Revolutionary. Also our technologies.

**INSULATING GLASS MANUFACTURING
HANDLING EQUIPMENT
AUTOMOTIVE GLASS PREPROCESSING**

Bystronic glass symbolises innovation with machinery, systems and services for the processing of architectural and automotive glass focused on tomorrow's market.

From basic requirements through to entire, customised installations Bystronic glass provides pioneering solutions – naturally, all in the highest quality.

www.bystronic-glass.com

GLASS APPLICATIONS

IR medium wave twin tubes emitters for:

- laminating lines
- mirroring lines
- dry screen printing lines

IR medium wave single tube emitters for:

- bending furnaces
- fusion furnace

IR fast medium wave twin tube emitters for:

- laminated glass cutting machines

Helios Quartz also produces highly appreciated equipment for the glass industry such as **manual and automatic tin side detectors** and **UV polymerization units**.

Application fields

Silk screen printing machines and lines engineered and designed for Automotive Glass Makers. For all types of automotive glass, tempered and laminated.

Automotive

Architectural silk screen printing machines are specially designed to print on large glass formats up to Jumbo size 3200x6200 mm

Architectural

The home appliance division provides silk screen printing solutions for a sector where printing speed is essential

Home appliance

Handle with AIR!

Increased profitability with the air cushion tempering technology by the inventor.

LiSEC AEROFLAT
Air Cushion Technology since 1996

High quality products deserve a top treatment. With the patented LiSEC AEROFLAT air cushion tempering technology, the surfaces of the glass sheets are not touched during the tempering process. The results:

- No roller waves / white stripes / roller pickups
- No cooling down of the heating zone in case of glass breakage
- No waiting time when the type of glass is changed
- 50 % less staff required

Tempered flat glass in top quality - profitable and future-proof.

COMPANY PROFILE

Adelio Lattuada produces the widest range of edging and bevelling machines currently on the market:

- more than 30 models of electronic or with PC straight-line edging machines for flat edges with arris and variable angle from 5 to 16 wheels;
- complete line of double-edgers from 8 to 11 wheels on each side, for flat edges with arris, available with many different possible configurations, both as stand-alone and in-line versions;
- more than 10 models of electronic or with PC straight-line bevelling machines from 7 to 14 wheels;
- 4 models of automatic corner grinding machines, able to process radius and straight corners of up to 20mm glass thickness in less than 30 seconds;
- 15 models of vertical washing machines both open or closed on top;
- complete line of horizontal automatic, semiautomatic and manual drilling machines with one head or two opposing heads (automatic lower head and manual upper head);
- accessories: a small washing machine that can be fitted on all Adelio Lattuada edging/bevelling machines and PAR-AL, a device for the processing of parallelogram-shaped glasses in an inclined position.

The strong points of all products are their ease of use, long working life, very simple to use, low maintenance required and high processing quality. The company is also highly concentrated on the customization of all its models in order to adapt them to different customers' demands: a very wide and detailed list of options is available, and is continuously updated and increased in response to the evolving market.

COMPANY PROFILE

ADI SpA has been founded in 1980 and now, after 37 years, ADI has 3 plants in Italy and 3 abroad, 154 people in Italy and 12 abroad. The growth has been possible thanks to the continuous R&D investments and the focus on the real customer's needs.

ADI manufactures diamond tools not only for glass, but also for stone, ceramics, mechanics and optics. The big advantage coming from this wide range of products is that the experience made in one application can be transferred to the others. A good example of this, is the UHS bond, which has been studied initially for the Glass Automotive industry and now it has been successfully transferred to the CNC tools for glass, stone and mechanics.

ADI is one of the very few companies in the world with all sintering technologies in house. ADI is in fact able to manufacture metal bond, resin bond, vitrified and plated bonds. In the last years an increasing number of patents has been registered worldwide. In particular, related to the glass industry, there is the GOLDFINGER router; the W.E.T. trapezoidal wheel, which allows an even deformation thanks to the patented refrigeration system; the flexible seaming wheels, which have been developed for the SKG machine.

ADI is extremely proud to offer products that are 100% Made in Italy. Many Companies have tried to reduce the production costs by selling imported products or by setting production plants in Countries with lower manpower and healthcare costs. ADI reduces the customer's Total Cost of Ownership with products innovation.

At the end of 2016 ADI, together with the company Surfaces Technological Abrasives SPA become part of a big group. This will not bring any change in the Company Values. On the contrary, the entire Group will be stronger and capable to invest even more in Innovation for the Customer's benefit.

COMPANY PROFILE

A+W

Software for Glass and Windows

A+W is the global market leader for software in the flat glass industry as well as the windows and doors business. The company develops ERP-, PPS- and optimization software in order to make glass and window manufacturers even more efficient.

A+W solutions control and optimize the whole value chain, from basic glass to finished windows or façade elements. A+W products are suitable for small-, mid-sized and large companies.

Of course, A+W offers individual advice and consulting for its entire product range and supports users from the presentation of the systems through to live operation.

With automatic updates and upgrades, the global maintenance service makes sure that the installed software is always up to date. A+W optimizes its customers' yield, reduces production costs, shortens lead times, improves quality and thus increases customer satisfaction.

A+W has been active on the market for by '40 years and sells its products worldwide. A+W cooperates with the most experienced and competent companies in the industry. This close networking helps A+W to always provide the best possible solution for its customers' demands.

A+W is a wholly owned company of Constellation Software Inc., which is listed on the Toronto Stock Exchange under the symbol 'CSU'. The Corporation acquires, manages and builds vertical market software businesses.

COMPANY PROFILE

PVB Shaping, relaxation and Cutting

- **Ayrox** has a long history as a specialist in PVB treatment, from roll handling to cut sheets ready for lamination. This includes roll transfer, shaping, relaxation and cutting.
- The advantage of PVB shaping and stretching is that it generates considerable material savings for laminated wind-screen producers.
- Ayrox newest product is an innovation in wedged PVB roll handling and cutting.

PVB Wiring

- Wiring technology enables to produce heatable PVB, suitable for both architectural and automotive applications.

Production Accessories

An example of production accessories in our product range include:

- For lamination:
 - Silicon rubber vacuum rings
 - Special silicone-free non-EPDM vacuum rings. These vacuum rings leave no silicone residue on glass and last tens times longer than normal silicone-free EDPM vacuum rings.
- For tempering, we supply aramide fiber tapes of different sizes and thicknesses.

Optical quality control

- Ayrox provides a wide range of high-precision non-destructive optical measurement instruments. They are designed for Quality Control requirements and worldwide norms and regulations. Our product range also includes optical equipment such as:
 - Polariscopes for visual inspection of stresses in glass
 - Polarimeters for a quantitative evaluation
 - GASP for surface stress measurement
 - VRP for non-destructive residual stress measurement on black paint areas
 - Edge stress metres, etc.

- Surface stress (mechanical strength) gauges for annealed, tempered and heat strengthened glass
- Our qualified technicians perform annual calibrations, repairs and preventive maintenance, and are available for theoretical and practical trainings.

Heatable backlite soldering and testing

- We offer machinery to perform testing of:
 - electric circuits
 - continuity of lines
 - mechanical strength of soldering
- Our soldering range includes:
 - Manual, semi-automatic and custom automated soldering machines, with a positioning jig.

Ayrox continuously innovates and expands its product range and machinery, responding to special production needs.

PRODUCT RANGE

- PVB shaping, relaxation and cutting lines
- Heatable PVB wiring technologies
- Heatable backlite soldering and testing systems
- Silk printing machinery
- Flat and bent glass tempering machinery
- Sourcing and trading in safety glass for various applications
- Distributor of Strainoptics products

- Tables for straight and shaped cutting

Bavelloni: on the right side of glass, focused on you.

Bavelloni is one of world's historical brands with regards to flat glass processing machinery. Bavelloni has produced machines for glass working since 1946 that are designed and built in its Italian factory. No manufacturing of any machinery is done outside of Italy. During over 70 years of operations, tens of thousands of glass processing machines have been installed in more than 100 countries, served by a wide, competent and active sales and service network.

The product range includes CNC machines, cutting tables, edging, bevelling and drilling machines for the architectural, furniture and domestic appliance and the solar industries. Bavelloni core business has always been that of edging, with a complete series of straight line edgers, VE 350 and VE 500 series, available with from 6 to 11 wheels for flat edge with arrises. The series includes two machines with variable angle which are the top of the range for the market. These models are the results of decades of experience in the construction of edging machines, which are known as the reference standard for reliability and quality in processing.

Bevellers are also one of Bavelloni's historical product: the new models VB350 and VB500, as well as the previous well known B75 and MAX are up and running all over the world.

The company has more than 20 years' experience in double-edging, with the design and construction of hundreds of plants, mostly customized as per the needs and demands of each client. Bavelloni bilateral lines, with cup wheels as well as with peripheral wheels, are available in many configurations and they can be equipped with specific technical solutions, such as wheels presetting, automatic supporting bars, automatic set-up cycles, to increase their automation level and their productivity. The HE500 range for processing flat edge with arrises has been conceived to provide a new concept, combining extreme flexibility, performance and reliability. The

easy and highly customizable configurations can match different customer's production requirements: maximum grinding size up to 7,200mm, up to 14 spindles on each side, solutions for 45° chamfering, low-E removal devices, engraving on the glass surface or directly on the glass edges for appliance, architectural and interiors applications. Many combinations are available to create L, U, Z or reverse lines.

Work centers are another product series that the Bavelloni brand is well known for. These top-level machines are highly successful with clients looking for strong and reliable machinery. Available in different models, Alpa and NRG, and sizes, the NC working centers are appreciated for their performance and strength, always granting high reliability and minimal maintenance. The new four axis working center NRG 420 POWER JET carries out edging, milling, drilling (as well as beveling, engraving, cutting by disc, polishing by cup wheels through specific aggregates) of maximum 4200x2300mm size glass sheets. This machine is equipped with the new electro-spindle fully designed and assembled by Bavelloni SpA., granting top quality and reliability. The innovative front door, unique in the market with new concept up and down movement (patent pending) opens and closes in a completely automatic way, making the loading and unloading operations easier for the operator. Some exclusive solutions, such as the automatic positioning of suction cups (PAV) and the PowerJet device for tool cooling, allow to increase grinding performance and reduce set-up times. And when automatic working is required, Bavelloni can provide plants made up of CNC machines with anthropomorphic robots for the automatic loading and unloading of glass sheets, very suitable for large production volumes in home appliances, shower enclosures, refrigeration, etc.

Bavelloni range also includes versatile stand-alone machines that can be used in any type of glassworks. REV 372 SR is a compact cutting table with high performance levels, chosen by many customers. SB10 is an edging and bevelling machine for shaped glass. VT 1250 is a reliable and indestructible drill with facing heads essential for any glassworks.

COMPANY PROFILE

BDT was founded in 2003 to support and complete Elettromeccanica Bovone: Vittorio Bovone, together with his daughters Federica and Giulia, and all the BDT Staff, wanted to produce and manage wheels for straight-line edgers and bevellers in-house. This represented just the beginning, and now BDT is a strong and consolidated company with well-prepared and experienced staff. Market demand focus and technical improvement are the keywords of BDT history and evolution.

Over the years this small company has grown a lot: 25 employees nowadays and a large production capacity including the range metal bond and resin bond diamond cup and peripheral wheels for bevellers, edgers, double-edgers, CNC peripheral wheels, drill bits and glass tools to make holes. In 2015 two young employees were recruited, one in the Production Department and the second one for Sales & Marketing.

In 2010 the new revolutionary and performing GOLDNET router was patented. Today it's one of the most highly appreciated tools of the range.

Bovone Maquinas e Equipamentos Industriais, the Sister Company of BDT, based in São Paulo, which deals with Bovone machines and BDT tools all over Brazil, was also founded during this same year.

Since 2010 the company has also been producing stone tools, investing on high-performance machines to provide high quality wheels, which can grind new materials such as Dekton.

The company has always experienced step-by-step development recording a steady and progressive increase in sa-

QUALITY & PERFORMANCE

JOINED FOR EXCELLENCE

STAINLESS QUALITY AND GOLD PERFORMANCE

BOVONE
GROUP

les volumes year after year. The only exception was in 2009 when sales decreased, but in 2010 the previous targets were completely restored. 2015 was a successful year since the company reported a 25% increase on total volume.

Also 2016 was a very positive year thus considering sales volume and accounting balance sheet.

The formula never changes: investments in innovation, research, development and performance in machines and human resources, these are the secrets of growth. At BDT, employees are, first and foremost people, and they are, in fact, very responsive people, part of a very big family, always ready to intensify rhythms when a customer needs an order urgently, since their efforts are always rewarded: they are always granted the best working conditions and always receive what they ask for. BDT uses the same philosophy with customers: first of all they are people, who need to be taken care of in the best way. Our company aims at establishing positive business relationships with them, and, thanks to this behaviour over the years, simple partnerships have often evolved into something more. This also happens with agents, dealers, suppliers, both Italian and international, and even forwarding agents (they are always welcome to a good Italian coffee!).

This virtuous circle keeps on producing important advantages, giving our brand name extra value which represents BDT's long-lasting seriousness and reliability.

COMPANY PROFILE

Future-oriented systems for glass processing

Bystronic glass symbolizes innovation in machinery, systems and services for architectural and automotive glass processing for tomorrow's market – from basic requirements to entire, customized installations.

Bystronic glass is an international brand with globally operating companies that support customers on site and through own sales and service companies. Bystronic glass has been part of Conzzeta AG, a renowned Swiss industrial holding company, since 1994.

Insulating glass manufacturing

Irrespective of whether it's a fully-automatic I.G. production line with warm-edge spacers or an entry-level solution, every I.G. manufacturer will find the line or machine that meets their requirements at Bystronic glass. The benchmark in this sector is the modern **B'SPEED** production line, which can produce triple I.G. units in the time it takes other lines to produce double I.G. units. At the other end of the product range is the **B'COMFORT**, the ideal entry-level solution for industrial I.G. production.

Remember – the trend is towards ever larger I.G. units and façade elements. With the **B'JUMBO** production line, XXXL units 9 meters long – or longer on request – can be manufactured economically.

Handling equipment

Glass processing industry customers have been impressed by **B'EASY** handling systems with their rigid guidance and low

dead weight since 1998. In recent years, the **B'EASY** handling systems have also been making headway with large window manufacturers as their flexibility in terms of frame design fulfil many requirements. Track-mounted equipment and battery-powered suction frames complete the range.

Automotive glass pre-processing

Bystronic glass is a world market leader in automotive glass pre-processing. The **B'CHAMP** machine generation enables quick and precise cutting, breaking, grinding and drilling of automotive glass ensuring system reliability for 24/7 operation. Thanks to its modular design, several cells can be combined to adapt to the specific requirements of individual customers. **B'CHAMP** solutions are also available for processing of solar glass, appliance glass and display glass.

PRODUCT RANGE

Straight edgers grinders
Double edgers grinders
Vertical drills
Horizontal drills

COMPANY PROFILE

C.M.B. Besana machines are continuously updated with technological and electronic innovations, able to guarantee high precision, reduced set-up time and increased production.

The most recent innovations are those regarding Double Edger Grinders for extra-polished flat edges and those for pencil edges, and the new series of NC drills in two versions: vertical compact with two pairs of drill spindles, and horizontal with five pairs of drill spindles and a router for the milling and grinding of notches. Vertical drills are particularly suitable for automatic grinding and drilling lines combined with

SF-type automatic seaming machines. CMB's series of drills also includes a new, highly versatile semi-automatic machine.

Straight line edgers for flat edges and polished arises or variable angle mitre, are available for up to 60° on thicknesses up to 40mm for both normal and laminated glass, as well as with 13 or 15 spindles for processing large thicknesses up to 65mm and more. A smaller model for glass thickness of 20mm and mitre up to 50° is also available.

COMPANY PROFILE

Since it was founded in the 60's, Cugher has been developing technologies for future needs and analysing market evolution and production requirements in order to identify in advance forthcoming trends.

The open dialogue with Customers has enabled us to develop and create fully reliable solutions to match our Customers' demand.

Cugher's divisions:

Automotive

The automotive division provides silk screen printing lines with a high level of automation, precision and repeatability, for automotive car sets, tempered and laminated.

Home Appliance

The home appliance division is able to provide silk screen printing solutions for a sector in which printing speed is essential.

Architectural

Architectural silk screen printing machines are specially designed to print large glass formats up to Jumbo size 3000x6000 mm.

Furnaces

IR and UV Dryers and customized heat treatment solutions. All Cugher dryers comply with the highest energy standards and are designed as an integral part of the line.

Handling

The high range of Cugher handling products allows transportation and stacking of glasses with any dimension and shape in all the directions inside production plant.

Our Customers are testimonials for our reliability and quality. Among them there are, leading glass manufactures such as AGC, Sisecam, Central Glass & Carlex NSG-Pilkington, PGW, Saint-Gobain, Schott, Guardian.

PRODUCT RANGE

- Screen printing machines (fully automatic and semi-automatic)
- IR - UV Dryers
- Accumulators/Stackers

Vacuum bags furnace

Ecol is a group of companies that designs, manufactures and implements both mechanical and electrical components and machinery. The companies also design full turnkey production lines, especially for the glass industry. Ecol has an industrial painting and shot blasting service at its facilities and in third-party companies.

Group staff is made up by a group of people who have been trained and specialised in different work areas, distributed in engineering and development, administration, mechanical and adjustment, electricity and programming area.

Ecol has own facilities with all the necessary facilities for the manufacture, assembly and testing of manufactured equipment.

The group has a wide range of products, among which:

Auto packing machines line

AUTOMOTIVE GLASS

- Vacuum bag furnace (heatable & non heatable)
- De-airing windshields furnace
- Auto packing machines for automotive sidelites
- Washing machines for flat & curved glass
- Windshields control lines
- PVB cutting machines (square & trapezoidal)
- Drum for heated PVB (parallel & trapezoidal)
- Stockers for flat & curved glasses
- Complete lines of manufacture, printing, load & unload furnaces
- Robots for Loading, Unloading, MB & packing
- Automatic PVB trimming for windshields
- Special machines for the automotive glass industry

FLAT GLASS

- Washing machines for flat glass up to Jumbo sizes
- Polishing machines up to Jumbo sizes
- Auto loaders & unloaders for Jumbo sizes (aerial & tilting)
- Stockers, rolls & belt conveyors, aerial & terrestrial transfers
- Mills for float, patterned & wired glass
- Complete lines for loading & unloading coaters, laminated & silvering lines
- Tin bath peripherals (coolers, top-rolls, side sealing)
- Dross box, hood, lip plate, de-drossing pocket

In the last years a high percentage of Ecol products have been exported to international markets such as Poland, Czech Republic, South Africa, Belgium, Brazil, Colombia, Portugal, China

PRODUCT RANGE

- Complete Stocking Lines / Engineering
- Complete Handling and Movement Lines
- Machines for Handling Glass Sheets
- Handling Robots
- Handling Equipment for Float Glass
- Vacuum Lifting Equipment
- Conveyor Belts
- Packaging Materials and Systems
- Loading and Tilting Machines
- Horizontal Washing Machines
- Vertical Washing Machines
- Washing Machines for Automotive Glass
- Laminated Windscreen Bending Furnaces
- Infrared Ovens
- PVB - Shaping and Cutting Equipment
- PVB - Wiring Technology for Heatable Laminates
- Cullet Handling Systems
- Screen Printing Drying Systems

Edgetech

A Quanex Building Products Company

EDGETECH EUROPE GmbH

Gladbacher Strasse 23 - 52525 Heinsberg - Germany
Tel.: +49 2452 96491.0 / Fax: +49 2452 96491.11

E-mail: info@edgetech-europe.com • www.quanex.com

About Edgetech Europe GmbH

Edgetech's Super Spacer® flexible foam-based spacer systems act as energy-efficient Warm Edge spacers in insulating glass windows. They significantly reduce energy loss to the outside, largely prevent condensation and also contribute to the lifespan of a window. Worldwide, more than 300 million metres of them on average are sold annually in over 90 countries.

Edgetech Europe GmbH, located in Heinsberg Germany, is a fully-owned subsidiary of Quanex Building Products Corporation, a leading global provider of energy-efficient components such as window and door profile systems, flexible insulating-glass spacers, edge seals for photovoltaic modules, wooden floors and ceiling profiles, as well as window and door grilles, with its head offices in Houston, Texas. Based on turnover Edgetech/Quanex is the world's largest manufacturer of spacers. Edgetech Europe GmbH is a sales location for the markets in continental Europe and one of the three worldwide Edgetech production plants, with a total of 450 employees and 16 extruders. You can obtain additional information about the Super Spacer® systems and the Warm Edge Technology of Edgetech here: www.superspacer.com.

Quanex IG Systems Inc.

Celebrating more than 35 years of WARM EDGE Excellence!

Quanex IG Systems Inc. manufactures Warm Edge spacers – an insulating glass edge seal product line that provides maximum condensation resistance, durability and energy performance. Super Spacer® in business since 1989 and with manufacturing facilities in the United States, United Kingdom and Germany, Edgetech's proven technology is improving the performance and energy efficiency of insulating glass systems worldwide. Visit www.superspacer.com to learn more about the company's products, services and global initiatives. Edgetech Europe GmbH is a division of Quanex Building Products Corporation (NYSE: NX), an industry-leading manufacturer of engineered components, products and systems serving North America and International window and door OEMs.

For further information visit the Company's website at www.quanex.com.

Edgetech Super Spacer® - Warm Edge Technology with flexibility plus

As the world's first manufacturer of flexible, foam-based edge spacer systems, Edgetech is a pioneer of Warm Edge Technology and thus of energy-efficient construction. Freely mouldable, aesthetically adaptable and suitable for manual or automated processes, the Super Spacer® Warm Edge spacer is flexible like no other. Proceed with safety towards a sustainable future alongside Edgetech, the innovation leader!

Modern spacers for thermal isolation of the edge seals of insulating glass windows are the missing link for energy efficient windows and facade systems.

Super Spacers® receives award from the Passive House Institute

At the BAU 2017 in Munich, Dr.-Ing. Benjamin Krick, head of the Component Certification working group at the Passive House Institute in Darmstadt, handed over the official component seal to Edgetech Europe GmbH for the flexible, foam-based Super Spacer® spacer systems.

The Passive House Institute tests and certifies products in terms of their suitability for use in passive houses. All the three certified Super Spacer® spacers exceed the required minimum levels of specific edge resistance and are thus certified for arctic climates and every climate zone with lower requirements. The Super Spacer® Premium warm edge was classified in the highest efficiency class of pH A+ with an edge resistance of 6.11 m K/W. This product also achieves the best values of up to 0.028 [W/mK] where the heat transfer coefficient Ψ is concerned.

The Super Spacer® TriSeal™ / T-Spacer™ Premium and Super Spacer® TriSeal™ / T-Spacer™ Premium Plus were also certified.

The advantages of the Super Spacer®

- low thermal conductivity
- fast dew point drop
- durable edge seal, continuous vapour barrier at corners
- moisture-adsorbing, flexible foam matrix
- high desiccant content adsorbs more moisture than two-sided and generally also more than four-sided filled conventional systems
- no chemical fogging*
- attractive aesthetic appearance
- high-quality silicone for superior resistance to UV-light and oxidation
- very good gas-loss rate values according to EN 1279 part 3
- optimum values for energy efficiency (Psi-Values up to 0.031**)
- enhanced comfort and well-being near windows
- excellent condensation resistance, shape retention and colour stability
- excellent durability for sustainable performance
- higher productivity through ease of processing (only three process steps)
- North America ASTM E2188/ E2189/ E2190
- Europe EN 1279
- Canada CGSB 12.8
- CEKAL - certified for France
- P1 Industry standard USA

* safe up to approx. 80°C, higher depending on the test method.

** Super Spacer® T-Spacer™ Premium Plus from structural foam processed in triple-pane insulating glass; source: Bundesverband Flachglas e.v. (German flat glass association).

FORZA G[®]

COMPANY PROFILE

FORZA G® is the reference brand in technical solutions for the treatment and total recovery of production line and glass working cooling liquids. FORZA G® products are designed to offer the lowest operating costs, the best energy optimization, the highest reliability and the longest lifetimes.

The systems FORZA G® are champions of solid-liquid centrifugal separation without using any chemical additives, so maintaining the original properties of the cooling liquids unchanged; the best recovery of all particles in suspension up to 2 microns in diameter is guaranteed.

The FORZA G® systems are the solution to ensure that all machine tools are working in ideal conditions, and so lengthen the lifetime of the tools and protect all your investments.

With 20 years' experience and more than 450 installations worldwide, FORZA G® is designed and produced as the widest range on the market of solutions for the treatment of volumes from 6.000 L/h to 300.000 L/h, and operating 24/7 without interruption.

Gtech designs and manufactures FORZA G® brand systems today and has started a three-year reorganization of its FORZA G® production, to define new sector industrial standards and uphold its leadership in the field.

COMPANY PROFILE

Glasstech, Inc. is the world's leading manufacturer of glass bending and tempering technology for the solar, automotive and architectural glass markets.

Innovative ideas and concepts were largely responsible for Glasstech's early success, after the company's founding in 1971. Today, that spirit of innovation continues as a new generation of products - from a new generation of technology - is being brought to market by a new generation of management.

Glasstech is based in Perrysburg, Ohio USA, with facilities in New York City; Shanghai, China and Mumbai, India.

COMPANY PROFILE

Loading

For loading **HEGLA** offers different solutions such as Automatic Floor Loading Systems, Compact and Gantry Loaders. Alongside security aspects for operators, this equipment is suitable to increase output and expand the possibilities of using special glass types. Double sided floor loaders of 3 x 2 metres and 6 x 3 metres are available with up to 6 positions (12 racks), while the gantry systems are infinitely variable and can use 'A' and 'L' frames as well as compact storage systems. 6 x 3-metre gantry loaders can also load directly from Float Liner delivery racks dropped in the crane area.

Float Glass Cutting

With its wide range of cutting systems, **HEGLA** offers a perfect solution for each and every customer needs. For the industrial volume cutting of float glass for example the Galactic with its shortest processing time and full automation was invented. **RAPIDLINE**, with its optional grinding device for low-E, is **HEGLA's** universal cutting machine for float glass.

Linear Driven Cutting Machine for float glass: Hegla Galactic

Laminated Glass Cutting

For the cutting of laminated glass **HEGLA** became known with its ProLam series which cuts precise and quickly. To offer customers more flexibility **HEGLA** offers the ProLam Kombi which can cut even float glass and laminated glass. As a space-saving solution for automatic scoring of free forms and models of laminated glass **Hegla** designed the new RapidLam which can be used as a stand-alone solution or as an add-on for an existing cutting line. Two synchronous cutting heads achieve high precision results which can be reproduced at any time.

RapidLam: Compact model cutting system for laminated glass

ReMaster

The ReMaster System for optimised processing of remnant sheets was first presented at glasstec in 2002 and has been constantly improved since then. This innovative system allows sub-plates of any type to be stored without manual handling above the cutting line. Without interrupting the production process the remnant can be used for following glass runs, thus reducing sub plate waste drastically. This creates the basis for efficient production of IG-units of all glass types and thicknesses. It offers optimal utilization of subplates, decreases material costs and reduces unnecessary handling.

SortJet

With the need for more and more automation and high-speed operations in glassworks, HEGLA invented the SortJet. Since its first

HEGLA SortJet: Invented to reduce material costs and improve production flow

presentation at glasstec 2004, the SortJet has proved in practice to be an innovative product that not only improves material flow but also reduces material costs to a minimum. After cutting the glass in random order to reduce offcuts, all panes are stored in the dynamic buffer of the SortJet. Just 250 bays can accommodate multiple panes to buffer all the glasses in the production process for an insulation glass line.

When the panes for an IG-unit are required on the line, the individual panes are handed over directly in production orientation and sequence. The separate processes in front of and behind the dynamic buffer contribute towards a production process that significantly reduces downtime while at the same time accelerating the material flow and reducing cutting costs.

COMPANY PROFILE

Founded in 1940, **Helios Quartz** is a family-owned company with two production plants in Italy (Helios Italquartz S.r.l.) and Switzerland (Helios Quartz Group SA) combined with distribution channels in the USA, South America and Asia to become a major international supplier for Quartz Glass processing and the manufacturing of Infrared Emitters and Ultraviolet Lamps. Helios Quartz also produces Specialized Equipment for Industrial, Scientific, and Medical applications.

TÜV certified, Helios Quartz is a very flexible and dynamic group which is deeply oriented towards internationalization and which is living a strong and stable growing phase with great momentum: following the opening of many commercial branches in USA (Helios Quartz America), in China (Shenyang Helios Tech) and Hong Kong (Helios Quartz Asia), a new branch dedicated to Turkey region, Helios Quartz Turkey,

was opened in 2016.

Thanks to its long track record and to its cutting-edge testing laboratory located in the historical Helios Italquartz S.r.l. plant in Cambiagio (Italy), Helios Quartz can advise customers and provide them with the best solution for every specific application.

Helios Quartz product range, specific for the glass industry, includes:

- Quartz Infrared Heaters in short, medium and fast medium wavelength, in single and twin tube, with or without gold-coated reflectors for:
 - Laminating lines (plastic film coupling);
 - Dry screen printing lines;
 - Bending furnaces;
 - Fusion furnaces;
 - Laminated glass cutting machines;
- UV Polymerization equipment: UV high and medium pressure lamps for drying screen printing of reactive inks, paints, coatings and adhesives for the decorating and furnishing sector;

- Manwood 25-N: UV black light apparatus able to identify the tinned coated side of the float glass even under high brightness conditions. Such identification is very important prior to laminating, mirroring, printing and decorating processes;
- Automatic Tin Detector: the technological development of the Manwood 25-N. It can be fixed directly on the glass transportation line, before the process starts, in order to check each and every piece of glass. Thanks to the simplicity of installation and the great flexibility, it is suitable for mass manufacturing where methodological control is essential to support the rate of production.

COMPANY PROFILE

HyGear supplies industrial hydrogen, nitrogen and oxygen gas in small bulk quantities. We offer the most cost-effective and reliable gas supply for the glass industry, by combining efficient on-site generation technologies with conventional gas distribution methods. Our attractive supply contracts are flexible and based on equipment lease and variable costs for consumption. Back-up supply from credible and locally active industrial gas suppliers form an integral part of each offering and ensure maximum reliability to our customers.

Hydrogen supply

HyGear supplies hydrogen by installing its on-site Hy.GEN® steam methane reforming technology. Decentralised hydrogen production by HyGear offers a reliable and cost-effective alternative to conventional hydrogen supply.

Nitrogen and Oxygen supply

HyGear also supplies nitrogen and oxygen by highly efficient on-site PSA-technology, the N.GEN® and O.GEN®. These highly efficient on-site generators are based on HyGear's extensive experience in PSA gas separation technology and gas processing systems.

Gas recycling

To further reduce costs, our Hy.REC® gas recycling technology can be installed to recover the spent gases (hydrogen-nitrogen gas mixtures) from the process. The opportunities lie in the reduction of the operational costs and the increased glass quality due to the higher refreshment rate.

About HyGear

HyGear is established in 2002 with the mission to develop cost-effective gas supply by enabling energy efficient technologies. HyGear's offices are located in The Netherlands and Singapore. Technical services and customer support is guaranteed by many local partnerships worldwide. By integrating advanced patented technologies, our products have optimised performance and increased energy efficiency, so that we are able to offer the most reliable and cost-effective solutions for our customers.

Key benefits of our on-site gas supply

- Cost-effective
- Reliable
- Flexible contracting
- Significant reduction of harmful emissions
- Autonomous and safe operation
- Compact and modular system
- Independent from third party supply
- Energy efficient process
- 24/7 customer service

COMPANY PROFILE

IOCCO operates in the design and construction of equipment and complete lines for glass industry, always providing efficient and state-of-the-art machines to reach its Customers' satisfaction.

IOCCO constantly upgrades its skills to face growing market competition and extreme cost pressure, guaranteeing the highest quality standards throughout the process, with constant focus on energy saving. These values enabled the company to be a reference for the major players in the glass industry worldwide. The goal is to provide Customers with captivating new solutions, relying on the expertise of its Engineering and Technical Departments and the synergies created with the after-sales support, so to ensure undeniable commitment to quality and safety.

IOCCO supplies from the feasibility study of the project through its development, up to the delivery in a turnkey formula, assuring an efficient and responsive after-sales assistance.

PRODUCT RANGE

AUTOMOTIVE GLASS

- Equipment and complete lines for tempered and laminated automotive glass
- Automatic PVB trimming and assembly line
- Deairing rubber bag and ring furnace for laminated sidelites and windshield
- Rack circuit for autoclave line, PVB trimming, quality inspection line and packing
- Equipment and complete lines for Value Added operations
- Special and dedicated machines

FLAT AND FLOAT GLASS, "ARCHITECTURAL and HOME APPLIANCE"

- Loading, handling, inspection, stoking and unloading of glass processing lines
- Ancillary equipment for tin bath
- Equipment for cold end
- Automatic storage system for float plant with End Caps Assembly Machines "tilting table"
- Special and dedicated machines

IOCCO means know-how, dynamism, competitiveness and focus on safety.

COMPANY PROFILE

Italcarrelli® is a world leader in the design and construction of special machines and solutions for the storage and handling of flat glass. Located in Vicenza, in North-East Italy, it has a technologically advanced plant and highly trained employees specialized in the design and construction of its machines. During many years of experience in the field, the company has acquired remarkable knowledge of the glass sector and, thanks to investments in the research of innovative solutions, is providing its own products to all the most important glass manufacturing companies all over the world.

COMPANY PROFILE

For a company producing glass-polishing tools, like **Italmole**, being in the marketplace for forty years means not just coping with the difficulties, but being able to read the signs of the times and to foresee winning moves, to react positively, to evolve, and always to go forward with conviction and courage.

In four decades the company, under the leadership of the founders Ezio Rossi and Graziano Venturi and with the later addition of Ivan Rossi, has come a long way. Italmole is now well established in a number of markets and continues to invest in research and development to maintain its reputation for "made in Italy" quality and to satisfy its clients.

In the course of pursuing these objective with great determination, the Milanese firm has created a complete range of tools covering every aspect of polishing, examples of which are: Type "BD" peripheral wheel line and the type "BD2" engraving wheel line, which have made Italmole well known all over the world.

- The range of polyurethane-binder cup wheels has achieved

considerable success among machine retailers and constructors of the sector.

- The production of rigid binder thread wheels either for single pass for machines without diamond wheels (type "RED" or "AR1") or for polishing the thread on machines with diamond wheels (type "BLACK" or "AR2").
- The line of elastic enriched binder peripheral wheels for the removal of low emission glass (type "LOW-E") range.
- Successful products also the range of cerium oxide wheels available with rubber-binder cups, or as peripherals, or with rigid binder for engraving.

Today, 40 years since its foundation, Italmole exports 70% of its production worldwide.

Such results confirm how passion combined with long experience have a strong impact on market position, enabling high standards of production to be maintained by continued research and the development of new technologies.

These values have made Italmole a quality benchmark in the sector, a company which may be emulated or copied today, but never equaled.

E-mail: southamerica@keraglass.com

COMPANY PROFILE

An overall view that makes the difference. What characterises **Keraglass** and has enabled the company to succeed as a world leader in the sector is its "all-round" approach to the glass industry. With innovative, functional and targeted solutions. Developed from a concrete and direct analysis of the problems that can arise in glass processing. Particularly in flat and bent tempered glass, screen printing, roller-coating and laminating.

Founded in the early Nineties by Stefano Spezzani, in the space of a few years Keraglass became a point of reference in the sector of plant engineering for glass processing.

Keraglass remains a driver of innovation in the sector, thanks also to the synergies developed with the key players on the market. An example can be found in the creation of the Kfo Double Star, a new glass tempering furnace with a pre-heating convective chamber, successfully tested by the experimental glass station and designed to respond to the requirements of UNI marking in an increasingly specific and efficient manner and to temper the latest generation of low-E glass with the maximum quality.

In 2004 Keraglass entered the world of shaping and tempering bent glass, installing the first "KBFO", forming close and profitable collaboration with Techint SpA and acquiring the exclusive licence for the use of the patented technology.

In 2010 the company patented the "RCK machine" roller cleaning device, an automatic machine that allows the complete cleaning of the rollers, directly inside the furnace, without having to remove them.

In the wake of these great technological and commercial successes, Keraglass inaugurated the new head offices, first in 2004 and then in 2009, in the Baiso industrial estate, in the hills near Reggio Emilia. Two large modern and multifunctional structures that reflect the company's dynamic spirit in their architectural concept.

With a view to continuous growth and extension of the offer and the company expertise, in 2014 Keraglass signed a technological partnership agreement with the Emmegi Group, world leader in the production of machining systems for aluminium profiles, light alloy, PVC and iron.

Glass is therefore added to aluminium, light alloys, iron, wood and PVC in a complete production range and a commercial network operating on 5 continents.

In 2015, Keraglass expands its product range, enhancing its range of oscillating tempering furnaces by including the Vision line, and launching the iPlotter and i5 single pass machines to gain a foothold on the digital glass printing market.

After one year spent consolidating the new structure, the Emmegi Group decided to strengthen its partnership with Keraglass by moving into position as the majority shareholder.

LEMA TC 3300

LEMA TC 9501
AUTOMATIC UNIT
FOR CHEMICAL TEMPERING
BY ION EXCHANGE
OF GLASS SHEETS MEASURING UP
TO 3,200 X 2,200 MM

COMPANY PROFILE

The TC9501 furnace from **LEMA S.r.l.** has been created for the chemical tempering of glass sheets measuring up to 3,200 x 2,500mm.

This machine, result of the long experience of the leading Parma-based company, which has been active in the small and medium-sized plant sector since 1970, meets the needs of an increasing market and is particularly suitable for:

- thin glass (from 0.3mm);
- printed glass;
- glass with complex shapes (i.e. furniture glass);
- glass for which optical quality is important;
- diverse glass thickness.

Chemically tempered glass is known to be at least two and a half times stronger than traditionally tempered glass, five times stronger than normal glass and can be ground, drilled and cut without any risk of breakage.

The TC9501 is flexible, easy to operate, and features a fully automatic tempering cycle; our company is available to face each and every customer's need, enabling LEMA to realize customized implants.

PRODUCT RANGE

- Automatic chemical and physical strengthening furnaces for a wide variety of glass types
- Polariscope for testing and glass production control

LiSEC TPA

COMPANY PROFILE

LiSEC based in Hausmening/Amstetten is a globally active group, which has been offering innovative individual and overall solutions in the field of processing and refining of flat glass for more than 50 years. LiSEC's service portfolio comprises machines, automation solutions and services. In 2015, the group with its approximately 1,200 employees and more than 20 locations generated an aggregate turnover of about 230 million Euros at an export rate of more than 90 percent. LiSEC develops and produces glass cutting and sorting systems, individual components and entire production lines for the production of insulating and laminated glass as well as machines for the processing of glass edges and tempering systems. With a reliable technology and intelligent automation solutions, LiSEC sets standards in terms of quality and technology and makes a substantial contribution to the success of its customers.

ATS 4.0

4 IMPROVEMENTS DEFINE A NEW SPACE

COMPANY PROFILE

Nancy Mammaro, **Mappi International** CEO & Founder says: "We want to create a product considered unique in the market, with excellent functions but, above all, that responds to market demands. Our 'modus operandi' is based, on the one hand, on everyday competition, which may cause tactical and immediate adjustments where appropriate and, on the other hand, on innovation, investments, planning and developing activities according to a strategic medium and long-term approach."

"Our starting point is to satisfy the end customer's needs: a quality glass, which meets specific functional requirements, at competitive prices.

The glasshouse seeks to respond to these requests also by receiving assistance from suppliers in order to reach its goals.

The goal of the customer becomes the glasshouse goal, your goal and then ours."

Mappi International since 1993 has designed and manufactured furnaces for tempering flat glass. More than 300 plants installed all over the world represents the stages of a steady growth path, made of investments in research and development, of uncompromising quality, attention for specific needs of each customer, especially the constant desire to outdo. Mappi America comes up beside the Italian Plant, located in Florida; this allows the customer service department to reach within 24 hours each one of our plants, anywhere. Since our efforts and our innovations are oriented towards our clients, our aim is to build self-adapting machinery which make its usage easy and flexible, that can generate reports, which are able to interact remotely both with the manufacturer and the operator.

The new ATS 4.0 is the synthesis of all latest innovations, a system that raises the bar in limiting consumptions through the use of coordinated MHS, ESS and IHS systems, a Mappi exclusive. ATS 4.0 raises the bar in productivity because it minimizes the time between tempering cycles, until you approach a virtually continuous cycle without down time for the adjustment of the operating temperatures.

ATS 4.0 reduces to the minimum values now possible all glass defects due to the computer management of the movement, the heating and air temperatures for tempering, supported by the use of engines and materials of absolute excellence.

Perfection is not a coincidence, it is a blend of experience and innovation. Mappi, beyond glass perfection.

COMPANY PROFILE

Our factory is characterized by a dynamic and experienced team that has long worked at the forefront of machinery and ovens especially for the treatment of the glass.

Our products are classified into the category of **machines for glass tempering**, occupying an important position in the **bending and laminating**, achieving outstanding performance in the fields of employment.

Over the years, the long process of research and development and continuous attention to detail, has led us to develop the machinery complete with **patented technology** aimed at achieving the main objectives and requirements of the customer.

In the construction of the machinery we boast the application of original solutions that make our product unique, through the search of solution for each individual customer.

Also thanks to twenty years experience in the industry, we performed revamping, upgrade, modernization of older machines both our production and of the competitors.

Italian masterpiece Capolavoro italiano

Advantages machine

• **Quick heating up** (with ignition power equal to approximately half the power of work). This characteristic is attributed to through the use of materials with low absorption and a thermal mass contained inside the oven, which is constructed so as to be able to absorb temperature ranges. The materials are placed such that they can expand and narrow depending on the temperature range without deterioration. Thanks to this characteristic it provides flexibility in the oven. The same can in fact be turned off whenever it is not used (see night and weekend) and then on bringing in maximum temperature in one hour.

- Optimization of consumption, waste reduction and energy savings. Thanks to the technologies described above, the machines designed by Mazzaroppi reach the real energy savings up to 35% compared to standard machines. This was a result of a thorough analysis and documented by customers who have decided to invest in these innovative patented technologies.
- **Flexibility change size and thickness:** the special construction machinery and their flexibility allows switching from one product to another very quickly. In different areas of the plant (load, heating chamber, blower and unload) it will be able to find several glasses in both the type either in the thickness and in size.
- **No use of SO²:** thanks to a special construction and use of special materials, the heating chamber does not experience expansions and contractions, therefore it does not create vibrations on the ceramic rollers, as well as other components within the heating chamber, which tend to break down with usage. The mechanical transmission that drives the ceramic rollers is constructed to eliminate vibration as well. Therefore, it is not necessary to use SO² gas, which is highly dangerous and harmful.
- **CE European materials and accurate construction:** all the components of our machines are of the highest quality and exclusively European brand. The special care taken during the design phase, guarantees the installation of vanguard materials and available over the years
- **Residual value:** through all the elements that characterize the accurate construction of the machinery, we have a product that appears to be durable over time. Normally with 10 years of use, our machinery on the market has a residual value of about 50%. An excellent investment for who choose Mazzaroppi.

The positive results encourage Mazzaroppi to create advanced technologically machinery and adapted to customer needs, always aiming at the end quality of products.

The latest machine arrived in Mazzaroppi family is the revolutionary furnace for glass lamination **LM REVOLUTION 2.1** with 2 patents that allow to obtain clean edges and speed in production cycles.

COMPANY PROFILE

ERP System

High-tech software system for the input of orders, shipping documents and invoices, warehouse management, production planning, batch creation, cutting optimization, production running by means of barcodes.

Opty-Way Enterprise is **Optima's** network-integrated software solution able to manage all the needs and problems of glassworks. Developed using SQL Database, it enables to input and plan any type of production order thanks to the use of a powerful and flexible distinct base.

Monitoring

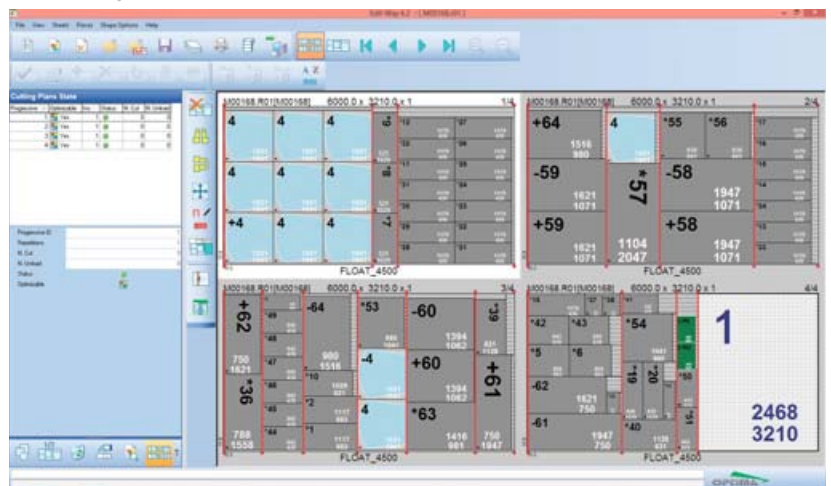

Specific production modules for visualization of each and every phase of production, data regarding the items being produced, orders and batches, supervisors for production running using barcodes, as well as the recording of production times, visualization of cutting diagrams, organization of racks and shipping all visualized on monitors.

Optimization Tools

High-yield systems for the optimization of waste product, suitable for straight-line- (1D), guillotine- (2D) or nesting cutting of complex geometric shapes. With more than 25 years of development and over 8,000 installations all over the world, Opty-Way and Nest-Way are the most widespread used optimization systems used for the glass sector.

Laminating furnaces with simple or modular bag system

Powerlam

Continuous laminating furnaces without bags

ECO

Fusion, bending and special bending furnaces

COMPANY PROFILE

R.C.N. was established thanks to many years of experience in the glass industry and, more specifically, in fusion technology.

R.C.N. was the first company to promote innovative technology for the production of glass washbasins in the 1990s, absolutely perfect in shape and transparency.

This system, with its use and control of three temperatures, then led to the study and feasibility of innovative ideas.

Since then R.C.N. has continued to develop and renew itself thanks to the goal of innovation that it is characterized by.

POWERLAM

Absolutely innovative technology in lamination.

Reduced production and logistics times thanks to a system that does not need bags, and with fast heating of the laminating chamber. Wide range of machine sizes and combinations for EVA processing only, or also for EVA and PVB.

This machine requires continuous production in order to optimize production volumes and speed.

Ease of loading and unloading operations thanks to two conveyors equipped with lifting device for the movement of the glass. A highly versatile machine that enables to change production type without the need for specialized operators.

REVA FILM

At long last a laminating film made in Europe that respects the double needs of adhesion and transparency, totally compliant with European norms, as well as being conform to AINSI regulations as of January 2015. This material is always new and available as stock, since R.C.N. has dedicated a specially equipped area of its premises to the storage and transport of rolls of REVA FILM. The film is available in different thicknesses and sizes and responds to diverse manufacturing needs. The production of coloured REVA FILM is presently being studied.

ECO Special line furnaces for special glass bending

The demand for curving furnaces started up again a couple of years ago, in particular with regards to special bending requiring a furnace suitable for temperature control and heat uniformity. RCN has therefore continuing developing its ECO Special furnaces, which have three upper and lower heating zones, all working independently one from another. This feature enables to have higher or less concentration of heat in certain areas of the glass sheet, in turn allowing for complex and perfect glass curves. RCN can develop personalized solutions, as per each and every client's needs and demands.

SILIKOSOFT

Bags for glass lamination designed by R.C.N. with special closure that enables fast handling and highly-resistant airtightness. Both strong and flexible, they can be used for the lamination of large glass thicknesses and curved glass sheets. Guaranteed for at least 4,000 hours of use in correct conditions. Can be repaired directly by the client in the case of breakage. The use of these bags in an autoclave is highly requested, and can also be supplied in vertical format with reinforced base.

COMPANY PROFILE

Rollmac is the division of GeMaTa Spa, one of the leaders among leather finishing equipment manufacturers, dedicated to the production of machinery for the enamelling of float glass sheets. Thanks to experience acquired, it has developed a new system based on engraved roller technology in continuous operations, also launching drying compartments. Rollmac manufactures a wide range of machinery and lines for the glazing and decoration of flat glass for the most diverse requirements.

Production

Gemata/Rollmac technology includes the enamelling machines Multiglass, Colorglass, Glassdrier drying tunnel, which allows easy working systems, perfect application homogeneity and drying performance on sheets with minimum dimensions up to very large ones and the possibility to apply both traditional ceramic and organic as well as silicon paints.

Multiglass and Colorglass can both be used as stand-alone units in automatic glazing lines, as well as equipped with a Glassdrier IR and conveyor rollers, if required.

Last but not least is Glassline, the brand new machine to enamel the edges of float glass sheets by means of a steel engraved cylinder. It is a completely new project based on the well-known technologies of enamelling using a reverse roller.

Rollmac – Gemata is certified as per ISO 9001, ISO 14000, and Italian “Safe Work” standards.

PRODUCT RANGE

- Vertical and horizontal washing machines
- Manual, Semi-automatic • Automatic Storage Systems
- Vertical Milling/drilling machines
- Manual, Semi-automatic • Automatic Cutting tables
- Automatic Loaders/Unloaders • Clamps
- Fixed, Manual • Motorized Vacuum Lifters
- Manipulators • Unloaders for packs

COMPANY PROFILE

Products

SCHIAVO machines are well-known the world over for their quality, reliability and advanced technology. As of today, more than 5,000 machines have been installed in over 50 countries.

Its machines are made 100% in Italy with 100% high-quality European components.

Washing

SCHIAVO horizontal and vertical washers have been developed to offer high-quality and high-performing machines, and for clients needing affordable and quality machinery. The company's washing machines can be equipped with from 2 to 6 brushes or more, and are made entirely of stainless steel.

Milling - Drilling

Very precise and CNC controlled, the new FV series of vertical milling machines are versatile machines to obtain every type of cuts, notches and holes needed for the installation of hinges, handles, locks and accessories on glass doors and glass furniture, with a small-business budget.

Storage systems

Glass storage systems are essential for glassworks to organize production efficiently and to optimize available space. In

Glass storage system UCS3300-S

Glass washing machine 1600 pre-washing

FV200 vertical milling machine

this sector, SCHIAVO is a leader, with highly reliable solutions for the needs of its clients. CLO is a sideways-moving storage system available in manual, semiautomatic and full automatic versions. UCS is the new, ultra-compact, ultra-low storage system for glass sheets and offcut glass, patented by Schiavo.

Cutting

The company's cutting tables are available in diverse types of configuration, all customizable, with either belt or rack and pinion transmission. The high quality of the components used and the attention to details are the strong points of SCHIAVO tables.

Handling

With regards to machinery for the lifting and handling of glass, SCHIAVO offers: tongs, vacuum lifters for all kinds of flat glass, including IG glass, manipulators, jib cranes, automatic loaders and unloaders for glass packs.

Vitrum 2017 - Milan, Italy - 3 / 6 October 2017

COMPANY PROFILE

Softerco is the worldwide leading supplier of Quality Control Equipment for the flat glass industry, both architectural and automotive. We closely follow changes in EU regulations and international norms, and update our supply and services accordingly.

Quality control for automotive glass:

- Softerco provides expertise in all normative and informative tests according to ECE R43.
- We supply all the necessary QC equipment, such as:
 - Dropping towers and supports for test pieces
 - Impact objects
 - Projectors and slides
 - Resistance to radiation test equipment
 - Light transmission measurement
 - Collimator for the automatic double image test
 - etc.
- We can coordinate ECE R, DOT and CCC certification processes.

Quality control for architectural glass:

- We provide knowledge and consultation services for CE marking and tests.
- We supply equipment and machinery to perform obligatory and non-obligatory tests, such as:
 - Spring loaded punch
 - Roller wave gauges and edge lift gauge
 - Optical surface and edge stress measurement equipment
 - Resistance to high temperature test oven

Number fragments : 22,5
Max. Length : 81,1 mm

- Insulated glass unit desiccant performance tester
- Low-E emissivity tester
- etc.

Gains through quality:

Some of the quality control equipment we provide can also be used to optimise productions parameters: avoiding waste and increasing yield.

Non-destructive and automated tests:

We aim at developing automated and non-destructive tests, such as the Grazing Angle Surface Polarimeter - GASP - designed to evaluate the strength of the compressive layer, which can be used instead of the 4-point-bender machine for mechanical strength tests. An example of an automated test is the FragGlass software, used in mandatory fragmentation tests for heat-treated glass.

Other control tools:

In addition to all mandatory QC instruments, we also provide instruments for daily or random testing, such as:

- Coating detection for IGU glass
- Tin-side detector
- PVB humidity meter, etc.

PRODUCT RANGE

- QC equipment for tempered and laminated glass
- Complete range of quality control equipment for automotive safety glass
- QC plans and information for architectural and laminated building glass
- QC plans and information for automotive safety glass production
- ECE R 43 and DOT ANSI Z 26.1 approval services
- Testing services for safety glass according to different norms, including EN
- PVB shaping, relaxation and cutting machinery

COMPANY PROFILE

Cutting glass holds no secrets for Talamoni. Your Italian partner for cutting tools known worldwide.

TALAMONI s.n.c. was founded in 1994 and is specialized in the production of cutting tools in hard metal for the glass and ceramics industry.

Competence, Quality, Flexibilities and Service are the strong points of Talamoni

The know-how of the owner, together with his young dynamic organisation, has enabled the company to grow and to make an impact on the market. Today Talamoni is a trusted and pro-active partner for many companies. 40% of its turnover is derived from exports.

Raw materials and Operations. Quality Standard

Talamoni cutting wheels and discs, sintered with state of the art technology, are produced in fine, extra fine and ultra fine micrograin, and are trued by machines that guarantee consistent high-quality batches.

In the quality assurance unit, the physical characteristics of the

material, the metallurgical properties and all stages of production to finished product, are examined before being assembled into several tool-holders also produced by Talamoni.

The "Diamant" line of wheels is produced in various sizes and finishes depending on the type of glass to be cut. The advantages of using "Diamant" wheels are multiple: better quality of cut, easy breakout, triple lifetime and the same cutting angle allows greater thicknesses to be worked.

The Talamoni products are used in the following fields:

WORKING HOLLOW GLASS

Wheels in hard metal with diameters of 5.0, 5.6 and 6.0 are used for engraving hollow glass in automatic crack-off lines. Talamoni also produces tool-holders for these lines and also proposes a series of diamond tools for working edges and glass beakers.

WORKING FLAT GLASS

- Wheels in hard metal with diameter from 3mm to 12,4mm for automatic or semi-automatic cutting tables, available with angles from 90° to 165° for cutting monolithic, stratified, laminated, and special glass.
- plastic wheel holders with various wheel models suitable for mounting on Bystronic, Bottero, Bavelloni, Cms, CSM, Euromec, Hegla, Intermac, Lisec, Mechanical Gfp, MacoTec, OCS, Tuomas cutting tables...
- wheel holders in metal or steel in various models for all cutting tables, CNC-controlled machines and hand-held cutters on the market.
- metal modules complete with wheels for safe, fast and secure tool changes.

LUBRICATION:

Talamoni cutting fluid mixtures are formulated to guarantee ideal lubrication of the cut and to optimise the working lifetime of the wheel; the oil enters the cut, maintains the tension

on the glass and facilitates the opening of the cut.

Talamoni offers four various types of synthetic fluid for cutting glass:

T-OIL 3125 for cutting thick glass – low volatility.

3130 T-OIL for cutting shaped glass – medium volatility.

3133 T-OIL for cutting monolithic glass – high volatility.

3232 T-OIL for magnetron, stratified, coated glass etc - super volatility.

All products are registered and checked to ensure safe working environment in work areas and on cutting tables.

MANUAL CUTTING

The company produces a complete line of oil-reservoir cutters for manual cutting.

Various models of oil-reservoir hand-held cutters with handles in blue or transparent plastic or blue or grey anodised aluminium all rigorously "Made in Italy".

Talamoni glass cutters are produced with wheels sharpened to different angles to satisfy various cutting requirements – the manual tools are destined for professional use in glassworks or artistic workshops.

3 / 6 October 2017

The systems produced by **Tema** are specifically dedicated to both the small scale glassmaker/ craftsman as well as to large scale industry, with models ranging from small workshop furnaces to more productive systems, that are capable of laminating sheets of up to 3.200x6.000 mm on 4 levels, with a production output up to 75 sqm/process.

The strong points of the company production is the quality, the care taken in details, the use of the best materials and ongoing research into innovative materials and solutions, making for exceptional reliability.

The modularity concept, that creates total versatility, is also important, so that the client is able to customize his own system to meet his specific needs; from a furnace for small production outputs to a complete industrial line complete with preparation tables, without in any way altering the salient features of Tema furnaces: impeccable quality, heat diffusion control assured by the PLC guided control points, total reliability and digital control of the vacuum system. Another great advantage of the furnaces, configured on 4 working levels, is that the system has two totally separate and independent lamination chambers, to give the customer the greatest advantage in terms of versatility and working organization.

Particular importance is also given to the post-sales service, both by implementing a remote assistance service which provides real-time information on any malfunction of the system, as well through active collaboration with the customer as from the time of installation, as well as during the development and perfecting of particular procedures and technology for the production of innovative laminated products.

Priority is also given to controlling consumption levels, and in fact at the present time, at parity of production output, the company produces furnaces with the lowest electricity consumption levels currently available on the market.

The client is able to download all the parameters of its production cycles, including the precise energy consumption, in order to have all the work stages under control.

Nowadays, Tema systems do not only simply laminate glass/glass with decorative inserts, new technology and new materials are evolving on an almost weekly basis, and we are seeing a boom in smart glass, as well as in glass coupling with different materials, in which the glass is not even the predominant material but has a protective function: all this requires increasingly reliable systems with total control of all parameters of the lamination cycles.

In relation to this, the company will shortly be introducing new software, which will be able to guarantee even more precision and uniformity in temperature control, a completely new vacuum system, which will be able to resolve problems connected with humidity or temperature in those areas with extreme climates, as well as other options which will make the lamination furnaces even more reliable.

Tyrolit grinding wheel for CNC

TYROLIT is one of the world's largest producers of innovative solutions in grinding, dressing, cutting, sawing, drilling and polishing. The company, founded in 1919 and member of the Swarovski Group, is based in Schwaz, Austria and employs over 4.250 people, 101 employees are in Research & Development at 27 production locations. Years of experience and synergies, combined with continuous innovation and top quality standards has enabled TYROLIT's Construction, Glass, Natural Stone, Ceramic, Metal Fabrication and Precision Machining Divisions to provide the most comprehensive product range in the market.

TYROLIT VINCENT SRL, based in Thiene (VI) Italy, is a leader manufacturer of diamond tools for the glass industry in any application; automotive glass, architectural and furniture glass, household appliance and optic glass. The company's origins date back to 1921 but it is in the 1994 with the incorporation within the Tyrolit Group that Tyrolit Vincent is originated.

TYROLIT VINCENT SRL is the divisional headquarter for the Stone, Glass and Ceramic Division and is one of the main production sites, with focus and investments in the manufacturing of high tech tools. All projects of Glass Division are developed in Italy by the R&D department and carefully followed by the technical and marketing team all over the world. Everyday our product specialists are working alongside our end customers, in order to be able to provide them with advice and support whenever they need it. Milestones in glass industry are TYROLIT high-quality diamond pencil wheel for grinding automotive glass at 40 m/s, released in 2010, and HALO product line, a pioneering concept for edge grinding automotive glass, launched in 2014.

Tyrolit has thus become a trusted partner for all kind of tools for the glass sector. With our wealth of process know-how we are able to provide sustained solutions in line with our customers' demanding, technical and economic expectations.

Glass MACHINERY MANUFACTURER

FLAT GLASS

- Washing machines for flat glass until Jumbo size
- Polishing machines until Jumbo size
- Auto loaders & unloaders for Jumbo size (aerea & tilting)
- Stockers, rolls & belt conveyors, aerial & terrestrial transfers
- Mills for float, pattern & wire glass
- Complete lines for load & unload coater, laminated & silvering lines
- Tin bath periferics (coolers, top-rolls, side sealing)
- Dross box, hood, lip plate, dedrossing pocket

AUTOMOTIVE GLASS

- Vacuum bag furnace (heatable & non heatable)
- De-airing windshields furnace
- Auto packing machines for automotive sidelites
- Washing machines for flat & curved glass
- Windshields control lines
- PVB cutting machines (squar & trapecial)
- Drum for heated PVB (paralel & trapecial)
- Stockers for flat & curved glasses
- Complete lines of manufacture, printing, load & unload furnaces
- Robots for Load, Unload, MB & packing
- Automatic PVB trimming for windshields
- Special machines for automotive glass industry
