b. (free on board) shipping-point price:** A price quotation that includes a loading charge at the shipping point but no further transport cost. In this publication, f.o.b. is the average, unweighted unit price received by the shipper or grower-shipper primarily for sales in carload or truckload quantities, but also including mixed loads.

**Fresh-cut vegetables (fresh-processed):** Fresh-market vegetables that have been trimmed, peeled, or cut (but not heated) into a completely usable fresh product, which is marketed in a prepackaged form. Examples include bagged salads, baby peeled carrots, and broccoli florets. In terms of the data in this report, these products are still considered fresh-market commodities.

**Fresh-market vegetables:** Sold primarily as fresh; includes artichokes, asparagus, green lima beans, snap beans, broccoli, brussels sprouts, cabbage, cantaloupes, carrots, cauliflower, celery, sweet corn, cucumbers, eggplant, escarole and endive, garlic, radishes, honeydews, lettuce, onions, bell peppers, spinach, tomatoes, and watermelons. Includes fresh-cut products such as baby carrots, baby spinach, and bagged salads.

**Grower-packer return:** Price received by the grower-packer.

**Marketing spread:** The difference between the retail price and the grower-packer return.

**Market year average (MYA) prices:** Represent weighted-average prices for crops sold during a specific marketing year. Marketing years generally vary by state and crop, with most U.S.-level fresh-market vegetables on a calendar year basis. State MYA prices are calculated as the weighted average of monthly prices using monthly shipments as weights. U.S. MYA prices are derived by dividing the sum of state-level crop values by the sum of their production volume.

**Pack:** The quantity of fresh or processed product placed in containers (e.g., cans). Generally refers to the output of a processing industry (e.g., frozen pack of broccoli).

**Pay weight:** The weight of useable product delivered to the processing plant and paid for at the rates specified by contract.

**Per capita use:** A measure of commodity disappearance on a per-person basis. Equal to total supply (production plus imports plus beginning stocks) less uses (exports, shrink and loss, seed use, ending stocks) divided by total U.S. population (including military). Also known as per capita net domestic use and presented by

ERS in both farm-weight equivalent (in this document) and retail-weight equivalent (on the ERS food consumption web site).

**Price at point of first sale:** An average price quotation that may be measured at any of several places in the marketing chain, including f.o.b. shipping point, the farm, farmer's market, grower auctions, bulk sales to a packer, U-pick operations, and roadside farm stands.

**Processing vegetables:** Commodities sold primarily to processors; include (but not limited to) green lima beans, snap beans, beets, cabbage, sweet corn, cucumbers, chile peppers, green peas, spinach, and tomatoes.

**Product weight:** The weight of a product in its final packaged form. For example, the weight of the contents of a can of tomato paste.

**Pulses:** A term used collectively for dry edible beans, dry edible peas, Austrian winter peas, chickpeas, and lentils.

**Retail weight:** The final weight of a farm product (e.g., fresh tomatoes, frozen broccoli, etc.) delivered to a retailer or foodservice purveyor's loading dock after adjusting for marketing/ processing losses and/or shrinkage from the product's original farm (or primary) weight.

**Season-average price:** Average price received by the grower-packer (grower-shipper), weighted by quantity marketed.

**Shipments:** Quantity of produce marketed from major production areas.

**Short ton:** A unit of measure equal to 2,000 pounds. A metric ton is equal to 1,000 kilograms or 2,204.62 pounds.

**Specialties:** A term for commodities (limited here to vegetables) not generally considered to be mainstream. Examples include jicama, dasheen, and cassava. May also include "minor vegetables," such as okra, chile peppers, pumpkins, and tropical vegetables.

**Spring season:** Production period which mainly spans April to June.

**Summer season:** Production period which mainly spans July to September.

**Value of production:** The value of commodities produced during the crop year. Calculated as production times marketing year average price. May be equal to cash receipts when the crop year for a vegetable runs from January through December.

**Winter season:** Production period which mainly spans January to March.

## Selected Conversion Factors

### General factors:

1 hundredweight (cwt) = 100 pounds  
1 cwt = 0.04536 metric tons  
1 ton = 2,000 pounds  
1 short ton = 1 ton (2,000 pounds)  
1 kilogram = 2.204622 pounds  
1 metric ton = 1,000 kilograms  
1 metric ton = 1.102311 short tons  
1 metric ton = 2,204.622 pounds  
1 hectoliter = 26.41721 gallons  
1 short ton per acre = 0.4467 times 1 metric ton per hectare  
1 cwt per acre = 1 hectogram per hectare divided by 1120.953  
1 hectare = 2.471 acres  
1 acre = 43,560 square feet  
1 square mile = 640 acres

Cents per pound = Dollars per cwt divided by 100.

### Selected farm-retail weight equivalents:

1 pound iceberg lettuce on farm = 0.97 pound whole unwrapped  
1 pound iceberg lettuce on farm = 0.98 pound whole wrapped  
1 pound iceberg lettuce on farm = 0.90 pound chopped lettuce  
1 pound iceberg lettuce on farm = 0.80 pound shredded lettuce

1 pound cabbage on farm = 0.97 pounds whole unwrapped  
1 pound cabbage on farm = 0.75 pounds shredded cabbage

1 pound broccoli on farm = 0.95 pound whole  
1 pound broccoli on farm = 0.78 pound broccoli crowns  
1 pound broccoli on farm = 0.55 pound broccoli florets

1 pound spinach on farm = 0.86 pound triple-washed bagged (over 3.5 inches)  
1 pound spinach on farm = 0.70 pound frozen spinach

1 pound tomatoes on farm = 0.85 pound fresh whole tomatoes at retail  
1 pound tomatoes on farm = 0.16 pound tomato paste  
1 pound tomatoes on farm = 0.57 pound canned whole tomatoes  
1 pound tomatoes on farm = 0.06 pound whole dried tomatoes

1 pound garlic on farm = 0.37 pound dry bulb garlic  
1 pound fresh (wet) chile peppers on farm = 0.125 pound dry-weight

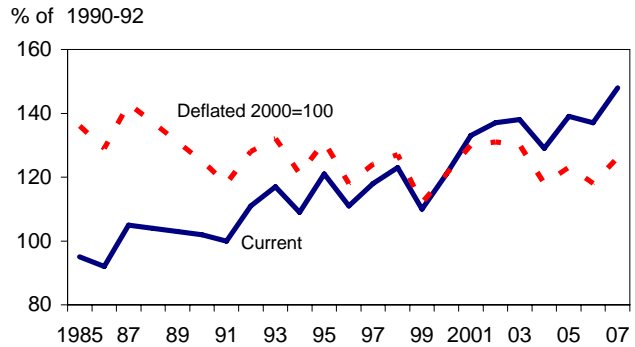

1 pound potatoes on farm = 0.95 pound fresh whole potatoes at retail  
1 pound potatoes on farm = 0.70 pound fresh-cut refrigerated potatoes  
1 pound potatoes on farm = 0.75 pound frozen mashed potatoes  
1 pound potatoes on farm = 0.53 pound frozen french fries  
1 pound potatoes on farm = 0.23 pound potato chips  
1 pound potatoes on farm = 0.20 pound dehydrated potatoes

41. Lettuce: U.S. monthly and annual exports, 1990-2007.....	57
42. Onions, fresh market: U.S. monthly and season-average f.o.b. shipping-point price, 1979-2007.....	58
43. Onions, fresh market: U.S. monthly and annual imports, 1979-2007.....	59
44. Onions, fresh dry bulb: U.S. monthly and annual exports, 1990-2007..	60
45. Snap beans, fresh market: U.S. monthly and season-average f.o.b. shipping-point price, 1996-2007. ....	61
46. Snap beans: U.S. monthly and annual imports, 1989-2007.....	62
47. Sweet corn, fresh market: U.S. monthly and season-average f.o.b. shipping-point price, 1979-2007.....	63
48. Tomatoes, fresh market: U.S. monthly and season-average f.o.b. shipping-point price, 1979-2007.....	64
49. Tomatoes, field-grown, fresh market: U.S. monthly and annual, retail price, 1979-2007.....	65
50. Tomatoes, fresh market: U.S. monthly and annual retail price index, 1979-2007.....	66
51. Tomatoes, fresh market: U.S. monthly and annual imports, 1980-2007.....	67
52. Tomatoes, all, fresh-market: U.S. monthly and annual exports, 1990-2007.....	68

***Fresh and Processing Supply and Use***

53. U.S. fresh tomatoes (field and hothouse): Supply, utilization, and price, farm weight, 1979-2007.....	69
54. U.S. fresh bell peppers: Supply, utilization, and price, farm weight, 1979-2007 .....	70

55. U.S. fresh head lettuce: Supply, utilization, and price, farm weight, 1979-2007.....	71
56. U.S. leaf and romaine lettuce: Supply, utilization, and price, farm weight, 1990-2007.....	72
57. U.S. fresh onions: Supply, utilization, and price, farm weight, 1979-2007.....	73
58. U.S. fresh sweet corn: Supply, utilization, and price, farm weight, 1979-2007.....	74
59. U.S. fresh carrots: Supply, utilization, and price, farm weight, 1979-2007.....	75
60. U.S. fresh broccoli: Supply, utilization, and price, farm weight, 1979-2007.....	76
61. U.S. fresh cauliflower: Supply, utilization, and price, farm weight, 1979-2007.....	77
62. U.S. fresh asparagus: Supply, utilization, and price, farm weight, 1979-2007.....	78
63. U.S. fresh celery: Supply, utilization, and price, farm weight, 1979-2007.....	79
64. U.S. fresh cucumbers: Supply, utilization, and price, farm weight, 1979-2007.....	80
65. U.S. cabbage: Supply, utilization, and price, farm weight, 1979-2007.....	81
66. U.S. artichokes, all uses: Supply, utilization, and price, farm weight, 1979-2007.....	82
67. U.S. eggplant, all uses: Supply, utilization, and price, farm weight, 1979-2007.....	83
68. U.S. garlic, all uses: Supply, utilization, and price, farm weight, 1979-2007.....	84
69. U.S. fresh-market snap beans: Supply, utilization, and price, farm weight, 1979-2007.....	85
70. U.S. fresh-market spinach: Supply, utilization, and price, farm weight, 1979-2007.....	86
71. U.S. fresh-market potatoes: Supply, utilization, and price, farm weight, 1979-2007.....	87
72. U.S. honeydew melons: Supply, utilization, and price, farm weight, 1979-2007.....	88
73. U.S. cantaloup: Supply, utilization, and price, farm weight, 1979-2007.....	89
74. U.S. watermelon: Supply, utilization, and price, farm weight, 1979-2007.....	90
75. U.S. asparagus for freezing: Supply, utilization, and price, farm weight, 1979-2007.....	91
76. U.S. broccoli for processing: Supply, utilization, and price, farm weight, 1979-2007.....	92
77. U.S. cauliflower for processing: Supply, utilization, and price, farm weight, 1979-2007.....	93
78. U.S. green peas for freezing: Supply, utilization, and price, farm weight, 1979-2007.....	94
79. U.S. snap beans for freezing: Supply, utilization, and price, farm weight, 1979-2007.....	95
80. U.S. sweet corn for freezing: Supply, utilization, and price, farm weight, 1979-2007.....	96

81. U.S. potatoes for freezing: Supply and utilization, farm weight, 1979-2007.....	97
82. U.S. spinach for freezing: Supply and utilization, farm weight, 1979-2007.....	98
83. U.S. carrots for freezing: Supply and utilization, farm weight, 1979-2007.....	99
84. U.S. tomatoes for processing: Supply, utilization, and price, farm weight, 1979-2007.....	100
85. U.S. sweet corn for canning: Supply, utilization, and price, farm weight, 1979-2007.....	101
86. U.S. snap beans for canning: Supply, utilization, and price, farm weight, 1979-2007.....	102
87. U.S. green peas for canning: Supply, utilization, and price, farm weight, 1979-2007.....	103
88. U.S. cucumbers for pickles: Supply, utilization, and price, farm weight, 1979-2007.....	104
89. U.S. sweet potatoes, all uses: Supply, utilization, and price, farm weight, 1979-2007.....	105
90. U.S. squash, all uses: Supply, utilization, and price, farm weight, 1979-2007.....	106
91. U.S. onions for dehydrating: Supply, utilization, and price, farm weight, 1979-2007.....	107

***Fresh Marketing Spreads***

92. Broccoli: U.S. monthly average retail price, marketing spread, and shipping-point price, 1995-2007.....	108
93. Lettuce, iceberg: U.S. monthly average retail price, marketing spread, and shipping-point price, 1979-2007.....	109
94. Tomatoes, fresh field-grown: U.S. monthly average retail price, marketing spread, and shipping-point price, 1979-2007.....	110
95. Potatoes, fresh: U.S. retail price, marketing spread, and grower-packer return, 1979-2007.....	111

***Processing Vegetables***

96. Vegetables, selected: Fresh and processing per capita utilization, 1979-2007.....	112
97. Vegetables, processing: Harvested acreage for canning and freezing, 1979-2006.....	113
98. Vegetables, processing: Production for canning and freezing, 1979-2006.....	114
99. Vegetables, processing: Value of production for canning and freezing, 1979-2006.....	115
100. Vegetables, processing: Raw product prices for canning and freezing, 1979-2006.....	116
101. Vegetables, processed: U.S. monthly and annual retail price index, 1988-2007.....	117
102. Vegetables, processing: Selected U.S. per capita utilization, 1979-2007.....	118
103. Vegetables and fruits, dehydrated: U.S. monthly and annual producer price index, 1982-2007.....	119

104. Vegetables, canned: U.S. monthly and annual producer price index, 1979-2007.....	120
105. Vegetables, canned: Selected U.S. imports, by type, 1979-2006.....	121
106. Vegetables, canned: Selected U.S. exports, by type, 1979-2006.....	122
107. Selected canned vegetables: U.S. export value to selected countries and the world, 2001-2006.....	123
108. Selected canned vegetables: U.S. import value from selected countries and the world, 2002-2006.....	124
109. Vegetables, frozen: Pack and carryover, 1979-2006.....	125
110. Vegetables, frozen: Annual pack of major vegetables, 1979-2004.....	126
111. Vegetables, frozen: January 1 stocks of major vegetables, 1979-2007.....	127
112. Vegetables, frozen: U.S. monthly and annual producer price index, 1979-2007.....	128
113. Vegetables, frozen: U.S. imports, by type, 1979-2006.....	129
114. Vegetables, frozen: U.S. exports, by type, 1979-2006.....	130
115. Selected frozen vegetables: U.S. import value from selected countries and the world, 2002-2006.....	131
116. Selected frozen vegetables: U.S. export value to selected countries and the world, 1999-2006.....	132

### ***Potatoes and Sweet Potatoes***

117. Potatoes: Harvested acreage, by season, 1979-2007.....	133
118. Potatoes: Production, by season, 1979-2007.....	134
119. Potatoes, all seasons: Production, by major State, 1979-2006.....	135
120. Potatoes, all seasons: Crop-year utilization, 1979-2005.....	136
121. Potatoes: Season-average price and value of farm sales by season, 1979-2005.....	137
122. Potatoes, all: U.S. monthly and season-average grower price, 1986-2007.....	138
123. Potatoes, fresh market: U.S. monthly and annual retail price index, 1979-2007.....	139
124. Potatoes, frozen french fries: U.S. monthly and annual producer price index, 1979-2007.....	140
125. Potatoes: U.S. monthly retail price, by product, 1987-2007.....	141
126. Potatoes: Selected U.S. imports, by type, calendar 1979-2006.....	142
127. Potatoes: Selected U.S. exports, by type, calendar 1979-2006.....	143
128. Potatoes: U.S. per capita utilization, by category, 1978-2007.....	144
129. Sweet potatoes: Production, by State, 1979-2006.....	145
130. Sweet potatoes: U.S. acreage, yield, production, and value, 1979-2007.....	146

### ***Pulses***

131. Dry edible beans: Harvested acreage, by State, 1979-2007.....	147
132. Dry edible beans: Production, by class, 1979-2006.....	148
133. Dry edible beans: Production, by State, 1979-2006.....	149
134. Dry edible beans: Value of production, by State, 1979-2006.....	150
135. Dry edible beans: Season-average wholesale price, by class, 1979-2006.....	151

136. Dry edible beans: U.S. monthly and season-average grower price, crop year 1979/80-2006/07.....	152
137. Dry edible beans: U.S. imports, by class, 1979-2007.....	153
138. Selected dry beans: U.S. export value to selected countries and the world, 2003-2006.....	154
139. Dry edible beans: U.S. exports, by class, 1979-2007.....	155
140. Dry edible beans: U.S. per capita disappearance (use) for selected classes, 1977-2007.....	156
141. Dry edible peas: U.S. acreage, yield, production, and value, 1979-2007.....	157
142. Lentils, dry: U.S. acreage, yield, production, and value, 1979-2007.....	158
143. Austrian winter peas, dry: U.S. acreage, yield, production, and value, 1979-2007.....	159
144. Dry edible peas and lentils: U.S. producer price index, 1991/92-2006/07.....	160
145. Dry peas and lentils: U.S. exports, by class, 1979-2006.....	161
146. Dry peas and lentils: U.S. imports, by class, 1979-2006.....	162

### ***Mushrooms***

147. Agaricus mushrooms: Production, by type of sale, 1970/71-2005/06....	163
148. Agaricus mushrooms: Price and value, by type of sale, 1970/71-2005/06.....	164
149. Mushrooms: U.S. monthly and annual imports, 1992-2006.....	165
150. Mushrooms, fresh-market and canned: U.S. monthly and annual exports, 1989-2006.....	166
151. Mushrooms, all: U.S. per capita utilization, 1970-2007.....	167
152. Specialty mushrooms: Production, price and value, by type of sale, 1986/87-2005/06.....	168
153. U.S. fresh-market mushrooms, all: Supply, disappearance, and price, farm weight, 1979-2007.....	169
154. U.S. mushrooms for processing, all: Supply, disappearance, and price, farm weight, 1979-2007.....	170

### ***Specialties and World Production***

155. Specialty vegetables: Fresh and processed imports, 1980-2006.....	171
156. Specialty and minor vegetables, fresh and processed: Harvested acreage, California, 1992-2005.....	172
157. Specialty and minor vegetables, fresh and processed: Production, California, 1992-2005.....	173
158. Specialty and minor vegetables, fresh and processed: Value of production, California, 1992-2005.....	174
159. Specialty vegetables, fresh market: U.S. domestic and imported shipments, 1992-2006.....	175
160. Selected vegetable production in leading countries and the world, 1997-2005.....	176
161. Selected vegetable harvested acreage in leading countries and the world, 1997-2005.....	179

f = Forecast. r = Revised. -- = Not available. 1/ All production for processing broccoli and cauliflower is for freezing. 2/ On-cob basis. 3/ In-shell basis. 4/ Includes domestically-produced hothouse tomatoes after 1996 (all years include imported hothouse tomatoes). 5/ Includes artichokes, brussels sprouts, eggplant, endive/escarole, garlic, radishes, green limas, squash, & spinach. In 2000, okra, pumpkins, kale, collards, turnip greens, and mustard greens added. 6/ Includes beets, green limas (1992-2004), spinach, and miscellaneous imports (1990-2004). 7/ Includes green limas, spinach, and miscellaneous freezing vegetables. 8/ Fresh, canning, and freezing data do not sum to the total because onions for dehydrating are included in the total. 9/ Production from new areas in the upper Midwest added in 1998. A portion of this is used for animal feed.

1/ Due to changes in the estimates program, data for 2000 and 2001 may not be comparable with other years. Includes fresh-cut/processing.

2/ Excludes melons, potatoes, sweet potatoes, pulse crops, and mushrooms.

3/ Excludes potatoes, sweet potatoes, mushrooms, pulse crops, and fresh-cut produce.

4/ Includes chickpeas and blackeye peas.

5/ Excludes chickpeas and blackeye peas. Production includes wrinkled seed peas.

1/ Includes domestic and import shipments. Table units are hundredweight (cwt), with one cwt equal to 100 pounds. 2/ Cantaloup shipments beginning with 1989 are not comparable with prior years due to reduced reporting. 3/ Spinach shipments beginning with 1992 are not comparable with prior years due to reduced reporting.

4/ Includes greenhouse tomatoes. 5/ Includes grape tomatoes. 6/ Includes seed.

-- = Not available.

1/ Includes Hawaii. 2/ Includes fresh-market production only for these dual-use crops. 3/ After 2002, data from California County Agricultural Commissioners.

4/ Only includes those 10 commodities for which data were available during the 1982-91 period. Excludes asparagus in 1982 and 1983. 5/ ERS estimates for 2005.

p = Preliminary. 1/ Excludes melons, potatoes, and mushrooms. 2/ Monthly distribution as reported by the Census is partly in error for 1976, 1980, 1981, and 1986. For July and August of 1981 and May of 1986, some quantities are included that actually arrived in earlier months. 3/ Import data beginning January 1989 are reported under the Harmonized Tariff Schedule (HS) of the U.S. Department of Commerce.

Source: Prepared by USDA, Economic Research Service using data provided by U.S. Department of Commerce, U.S. Census Bureau.

-- = Not available. f = ERS forecast.

1/ Excludes potatoes, sweet potatoes, and mushrooms. 2/ Includes fresh and processing. 3/ After 1996, includes an ERS estimate of domestically-produced hothouse tomatoes. Hothouse tomato imports are included in all years. 4/ Includes radishes, Brussels sprouts, squash, and green lima beans. Green lima beans included since 1992. Beginning with 2000, also includes collards, kale, mustard greens, turnip greens, okra, and pumpkins.

p = Preliminary. 1/ Includes asparagus, green beans, broccoli, Brussels sprouts, cabbage, cauliflower, carrots, cucumbers, sweet corn, garlic, celery, lettuce, onions, peppers, tomatoes, and misc. vegetables. Excludes melons, potatoes, pulses, and mushrooms. 2/ With the exception of the "all other vegetables" category, USDC data for exports to Canada during 1979-89 were adjusted using import data from Statistics Canada.

Source: Prepared by USDA, Economic Research Service using data provided by U.S. Dept. of Commerce, U.S. Census Bureau and Statistics Canada (1979-89).

1/ Monthly prices are averages received at the f.o.b. shipping point through 2005. Thereafter, prices are measured at the point of first sale. The season average is the weighted average price received by producers at the point of first sale. Data collection resumed in 1995 after the estimates program had been eliminated in 1994.

1/ Monthly prices are averages received at the f.o.b. shipping point through 2005. Thereafter, prices are measured at the point of first sale. The season average is the weighted average price received by producers at the point of first sale. Data collection resumed in 1996 after the estimates program had been eliminated in 1995.

1/ Includes all fresh tomato imports including round, roma (plum), greenhouse (hothouse), cherry, and grape types. 2/ Monthly distribution as reported by the Census Bureau is partly in error for 1981 and 1986. For July and August of 1981 and May of 1986, some quantities are included that actually arrived in earlier months. 3/ Import data beginning January 1989 are reported under the harmonized tariff schedule (HS), U.S. Dept. of Commerce

Source: Prepared by USDA, Economic Research Service using data provided by U.S. Department of Commerce, U.S. Census Bureau.

1/ Source: National Agricultural Statistics Service, USDA. Production was adjusted by ERS for 1970-81 to account for States not included in NASS estimates. Includes ERS estimates of domestically-grown hothouse tomatoes after 1996. 2/ Source: Bureau of the Census, USDC. From 1978-89, U.S. exports were adjusted using Canadian import data. Imports include hothouse tomatoes. 3/ Includes shipments to U.S. territories from 1978-88. These were previously included in U.S. exports. 4/ Constant dollar prices were calculated using the GDP implicit price deflator, 2000=100

Source: Prepared and calculated by USDA, Economic Research Service.

1/ Largely head cabbage. End of year stocks and shrinkage are not included.

2/ Source: National Agricultural Statistics Service, USDA. From 1982-91, U.S. production and price were estimated by ERS based on available State reports.

3/ Source: Bureau of the Census, U.S. Department of Commerce. From 1978-89, U.S. exports were adjusted using Canadian import data. Excludes sauerkraut.

4/ New York data through 2002. Estimated by ERS thereafter. 5/ Constant-dollar prices were calculated using the GDP implicit price deflator, 2000=100.

Source: Prepared and calculated by USDA, Economic Research Service.

1/ Excludes onions for fresh, canning, and freezing. 2/ From 1979-92, estimated by ERS as 76 percent of California summer crop.

After 1992, production for processing estimated by USDA/NASS. Price data also estimated by USDA/NASS starting in 1993 crop. 3/ Product-weight data was converted to fresh basis using factor of 9.0. 4/ Data from *FATUS*, USDA-ERS.

5/ Stocks are for raw product to be processed and do not include finished inventory. Estimated by ERS as 80 percent of California summer onion stocks from 1970-80. Since 1980, estimated by ERS as 2.5 percent of U.S. Jan 1 onion inventory.

6/ Estimated by ERS as 50 percent of California's summer crop shrinkage and loss (assumes lower shrink in processing)

7/ Unit value of California onions destined for processing. 8/ Deflated by the GDP implicit price deflator, 2000=100

Source: Prepared and calculated by USDA, Economic Research Service.

-- = Not available.

1/ Exports are in product weight as reported by Census. Due to under-reporting, U.S. exports to Canada prior to 1990 may be understated.

2/ Excludes shelled beans. 3/ Data were converted from gallons using a factor of 8.485 pounds per gallon. 4/ Tomato products not elsewhere classified. For 1989-2005, largely represents whole tomatoes.

p = Preliminary. f = NASS forecast. 1/ Prior to 1993, estimates based on data from the USA Dry Pea and Lentil Council as USDA did not make prior estimates.

2/ Prior to 1992, unit prices and values estimated using price data reported by the *Bean Market News*, Agricultural Marketing Service, USDA.

Source: USDA, National Agricultural Statistics Service, *Crop Production* and *Crop Values*, USDA, Agricultural Marketing Service, *Bean Market News Summary*, (1979-92), and USA Dry Pea and Lentil Council (1979-92).

1/ Crop year begins July 1 and ends June 30. 2/ From 1970 to 1988, includes all dried, desiccated, and dehydrated peas, other than split peas. After 1988, under the Harmonized Tariff Schedule, green, yellow, and split peas were shown separately. 3/ From 1979 to 1988, includes green and yellow peas.

After 1988, includes split peas only. 4/ Includes Austrian winter peas and misc. dry peas. 5/ Planting seed. Excludes chickpeas. 6/ Pea data series broken following the 1987/88 season due to the January 1989 change to the harmonized system. Data in this table prior to 1989 are on a Sept-Aug year.

p = Preliminary. -- = Not available. Units are million hundredweight (cwt). One million cwt is equal to 100 million pounds or 50,000 US tons.

1/ Includes fresh and processing production. U.S. data may not match data elsewhere in this report due to reporting delays. Some U.S. data was updated by ERS. 2/ The United States was eleventh largest in 2005. 3/ The U.S. is the eighth largest producer. 4/ The U.S. is the nineteenth largest producer.

5/ Largely string beans. 6/ Includes green peppers and chile peppers. 7/ The U.S. is fifteenth largest. 8/ U.S. data revised by ERS to match data reported by USDA, NASS. World total also adjusted. 9/ Excludes potatoes, sweet potatoes, and dry pulse crops but includes green (fresh) pulses, and mushrooms.

Source: Derived from data supplied by United Nations Food and Agriculture Organization, FAOStat (<http://faostat.fao.org/site/567/default.aspx>).
