Welcome

Welcome to the latest JK catalogue for VW T25 parts and accessories!

We're really proud of our T25 range, which includes over 1,700 products and is constantly growing. We know these vehicles inside and out, and always on the look out for the next great part or accessory to bring into the range. We've used this expertise to bring you hundreds of top quality products at excellent prices. Throughout this catalogue, and our range as a whole, you'll see that we've raised the quality and reduced the price.

There are seven VW T25s in the JK Fleet, used by different members of the JK Team. These include a converted fire engine, a synchro pick-up at two Gypsies! This has given us a great understanding of which areas or parts on the T25 are most prone to problems, and helped us source fantastic quality parts. When these haven't been available, we've created them from scratch in our on-site workshop here at JK HQ to the exact original specifications. You can find these parts and accessories listed under Preservation Parts.

Best regards

Mark Reynolds MD

Handy Hint

What is nearside and offside?

Many parts are described as being nearside or offside, this simply indicates which side of the vehicle the part fits.

For the UK, an easy way to remember is nearside means near the kerb. this applies, regardless of whether the car is left or right hand drive.

Nearside Offside

A brief model history

May 1979

Hanover built the first models of the 'third' generation Volkswagen Transporter. It was a total redesign of the old Bay window, being wider with larger windows and tailgate, and a new front style. Very little was carried over from the previous model. There was new suspension, which moved away from the torsion bar system. powered by either a 1600cc 50bhp (37kw) or 2000cc 70bhp (51kw) aircooled engine.

Late water cooled model

February 1981

Saw the introduction of a watercooled 1600cc diesel engine with 50bhp (37kw). This engine originally came from the Golf.

September 1981

Introduction of the Caravelle, offering a more luxurious interior.

October 1981

Saw the first watercooled flat four petrol engines in two versions: DF 1900cc 60bhp (44kw) and DG 1900cc 78bhp (57kw). Rear air intakes became plastic inserts.

1982

Was the end of production of aircooled engined models in Germany.

'Caravelle'

August 1983

Saw the introduction of a higher spec 'Caravelle' with the option of a 4 lamp square grill.

1985

The year of a full 'revamp' of the model. Changes included new exhaust systems, front suspension, sliding door locks, fuel injection systems, to name a few. It is said they made over 1000 changes in this year. It also saw the introduction of the Syncro, a four wheel drive vehicle,

which was built with Steyr/Daimler/Puch in Austria. Capable of climbing a 54% gradient and utilizes a centre viscous coupling.

1986

Onwards vehicles did not suffer so badly with rust due to a new rust treatment in the production process.

September 1990

Saw the last T25 leave the Hanover factory, however production carried on in South Africa until the end of 2002. The last Syncro was built in 1992.

4x4 Syncro 'crewcab' pickup

Chassis Number

This can be found stamped inside, on the offside door pillar.

Find the 10th digit of the VIN (Vehicle Identification Number)

Using the table below, this digit will give you the model year.

Bare in mind that the build dates run from August to July not January to December, so for example a 1981 model could have been built in late 1980. The last 6 digits are the serial no.

10th digit of chassis number

10th digit	Model year

Handy Hint

Jacking up your Volkswagen

If you are using the standard VW jack and jacking points, always check the condition of jacking points and surrounding metalwork.

If you are using a bottle, scissor or trolley jack, they must be placed under the front axle beam or under the rear torsion bar crossmember (ahead of the gearbox).

Always 'chock' the wheels to prevent the vehicle rolling and if you are going to be under the

vehicle, ALWAYS USE AXLE STANDS. Wherever possible, always jack your vehicle on a level solid surface, never on gravel or grass. You may not have a choice in the case of a break down, so carry a flat (strong!) piece of wood or similar to put under the jack if you have to change a wheel on the 'not so hard' shoulder.

Handy Hint

Adjusting the clutch pedal free-play (1979-1982)

Clutch adjustment is carried out by means of the adjusting nut on the cable end. Release the locknut, and turn the adjusting nut to give a pedal free-play of 10–25mm (0.4–1.0 in) which corresponds to the correct clearance of approx. 2 mm (0.08 in) on the clutch release bearing. Tighten the locknut.

To avoid cable snatch, the clutch cable guide should sag 25–45mm (1.0–1.8 in) as seen in the diagram

below. The sag at point 'B' is achieved by inserting or removing shims at point 'A', between the end of the cable guide, and the retaining bracket.

Handy Hint

Clutch cable conduit

When you replace the clutch cable on your 1979-82 model, check the condition of the clutch cable conduit. An aging conduit can often break inside, leaving a sharp edge which will eventually cut your new cable.

- ✓ Gas hose (2m length)
- ✓ Gas bottle holder (7kg gas bottle)
- ✓ Butane regulator
- ✓ Magnetic gas level indicator

For over 20 years the Propex name has been synonymous with quality air heating and water heating products. From the early days of heaters designed for the leisure market and with their new Heatsource range, they now supply some of the most advanced gas heaters available today for a variety of applications from motor-homes and caravans to marine craft and horseboxes.

Propex heaters run on clean burning Propane gas or Butane gas so are entirely independent from the engine fuel supply, they produce less pollutants and are cheaper to run than diesel heaters.

All heatsource blown air heaters conform to the latest European Standards for gas fired heaters where focus is very much on safety. All Propex blown air heaters and water heaters incorporate leading edge electronics that are constantly monitoring all operations of the water or air heaters to ensure maximum efficiency.

Propex Gas Heatsource HS 2000E 240 Volt

The HS2800 heaters are automatic thermostatically controlled blown air heating systems fuelled by propane or butane gas. The HS2800 with its greater heat output of 2.8kW and twin outlet is the big brother to the smaller output, single outlet HS2000.

J27697..... £589.00

Propex Gas Heatsource HS 2000E 240 Volt

The Propex HS 2000E heater gives you the option of using mains hook-up to provide selectable 500W, 1kW or 2kW of heat output.

Diesel Heating

How an Eberspächer AIRTRONIC Air Heater Works:

As soon as the heater receives its starting pulse, the following processes are triggered by the central control unit:

- Automatic safety check.
- The burner motor starts, the combustion space is pre-ventilated, the glow plug is warmed up, the metering pump conveys fuel.
- The glow plug ignites the fuel-air mixture, the flame is formed.
- The hot combustion gases flow through the heat exchanger.
- The hot air fan draws in room air or fresh air.
- The heat of the combustion gases is transferred by the heat exchanger to this hot air.

JK Exclusive UK Made Repair Panels

Just Kampers originally started as a workshop so we understand the frustrations of poor quality parts, or worse still, being unable to source the parts at all.

As the supply of many parts dried up we realised the only way to guarantee a good supply was to invest in remanufacturing these obsolete or difficult to find parts ourselves.

We are continually expanding our range and reinvesting in more tooling and wherever possible, bringing manufacturing back to the UK. As a result, many of the panels shown in this catalogue are produced here at JK in Hampshire.

Handy Hint

Removing old body panels

The panels that make up a classic VW are often spot welded together, so to replace them, the neatest way is to unpick the original spot welds.

How to find the spot welds. As long as the panels has not been repaired before and the original spot welds lost, try the following. Rub a 40 grit piece of sand paper along the edge that has the spot welds (for example along the bottom edge of the outer sill). As the paint comes off you will see dimples

with the original paint still showing in them. These are the spot welds. You will not easily remove them with a normal drill bit. So use a spot weld drill bit (Just Beetles Part No. J11399) and going at a slow speed drill through the top layer of metal (the panel you want to remove). Continue this on all the visible spot welds. To break the last bit of each spot weld, carefully split the two panels apart using a thin metal chisel.

Any areas that need cutting (because you cannot get to the original spot welds) use as thin a cutting disc as possible in an angle grinder. If you have access to air tools such as air chisels and air saws, it is important that you practice on some scrap metal, as they can cause a lot of damage quickly if you are not sure how to use them.

Think before you cut!

Always think about what you are doing. Offer up the new panel, mark it with a sharp scribe, make sure you are happy with the size and fit. If you cut too much away, you are just making more work for yourself. Panels such as rear corners and rear wheel arches are worth spending extra time offering them up and rechecking before you cut. A badly fitted panel can ruin the look of a restored camper.

Handy Hint

Stop the rust coming back

Once you have finished welding the following simple steps can help keep the rust out.

1) If you have replaced a panel like the rear side panel, you have a long welded edge, but are unable to get to the inside to seam seal it.

So using finely chopped fibre glass fill along the outside edge squeezing as much as possible into the joint. This will help to stop moisture getting in from the back and rusting the panel out. Sand back the fibre glass filler on the outside and fill as normal.

2) Where ever possible use seam sealer to make sure the damp can not get back in. Seam sealer is available in tubes (that you use in a grouting gun) from most car paint shops etc. It is also available in tins, so that you can brush it on.

3) Panels come in a protective primer. It is advisable to remove this primer before you fill and paint. On the inside it needs to be either sprayed with a waxoyl (or similar) covering which will stop rust starting and dispels water, or it should be painted in a water tight paint or under sealed.

4) Avoid cheap under seal. It goes hard with time, cracks and allows water to be trapped between the under seal and the metal. Use flexible products such as Waxoyl under seal or Hammerite paints.

5) Make sure you clean mud from under the vehicle regularly (a pressure washer at your

local petrol station, is great for this) touch up any stone chips and scratches as soon as possible. Make sure rubber seals are still supple and do not leak.

Handy Hint

Ordering window seals

It's a common misconception, that VW Built campers. VW never actually produced a camper. All VW vans were built with either factory fitted glass such as the 'Microbus' or 'Kombi' models, or built as 'Panel Vans' with no side glass. These were then converted into campers by private companies like Danbury, Devon, Dormobile and Westfalia.

Most were built from Microbuses and Kombi's, but some companies used panel vans which were converted by adding side windows.

If you are ordering new side window seals, it's important to know whether your van started life with factory fitted glass or whether the glass was added later on.

3 ways to tell if your van has factory fitted glass

Microbus-Kombi with factory fitted glass

Recessed FLAT glass.
Second digit of the Chassis No. starts with a 2, 3 or 4
Van comes with rear seat belt mounts.

Panel van with window conversion

Flush mounted CURVED glass.
Second digit of the Chassis No. starts with a 1
Van has no rear seat belt mounts.

K JK Conversions

We stock a range of products for campervans, motorhome, caravans, trailer conversions, horse boxes, catering vans and a whole host of other vehicles that will help you to quickly and affordably transform these into your ideal home-away-from-home.

This is a new venture for us, which focusses on combining our 28 years of experience in sourcing and creating top quality products, with a sales and aftercare service that has earned us high praise on both Trust Pilot and Google Reviews.

EBI SHOW

We sent Gemma from the JK Purchasing Team, and Duncan from the Export Department over to European Bug-In in the summer, for their first ever show across the Channel! They went in Jack the Giant Slayer, and the pair had an amazing time at the show (despite the weather). It's always one of our favourite events!

★ **NEW PARTS ADDED** ★

We've added **over 1,000 new parts & accessories** to our range here at JK, and have had to expand our warehouse yet again to fit them in. This is becoming something of a yearly tradition here at JK HQ as we need more and more space to hold our stock!

HESSISCH OLDENDORF

After JK made such a place at the Mille Miglia, they were invited to bring the Beetle 'Jack the Giant Slayer' to the famous *Hessisch Oldendorf* show in Germany. The show was a lot of fun, and we're already looking forward to the next one in four year's time.

PRESERVATION PARTS

Over 470 parts in the range

We've scoured the globe to bring together the very best parts and accessories to create our **exclusive** Preservation Parts range. These are a showcase of the highest quality parts available anywhere in the world.

To become a Preservation Parts product, it must:

- Be as good as the original part
- Be manufactured by a reputable company
- Fit an Aircooled VW
- Be great value for money
- Pass our stringent quality control

**A 1977 WESTFALIA
CAMPER IN 2018**

IT'S BEEN A BUSY YEAR AT JUST KAMPERS.

Here's some of the things we were
doing in 2017.

WHERE WILL YOU GO IN YOUR VW IN 2018?

MILLE MIGLIA

Earlier this year, the JK Team took part in the 90th Mille Miglia, a gruelling 1,000mile classic car rally around Italy. The vehicle they raced in was Jack the Giant Slayer, JK's 1956 Oval Beetle that really lived up to it's name. JK started out as car 429, but finished in 223 place, well within the top 50%.

The Mille Miglia was also a fantastic opportunity for JK to test out their ever-expanding range of parts and accessories, as they needed to get Jack ready for the event. Many of these new products are now on the shelves at JK.

This summer Mark Reynolds, who set up JK back in 1989, took some time off for his 50th birthday to travel around Italy with his wife, Kerry. They took a relaxed route through the countryside, enjoying the weather in Mark's 1967 Beetle Cabriolet, built just two weeks before he was born!

Join us for the weekend and enjoy an outdoor cinema, great food, music and good times in the beautiful Hampshire countryside. All proceeds go directly to Cancer Research UK.

BEACH CLEAN

As Surfers Against Sewage 250 Club Members we are keen to support SAS in any way we can. Most recently we've been attending their Beach Clean series.

During the 2017 series 475 beach cleans took place, removing an amazing 55 tonnes of plastic from our beaches.

In October, 18 of the JK team headed down to Bracklesham Bay. Our most disturbing find: a bottle top from 1972. Plastic is a real problem for the environment and we're happy to support SAS in their work to tackle it.

THE JK WAREHOUSE

We've just added another 3,000 square feet to our existing warehouse space, allowing us to store the hundreds of new products that we'll be adding into our range over the next few months. This brings our total warehouse space to nearly 40,000 square feet!

When we first arrived at JK HQ in 1999 we occupied a tiny space and wondered how we'd ever fill our little corner. Now, the space we originally took on only just fits in our Dispatch Department! We send out over 100,000 orders each year, and our warehouse is now open from 7am to 7pm, seven days a week. We've come a long way since 1999, and continue to grow all the time!

Handy Hint

Seat belt extender kits

Seat design and the thickness of seat foam varies, so we sell extender kits for lengthening the seatbelts. Just Kampers part no. J11679.

Seat belt mountings

If your camper started life as a panel van, the van will have no rear seat belt mounts. Just Kampers stocks seat belt mounting plates which can be welded to the vans floor and side panels. Just Kampers part no. J11582.

Seat foam must be fixed

When covering your rear seat foam, fix the seat cover SECURELY to the seat base, otherwise in an accident your passengers will slide under and probably hang themselves on your new seatbelts.....Be warned!

Handy Hint

Remember to carry spare cables with you

It's worth while carrying a spare accelerator and clutch cable with you in the van. Due to the unusual length of the cables, Mr AA or RAC may not carry the right cables and it may not be possible to repair your broken one at the roadside.

Noise reduction kits for Type 25 Camper or Panel Vans

Just Kampers have teamed-up with Dynamat, the leading automotive noise and heat reduction specialists, to provide a range of products for your VW.

To make things easier and take the guess work out how much Dynamat you need, we've measured the inside of a Type 25 Camper and put together a range of kits that have all the sound deadening you'll require.

The benefits of installing Dynamat from Just Kampers are:

- *Less road noise*
- *Less engine/transmission noise*
- *Less resonance & rattles*
- *Improved sound quality from your music system*
- *Less heat from engine/exhaust*

Handy Hint

Wheel fitting guide

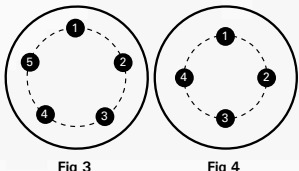

Bolt pattern

Type 25 vans used wheels with a PCD (Pitch Circle Diameter) of 5/112.

The PCD (measured in millimetres) is the distance between the center of two diametrically opposite bolts. In the 4-bolt wheel (Fig 1), this would be the distance between the top and bottom holes. Some basic geometry is needed to find the center of the 5-bolt pattern (Fig 2): But the simplest way is to multiply the center distance between any two adjacent holes by 1.701 (for example bolt holes 3 and 4 in Fig 3).

It's possible for 4 and 5 bolt wheels to share the same PCD, so if the wheels in Fig 1 and Fig 2 both had a PCD of 130mm the 4 bolt wheel on the left would be described as having a PCD of 4/130 and the wheel on the right would be a 5/130.

Offset

The offset (measured in millimeters) can be negative or positive, and is the distance from the hub-mounting surface (i.e the brake drum surface) to the wheels true centerline. A positive offset means the hub-mounting surface is closer to the outside edge of the wheel; a negative offset means the hub-mounting surface is closer to the inside edge of the wheel. When selecting aftermarket wheels, a wheel with too

little positive offset will be closer to the fender, and one with too much positive offset will be closer to the suspension components.

Before ordering any wheels, the choice of wheel width, offset, wheel diameter and tyre size should be considered very carefully to avoid tyre contact with the inner and outer wheel arches or steering and suspension components, especially if your Type 25 is lowered or has non standard brakes. Fitting non standard brakes can widen or narrow the track of the vehicle (The track is the distance between two wheels on the same axle).

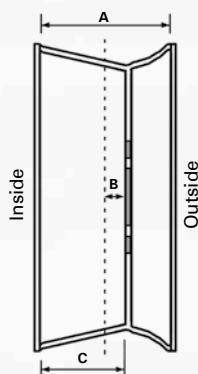

Fig 5 A = Wheel width
-- = Wheel centre
B = Offset
C = Backspace

Another thing to consider when fitting new wheels is using the correct wheel nuts or bolts. Steel wheels and alloy wheels require different fittings, so make sure you use the correct bolts or nuts for your choice of wheel. If you are using steel wheels these are held in place by the standard wheel bolt, but if you are fitting alloy wheels you will need to use bolts or nuts designed for use with alloys, which have a different seat. Using the wrong type could result in your wheels coming loose or losing a wheel altogether.

Handy Hint

Wiring up twin batteries with a dual charging kit

Handy Hint

How long will my battery last if I use an inverter

Here is a handy hint to remember, if you wish to know how quickly a power item will flatten your battery, for example a 12v interior light or if you are going to run household 240v items off your 12v car battery by using one of our power inverters.

Firstly check what Amp battery you have, (written on the side of the battery) then take the wattage of the item and divide it by the volts, the answer is the amps per hour it will use. (12 volt, 16 watt interior light (16 divided by 12) will draw 1.33 amps per hour)

Current draw guide for 12v to 240v inverters

- Laptop computer 75w
- Laptop printer 10w
- Satellite receiver and dish... 40w
- TV set..... 60w
- Household hairdryer draws a lot of power..... 1,000w
- Coffee maker..... 750w

Handy Hint

Rustproofing wax

Wax is an essential rust preventative for long term corrosion protection. Produced by Morris (Ankor Wax) and Hammerite (Waxoyl) both brands have low viscosity and surface tension thereby enabling them to spread rapidly, penetrating all inaccessible areas like sills, chassis members and inner body panels, covering the surface however irregular. The wax dries to leave a continuous protective coating that imparts excellent corrosion protection. Wax also has de-watering properties, therefore it can be used where the metal parts to be treated are wet. Effective in damp and humid climates, all traces of water are displaced before the protective film is applied giving excellent protection against salt spray. The ideal for rustproofing measure for your van.
