

# 2019-2020 Seed Catalog

## A Family Business Since 1932

### TO OUR MANY FRIENDS -

As we begin our 88th year, we continue with a new look for our seed catalog! Last year we changed a few things. We went to a color layout which will allow us to use contrasting colors for you to better see the varieties and special information. Combined all of the flowers together into one alphabetical listing. You will now see three sections : **FLOWERS, HERBS, VEGGIES**. We are hoping that by combining the annuals, perennials, grasses and vining crops into one alphabetical list, while still highlighting what category they pertain to, will make it easier to find items. Plus more pictures! Incorporating more pictures allows us to highlight some of the very special items we offer and will make it easier for you to get a snapshot of what they look like.

This year brings over 150 new and exciting items to the seed catalog! Many new series being added and improvements to series and colors continue to make this catalog a trusted guide for your business. There is so much available in the market - if you do not see it in this catalog, please feel free to contact us and we will source it for you.

We have improved our online catalogs and ordering system to allow you to find products and order them easily, online and on your time table. Most of the varieties we carry have pictures available online for both seeds and plants - check it out at ORDER ONLINE at [www.germaniaseed.com](http://www.germaniaseed.com). We know you will be pleased with the ease of ordering that is available online.

The changes and improvements are endless, but all of them come down to better customer service and providing you the best products available. We stand by our motto that **Personal Service is the Foundation of our Business!**

Thank you for your continued confidence, best wishes for a healthy and prosperous year!

**DOWNY MILDEW RESISTANCE!** These two series have been bred to be HIGHLY downy mildew resistant. Now it is time to take back the shade!

Since 2011, Impatiens downy mildew (IDM) has decimated Impatiens beds across the globe. IDM is caused by a host-specific water mold, *Plasmopara obducens*. When present, and environmental conditions are met (high humidity and cool night temperatures), the disease can spread rapidly, resulting in flower drop and eventually plant collapse – a loss of impatiens in your garden! Both airborne and overwintering spores meant this popular shade garden flower couldn't be grown with confidence because of the threat of disease.

At first, gardeners planted alternatives for shade colour: Begonia, Torenia, Coleus, as well as New Guinea Impatiens, which are not susceptible to the disease. But nothing could take the place of the traditional Impatiens walleriana garden fill, color range and performance.

What is HIGH RESISTANCE? The plant highly restricts the growth and/or development of the pathogen/damage it causes under normal pressure when compared to susceptible varieties under similar environmental conditions and pressures.

7-8 weeks sowing to flower in packs. The number one bedding plant in North America, Impatiens offer a wide array of brilliant colors and thrive with minimum care. Blooms continuously from mid-summer until frost. A most valuable bedding plant for shady places. As a pot plant they bloom the year round. Impatiens are easily grown from seed. For satisfactory germination, soil temperature of 72°-76° must be maintained at all times with an even moisture level. Do not cover seeds with mix or media, light induces a more even and higher germination level. Use bottom heat if possible. (Keep seed flats out of direct sunlight.)  
Due to the breeder's development efforts, we can assure you of a high germination percentage of at least 92% on all Super Elfin, Accent and Xtreme varieties.

Also see listing of Delphinium.

## LARKSPUR

8,000 sds/oz 55° 21 days

For the best germination, cover seeds lightly after sowing. Darkness will help germination. Freeze seed 3-5 days before sowing.

Sow outdoors in late fall or in early spring as soon as the ground can be worked. 2 lbs. seed will grown an acre, 1 oz. a row 600-700 ft. For growing under glass, space 10 in. x 10 in. on raised benches and maintain a night temperature of not over 50°.

Seed does not germinate well in hot weather. If a sowing must be made in summer heat, chill it for several days in a refrigerator (45°-50°) or set the seed flat under a bench or in a cool shed. It takes from 2-3 weeks to germinate, sometimes longer. Following varieties are the best for growing under glass and outdoor cultivation. They retain the desirable height and basal branching habit of the Giant Imperials; have Delphinium-like florets on long, thick spikes. Will attract hummingbirds all season.

# HERBS

Harvest your favorite herbs from June until frost. Collect your favorite varieties for drying indoors. Pick the flowers when the blossoms are fully open, leaves should be harvested before the plants bloom. When drying, strip the leaves from the bottom 6-8 inches of each stem. Gather into a bundle by tying the stems together and hanging upside down to dry. The leaves and flowers are very popular and have great medicinal value. Please refer to individual varieties for their specific uses. Before using the stems, branches, oils from any plant, consult a physician or health reference book as many can be toxic if used incorrectly or in excess.

Do not mix herbal remedies or teas with medical prescription. Remember, self diagnosis and/or self medication is irresponsible and can be dangerous. Consult a health care professional or doctor in your area whenever in doubt. Herbs are essential in adding the zest and flavor to foods and drinks as a flavoring or seasoning. When leaves are used, cut and gather when the flower buds just start to form. During the past 4-5 years herbs have become more popular. They are easy and economically grown either in plant trays or pots.

Gourmet Tip: Many varieties are easily dried in the microwave or frozen to be used later in the year by yourself or friends.

### 13,000-28,000 sds/oz 70° 7-10 days

*Will grow in rich, moist soil, but well drained with a pH of 6 to 7. Likes warm weather and cannot withstand frost, as it will show cold damage such as blackened leaves when exposed to cool temperatures below 50°. If flowers appear simply pinch them to keep the plant producing tasty leaves. Because basil is harvested continually for lots of leaves it needs a little fertilizer. When planting, add a coated, slow release fertilizer such as 19-19-19 at the rate recommended or work plenty of organic nutrients from compost, blood meal or cottonseed meal into the soil. Keep moist, not wet, dry soil stunts its growth. Water on the leaves can damage them so it is best to water the base of the plant or use drip irrigation.*

For selling onion plants in flats, seed 7-10 seeds per in. of row and 1 1/2 to 2 in. apart in row about 6 weeks before offering the plants for sale. Short day length varieties like Bermuda and Sweet Spanish have been particularly good sellers. An oz. will plant a 100 ft. row; 3-4 lbs. an acre in rows 18 in. apart. If plants start to stretch, they can be cut back for dense growth. Darkness will help germination. Many customers have inquired about the health advantages on Quercetin. Quercetin is the onion chemical that fights the formation of blood clots and may protect you from elevated levels of cholesterol. It is found in the yellow and red onions, but almost none in white onions and only in some forms of garlic. To stop the itching and stinging of a bee or mosquito bite, rub the area with an onion. Eating raw onions will help flush fat from the body and lower cholesterol. Herbalists used raw onions to treat dysentery and other hot climate diseases. George Washington ate a hot, roasted onion before he went to bed whenever he had a cold. Be kind to your eyes - place raw onions in the freezer for 30 minutes before cutting and this will eliminate tearing.

4,000 sds/oz 75° 10-15 days

For quick germination, soak 3-4 days in water before sowing. Sow 6-7 weeks before outdoor planting. Transplant 10-15 days after seeding; germinate seed warm. Hot peppers and the capsicum oil in hot peppers can not be neutralized by water. Wash hands or rinse mouth in vinegar to alleviate discomfort in an emergency. Bread, bananas, pasta, or potatoes will alleviate any burning sensation. Never touch your face or eyes after handling hot peppers. (Warm growing temperatures develop the hottest peppers). Hot peppers are rated by their Scoville level. (The higher the number, the hotter the Pepper). The rating we list is for normal, moderate conditions. Peppers grown under stress, high temperatures and high humidity will be 10-15 times hotter after drying. Hot or Chili Peppers will help relieve respiratory problems, prevent blood clots, help lower cholesterol, will speed up metabolism and lower the risk of heart related problems.

## TOMATO

**7,000-9,000 sds/oz 75°-80° 7-14 days**  
Sow seed 6-8 weeks before time to plant out. Transplant 14-21 days after seeding. For best germination, cover seeds lightly after sowing. About 1/4 oz for a 100 ft row or 2 lbs per acre if direct seeded. If White Fly is a problem, plant Marigolds and Herb, Basil nearby to help repel the insects. Tobacco users should not come in contact with seedlings to prevent tobacco virus. Planting Radishes, Rue, and Pennyroyal will repel many insects.

Days indicated after each variety are from when plants are set out in the garden to ripe fruit. Indeterminate habit will require staking. Determinate habit may sometimes require caging.

Lycopene is a carotenoid that is abundant in Tomatoes and makes them red. It is a strong antioxidant and is helpful in preventing cancer. Processed and cooked tomatoes in sauces are more easily absorbed than raw tomatoes.

Increase your yields and fruit size by 2-4 oz. by growing on stakes or cages.

For your selection of disease resistant varieties, we have indicated after the variety the strength of the disease resistance: V = Verticillium resistant; F = Fusarium resistant; N = Nematode resistant; T = Tobacco Mosaic resistant, A= Alternaria Resistant.
