## MULTIGLASS

Multi-roller coating machine for the enamelling and design printing of float glass sheets.

*Revolutionary. Also our technologies.*

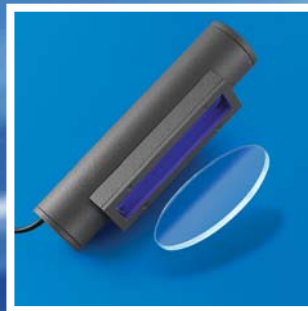

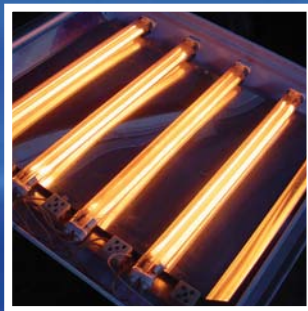

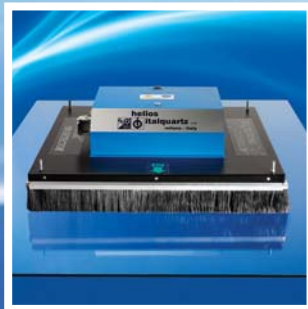

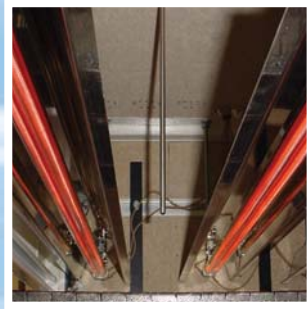

**INSULATING GLASS MANUFACTURING  
HANDLING EQUIPMENT  
AUTOMOTIVE GLASS PREPROCESSING**

Bystronic glass symbolises innovation with machinery, systems and services for the processing of architectural and automotive glass focused on tomorrow's market.

From basic requirements through to entire, customised installations Bystronic glass provides pioneering solutions – naturally, all in the highest quality.

[www.bystronic-glass.com](http://www.bystronic-glass.com)

# GLASS APPLICATIONS

## IR medium wave twin tubes emitters for:

- laminating lines
- mirroring lines
- dry screen printing lines

## IR medium wave single tube emitters for:

- bending furnaces
- fusion furnace

## IR fast medium wave twin tube emitters for:

- laminated glass cutting machines

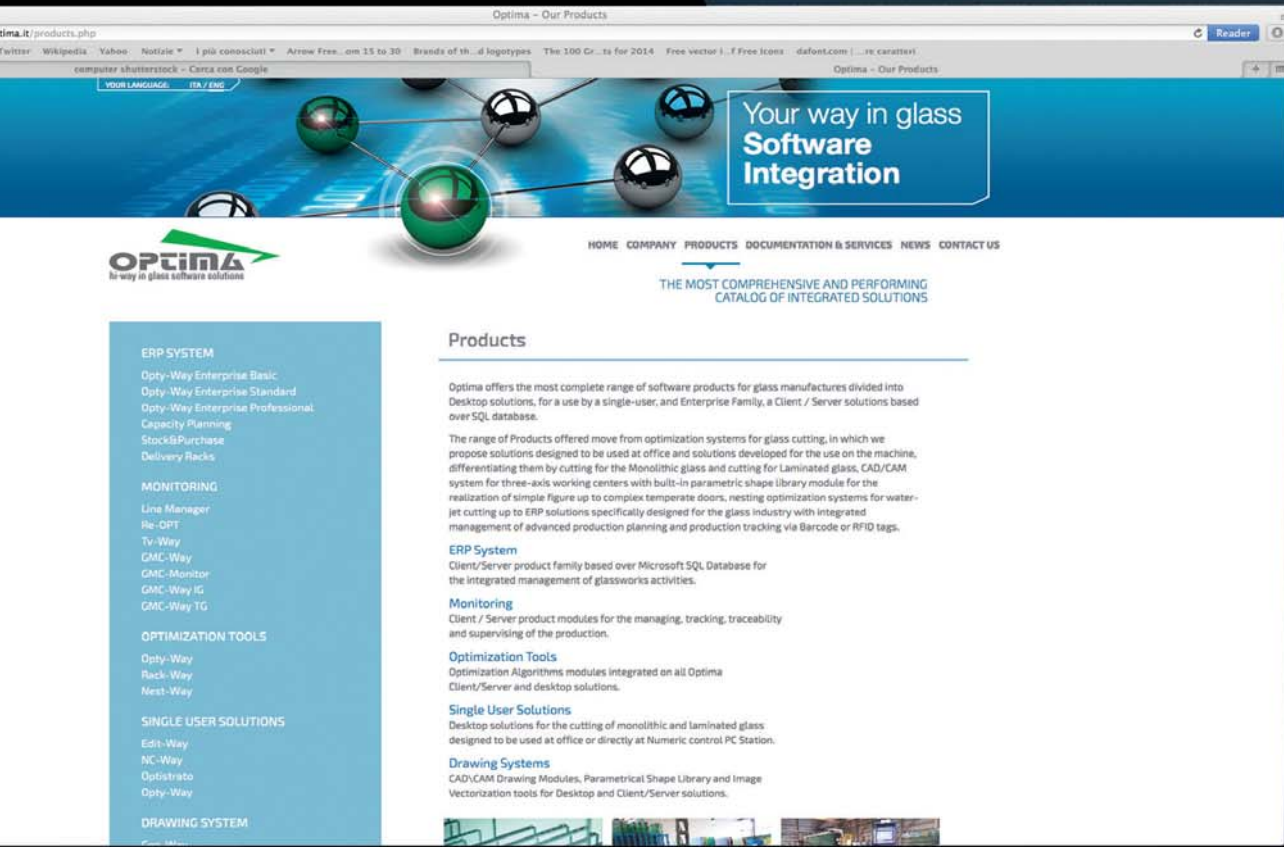

Helios Italquartz also produces highly appreciated equipment for the glass industry such as **manual and automatic tin side detectors** and **UV polymerization units**.

# GLASS PROCESSING IS OUR PASSION

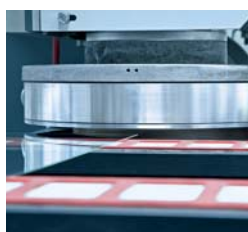

## Standard or customized? We have the right solution!

**Your reliable partner for small and big projects!**

- From the standard machine to the individual solution
- As a single machine or turn-key solution
- Consulting from planning up to commissioning
- Integration into existing systems is possible
- All machines are manufactured according to the latest energy guidelines
- Proven solution due to many years of experience in glass processing

**VITRUM 2015.  
IN THE FUTURE OF  
GLASS, ANYTHING  
IS POSSIBLE.**

New ideas produce new technologies and out of these new technologies come other, even more cutting-edge and meaningful, ideas. One more reason why participating in Vitrum 2015 once again will make the difference for everyone involved in this industry. Every two years at Vitrum, the prospects for the future come into view with clean lines and clear focus, making it possible for companies, products and strategies to fully realize their potential. The setting this year will be especially thrilling, with Milan brimming with energy and life right at the height of the World Expo. An amazing, unforgettable Vitrum, one you really don't want to miss. Because, in the future of glass, anything is possible.

COMPANY PROFILE

**Adelio Lattuada** produces the widest range of edging and bevelling machines currently on the market:

- more than 30 models of electronic or with PC straight-line edging machines for flat edges with arris and variable angle from 5 to 16 wheels;
- complete line of double-edgers from 8 to 12 wheels on each side, for flat edges with arris, available with many different possible configurations, both as stand-alone and in-line versions;
- more than 10 models of electronic or with PC straight-line bevelling machines from 7 to 14 wheels;
- 2 models of combined straight-line edging/bevelling machines (electronic or with PC) for the simultaneous processing of flat edges with arris and bevels in one single passage;
- 4 models of automatic corner grinding machines, able to process radius and straight corners of up to 20mm glass thickness in less than 30 seconds;
- 18 models of vertical washing machines both open or closed on top;
- accessories: a small washing machine that can be fitted on all Adelio Lattuada edging and bevelling machines' outlet conveyor and much more.

The strong points of all products are their ease of use, long working life, very simple to use, low maintenance required and high processing quality. The company is also highly concentrated on the customization of all its models in order to adapt them to different customers' demands: a very wide and detailed list of options is available, and is continuously updated and increased in response to the evolving market.

Tampere, Finland - 24 / 26 June 2015

**Vitrum 2015** - Milan, Italy  
06 / 09 October 2015

### COMPANY PROFILE

#### PVB Shaping, relaxation and Cutting

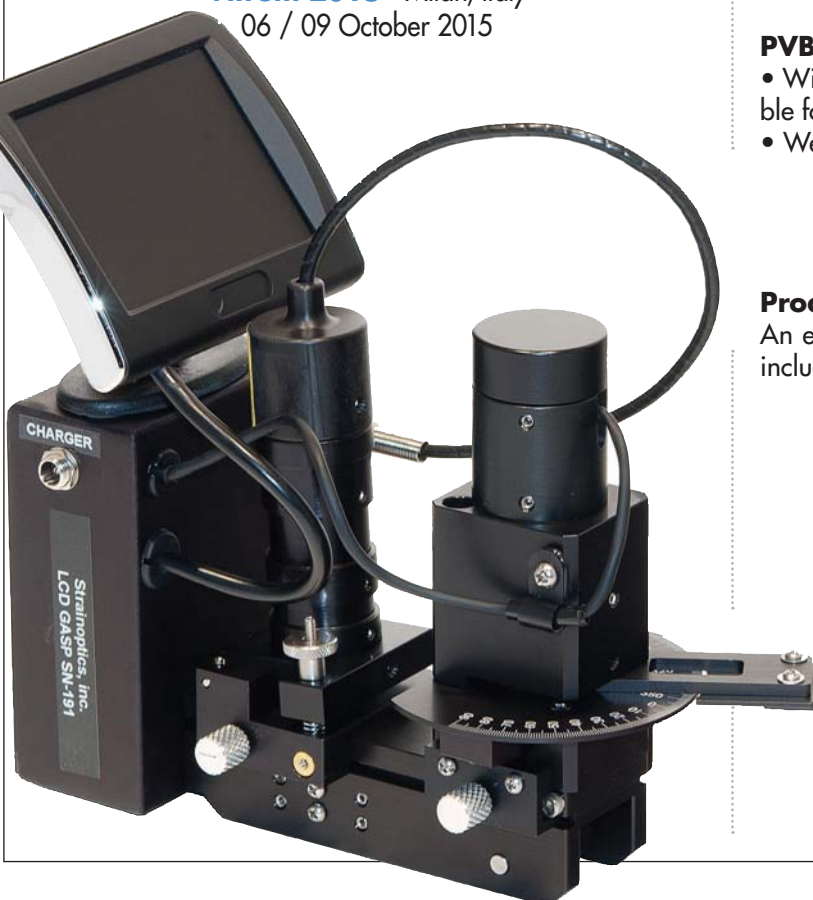

- **Ayrox** has a long history as a specialist in PVB treatment, from roll handling to cut sheets ready for lamination. This includes roll transfer, shaping, relaxation and cutting.
- The advantage of PVB shaping and stretching is that it generates considerable material savings for laminated wind-screen producers.
- Ayrox newest product is an innovation in wedged PVB roll handling and cutting.

#### PVB Wiring

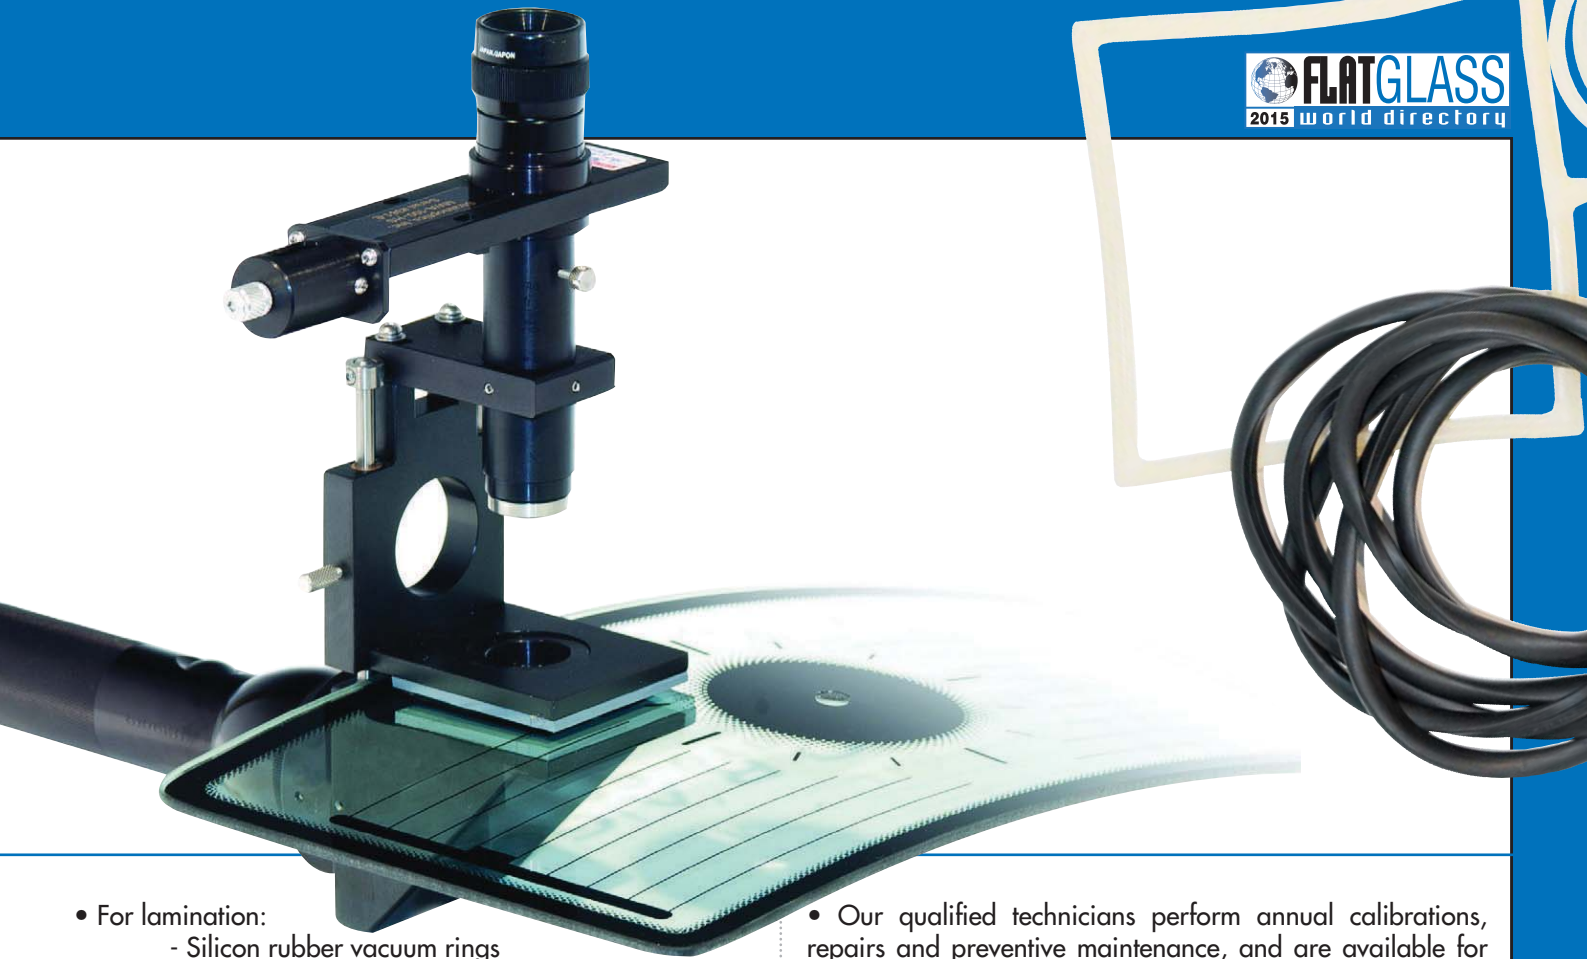

- Wiring technology enables to produce heatable PVB, suitable for both architectural and automotive applications.
- We offer accessories for PVB wiring:
  - Wolfram by Ayrox™ tungsten wire can be used in all heatable laminated glass applications
  - Busbars made from tin-coated copper.

#### Production Accessories

An example of production accessories in our product range include:

- For lamination:
  - Silicon rubber vacuum rings
  - Special silicone-free non-EPDM vacuum rings. These vacuum rings leave no silicone residue on glass and last tens times longer than normal silicone-free EPDM vacuum rings.
- For tempering, we supply aramide fiber tapes of different sizes and thicknesses.

#### Optical quality control

- Ayrox provides a wide range of high-precision non-destructive optical measurement instruments. They are designed for Quality Control requirements and worldwide norms and regulations. Our product range also includes optical equipment such as:
  - Polariscope for visual inspection of stresses in glass
  - Polarimeters for a quantitative evaluation
  - GASP for surface stress measurement
  - VRP for non-destructive residual stress measurement on black paint areas
  - Edge stress metres, etc.
- Surface stress (mechanical strength) gauges for annealed, tempered and heat strengthened glass

- Our qualified technicians perform annual calibrations, repairs and preventive maintenance, and are available for theoretical and practical trainings.

#### Heatable backlite soldering and testing

- We offer machinery to perform testing of:
  - electric circuits
  - continuity of lines
  - mechanical strength of soldering
- Our soldering range includes:
  - Manual, semi-automatic and custom automated soldering machines, with a positioning jig.

Ayrox continuously innovates and expands its product range and machinery, responding to special production needs.

## PRODUCT RANGE

- PVB shaping, relaxation and cutting lines
- Heatable PVB wiring technologies
- Heatable backlite soldering and testing systems
- Silk printing machinery
- Flat and bent glass tempering machinery
- Sourcing and trading in safety glass for various applications
- Distributor of Strainoptics products

## COMPANY PROFILE

**Bovone Diamond Tools srl (BDT)**, founded in 2003, has, as one of its main products, resin diamond wheels, also thanks to being part of the Elettromeccanica Bovone group, a historically-important brand in the sector of bevellers and flat-edge straight-line edgers for flat glass.

At present, the production of BDT includes metal- and resin alloy diamond wheels for all types of bevellers, straight line edgers, work centres, original wheels for Bovone machines, special wheels 'made to measure' and diamond drill bits.

Moreover, the company also commercializes polishing wheels, felts, cerium oxide, cooling oil, pumice stone tablets and carborundum.

Right from the very beginning of its activities, Bovone Diamond Tools has focussed intensely on R&D to develop ever-more performing solutions with regards to long working life and quality of the end products, so as to favour higher efficiency in glassworks by lowering labour costs.

One of the most important innovations is GOLDNET, a milling cutter that already differs from the previous version in its design as it has numerous small sections that intersect instead of the usual lengthwise sections of normal cutters.

GOLDNET has been patented and put onto the market after a long series of tests, and is an innovative solution that enables to obtain higher processing quality, as well as longer working life of the tool, which can be easily used on any type of glass. The higher cost of this item is compensated greatly by its performance.

BDT's production not only regards products in series and, in fact, the company is also open to respond to the diverse needs and demands of its clients, with the most recent developments being focussed on tools that are not exclusive for Elettromeccanica Bovone machinery.

The company has also increase its machine fleet in preparation for the start up of the new production of diamond tools for stone requested by BDT's distributors.

And due to the increasing demand of quality products from Latin America, Bovone Brasil, located in San Paulo, was opened in 2010, aimed at facilitating the market penetration of grinding wheels and drill bits.

At present, exports of BDT are more than 70% of the company's production, with the main market being the US, while in Europe, the most important markets are Germany and Spain, followed by the UK. Belgium is growing and Scandinavia is increasing its demand. And exports in Russia and Ukraine are now picking up again thanks to the collaboration with a new agent.

In conclusion: constant high quality of products and client satisfaction, while continuously updating machinery and constantly investing in R&D, this is the winning formula of Bovone Diamond Tools.

## COMPANY PROFILE

### Flat glass processing machines

"Glass processing is our Passion" – our slogan says a lot about how we understand our work. We offer grinding and drilling machines, washing machines for flat and curved glass, complete pre-processing lines (cutting, breaking, grinding, drilling), CNC processing centres, laminating lines as well as mirror coating lines for the architectural, automotive, solar and display glass industry. All **BENTELER** equipment is available as stand-alone machines or integrated in fully automatic production lines.

BENTELER Glass Processing Machines are designed to adapt to different industry standards and customer requirements. Standardized variants, optional equipment and modular design allow maximum customization with short delivery times and competitive pricing. The result is an improved and optimized manufacturing process, giving glassmakers a competitive edge in the market.

BENTELER is one of the largest suppliers of complex processing lines from a single source. This includes the linking of grinding, drilling and washing machines to a complete processing line, to avoid handling during manufacturing and to minimize cycle times.

In addition to our high quality and customized solutions, we also provide support in project management and factory planning. Experience in creating interfaces and linkages of machinery is another of our strong points.

### **BENTELER has been building flat glass processing machines for more than 60 years.**

Over the last few years, the requirements in glass processing have increased, while demands vary from customer to customer. Due to our long experience and the continuous development of all our machines and systems, we can offer

machines with state-of-the-art technology, energy-optimized and with tried and tested quality. Sophisticated design and reliable partnerships create the basis for successful cooperation with customers.

make Bovone's bevellers and edgers the most reliable on the market. The stability given by cast iron allows a precision that nobody else can reach. The product range includes two series of bevellers and a wide range of edgers: for the processing of flat edges to 45° arris, with or without liquid cerium.

Moreover, the machines can be customized for high loads up to 2,250 kilos.

#### Robotic lines

Following the market and the requests of more and more automation either for an increase in production or for security reasons due to the handling of big sheets of glass, Elettromeccanica Bovone has expanded its range of products offering Robotic Systems. Robots can be supplied as stand-alone, applied to existing edgers or as customized islands with two machines and two robots to satisfy customers' production needs.

#### Elettromeccanica Bovone, a 'historical' name among glass machinery manufacturers

The company founded in 1954 by Luigi Bovone started its history with the galvanic coppering process to protect the silver layer of mirrors, soon followed by further improvements, finally leading to the production of whole lines for mirror production. In 1974 Bovone introduced a revolutionary straight beveller, able to work at twice the speed of machines of the most skilled competitors! In the following years, Bovone enlarged its production range, with straight line edging machines and lines for laminated and bullet-resistant glass.

The company is currently one of the world leaders for straight bevelling and edging machines: since 1974, more than 4,000 machines have been sold.

In the meantime, company organization has never stopped developing, and, in 2000, the company was awarded ISO 9001 certification.

Elettromeccanica Bovone s.r.l. is present worldwide, thanks to a consolidated network of qualified agents that often also provide technical service and spare parts. Moreover, Bovone experienced technicians are always on call.

Bovone has always stood for excellence and lasting quality: to maintain this recognition is the chief aim for anyone who works in the company.

Its commitment towards quality and constant innovation has been known ever since its founding, and continues now and in the future, facing ever renewing challenges.

#### Straight line bevellers and edgers

The body and other parts of its machines made of cast iron,

#### Laminating glass lines

Bovone offers various types of laminating glass lines: Glass width from 1,600 to 3,300mm, automatic or manual PVB laying, straight or 'U' shaped configuration.

Lines can also be upgraded in the future to meet changing market demands as follows:

From the first level manual line LLB to upgrading to a LLS semi-automatic line, which can then be upgraded to a larger LGL automatic line in the future.

#### Mirror lines

Msl, modular mirror lines, produced for glass sheets with widths of 2,250, 2,600 and 3,300mm, with a production speed of a 8 m/min: made in 12 different sections: automatic loading, scrubbers, chemical sections, pre-painting oven, curtain coaters, intermediate oven, final oven, cooling section and automatic unloading.

These lines can be supplied with traditional copper/silvering processes or copper free, with electrical ovens or with new gas ovens for energy saving.

## COMPANY PROFILE

### Future-oriented glass processing systems

**Bystronic glass** symbolizes innovation with machinery, systems and services for the processing of architectural and automotive glass focussed on tomorrow's market. From basic requirements through to entire, customized installations, Bystronic glass provides pioneering solutions – naturally, all in the highest quality.

Bystronic glass is an international brand with globally operating companies that support their customers on site and through own sales and service companies. Bystronic glass has been part of the Conzeta AG, a renowned Swiss industrial holding company since 1994.

### Insulating glass manufacturing

Irrespective of whether a fully-automatic line for insulating glass production with warm-edge spacers or an entry-level solution: at Bystronic glass, every insulating glass manufacturer will find the line or machine that meets their requirements. The benchmark in this sector is the modern B'SPEED production line, which can be used to produce triple insulating glass units in the same time it takes other lines to produce double units. At the other end of the product range is the B'COMFORT, the ideal entry-level solution to industrial insulating glass production.

### Handling equipment

The best seller Easy-Lift has been impressing customers from the glass processing industry with its rigid guidance and its own low dead weight since 1998. In recent years, this handling equipment has also gradually asserted itself with large window manufacturers as it is extremely flexible in terms of frame design and therefore fulfils their requirements. Track-mounted equipment, as well as battery-powered suction frames, complete the range.

### Automotive glass pre-processing

A few years ago, Bystronic glass introduced a completely new machine generation for the pre-processing of automotive glass - the champ'speed. Since then, the champ'speed 2in1 version, the first machine in the world that can break automotive glass with or without a template on a single machine has established itself. Customers gain both functions in one device and can flexibly switch between breaking with or without a template.

## PRODUCT RANGE

**Straight edgers grinders**  
**Double edgers grinders**  
**Vertical drills**  
**Horizontal drills**

## COMPANY PROFILE

**C.M.B. Besana** machines are continuously updated with technological and electronic innovations, able to guarantee high precision, reduced set-up time and increased production.

The most recent innovations are those regarding Double Edger Grinders for extra-polished flat edges and those for pencil edges, and the new series of NC drills in two versions: vertical compact with two pairs of drill spindles, and horizontal with five pairs of drill spindles and a router for the milling

and grinding of notches. Vertical drills are particularly suitable for automatic grinding and drilling lines combined with SF-type automatic seaming machines. CMB's series of drills also includes a new, highly versatile semi-automatic machine.

Straight line edgers for flat edges and polished arises or variable angle mitre, are available for up to 60° on thicknesses up to 40mm for both normal and laminated glass, as well as with 13 or 15 spindles for processing large thicknesses up to 65mm and more. A smaller model for glass thickness of 20mm and mitre up to 50° is also available.

**Vertical CNC grinder:** it is a machine for grinding flat glass plates, both straight and shaped, which cup pick-up system, allows the processing of glass including low-E

**Vertical and horizontal drills:** with facing heads, ranging from semi-automatic to CNC controlled versions and milling spindles, which can be equipped with tool storage and adapted as per the type of work to be carried out

**CMV** is continuing along the route it started out on five years ago, aiming at the continuous improvement of the two major characteristics that have always made its products stand out: quality and reliability.

Despite being on the market for just a few years, **CMV's** technicians and management can count on more than 20 years' experience in the sector working with some of the most well known companies of the market.

Company philosophy – especially regarding production – is, and has always been, to start from a basic project and to personalize each and every machine, thus creating products able to satisfy the needs and demands of each user. And this aim is the result of the exchange of information between manufacturer and end user.

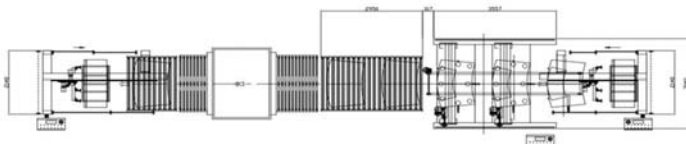

Our clients' requests have led us to create new machines, including drilling and bilateral grinding lines, with loading and unloading stations, equipped with devices for the separation of the glass sheets in different ways.

**CMV's** activities also include the construction of vertical grinders, arrissers, complete vertical drilling and milling lines for the production of glass for the home appliance and automotive sectors.

Other than the design and production of machinery, the company also offers technical assistance – not only on its own machines – but also on those of other manufacturers.

**Vertical and horizontal drills** with facing heads, ranging from semi-automatic to CNC controlled versions and milling spindles, which can be equipped with tool storage and adapted as per the type of work to be carried out.

**Vertical CNC grinder** is a machine for grinding flat glass plates, both straight and shaped, with cup pick-up system, allows for the processing of glass, including low-E.

**CMV** produces double edge grinding, single and online, with single or double transfer. From two to six diamond and/or polishing spindles are assembled on each cross.

The spindles are manufactured so as to allow easy replacement of the grinding wheels; the glass transport system has two brushless motors in electric axis, without mechanical connection organs, while the movement of the crosshead is realized on guides with re-circulating ball, ball screw and a brushless motor.

The software is simple and intuitive, enabling to optimize production while reducing operator intervention and limiting machine setting time.

**CMV** produces complete factory plants destined to automotive and household appliance glass industries; we are able to tailor our projects to customers' specific needs.

**CMV** produces horizontal and vertical lines with special drills and grinders as per the specific needs of users. The layout shown here regards a vertical drilling and grinding line with automatic loader and unloader for the production of glass for the automotive and household appliance glass sector.

## COMPANY PROFILE

**Cugher** was founded in the late 1960s. It was among the first companies to automate the silk screen printing process and is now recognized as one of the most innovative and technologically advanced producers of silk screen printing machines and solutions worldwide, leader in the Automotive sector.

### Turnkey projects

The company is specialized in the realization of turnkey silk screen printing lines, providing a wide range of optional and complementary equipment and solutions even for the most challenging production needs.

Our clients are testimonials for our reliability and quality, among which, leading glass manufactures such as AGC, Guardian, Pilkington, PGW, Saint-Gobain, Schott, Sisecam.

### Fully automatic machines

Cugher offers two technologically advanced types of printers: Series G and Series J. Series G printers are the best solution for industrial contests that require high automation, large production volumes, quick set up and format changeover and extreme print precision, absolute leader in automotive glass printing, special edition of Series G for double glass printing is the newest machine added to the Cugher portfolio.

Series J printers are the answer for handling large formats, drilled, heavy glass, for medium-high production; the modular machine design provides flexibility, accessibility, easy set up and maintenance. It finds best application in Automotive and Architectural industry.

### Semi-automatic machines

Series LS and Canguro are Cugher's machines for medium and special production needs.

Series LS has a maximum printing size of up to 100x70cm, a wide range of applications, and can be personalized for particular types of production.

Easy to use and maintain, Series LS occupies little space, has print precision of +/- 0,08mm, and can be equipped with automatic unloading.

Series Canguro, maximum printing size up to 25x60cm, very easy to use, compact dimension, completely pneumatic, manual set up with extractable printing table for loading/unloading. Provides flexibility of production.

### IR and UV Dryers

Cugher dryers comply with the highest industry standards, and can be used both stand alone and integrated in a silk screen printing line.

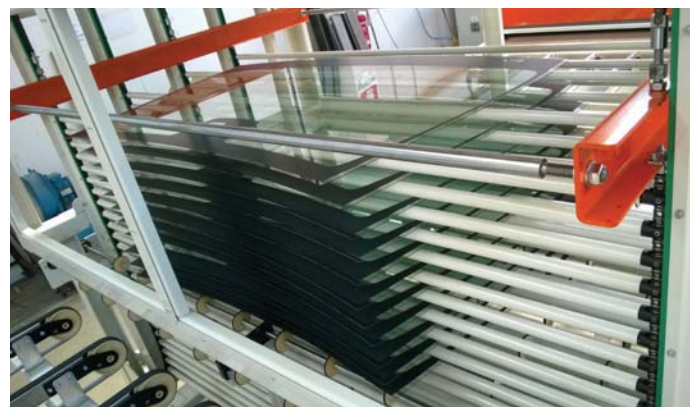

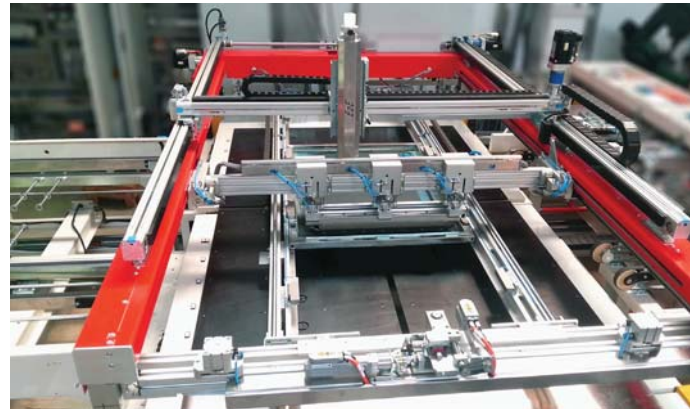

Our dryers are manufactured with the best existing materials and components, in order to guarantee maximum reliability and productivity.

The IR Dryers use medium wave length, mixed type drying technology (IR rays and hot air), Kevlar belt transport system under constant tension, and automatic power management, which guarantee quick and uniform drying.

The UV Dryers have compact dimensions and guarantee safe operation and complete UV protection. Power saving thanks to a fully digital control system, exit temperature of the glass slightly above that of the environment.

### Complementary equipment

- Edge-to-Edge systems
- Automatic screen alignment
- Quality inspection systems
- Corner conveyors
- Special handling
- Stackers
- Screen integrity control systems
- Rotating tables • Tilting conveyors • Chiller units

## PRODUCT RANGE

- Silk Screen Printing Machines**
- IR - UV Dryers and Combo dryers**
- Handling and Transportation**
- Customized Software**

## FORVET SRL

Str. Piossasco, 46 - 10040 Volvera (TO) - Italy  
Tel: +39 - 011 - 9855200 r.a. • Fax: +39 - 011 - 9853032

e-mail: [forvet@tin.it](mailto:forvet@tin.it) • [www.forvet.it](http://www.forvet.it)

### COMPANY PROFILE

**Forvet's** wealth of experience has enabled the company to develop innovative solutions for specialised glass working machinery. Since 1990 the market sector has been explored in all aspects in order to improve the performance of the equipment. Continuous efforts have led the company to develop cutting edge technology which is setting the standard in this market. Located in Volvera (near Turin), Forvet is ideally positioned to benefit technologically from the highly developed Automotive and Aviation/Aerospace industries in North Western Italy. These factors have enabled Forvet to produce highly sophisticated, technically advanced and durable machinery.

#### FRANCESCA and CHIARA lines

"The combination of the **FRANCESCA FC** work centres in line with the **CHIARA MTP** edge processor offers users unique production power combined with unrepeatable performance flexibility. These machines linked together are the combination of two different processes that can operate different glass thickness and different glass sizes in automatic operations without the need for any manual adjustments. The lines, depending on machine model, can grind or polish flat and aris rectangular glass and **GEOMETRICAL SHAPES** and can drill, countersink and mill on straight or shaped glass.

#### Francesca FC 32M 3300 Work Centres

**Francesca FC 32M 3300** is a new idea of flexibility, created for large industrial companies with important production volumes, also with regard to limited batch quantities. Support during transport and stabilization during processing, obtained thanks to a new Forvet patented transport

system, are based on dynamic vacuum, which maintains the glass in its correct position during movement along its entire length.

This special feature enables to process low-E magnetron glass without contact with and damaging the glass surface. Francesca FC 32M 3300 is the only work centre that enables to carry out milling and drilling on an automatic line thanks to its completely automatic loading, positioning, setting and unloading.

The plant is equipped with 32 tools, on four processing heads, enabling to use four different tools on the same sheet of glass at the same time, and drastically reducing processing times.

#### Francesca FC 16M 1600 Work Centres

The experience gained with the Francesca 32M 3300 over the years has resulting in a new machine of this range which, even if more compact, uses the same principles and patents of its 'bigger sister'.

This latest technological effort of the company has also taken into consideration the logistics aspects connected to the installation of the machine – taking up only five hours.

The working dimensions of the machine enable to process glass sizes of up 3500 x 2000mm, and 300Kg in weight. This new machine is the perfect example of flexibility, aimed at medium-sized companies with limited production quantities and series.

#### Waterjet cutting applications

The **FRANCESCA** range of machines has undergone a technological restyling that has enabled to include water jet technology for glass cutting.

Francesca FC 16M 1600 and FC 32M 3300 can be equipped with one or more nozzles for the cutting of glass using high-pressure jets of water.

This technology, already well known in the glass sector, has been used by Forvet following its company philosophy, resulting in the first waterjet cutting machine with loading, positioning, processing and unloading all carried out completely automatically. This has made waterjet technology much more accessible for users, as it has eliminated all problems connected to the management of waterjet cutting, such as loading, positioning and unloading.

### **Francesca FC 16M 1250 HO Work Centres**

Robustness, reliability and performance. These are the characteristics that make Francesca FC 16M 1250 HO the best-selling machine with regards to problems connected to automation of milling and drilling, with automatic loading and unloading.

Its sturdy construction ensures an average working life of 15-20 years, reliability that guarantees three production shifts without problems, with an average of four minutes to carry out notches and holes during the production of doors.

This highly successful machine, one of the first manufactured by Forvet, has a list of references that justifies the company's choice of keeping it in production, with updates regarding mechanical aspects, side by side with the most recent technological choices.

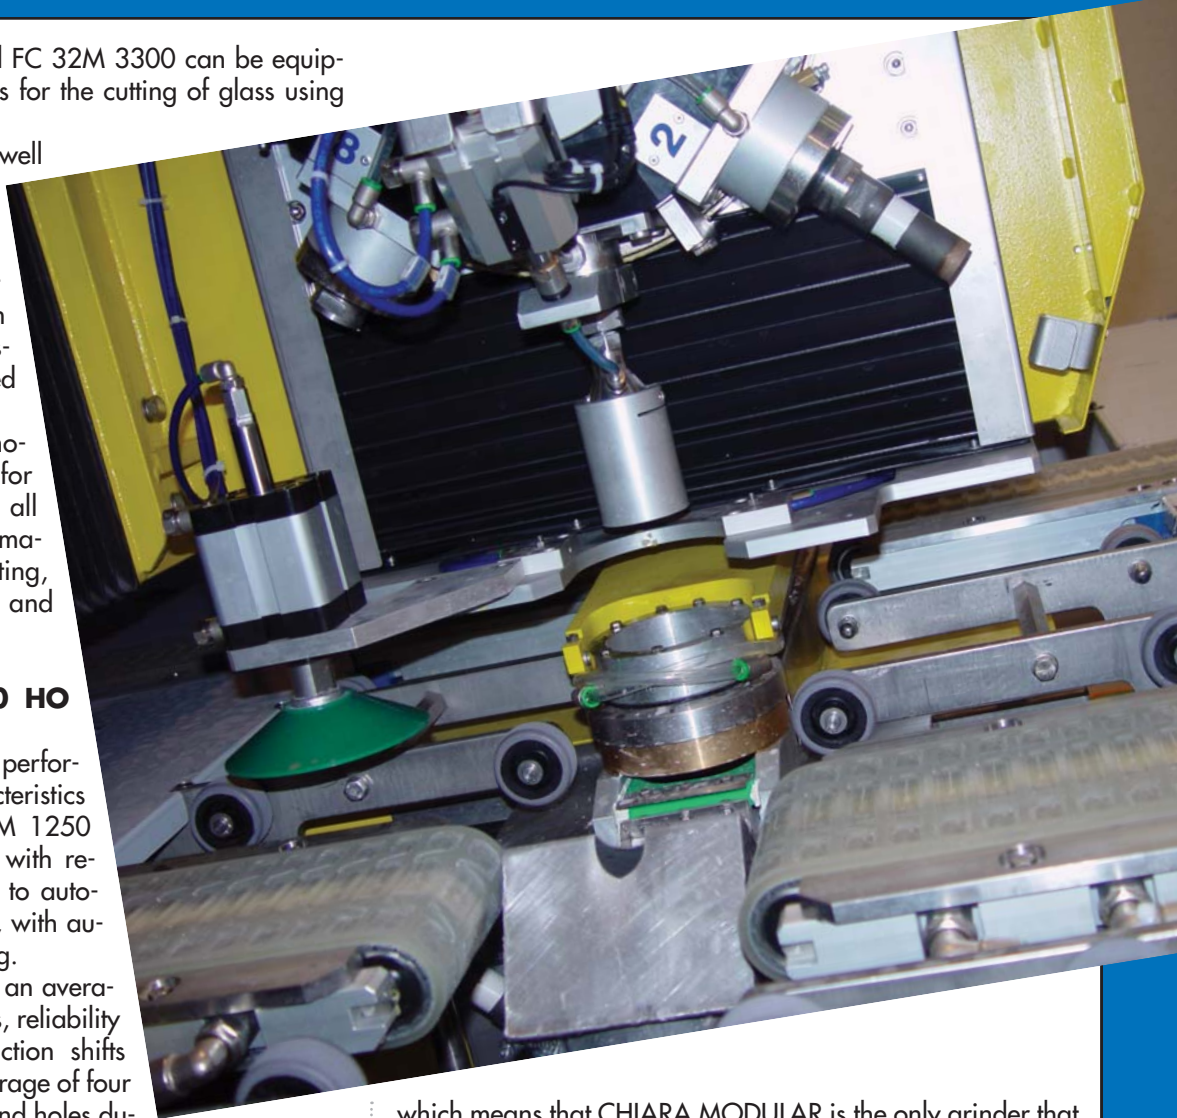

### **Chiara MTP8 Modular**

This machine is yet another revolution in the grinding sector. The new CHIARA MPT8 MODULAR carried out polished grinding of all edges of glass, also those out-of-square. Chiara MPT8 MODULAR can process four or more edges of glass sheets at the same time or in sequence. (patented system) The machine can process different glass thicknesses, sizes and shapes continuously, without the need for manual intervention.

The complete control of each single action that the machine carries out, enables to grind glass thicknesses of 3mm and sizes of 300x400mm, and immediately followed by glass thickness of 15mm and sizes of up to 3300x6000mm.

CHIARA MPT8 MODULAR can process each side of the same glass sheet with different edge finishes. The operator can choose the type of finish by simply changing parameters on the keyboard.

During production, the glass is supported by a particular configuration of the automatic vacuum system, with NC controlled suction cups as per the different glass sizes (patented system)

which means that CHIARA MODULAR is the only grinder that guarantees the processing of low-E glass without touching the glass surface, whatever type of coating it has.

### **The Key**

The constant analyses of problems connected to glass processing has always been a priority for Forvet. As a consequence, the optimization of production performance obtained with Forvet machines has become a real necessity.

The use of integrated technology and company goal have created the production line made up of Chiara and Francesca. These production lines can also be supplied with different thicknesses and sizes making raw material supply complex.

To solve this problem, and also to increase production by means of the reduction of handling of the glass, and the application of 'just in time' supply of material, Forvet has created KEY, a system to supply the starting material in the thicknesses, shapes and sizes requested, starting from the warehouse of glass sheets. Each 'starting' sheet can be different from the previous and following one, thus responding to the production needs programmed on the CHIARA-FRANCESCA line.

The system is made up of an automatic warehouse of the glass sheets in which a robot chooses the raw material. The glass is transported towards the cutting and breakout bar where a second robot handles and measures the position and requested inclination to obtain the shapes requested.

FORZA G®

## COMPANY PROFILE

**FORZA G®** revolutionizes fluid filtration and separation in applications requiring clarified process fluid. Unique design and efficiency features, as well as reduction and optimization of power using inverter motors are the key to a superior system that saves money and increases bottom line profits by offering benefits that include: increased production; superior quality; extended fluid life; reduced waste volume; media free filtration; fully automatic, unattended operation; maintenance free; extended life of tools and wheels; extend life of process machinery.

Since 1998, **FORZA G®** has been an innovator in environmental products and fluid management services. With its two-step centrifugation technology it has proven results in the most demanding situations throughout a wide range of industrial, commercial and institutional applications.

The newest designs, developed thanks to the collaboration with and information of clients, has been successfully proven in the most demanding applications, with over 400 installations in 40 countries throughout the world.

No other centrifuge machine matches **FORZA G®** for durability, reliability, performance and workmanship. **FORZA G's** superiority has been proven in the most demanding applications, such as glass grinding, stone grinding, ceramic grinding, machining coolants, paint booth curtain water, zinc iron phosphate baths, in hundreds of installations in countries throughout the world.

### COMPANY PROFILE

Innovation of ideas and concepts was largely responsible for **Glasstech's** success following the company's founding in 1971. Today's Glasstech, strong in leadership and engineering expertise, is continuing its heritage of innovation and insistence on quality. Among Glasstech's pioneering innovations was the design and construction of the world's first micro-processor-controlled, roller hearth glass tempering system. This innovative technology, which made the first system possible during the 1970's, remains a hallmark of all Glasstech systems.

### Planned Exhibitions

**China Glass 2015** - Beijing, China - 20 / 23 May 2015

**Glassbuild America 2015** - Atlanta, Georgia, USA - 16 / 18 September 2015

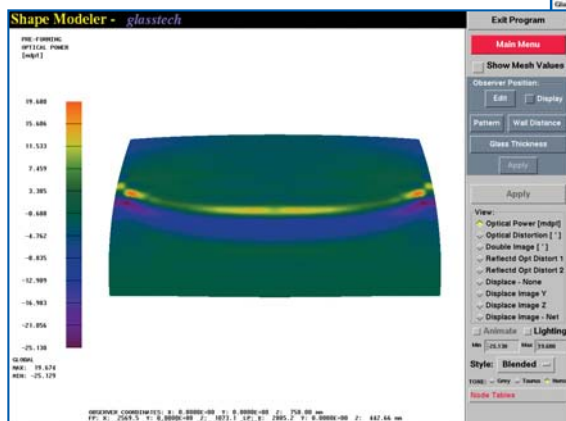

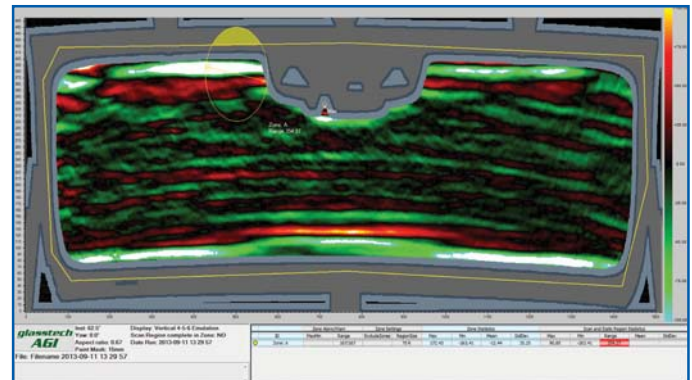

**glasstec 2016** - Düsseldorf, Germany - 20 / 23 September 2016

- Manufacturer of advanced glass bending and tempering systems
- Over 600 systems sold in over 50 countries
- Provides solutions to the Automotive, Solar, Architectural and Specialty Glass Markets
- Technological leader with more than 600 patents and patent filings
- Experienced, capable organization

Glasstech is the world leader in the production of OE automotive glass bending and tempering systems and bending and annealing systems. Glasstech also offers:

- Retrofit and upgrade to current technology
- Glass inspection equipment
- Tooling production
- Shape Modeler™ software
- System auditing
- Service contracting
- Spare parts

VE350 vertical straight line edging machine

**GlastonAir**

**Changing the way the world sees glass** and develops glass processing technology, machines and services for architectural, solar, appliance and automotive applications. **Glaston's** portfolio ranges from pre-processing and safety glass machines to tools and services. We serve customers worldwide from over 20 locations and with production in four countries on three continents: Italy, Brazil, China and Finland.

Customers trust in our strong technological expertise, equipment quality, advanced product and service offering, comprehensive customer service network as well as productive and energy-efficient machines. They know they can get everything they need from us for cutting and drilling to edge grinding and polishing, including tempering, bending, bent tempering and lamination. Our portfolio brings you the most extensive high-quality range of glass pre-processing and safety glass processing machinery and services.

We have delivered over 25,000 glass pre-processing machines to more than 100 countries for the past 65+ years. Our wide product range includes diamond and polishing tools, CNC machines and technologies for cutting, edging, beveling and drilling machines, available as stand-alone solutions as well as in integrated lines. Moreover, we have delivered close to 3,000 safety glass machines to over 90 countries for 40+ years with technology for flat glass tempering, glass bending and tempering, glass bending and flat glass laminating. The competitive edge of our machines is the reliability of operations, flexible capacity, energy efficiency, and high end product quality.

### **Glaston technology takes you the next step ahead**

**Glaston VE Series™** is the new family of vertical edgers with cup wheels which can satisfy every need for processing flat edge glass with arrises and with variable angles.

**Glaston HE500™** is the new range of double edging machines with cup wheels, satisfying all needs of productivity and edge finishing in grinding flat edges with arrises.

**Glaston UC™ Series**, a new range of automatic cutting lines, delivers outstanding performance and reliability at an affordable price. Coupled with a new generation fast and versatile range of loaders and of proven break-out tables, the UC series is well suited for the most demanding cutting applications.

**Glaston RC200™, RC350™, FC500™ and FC1000™** flat tempering lines meet today's heavily competed tempering business with high production capacity, a wide glass appli-

cation capability and low operating costs due to minimized energy use.

**GlastonAir™** gives you a new approach to glass heat treatment with its unique air flotation technology for quality and processing results that are impossible to reach with roller-type tempering furnaces.

**Glaston IriControl™** is a unique measurement system and special technology to overcome iridescence. It raises the quality of tempered glass to a level that will be indisputably demanded in the near future.

**Glaston iLOOK™** is an integrated online glass quality measuring system that measures roller wave and edge kink, both leading and trailing, measuring glass online without any human error and saving you time.

### **Glaston Services for a highly productive lifetime**

As the leader in the industry when raising the bar for all types of glass processing, Glaston is now setting a new standard of service and support called Glaston Genuine Care. The name for this concept comes thanks to our genuine breakthroughs in glass processing R&D, our genuine spare parts and tools – and especially because of our genuine interest in our customers' long-term business success. Glaston Genuine Care helps you extend the lifetime of your glass processing machinery and take your business to a completely new level. It allows you to focus on your core competencies and leave the operational support to us to improve step-by-step on your behalf. Glaston Genuine Care includes all of our lifecycle services, training and consulting, wear and tear parts, machinery and software upgrades as well as service support.

Glaston **spare parts** are a quality guarantee for your reliable production. Our parts are all original or OEM parts, fully tested and approved by the manufacturer. Our widest range of OEM **diamond and polishing tools** available work in perfect synergy with Glaston pre-processing equipment and with other suppliers' machines.

Glaston **upgrades** are a cost-efficient way of lengthening the lifecycle of your existing process machinery and improving your overall profitability. **GlastonMove™** is a complete range of relocation services to make the move as easy as possible for both the equipment buyer and seller. We offer four different levels of **Glaston Care™ service agreements** to best match your needs and bring you world-class professional expertise on which you can fully rely. We can also customize a range of professional operator **training programs** so that your personnel get the most from the new. Let us show you how to achieve your performance goals with energy savings, quality control and convection upgrades, for windshield production, flat laminating or any of your glass processing needs.

**Glaston upgrades**

### COMPANY PROFILE

#### Loading

For loading **HEGLA** offers different solutions such as Automatic Floor Loading Systems, Compact and Gantry Loaders. Alongside security aspects for operators, this equipment is suitable to increase output and expand the possibilities of using special glass types. Double sided floor loaders of 3 x 2 metres and 6 x 3 metres are available with up to 6 positions (12 racks), while the gantry systems are infinitely variable and can use 'A' and 'L' frames as well as compact storage systems. 6 x 3-metre gantry loaders can also load directly from Float Liner delivery racks dropped in the crane area.

#### Float Glass Cutting

With its wide range of cutting systems, HEGLA offers a perfect solution for each and every customer needs. For the industrial volume cutting of float glass for example the Galactic with its shortest processing time and full automation was invented. RAPIDINE, with its optional grinding device for low-E, is HEGLA's universal cutting machine for float glass.

**Cutting machine for float glass: Hegla Galactic**

#### Laminated Glass Cutting

For the cutting of laminated glass HEGLA became known with its ProLam series which cuts precise and quickly. To offer customers more flexibility HEGLA offers the ProLam Kombi which can cut even float glass and laminated glass. In 2012, HEGLA invented the ProLam Plus Shape with electro-magnetic linear drives which offers the possibilities of straight cuts as well as free forms and models of laminated glass. HEGLA peripherals equipment such as automatic edge coating removal, or the coat removal module for foil-protected glass extend the systems' range of applications

and meet all requirements for professional cutting solutions.

**ProLam Plus Shape: Model cutting system for laminated glass**

### ReMaster

The ReMaster System for optimised processing of remnant sheets was first presented at glasstec in 2002 and has been constantly improved since then. This innovative system allows sub-plates of any type to be stored without manual handling above the cutting line. Without interrupting the production process the remnant can be used for following glass runs, thus reducing sub plate waste drastically. This creates the basis for efficient production of IG-units of all glass types and thicknesses. It offers optimal utilization of subplates, decreases material costs and reduces unnecessary handling.

### SortJet

With the need for more and more automation and high-speed operations in glassworks, HEGLA invented the SortJet. Since its first

**HEGLA SortJet: Invented to reduce material costs and improve production flow**

presentation at glasstec 2004, the SortJet has proved in practice to be an innovative product that not only improves material flow but also reduces material costs to a minimum. After cutting the glass in random order to reduce offcuts, all panes are stored in the dynamic buffer of the SortJet. Just 250 bays can accommodate multiple panes to buffer all the glasses in the production process for an insulation glass line.

When the panes for an IG-unit are required on the line, the individual panes are handed over directly in production orientation and sequence. The separate processes in front of and behind the dynamic buffer contribute towards a production process that significantly reduces downtime while at the same time accelerating the material flow and reducing cutting costs.

## COMPANY PROFILE

**Helios Italquartz** is a typical, small- to medium-sized, family-based company which, since 1940, has been designing, prototyping and producing infrared quartz emitters, ultraviolet lamps, quartz glass items and scientific equipment.

Helios Italquartz S.r.l., a TUV certified company, has become a member of Helios Quartz Group, a very flexible and dynamic company, deeply oriented towards internationalization and which is living a strong and stable growing phase with great momentum.

Helios Quartz Group manufactures all products at the historical Helios Italquartz S.r.l. plant in Cambiogo (IT) and in the new production facility in Novazzano (CH). This in-house production ensures the highest quality standards in terms of selection of materials and workmanship and great flexibility in responding to customers' requests. Helios Quartz Group is also present worldwide, with its own

distribution channels on three continents (North America, Asia and Europe).

The Helios Italquartz product range, specific for the glass industry, includes:

- Quartz Infrared Heaters: short- and medium-wave, mono- and twin-tube, with or without gold-coated reflectors. IR medium wave twin-tube emitters;
  - for laminating lines (plastic film coupling);
  - for mirroring lines;
  - dry screen printing lines; IR medium wave single tube emitters;
  - bending furnaces;
  - fusion furnace; IR fast medium wave twin tube emitters;
  - laminated glass cutting machines;
- UV Polymerization Equipment: UV high and medium pressure lamps for enamelling, drying screen printing of UV reactive inks, paints, coatings and

adhesives for the decorating and finishing sector;

- Manwood 25-N: UV black light apparatus, able to identify the tinned coated side of the float glass even under high brightness conditions. Such identification is very important prior to laminating, mirroring, printing and decorating processes;
- Automatic Tin-Detector: the technological development of the Manwood 25-N. It can be fixed directly on the glass transportation line, before the process starts, in order to check each and every piece of glass.

Thanks to simplicity of installation and great flexibility, it is suitable for mass manufacturing where methodological control is essential to support the rate of production.

## COMPANY PROFILE

**Intermac** is the division of the Biesse Group specialized in the production and distribution of machines and systems for the working of flat glass and more in general for the sectors of furniture, automotive and building.

Founded in 1987, thanks to the idea to introduce in the glass sector all the experience and technology already developed for the wood working sector, Intermac has been a powerful engine behind the innovation in this industrial segment, becoming in brief the synonym for centres for the working of glass.

The very first line of machinery already made new processes possible, and immediately caught the attention of designers and architects, thus creating new markets. The high technological level of the products, built with the most advanced components and with a winning building philosophy, have enabled Intermac to conquer a leading position in this sector worldwide.

Thanks to its widespread network of subsidiaries, dealers and agents, Intermac is able to grant global professional pre-sales advice and after-sales and spare parts service, employing structures and personnel close to customers and with solid technical knowledge and great in the field experience.

Intermac Division's main production facilities are located in Pesaro and Lugo, with more than 20,000 square meters of productive area and 200 skilled employees.

## COMPANY DATA

**Italcarrelli®** is a world leader in the design and construction of special machines and solutions for the storage and handling of flat glass. Located in Vicenza, in North-East Italy, it has a technologically advanced plant and highly trained employees specialized in the design and construction of its machines. During many years of experience in the field, the company has acquired remarkable knowledge of the glass sector and, thanks to investments in the research of innovative solutions, is providing its own products to all the most important glass manufacturing companies all over the world.

### COMPANY PROFILE

#### An overall view that makes the difference

What characterises **Keraglass** and has enabled the company to succeed as a world leader in the sector is its 'all-round' approach to the glass industry – with innovative, functional and targeted solutions. Developed from a concrete and direct analysis of the problems that can arise in glass processing, particularly in flat and bent tempered glass, screen printing, roller-coating and laminating. Founded in the early 1990s by Stefano Spezzani, in the space of a few years Keraglass became a point of reference in the sector of plant engineering for glass processing. Today Keraglass is an innovative driving force in the sector, thanks also to the synergies developed with the key players on the market.

One example is the creation of a new model of glass tempering furnace, the 'Kfo Double Star'. Its pre-heating convective chamber, successfully tested by the experimental glass station, is designed to reply, in an increasingly specific and efficient way, to the requirements of UNI marking, and for the tempering of the latest generation of low-E glass with the maximum quality.

In 2004, Keraglass entered the world of shaping and tempering bent glass, installing the first 'KBFO', forming close and profitable collaboration with Techint SpA and acquiring the exclusive licence for the use of its patented technology.

In 2010 the company patented the 'RCK machine' roller cleaning device, an automatic machine that allows the complete cleaning of the rollers, directly inside the furnace, without having to remove them.

In the wake of these great technological and commercial successes, Keraglass inaugurated new head offices, first in 2004 and then in 2009, in the Baiso industrial estate, near Reggio Emilia. Two large modern and multifunctional structures that reflect the company's dynamic spirit with their architectural concept.

With a view to continuous growth and extension of its offer and expertise, in 2015 Keraglass signed a technological partnership agreement with the Emmegi Group, world leader in the production of windows.

Glass is therefore added to aluminium, light alloys, iron, wood and PVC in a complete production range and a commercial network operating on five continents.

Today the history of Keraglass can be read in all the languages of the world.

## COMPANY PROFILE

The TC9501 furnace from **LEMA S.r.l.** has been created for the chemical tempering of glass sheets measuring up to 3,200 x 2,500mm.

This new machine, result of the long experience of the leading Parma-based company, which has been active in the small- and medium-sized plant sector since 1970, meets the needs of an increasing market and is particularly suitable for:

- thin glass (from 0.3mm);
- printed glass;
- glass with complex shapes (i.e. in glass furniture);
- glass for which optical quality is important;
- diverse glass thicknesses.

Chemically tempered glass is known to be at least two and a half times stronger than traditionally tempered glass, five times stronger than normal glass and can be ground, drilled and cut without any risk of breakage.

The TC9501 is flexible, easy to operate, and features a fully automatic tempering cycle.

**LEMA TC 9501**

## COMPANY PROFILE

Based in Hausmening/Austria, **LiSEC** is a global group with more than 50 years of experience, offering innovative single and all-in-one solutions in the field of flat glass processing and finishing. The group's portfolio includes machinery, automation solutions and services. In 2014, with around 1,500 employees in over 20 locations and an export rate of more than 90 per cent, LiSEC generated a total turnover of about EUR 200 million. LiSEC develops and manufactures glass cutting and sorting systems, single components and production lines for insulating and laminated glass production, glass edge processing machinery and tempering systems. With reliable technologies and intelligent automation solutions, LiSEC sets standards in quality and engineering, and significantly contributes to its customers' success.

## COMPANY PROFILE

ATS Eco Convection is **Mappi International's** new horizontal glass tempering furnace using advanced technology, guaranteeing excellent production and quality results thanks to a wide range of innovative solutions for high production quantities, maximum product quality, energy savings.

All high-tech solutions are perfectly integrated in this new ATS plant, which, thanks to a new and exclusive Total Convection System, enables to temper all types of coated glass on today's market: selective glazing, solar control, as well as low-E

magnetronic glass with emissivity index of 0.01, also enabling to increase the quality of the glass and the productivity of the plant. These plants also have an opening at the side of the heating chamber, which facilitates complete access to internal components.

LAMINA 3 P 1800 3200 is a laminating furnace for use with EVA film, consisting of a heating chamber for a one-level or multi-storey system for increased production.

The glass loading and unloading system works by extracting the level of an outer rail or through the use of a hydraulic platform for the multi-storey system.

An integral part of the system is an oil vacuum pump, connected to the silicone bag, by means of high temperature resistant silicone tubing and related attachments to obtain the vacuum required for the lamination of glass.

Inside the heating chamber, the thermal cycle takes place by means of a hot air convection system which distributes the heat evenly throughout the chamber and across the surface of the glass.

The Fox series is designed to satisfy the demands of small- to medium-sized glassworks interested in integrating a compact tempering plant but are limited by available space. The Fox series maintains high quality standards while remaining affordable.

### COMPANY PROFILE

#### ERP System

High-tech software system for the input of orders, shipping documents and invoices, warehouse management, production planning, batch creation, cutting optimization, production running by means of barcodes.

Opty-Way Enterprise is **Optima's** network-integrated software solution able to manage all the needs and problems of glassworks. Developed using SQL Database, it enables to input and plan any type of production order thanks to the use of a powerful and flexible distinct base.

#### Monitoring

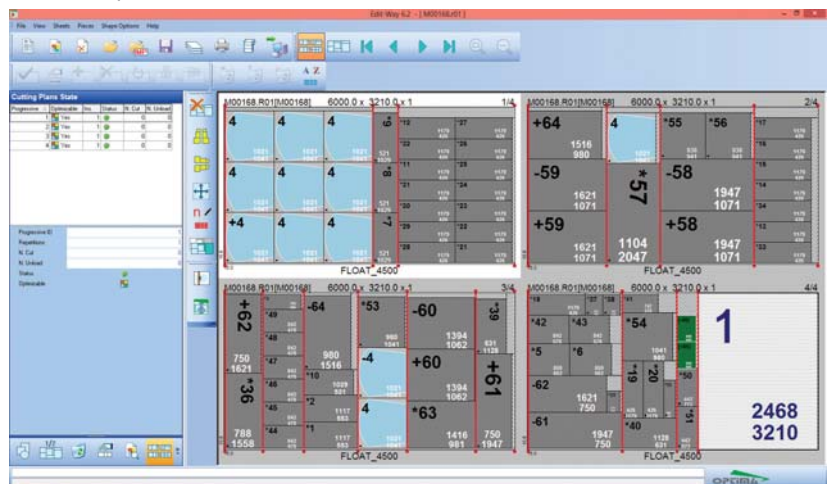

Specific production modules for visualization of each and every phase of production, data regarding the items being produced, orders and batches, supervisors for production running using barcodes, as well as the recording of production times, visualization of cutting diagrams, organization of racks and shipping all visualized on monitors.

#### Optimization Tools

High-yield systems for the optimization of waste product, suitable for straight-line- (1D), guillotine- (2D) or nesting cutting of complex geometric shapes. With more than 25 years of development and over 8,000 installations all over the world, Opty-Way and Nest-Way are the most widespread used optimization systems used for the glass sector.

#### Single User Solutions

## COMPANY PROFILE

### 3NEO® Magnetic Cup Wheels

**Pomdi Diamond Tools** is continuing to enter new markets thanks to its new and innovative products for flat glass processing, such as those for double edgers/bilaterals. In fact, the 3NEO® Diamond Wheels System now works on 95 per cent of straight-line edgers and bevellers - even those working up to three shifts without stopping. In these situations, the need of quick and easy changeover of the worn diamond tools is a must. Therefore, the 3NEO® diamond wheels system is the perfect option as it enables to change a whole sets of tools of a 10- to 12-motor machine in only two minutes per wheel, instead of the normal 8-10 minutes per motor. Moreover, thanks to Pomdi's bond, the wheels deliver their expected

finishing in only a few meters of glass after installing them on the machine. Obviously, this level of speed goes hand in hand with the highest standards of processing and grinding quality.

**Core drills and split countersinks**

Pomdi also provides core drills with the following features:

- 1.- stainless steel;
- 2.- laser welded – they never break;
- 3.- self re-profilable – they always cut, no need to re-profile them from time to time;
- 4.- drill thickness of only 0.8 millimeters – very thin, better entry;
- 5.- shaped for better cooling – better work.

The features make Pomdi drills one of the best choices for the professional drilling of glass, with extraordinary finishing, being able to drill six millimeter glass from only one side with optimum results. Split countersinks from Pomdi use the clever-design advantages of 3NEO®, and can be used with core drills, and with any other drill bit, and are “split” countersinks, using the same 3NEO® principle of splitting the product in two parts, body (adapter) and diamond ring. The adapter function holds the ring perfectly parallel to the drill bit, and the diamond ring is what touches the glass, works and logically

gets worn with the use. The adapter must be bought the first time, but only the diamond rings for the countersinks must be repeatedly replaced. That means that replacement price is extremely competitive, reducing its variable cost between 30 and 50 per cent depending on the diameter, figures that in today's operations seem quite interesting.

**Peripheral Wheels, series ECO®**

New line of peripheral wheels for CNC and manual edgers, as well as straight and double edgers. We develop this new line reducing the labor cost with the compromise of cost effective product improving the performance for

the user. Special wheels for high speed with minimum chipping and special reinforced wheels for laminated glass with PVB.

**Cerium oxide - Glossex®**

Pomdi offers two types of Cerium Oxide: Pink and White, to European, African and Middle East customers, at very competitive prices due to a direct contact with an original source supplier.

Glossex®, as this product is called, is supplied with all the necessary Safety Data Sheets (SDS) documents according to UE – Reach regulations. Pink Cerium Oxide is absolutely valid for common flat glass processing, and has the most positive feedback in terms of price/quality from processors. White Cerium is suited for special jobs requiring the highest finishing standards, with the best example of its effectiveness being the fact that it is used by Pomdi customers of the very demanding optical glass market.

**3NEO® Polishing wheels**

Pomdi is developing the magnetic system with polishing wheels manufacturers for a complete set of wheels especially for straight and double edgers. The main advantage for users is the quick change of used tools and not need to stop production too much time, just a pair of minutes.

## COMPANY PROFILE

**R.B.M. ITALIA s.r.l.** has been manufacturing polishing wheels for flat glass for over 50 years.

Its extensive product range includes 26 different formulations of wheels with different grit and size, commercialized by a detailed global sales network.

The family-owned and managed company has always been located in Baldichieri, in the province of Asti, where it was founded in 1963, thanks to the inventive of Romano Reynaud, who was the first person in the world to create the formulation of polishing wheels and their use on flat glass processing machines.

The Reynaud family continues these activities with seriousness and success, following the philosophy of technological research and great skills and competence in the sector.

Today, R.B.M. not only means high-quality products, used in small workshops as well as in large-scale industrial production, but is also a prestigious trademark.

Alongside the production and commercialization of its own polishing wheels, R.B.M. has also been able, year after year, to increase its national and international markets thanks to the continuous development of new products, taking part in the most important fairs of the sector, cooperation with machinery manufacturers, as well as tailor-made technical assistance for the diverse needs of clients and markets.

Georgia, Atlanta, USA - 16 / 18 September 2015

**Vitrum 2015** - Milan, Italy - 06 / 09 October 2015

### COMPANY PROFILE

**R.C.N. Engineering Srl** was established thanks to the idea of its two founders after many years of experience in the glass industry and, more specifically, in fusion technology. R.C.N. was the first company to promote innovative technology for the production of glass washbasins in the 1990s, absolutely perfect in shape and transparency.

This system, with its use and control of three temperatures, then led to the study and feasibility of innovative ideas. Since then R.C.N. has continued to develop and renew itself thanks to the goal of innovation that it is characterized by.

#### POWERLAM

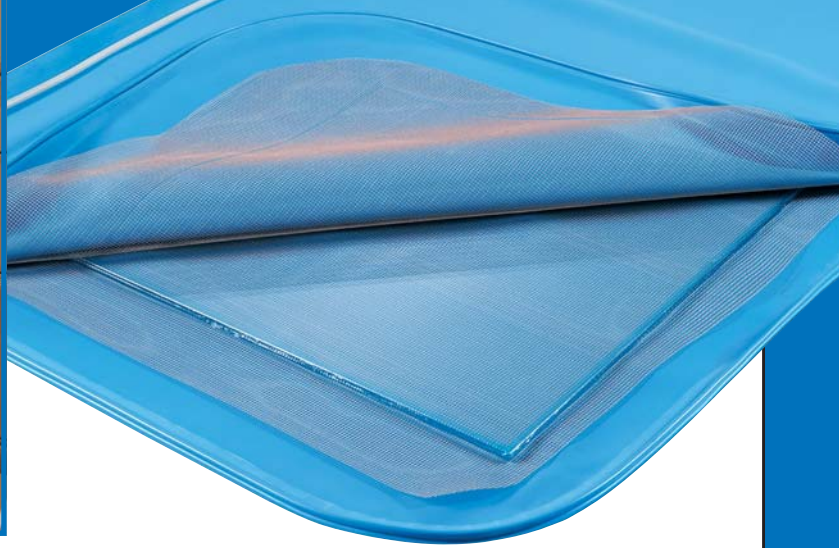

Absolutely innovative technology in lamination.

Reduced production and logistics times thanks to a system that does not need bags, and with fast heating of the laminating chamber. Wide range of machine sizes and combinations for EVA processing only, or also for EVA and PVB.

This machine requires continuous production in order to optimize production volumes and speed.

Ease of loading and unloading operations thanks to two conveyors equipped with lifting device for the movement of the glass. A highly versatile machine that enables to change production type without the need for specialized operators.

### REVA FILM

At long last a laminating film made in Europe that respects the double needs of adhesion and transparency, totally compliant with European norms, as well as being conform to AINSI regulations as of January 2015. This material is always new and available as stock, since R.C.N. has dedicated a specially equipped area of its premises to the storage and transport of rolls of REVA FILM. The film is available in different thicknesses and sizes and responds to diverse manufacturing needs.

The production of coloured REVA FILM is presently being studied.

### ECO Special line furnaces for special glass bending

The demand for curving furnaces started up again a couple of years ago, in particular with regards to special bending requiring a furnace suitable for temperature control and heat uniformity.

RCN has therefore continuing developing its ECO Special furnaces, which have three upper and lower heating zones, all

working independently one from another. This feature enables to have higher or less concentration of heat in certain areas of the glass sheet, in turn allowing for complex and perfect glass curves.

RCN can develop personalized solutions, as per each and every client's needs and demands.

### SILIKOSOFT

Bags for glass lamination designed by R.C.N. with special closure that enables fast handling and highly-resistant airtightness. Both strong and flexible, they can be used for the lamination of large glass thicknesses and curved glass sheets. Guaranteed for at least 4,000 hours of use in correct conditions.

Can be repaired directly by the client in the case of breakage. The use of these bags in an autoclave is highly requested, and can also be supplied in vertical format with reinforced base.

## PRODUCT RANGE

### Smart and Lammy

Laminating furnaces with simple or modular bag system

### Powerlam

Continuous laminating furnaces without bags

### ECO

Fusion, bending and special bending furnaces

## COMPANY PROFILE

**Rollmac** is the division of GeMaTa Spa, one of the leaders among leather finishing equipment manufacturers, devoted to the production of machinery for the enamelling of float glass sheets. Thanks to experience acquired, it has developed a new system based on engraved roller technology in continuous operations, also launching drying compartments. Rollmac manufactures a wide range of machinery and lines for the glazing and decoration of flat glass for the most diverse requirements.

### Production

Gemata/Rollmac technology includes enamelling machines Multiglass, Colorglass, Glassdrier drying tunnel, which al-

lows easy working systems, perfect application homogeneity and drying performance on sheets with minimum dimensions up to very large ones and the possibility to apply both traditional ceramic and organic as well as silicon paints.

Multiglass and Colorglass can both be used as stand-alone units in automatic glazing lines, as well as equipped with a Glassdrier IR and conveyor rollers, if required.

Last but not least is Glassline, the brand new machine to enamel the edges of float glass sheets by means of a steel engraved cylinder. It is a completely new project based on the well-known technologies of enamelling using a reverse roller.

Rollmac – Gemata is certified as per ISO 9001, ISO 14000, and Italian "Safe Work" standards.

### COMPANY PROFILE

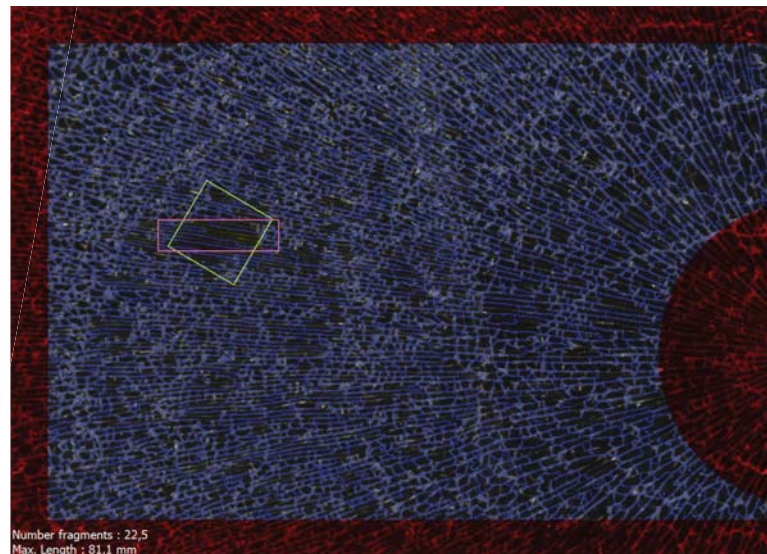

**Softeco** is the worldwide leading supplier of Quality Control Equipment for the flat glass industry, both architectural and automotive. We closely follow changes in EU regulations and international norms, and update our supply and services accordingly.

#### Quality control for automotive glass:

- Softeco provides expertise in all normative and informative tests according to ECE R43.
- We supply all the necessary QC equipment, such as:
  - Dropping towers and supports for test pieces
  - Impact objects
  - Projectors and slides
  - Resistance to radiation test equipment
  - Light transmission measurement
  - Collimator for the automatic double image test
  - etc.
- We can coordinate ECE R, DOT and CCC certification processes.

#### Quality control for architectural glass:

- We provide knowledge and consultation services for CE marking and tests.
- We supply equipment and machinery to perform obligatory and non-obligatory tests, such as:
  - Spring loaded punch
  - Roller wave gauges and edge lift gauge
  - Optical surface and edge stress measurement equipment
  - Resistance to high temperature test oven

Number fragments : 22,5  
Max. Length : 81,1 mm

CE e17 E17

- Insulated glass unit desiccant performance tester
- Low-E emissivity tester
- etc.

**Gains through quality:**

Some of the quality control equipment we provide can also be used to optimise productions parameters: avoiding waste and increasing yield.

**Non-destructive and automated tests:**

We aim at developing automated and non-destructive tests, such as the Grazing Angle Surface Polarimeter - GASP - designed to evaluate the strength of the compressive layer, which can be used instead of the 4-point-bender machine for mechanical strength tests. An example of an automated test is the FragGlass software, used in mandatory fragmentation tests for heat-treated glass.

**Other control tools:**

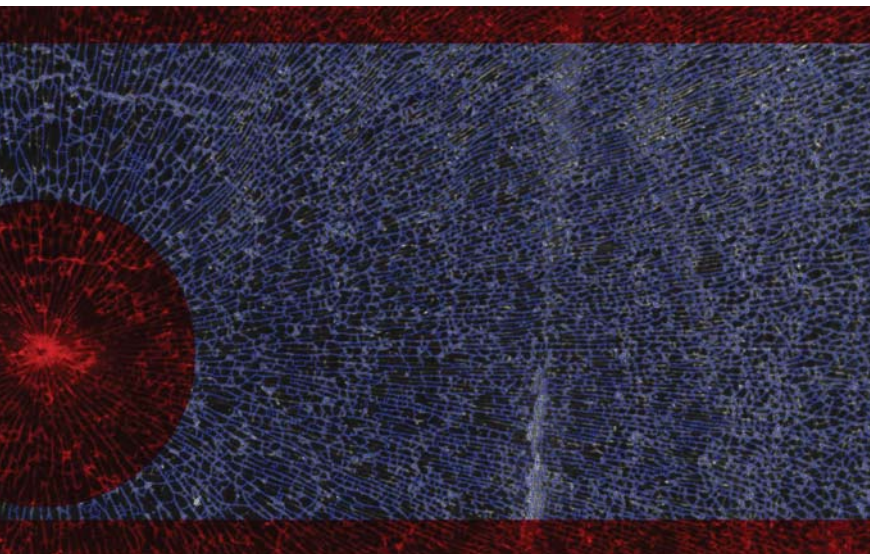

In addition to all mandatory QC instruments, we also provide instruments for daily or random testing, such as:

- Coating detection for IGU glass
- Tin-side detector
- PVB humidity meter, etc.

**PRODUCT RANGE**

- QC equipment for tempered and laminated glass
- Complete range of quality control equipment for automotive safety glass
- QC plans and information for architectural and laminated building glass
- QC plans and information for automotive safety glass production
- ECE R 43 and DOT ANSI Z 26.1 approval services
- Testing services for safety glass according to different norms, including EN
- PVB shaping, relaxation and cutting machinery

## COMPANY PROFILE

**T.C. Turrini Claudio srl** has been producing water treatment plants for the recycling of wastewater coming from glass processing, thanks to the multi-tested DEP system, since 1994.

Starting from steel sheets and finishing with final products, all machines are designed, laser cut, bent, welded and assembled by T.C. Turrini Claudio in-house at its two factories located in Villafranca di Verona, Italy.

During over 20 years of activity in the glass market, the company has produced water treatment systems for each and every type of glass production: from normal flat glass to fire resistance Pyrobel, from 50 lt/min to 10,000 lt/min (3 mc/h to 600 mc/h). Helping small-, medium- and large-sized glass factories with wastewater recycling, following CE directives and preserving the environment from groundwater pollution, also saving customers' money, the DEP system has developed and is now a reliable and consolidated system.

The DEP system solves wastewater treatment problems in accordance with regulations on water protection. Decantation is performed by means of the sedimentation process of suspended material in the wastewater, with the possible use of a suitable flocculent. The settling process causes a thickening of the mud at the bottom of the settling tank, from where it is extracted, making it compact, dry and suitable for disposal.

For sludge dewatering, our company offers different solutions, from filter bag systems (DS and DSM) for small- and medium-sized businesses, to filter press systems (FP) for companies with high productivity.

T.C. Turrini Claudio also offers a wide range of quartzite filters for additional water filtration, which preserve CNC spindles with additional drinking water filtration (40 micron).

Over the decades, experience and continuous contacts and discussions with customers, the first true business partners, have made T.C. Turrini Claudio leader in its field.

Quality materials, attention to design and the ability to produce all its machinery from flat sheets to complete products in-house at its two factories are the strengths that have led the company to achieve standards of quality unmatched in the field, making it a reference point in the Italian and international market.

Thanks to a technical study that uses three-dimensional design software generation and to constant research in the field of industrial automation, T.C. Turrini Claudio srl is projected towards new challenges with the strength of its experience and enthusiasm of ideas.

MUELAS PARA EL CORTE

**Pomdi**

## DEIONIZING AND WATER SOFTENING EQUIPMENT

DEIONISATEURS ET ADOUCISSEURS D'EAU

ENTIONISIERUNGS-ANLAGEN UND WASSERENTHÄRTER

INSTALACIONES DEIONIZADORAS Y ABLANDADORES DEL AGUA

**Lisec Group**

## ELECTRIC FOILERS FOR COPPER RIBBONS

SYSTÈME D'ÉTRIRAGE ÉLECTRIQUE

ELEKTRISCHE VORRICHTUNG ZUM KUPFERAUFTRAGEN

APLICADORES ELECTRICOS DE HOJAS DE COBRE

**RCN Engineering**

## FLAT GLASS QUALITY CONTROL DEVICES

SYSTÈMES DE CONTRÔLE DE QUALITÉ POUR PLAQUES DE VERRE

QUALITÄTSKONTROLL-SYSTEME FÜR GLASPLATTEN

SISTEMAS DE CONTROL DE CALIDAD PARA HOJAS DE VIDRIO

**Ayrox**  
**Softeco**

## HEATING EQUIPMENT - STANDARD (GAS FIRING, BURNERS, AIR GAS MIXERS, SAFETY DEVICES, ELECTRICAL RESISTORS)

EQUIPEMENTS POUR LE RÉCHAUFFEMENT (BRÛLEURS, MÉLANGEURS D'AIR ET DE GAZ, MÉCANISMES DE SÉCURITÉ, RÉSTANCES ÉLECTRIQUES)

HEIZUNGSANRÜSTUNG (BRENNER, LUFT-GASMISCHER, SICHERHEITSVORRICHTUNGEN, ELEKTRISCHE WIDERSTÄNDE)

EQUIPOS DE CALEFACCION (QUEMADORES, MEZCLADORES DE AIRE Y GAS, MECANISMOS DE SEGURIDAD, RESISTENCIAS ELECTRICAS)

**Keraglass**

## INFRARED TUBES

TUBES À INFRAROUGE

INFRAROT ROHREN

TUBOS INFRARROJOS

**Helios Italquartz**

## KILNS

FOURS

KAMMERÖFEN

HORNOS

**Keraglass**  
**Lisec Group**

**RCN Engineering**

## OPTICAL DISTORTION ANALYSERS FOR AUTOMOTIVE GLASS

ANALYSEURS OPTIQUES DE DISTORSION POUR VERRE DESTINÉ À L'INDUSTRIE AUTOMOBILE

OPTISCHE VERZUGS-ANALYSATOREN FÜR GLAS FÜR DIE AUTOMOBILINDUSTRIE

ANALIZADORES ÓPTICOS DE DISTORSIÓN PARA VIDRIO PARA LA INDUSTRIA AUTOMOVILÍSTICA

**Keraglass**

## POWDER OR LIQUID APPLICATION SYSTEMS FOR PROTECTING FLOAT GLASS

SYSTÈMES D'APPLICATION EN POUDRE OU LIQUIDE POUR LA PROTECTION DU VERRE

PUFDER-FLUSSIGKEITAUFRAGSGERÄTE ZUM SCHUTZ VON FLACHGLAS

SISTEMA DE PROTECCIÓN DEL VIDRIO "FLOAT" MEDIANTE POLVOS O LÍQUIDOS

**Cugher Glass**

## PURIFIERS FOR REFLUENT WATER

PURIFICATEURS POUR L'EAU DE REFLUENT

REINIGER FÜR REFLUENT WASSER

PURIFIERS PARA EL AGUA DE REFLUENT

**Forza G Italia**  
**T.C. Turrini Claudio**

## QUARTZ EQUIPMENT

QUARTZ MACHINES

QUARTZ MASCHINEN

EQUIPOS DE CUARZO

**Helios Italquartz**

## SIC HEATERS

SIC APPAREILS DE CHAUFFAGE

SIC HEIZGERÄTE

SIC CALENTADORES

**Helios Italquartz**

## SOFTWARE SYSTEMS FOR PRODUCTION CONTROL

SYSTÈMES DE LOGICIELS POUR LE CONTRÔLE DE LA PRODUCTION

SOFTWARE-SYSTEME FÜR DIE KONTROLLE DER PRODUKTION

SISTEMAS DE SOFTWARE PARA EL CONTROL DE LA PRODUCCIÓN

**Cugher Glass**  
**Lisec Group**  
**Optima**

## SOLDERING EQUIPMENT FOR ELECTRICAL CONNECTORS FOR WINDSCREENS AND BACKLITES

SYSTÈMES POUR LE CONTRÔLE DU GABARIT

SYSTEME FÜR DIE VERSCHWEISSUNG DER ELEKTRISCHEN LEITER IN WINDSCHUTZSCHEIBEN UND HECKFENSTERN

SISTEMAS PARA SOLDAR LOS CONECTORES ELÉCTRICOS EN LOS PARABRISAS Y CRISTALES TRASEROS

**Ayrox**  
**Softeco**

## SORTING SYSTEMS

SYSTÈMES DE CLASSIFICATION

KLASSIFIZIERUNG (FÜR GLASPLATTEN)

CLASIFICADORES

**Bystronic glass**  
**Lisec Group**

## TESTING FOR SOLDERINGS

TESTS DES SOLDURES

PRÜFUNG DER SCHWEISSNÄHTE

PRUEBA PARA LAS SOLDADURAS

**Softeco**

## TESTING DEVICES OF BACKLITES ELECTRICAL HEATING

SYSTÈMES DE CONTRÔLE DU CHAUFFAGE ÉLECTRIQUE DES VITRES ARRIÈRES

KONTROLLSYSTEME FÜR DIE ELEKTRISCHE HECKFENSTERBEHEIZUNG

SISTEMAS DE CONTROL PARA EL CALENTAMIENTO ELÉCTRICO DE LOS CRISTALES TRASEROS

**Softeco**

## UV LAMPS

UV LAMPES

UV LAMPEN

# SUBSCRIBE NOW TO THE WORLD'S

GLASS MAGAZINES

since 1989

## Glass-Technology International

**GLASS-TECHNOLOGY INTERNATIONAL** is the leading international magazine for professionals involved in the flat and bent glass industry, from building to automotive, and from furniture to household appliances. **G-TI** is useful for those working in float glass plants as well as glass processors/fabricators, glazing contractors, automotive glass installers, window and door manufacturers, glass merchants, wholesalers, etc. With about 100 pages per issue, it is the bi-monthly tool for keeping abreast of new technology, new products, company life and all innovations in the world of flat and bent glass.  
**Also available in interactive digital format.**

since 1988

## glassmachinery world plants & accessories

**GLASS MACHINERY PLANTS & ACCESSORIES** is the leading international magazine for glass manufacturing, and is targeted at glassworks involved in the production and processing of hollowware and special glass (bottles, containers, household, lighting, technical, scientific, industrial and medical glassware).  
**GLASS MACHINERY PLANTS & ACCESSORIES** is a bi-monthly periodical with about 100 pages of product news, current world news, focus on... technical articles and dossiers, worldwide exhibitions, glassworks in the world, Yellow Pages, etc.  
**Also available in interactive digital format.**

ANNUAL GUIDES

since 1990

## WORLD GLASS DIRECTORY

The **WORLD GLASS DIRECTORY** is a unique international annual guide which gives a complete overview of international glassworks and suppliers involved in hollowware and special glass manufacturing. About 200 pages of complete company profiles: addresses, management, sister companies, plants, number of employees, turnover, banks, year of company foundation, capital, trademarks, areas of activity, innovations, product-by-product and country-by-country breakdowns. **The WORLD GLASS DIRECTORY** is the annual reference point for the international glass manufacturing industry comprising bottles and containers, domestic glassware, tubing, vials and ampoules, lighting glassware, technical and industrial glassware, scientific, laboratory and medical glassware and automotive glassware.  
**Also available in interactive digital format.**

second edition

## FLATGLASS 2015 world directory

The **FLAT GLASS WORLD DIRECTORY** is a unique international annual guide providing a complete overview of glassworks and suppliers for the flat glass sector. More than 150 pages of company profiles and information about worldwide glassmakers, glass processors and suppliers, including addresses, management, sister companies, plants, number of employees, turnover, banks, year of company foundation, capital, trademarks, areas of activity, innovations, sales network, exhibitions, and, of course, interactivity in digital format, make the **FLAT GLASS WORLD DIRECTORY** the annual reference point for the international flat glass industry.  
**Also available in interactive digital format.**
