CAPABILITY HELPS YOU DELIVER.

The Ford Transit van is built to help you get the job done. Behind the ISO-compliant bulkhead, you'll find up to 15,188 liters of secure cargo volume. Near-vertical sidewalls, a flat load floor, and load lengths of up to 4,217 mm mean standard-length items such as pipes, boards and carpet rolls can be carried with ease. Access is quick and simple, thanks to a wide-opening sliding side-load door, full-height rear doors and a built-in rear bumper step. While the tough, easy-to-clean partial floor covering helps protect your van.

SIDEWALL TIE-DOWN LOOPS

ISO-compliant tie-down loops are positioned just above the floor along the load space sidewalls, making it easy to secure loads while keeping the floor clear of obstructions.

TECHNOLOGY TO HELP EASE YOUR DAY.

From changing road conditions to backing out of tight spaces, the Ford Transit van is designed with ease of operation in mind. Take advantage of these standard and available features to help make each drive a little easier.

SELECTABLE DRIVE MODES

The standard Selectable Drive Modes feature allows you to choose your mode: Normal, Eco, Slippery and, on RWD vehicles with a factory-fitted tow bar, Tow/Haul. The system adjusts various settings, including throttle response and steering feel, to help ease driving in certain conditions.

SIDE-WIND STABILIZATION¹

This feature is designed to help the vehicle stay in the intended lane in strong, gusty conditions by using the Electronic Stability Program (ESP) to sense when the vehicle is being affected by crosswinds.

ELECTRONIC STABILITY PROGRAM (ESP)¹

If this standard system senses you are deviating from your intended path, it aims to help keep you on track by regulating braking and engine output.

TRACTION CONTROL¹

Another valuable standard feature, Traction Control is designed to help provide grip by constantly monitoring and adjusting the torque delivered to individual wheels.

¹. Remember that even advanced technology cannot overcome the laws of physics. It's always possible to lose control of a vehicle due to inappropriate driver input for the conditions.
