**STATEMENT OF
REASONS**

NATIONAL FUEL GAS DISTRIBUTION CORPORATION
2022 Base Rate Case
Docket No. R-2022-3035730

STATEMENT OF REASONS

I. INTRODUCTION

National Fuel Gas Distribution Corporation’s (“NFGDC”) Pennsylvania Division (“National Fuel” or “Company”) is filing Supplement No. 248 to National Fuel Gas Tariff – Pa. P.U.C. No. 9 (“Supplement No. 248”), with a proposed effective date of December 27, 2022.¹ The rates set forth in Supplement No. 248, if approved by the Pennsylvania Public Utility Commission (“PAPUC” or the “Commission”), would increase the Company’s annual revenues by \$28.1 million, or by 9.2%.² In addition, Supplement No. 248 also proposes additional changes to tariff rates, riders, and tariff terms and conditions as described in the filing.

The following monthly bill impact analysis applies to National Fuel’s customers. It assumes that the Company’s proposals for full rate relief are accepted.

AVERAGE MONTHLY BILL IMPACT

Customer Class	Average Usage per Month	Current Rates	Proposed Rates	\$ Increase	% Increase
Residential	84 ccf	\$99.93	\$109.67	\$9.74	9.7%
<i>Commercial & Public Authority</i>					
SCPA <250	100 ccf	\$110.32	\$120.87	\$10.55	9.6%
SCPA >250	431 ccf	\$334.28	\$358.03	\$23.75	7.1%
LCPA	361 Mcf	\$1,047.97	\$1,151.78	\$103.81	9.9%
<i>Industrial</i>					
SVIS	42 Mcf	\$352.48	\$377.50	\$25.02	7.1%
IVIS	738 Mcf	\$1,524.31	\$1,687.21	\$162.90	10.7%
LVIS	7,474 Mcf	\$6,699.44	\$7,808.93	\$1,109.49	16.6%
LIS	44,383 Mcf	\$21,289.79	\$24,922.35	\$3,632.55	17.1%

¹ It is anticipated that the rates proposed in Supplement No. 248 will be suspended until July 27, 2023.

² As explained below and in the Company’s direct testimony, the Company has also proposed a new energy efficiency pilot program that would recover an additional \$1.2 million from residential customers annually in a separate rider.

If the Company had not voluntarily reduced its base rates effective October 2021 to stop recovering expenses for Other Post Retirement Benefits (“OPEBs”) that were authorized in its last base rate case, the proposed rate increase in this filing would have been approximately \$7.7 million lower. The \$7.7 million OPEB rate reduction, along with the return of \$54 million in funds previously collected that were no longer needed to cover future OPEB liabilities, would have normally been addressed in this base rate proceeding. As such, it is reasonable to consider the impact of the Company’s current proposal to increase rates in the context of the OPEB rate decrease last year. The following monthly bill impact analysis shows the effect of the proposed increase on current rates that exclude the OPEB rate reduction implemented in October 2021.

AVERAGE MONTHLY BILL IMPACT (EXCLUDING 2021 OPEB RATE REDUCTION)					
	Average Usage per Month	Pro-Forma Current Rates	Proposed Rates	\$ Increase	% Increase
Residential	84 ccf	\$104.26	\$109.67	\$5.41	5.2%
<i>Commercial & Public Authority</i>					
SCPA <250	100 ccf	\$113.82	\$120.87	\$7.04	6.2%
SCPA >250	431 ccf	\$343.24	\$358.03	\$14.80	4.3%
LCPA	361 Mcf	\$1,110.69	\$1,151.78	\$41.09	3.7%
<i>Industrial</i>					
SVIS	42 Mcf	\$357.07	\$377.50	\$20.44	5.7%
IVIS	738 Mcf	\$1,584.55	\$1,687.21	\$102.66	6.5%
LVIS	7,474 Mcf	\$7,372.95	\$7,808.93	\$435.98	5.9%
LIS	44,383 Mcf	\$22,855.76	\$24,922.35	\$2,066.58	9.0%

National Fuel makes this tariff filing principally: (1) to allow it to earn a fair return on investments used and useful to continue to provide safe and reliable service to the public; (2) to support its infrastructure replacement programs designed to enhance safety and reliability; (3) to recover higher levels of certain operating expenses, including increased employee compensation costs, necessary for the provision of safe and reliable gas distribution service. (4) to implement a

Weather Normalization Adjustment (“WNA”) tariff rider, which limits the variability of over- or under- collections of revenues due to weather; and (5) to implement an Energy Efficiency (“EE”) pilot program, the costs of which will be recovered from residential customers through a separate reconcilable rider. Each of these reasons is discussed in more detail below and in the Company’s testimony. National Fuel’s projected net plant in-service through the Fully Projected Future Test Year ending July 31, 2024 (“FPFTY”) of \$496 million represents an increase of approximately \$208 million over the net plant balance in-service as of December 31, 2007 when the Company’s current rates were last set. Accordingly, this revenue increase is essential to attract the investments necessary to operate and maintain safe, reliable, and customer-focused natural gas distribution services.

II. REASONS FOR THE REQUESTED REVENUE INCREASE

1. Fair return on investments used to serve the public

A variety of circumstances will prevent the Company from earning a fair rate of return at present rate levels. As reflected in National Fuel Exhibit A (FPFTY), the Company’s operations are projected to produce an overall return on rate base of 4.17%, which equates to a return on common equity of only 3.26% for the FPFTY. As explained by Company Witness Paul R. Moul (National Fuel Statement No. 10), those returns are not adequate based on applicable financial analysis and the risks confronted by the Company. Unless National Fuel receives the requested rate relief, its returns will decline. This will jeopardize its ability to attract capital necessary to make the reasonable and necessary investments in gas infrastructure and the human resources that are necessary to maintain and enhance the provision of safe and reliable natural gas service to its customers.

2. Support for the Company’s accelerated infrastructure replacement program

Significant capital investment in the distribution system is the primary driver for the requested rate relief in this proceeding. Upgrading and modernizing the distribution system facilitates the provision of safe, reliable, and reasonable service to customers. Accordingly, the Company is replacing its non-contemporary infrastructure at an accelerated pace, as described in its recently-filed Long Term Infrastructure Improvement Plan (“LTIIIP”).³ Under the LTIIIP, the Company will invest an average of \$39.1 million per year, and replace an average of 52.8 miles of leak prone pipe per year, between 2023 and 2027. This represents a significant acceleration of investment and replacement over historical levels.

3. Employee compensation and increases in operating costs

National Fuel adopted needed annual wage and salary increases and has made certain compensation adjustments to attract, maintain, and promote a highly qualified work force and will continue to do so, where reasonable. The increased compensation is necessary for the Company to be competitive and to maintain its skilled workforce. These changes are discussed in the testimony of National Fuel witness Brian M. Welsch (National Fuel Statement No. 1), Anthony M. Formato (National Fuel Statement No. 3), and Valerie L. Hawthorn (National Fuel Statement No. 4). While National Fuel has generally experienced declining levels of operations and maintenance (“O&M”) expense due mainly to the impact of the wave in employee retirements in the early part of the last decade (where the Company was able to replace retiring employees at a lower cost), as well as lower bad debt expense, prudent management of employee retirement benefits, realization of operational efficiencies, and a focus on cost containment, these

³ Docket No. P-2022-3034957.

trends have begun to reverse. In particular, over the past 5 years, the Company has seen fewer retirements resulting in increases in associated O&M. National Fuel has also been impacted generally by the inflationary pressures that currently challenge the economy, as discussed in its testimony.

4. Implement a WNA

The Company has also proposed to implement a WNA rider, which is designed to stabilize customers' bills and the Company's distribution revenue from weather variability. The Company's distribution rates, which are set to allow the utility to recover its authorized level of distribution revenues, are based on expected throughput during normal weather. When actual weather deviates from normal weather, there will be a difference between actual and projected distribution revenues. The Company proposes to implement a WNA mechanism that adjusts billings on a monthly billing basis as the bill is being calculated and issued. The benefits and components of the proposed WNA mechanism are explained in detail in the direct testimony of Mr. John D. Taylor (National Fuel Statement No. 19). Mr. Taylor also addresses the criteria set forth in the Commission's policy statement regarding alternative ratemaking mechanisms at 52 Pa. Code § 69.3302, with respect to the proposed WNA.

5. Implement an EE Pilot Program

Finally, National Fuel also proposes to implement an EE pilot program. The pilot program will last for a period of three years, starting in August 2023. The program would be offered to all residential customers in the Company's service territory. Residential customers would be offered equipment replacement rebate incentives for single-family and multi-family residential dwellings, to encourage them to install high efficiency space heating appliances such

as furnaces and boilers, which will be used to offset a portion of the incremental cost of purchasing high efficiency equipment in place of standard efficiency equipment. The program is projected to save 224,269 therms annually of natural gas for the first ten years, and is projected to cost \$1.2 million annually. National Fuel further proposes to recover the costs of this program on an annual basis through a separate reconcilable rider. The details of the program are discussed in the direct testimony of Eric M. Solomon (National Fuel Statement No. 18).

III. MANAGEMENT EFFECTIVENESS

National Fuel has successfully provided customers safe and reliable service at the lowest rates of all major natural gas utilities in Pennsylvania. National Fuel's management effectiveness is evidenced in the following areas:

Safety Culture

- National Fuel has a long-standing culture of safety that encourages continuous improvement of its safety performance, with demonstrated success in several areas. Principally, National Fuel has made significant progress in the modernization of its system, and the replacement of leak prone pipe; today, the Company has no cast iron mains in its Pennsylvania service territory. The Company plans to continue to accelerate its pipeline replacement program, consistent with its LTIP. Furthermore, the Company has significantly reduced the number of leaks on its system, as well as damages to its system since fiscal year 2017.
- The Company also educates and builds awareness with its customers so they can act safely if they smell gas in their homes. In the event of an emergency, National Fuel rapidly and thoroughly responds; the Company's average emergency response time is less than 45 minutes more than 99% of the time.
- Finally, National Fuel has implemented employee training and safety initiatives including its "Safe 4 the Right Reasons" safety culture program, to promote safe behaviors at every job site. In 2021, National Fuel Gas Company's ("NFG") consolidated operations reported the lowest Occupational Safety and Health Administration ("OSHA") Recordable Incident Rate and OSHA Days Away, Restricted or Transferred Rate in its history.

Quality Customer Service

- National Fuel maintains high levels of customer satisfaction. Based on the Company's internal surveys of residential and commercial customers presented below, National Fuel has consistently achieved satisfaction levels above 90% over the last 3 fiscal years. Furthermore, the Commission's 2021 Customer Service Performance Report showed that the Company scored at or above the Pennsylvania state average for natural gas

distribution companies in a majority of the report's satisfaction survey categories, including highest in satisfaction with ease of reaching the Company and highest overall satisfaction with a natural gas distribution company contact.

Affordability and Operational Efficiencies

- National Fuel currently has the lowest total bills and delivery rates in the Commonwealth amongst large natural gas utilities. Furthermore, National Fuel's customers have the third lowest natural gas rates in the northeast U.S. National Fuel's focus on cost control, productivity, and ability to optimize operational efficiencies is a major driver of the Company's ability to keep its delivery rates low. Even with the proposed rate increase, the Company anticipates that it will continue to lead its Pennsylvania natural gas peers in affordability.

Universal Services and Customer Payment Assistance

- National Fuel maintains several low-income customer focused programs in order to be attentive to the needs of its low-income customers. These include the Company's Low-Income Residential Assistance program, Low-Income Usage Reduction Program, as well as the Company's diligent efforts to connect its low-income and payment troubled customers with all available forms of assistance (e.g., Low Income Home Energy Assistance Program ("LIHEAP")).

Environmental Stewardship

- The Company is focused on limiting its environmental footprint and, in particular, reducing greenhouse gas emissions. Through 2020, NFGDC has reduced its EPA Subpart W emissions by 64% compared to 1990 levels, driven largely by its systematic leak-prone pipe replacement program. NFGDC has further committed to reduce its EPA Subpart W emissions, which is primarily methane, 75% by 2030 and 90% by 2050 when compared to 1990 levels. National Fuel is also committed to helping its customers reduce their own GHG emissions, and has proposed to implement a three-year EE pilot program that incentivizes residential customers to install high efficiency appliances for space and water heating.

Diversity and Inclusion

- National Fuel is committed to hiring and developing qualified individuals who can enhance and contribute to the diversity of its workforce and reflect the communities that it serves. To that end, the Company created and launched four different employee resource groups, which are voluntary, employee-led groups made up of individuals who work together based on common interest, backgrounds and/or demographic factors. Moreover, the Company has adopted specific diversity and inclusion goals for each executive officer and included achievement of the goals as part of the Company's at-risk executive incentive compensation plan.

Community Engagement and Impact on Local Economies

- Finally, National Fuel and its employees support the communities where they live and work. This support includes charitable contributions and volunteer opportunities. In addition to these philanthropic endeavors, the Company, as a subsidiary of NFG, has

made substantial investments in the value chain to expand the natural gas industry in Pennsylvania, supporting local jobs and economies, providing state and local taxes and impact fees, and supplying a comparatively inexpensive and reliable source of energy for families and businesses across the Commonwealth.

The identified initiatives and efforts, as described by the Company's witnesses, demonstrate National Fuel's commitment to providing safe, reliable, and quality distribution service to its customers. The Company believes that its management efforts, system investments, and continued provision of safe and reliable service at reasonable rates, as detailed by the testimony submitted in this case, all strongly support an upward adjustment of 25 basis points to the Company's rate of return on common equity. This upward adjustment is included in the 11.20% return on common equity requested by the Company and is discussed in the Direct Testimony of Paul R. Moul (National Fuel Statement No. 10).

IV. OVERVIEW OF FILING

Included with National Fuel's filing are all of the supporting data required by the Commission's regulations. This information provides data for the historic test year ("HTY") ended June 30, 2022, a future test year ("FTY") ending June 30, 2023, and a FPFTY ending July 31, 2024. In accordance with permitted ratemaking procedures, the Company has elected to use the FPFTY as the basis for its proposed revenue change. National Fuel has followed Commission ratemaking practice in preparing its claims for rate base, operating revenues and operating expenses.

Rate Base. Rate base was determined based on depreciated original cost values for projected plant in service at the end of the FTY and FPFTY, respectively. The Company's rate base claim also includes reasonable estimates for materials and supplies inventory and cash

working capital, as well as standard deductions for accumulated depreciation, accumulated deferred income taxes, and customer deposits. The Company's rate base claim is shown in summary form in Schedule C-1 to Exhibit A (Fully Projected) and is principally supported by the Direct Testimony of Tracy L. Wesoloski (National Fuel Statement No. 6).

Operating Revenues. National Fuel's *pro forma* test year operating revenues were derived from its annual five-year revenue forecast. As explained in the testimony of Jeremy R. Barber (National Fuel Statement No. 14) and other witnesses, operating revenues were annualized, normalized, and otherwise adjusted in accordance with standard ratemaking practice, as detailed in Schedules D-5 of Exhibit A (Fully Projected) and the exhibits attached to Mr. Barber's testimony.

Operating Expenses. National Fuel's *pro forma* test year operating expenses were derived from its annual budgeting process. As explained in the testimony of Anthony Formato (National Fuel Statement No. 3) and other witnesses, certain operating expenses were annualized, normalized, and otherwise adjusted in accordance with standard ratemaking practice, as detailed in Section D of Exhibit A (Fully Projected). The Company's claim for depreciation and amortization expense is supported by Exhibit C (Fully Projected) to the filing, and exhibits developed and supported by John J. Spanos of Gannett Fleming Valuation & Rate Consultants, LLC (National Fuel Statement No. 8). Mr. Spanos's calculations are based on the straight-line, remaining life method previously approved for National Fuel's operations by the Commission.

Income Taxes. National Fuel's income tax expense was calculated using procedures

previously accepted by the Commission. The Company's filing reflects the normalization of book-tax timing differences related to the use of accelerated depreciation for federal tax purposes and for the Company's repairs allowance deductions. As it relates to accelerated depreciation for state tax purposes, the Company uses flow-through for rate making purposes. The Company's tax claims are described and supported in the Direct Testimony of James A. Rizzo (National Fuel Statement No. 12).

Revenue Allocation and Class Cost of Service. National Fuel is proposing to allocate the revenue requirement to all customer classes based on the results of a cost of service study. The Company's proposed revenue allocation will move all rate classes toward the overall system average rate of return. Additional details regarding the Company's cost of service study and revenue allocation are provided in the Direct Testimony of John D. Taylor (National Fuel Statement No. 19).

Rate Design. As part of this proceeding, National Fuel is proposing to eliminate all block rates from its rate design. National Fuel is also proposing to increase the fixed monthly customer charges for the residential, commercial and public authority, and industrial classes. Details of the Company's rate design proposals are found in the Direct Testimony of John D. Taylor (National Fuel Statement No. 19).

Other Tariff Changes. In this filing, the Company proposes relatively few changes to the terms and conditions approved by the Commission in the Company's most recent completed rate case. One such change is a proposed WNA tariff rider, which limits the variability of non-

gas margin revenues due to weather variations during the heating season calendar months (e.g., October through May). A list of all proposed changes is identified in the Company's proposed tariff, Supplement No. 248.

V. CONCLUSION

The proposed revenue increase is the minimum increase necessary for the Company to continue providing safe and reliable service, to maintain the integrity of its financial ratings, to attract additional capital on reasonable terms, and to have a reasonable opportunity to earn a fair rate of return on property that is used and useful in providing natural gas service to the public within its service territory. The proposals contained in this filing will provide significant benefits to all stakeholders. Moreover, the Company's proposed revenue allocation and rate design are just and reasonable and non-discriminatory, as are the proposed changes made to the Company's general terms and conditions of service. Therefore, the rates, rules, and terms and conditions of service set forth in Supplement No. 248 should be permitted to become effective as filed.

PLAIN LANGUAGE - STATEMENT OF REASONS

NATIONAL FUEL GAS DISTRIBUTION CORPORATION
2022 Base Rate Case
Docket No. R-2022-3035730

PLAIN LANGUAGE STATEMENT OF REASONS

National Fuel Gas Distribution Corporation's ("NFGDC") Pennsylvania Division ("National Fuel" or "Company") has asked the Pennsylvania Public Utility Commission ("PAPUC" or the "Commission") to increase its annual jurisdictional revenues by \$28.1 million, or by 9.2%.⁴ The percentage rate increase will vary by rate class. The main reasons for this proceeding are:

- National Fuel continues to invest in gas plant needed to provide continued safe and reliable service, and intends to accelerate these investments. Under its recently-filed Long Term Infrastructure Improvement Plan, the Company will invest an average of \$39.1 million per year, and replace an average of 52.8 miles of leak prone pipe per year, between 2023 and 2027. This represents a 64.3% increase in annual investment, 27.8% increase in replacement mileage, respectively, over the 2017-2021 historical average.
- National Fuel proposes a Weather Normalization Adjustment ("WNA") tariff rider, which limits the variability of over- or under-collections of non-gas margin revenues due to weather during the heating season (*i.e.*, October through May).
- National Fuel proposes a three-year Energy Efficiency ("EE") pilot program that incentivizes residential customers to install high efficiency appliances for space and water heating. The EE pilot program to cost approximately \$1.2 million per year, which will be recovered through a separate reconcilable rider from residential customers only.
- National Fuel seeks to recover increased labor and employee costs, which are necessary to attract, maintain, and promote a highly qualified work force.
- Without substantial rate relief, the Company will not be able to earn a fair return on its investment used to serve the public and, if not addressed, this could adversely affect the integrity of its financial ratings and its ability to provide safe and reliable service to its customers.

⁴ As explained below and in the Company's direct testimony, the Company has also proposed a new energy efficiency pilot program that would recover an additional \$1.2 million from residential customers annually in a separate rider.

- National Fuel seeks to eliminate all block rates from its rate design. National Fuel is also proposing to increase the fixed monthly customer charges for the residential, commercial and public authority, and industrial classes.

The Company designed the proposed rates for each customer class to recover its total required revenue. In allocating the revenue increase to the residential and non-residential customer classes, National Fuel was guided by detailed studies of each rate class's cost of service. The Company also considered and balanced other principles of rate design consistent with the Commission's approach to ratemaking.

Along with its rate increase, National Fuel has filed all supporting data required by the Commission's regulations, as well as the written statements of nineteen witnesses and numerous exhibits prepared by those witnesses. The data, testimony, and exhibits submitted by the Company comply with the Commission's filing requirements. The proposed distribution revenue increase is the minimum increase necessary for National Fuel to continue providing safe and reliable service to the public within its service territory.

SECTION 53.52 - FILING REQUIREMENTS

NATIONAL FUEL GAS DISTRIBUTION CORPORATION

Proposed Changes to NFGDC – PA Division, Supplement No. 248 to Original Tariff No. 9

Information furnished with the filing of rate changes under
52 Pa. Code, Section 53.52

(a) Applicable to changes in terms and conditions of service.

(a)(1) The specific reason for each change.

National Fuel Gas Distribution Corporation’s (“NFGDC”) PA Division (“National Fuel” or “Company”) has provided a Statement of Reasons describing the necessity for the changes proposed within this filing.

(a)(2) The total number of customers served by the utility.

213,726 total customers served as of June 30th, 2022.

(a)(3) A calculation of the number of customers, by tariff subdivision, whose bills will be affected by the change.

This information is shown in National Fuel Exhibit E – Proof of Revenue.

(a)(4) The effect of the change on the utility’s customers.

This information is shown in National Fuel Exhibit E – Proof of Revenue.

(a)(5) The effect, whether direct or indirect, of the proposed change on the utility’s revenue and expenses.

The Company’s proposal will change revenues and expenses, as shown in National Fuel Exhibit A (FPFTY), Schedule A-1. Individual adjustments to revenues and expenses are described in testimony and exhibits supporting the filing.

(a)(6) The effect of the change on the service rendered by the utility.

The filing will allow the Company to continue to provide safe and reliable service to its customers while maintaining high levels of customer satisfaction.

(a)(7) A list of factors considered by the utility in its determination to make the change. The list shall include a comprehensive statement as to why these factors were chosen and the relative importance of each. This subsection does not apply to a portion of the tariff change seeking a general rate increase as defined in 66 Pa.C.S. Section 1308 (relating to voluntary changes in rates).

Not applicable.

- (a)(8) Studies undertaken by the utility in order to draft its proposed change. This paragraph does not apply to a portion of the tariff change seeking a general rate increase as defined in 66 Pa.C.S. Section 1308.**

Not applicable.

- (a)(9) Customer polls taken and other documents, which indicate customer acceptance and desire for the proposed change.**

No customer polls or other documentation regarding customer acceptance or desire for the proposed change exists.

- (a)(10) Plans the utility has for introducing or implementing the change with respect to its customers.**

The Company will notify its customers of the proposed increase by means of a billing insert in compliance with the Commission's Regulations as codified at 52 PA Code Section 53.45.

- (a)(11) F.C.C. or FERC or Commission orders or rulings applicable to the filings.**

There are no FERC or Pennsylvania Public Utility rulings directly applicable to this change.

- (b) Applicable to changes in rates.**

- (b)(1) Specific reason for each change.**

The Company has provided a Statement of Reasons describing the necessity of this filing.

- (b)(2) Utility's operating income statement ending not more than 120 days prior to filing date – historic year.**

Please refer to National Fuel Exhibit A (HTY), Schedule B-2.

- (b)(3) Number of customers, by tariff subdivision, whose bills will be increased.**

This information is shown in National Fuel Exhibit E – Proof of Revenue.

- (b)(4) Total increases, in dollars, by tariff subdivision, projected to an annual basis.**

This information is shown in National Fuel Exhibit E – Proof of Revenue.

(b)(5) Number of customers, by tariff subdivision, whose bills will be decreased.

This information is shown in National Fuel Exhibit E – Proof of Revenue.

(b)(6) Total decreases, in dollars, by tariff subdivision, projected to an annual basis.

This information is shown in National Fuel Exhibit E – Proof of Revenue.

(c) Applicable to changes where increase for any tariff subdivision exceeds 3% of utility’s operating revenue OR bills of more than 5% of customers will increase.

(c)(1) Rate of return for historic year and anticipated for future year.

Please refer to National Fuel Exhibit A (HTY), Schedule A-1, National Fuel Exhibit A (FTY), Schedule A-1, and National Fuel Exhibit A (FPFTY), Schedule A-1.

(c)(2) Detailed balance sheet at the end of the historic year.

See Attachment (c)(2) for a comparative balance sheet of NFGDC at June 30, 2022, and 2021. The balance sheet provided is for the entirety of NFGDC. Balance sheets are not maintained separately for National Fuel and NFGDC’s NY Division (“National Fuel – NY”).

(c)(3) Summary, by detailed plant accounts, of book value of property of utility at end of historic year.

Please refer to National Fuel Exhibit A (HTY), Schedule C-2, for the original cost book value of the property of the utility.

(c)(4) Respective amount of the depreciation reserve applicable to each detailed plant account.

Please refer to National Fuel’s Exhibit A (HTY), Schedule C-3, for the depreciation reserve as of June 30, 2022, Exhibit A (FTY), Schedule C-3, for the depreciation reserve as of June 30, 2023, and Exhibit A (FPFTY), Schedule C-3, for the depreciation reserve as of July 31, 2024. Please also refer to the depreciation study sponsored by Company witness John J. Spanos in National Fuel Exhibit C.

(c)(5) Statement of operating income, setting forth the operating revenues and expenses by detailed accounts – historic year.

Please refer to National Fuel Exhibit A (HTY), Schedule B-2, for the historic year operating revenue and expenses.

(c)(6) Description of any major changes in the operating or financial condition of the utility occurring between the date of the balance sheet at end of the historic year and filing date.

National Fuel has had no major changes in its operating or financial condition from June 30, 2022, through the filing date.

SECTION 53.62 - FILING REQUIREMENTS

NATIONAL FUEL GAS DISTRIBUTION CORPORATION

Proposed Supplement No. 248 to NFGDC Tariff No. 9

Information furnished pursuant to 52 Pa. Code, Section 53.62

§ 53.62. Additional information to be filed by gas utilities with gross annual intrastate operating revenues in excess of \$40 million seeking a change in base rates.

In addition to information otherwise required to be filed by a jurisdictional natural gas distributor with gross intrastate annual operating revenues in excess of \$40 million seeking a change in its base rates, each gas utility shall also file updates to the information required by § 53.64(c) (relating to filing requirements for natural gas distributors with gross intrastate annual operating revenues in excess of \$40 million). In the case of a gas utility purchasing gas as defined at § 53.61(a) (relating to purpose) from an affiliated interest, it shall also file updates to the information required at § 53.65 (relating to special provisions relating to natural gas distributors with gross intrastate annual operating revenues in excess of \$40 million with affiliated interests). These updates shall be made at the time the base rate case under 66 Pa.C.S. § 1308 (relating to voluntary changes in rates) is originally filed. Deficiencies in filing will be treated as set forth at § 53.51(c) (relating to general).

RESPONSE:

National Fuel Gas Distribution Corporation PA Division (“National Fuel” or “Company”) hereby incorporates by reference 1307(f) Case R-2020-3015251 comprised of 34 exhibits filed on January 2, 2020. On February 6, 2020, the Company filed its testimony and additional exhibits. Rates are effective through July 2021. Additionally, the Company filed quarterly updates of purchased gas costs and revenues effective February 1, 2020.

National Fuel hereby incorporates by reference 1307(f) Case R-2021-3023541 comprised of 34 exhibits filed on January 4, 2021. On February 2, 2021, the Company filed its testimony and additional exhibits. Rates are effective through July 2022. Additionally, the Company filed quarterly updates of purchased gas costs and revenues effective February 2, 2021.

National Fuel hereby incorporates by reference 1307(f) Case R-2022-3030235 comprised of 34 exhibits filed on January 3, 2022. On February 1, 2022, the Company filed its testimony and additional exhibits. Rates are effective through July 2023. Additionally, the Company filed quarterly updates of purchased gas costs and revenues effective February 2, 2022.

SECTION 53.53 - VALUATION

National Fuel Gas Distribution Corporation
Docket No. R-2022-3035730
2022 Base Rate Case
Responses to Section 53.53 - I-A - Valuation - All Utilities
Delivered on October 28, 2022

I-A-1

Request:

Provide a corporate history (include the dates of original incorporation, subsequent mergers and/or acquisitions). Indicate all counties and cities and other governmental subdivisions to which service is provided (including service areas outside the state), and the total population in the area served.

Response:

National Fuel Gas Distribution Corporation (“NFGDC”) is a corporation organized and existing under the laws of the State of New York. Its certificate of incorporation was filed April 11, 1973. NFGDC was qualified to do business in Pennsylvania on December 26, 1973.

NFGDC is a wholly owned subsidiary of National Fuel Gas Company (“NFG”). NFG is a public utility holding company registered with the Federal Energy Regulatory Commission (“FERC”) under the Public Utility Holding Company Act of 2005. NFG was organized under the laws of the State of New Jersey on December 8, 1902. Its principal office is located at 6363 Main Street, Williamsville, New York 14221. In addition to its ownership of 100% of the capital stock of NFGDC, NFG owns, directly or indirectly, 100% of the capital stock of the following companies:

Company	Incorporation / Formation
Leidy Hub, Inc.	New York, 1981
National Fuel Gas Supply Corporation	Pennsylvania, 1951
Empire Pipeline, Inc.	New York, 2005
Pennsylvania Gas Holdings Corporation	Pennsylvania, 2018
Seneca Resources Company, LLC	Pennsylvania, 1913
National Fuel Gas Midstream Company, LLC	Pennsylvania, 2008
Highland Field Services, LLC	Pennsylvania, 2014
NFG Midstream Covington, LLC	Pennsylvania, 2009
NFG Midstream Processing, LLC	Pennsylvania, 2009
NFG Midstream Trout Run, LLC	Pennsylvania, 2010
NFG Midstream Tionesta, LLC	Pennsylvania, 2012
NFG Midstream Clermont, LLC	Pennsylvania, 2013
NFG Midstream Wellsboro, LLC	Pennsylvania, 2014
National Fuel Resources, Inc.	New York, 1991

The present responsibilities of NFGDC resulted from a corporate reorganization of NFG and certain of its subsidiaries, effective July 1, 1974. Prior to July 1, 1974, three wholly owned subsidiaries of NFG were engaged in retail distribution of gas service. The

I-A-1 (Continued)

subsidiaries were Pennsylvania Gas Company, United Natural Gas Company, and Iroquois Gas Corporation.

As of July 1, 1974, the assets of Pennsylvania Gas Company, United Natural Gas Company and Iroquois Gas Corporation associated with gas distribution and the intrastate transmission of gas were transferred to NFGDC. The assets of those companies associated with the storage, production and interstate transmission of gas were transferred to National Fuel Gas Supply Corporation at the same time. The required regulatory approvals were secured for the corporate reorganization, including a certificate of public convenience, docketed at A.97939, and dated August 17, 1973, issued by Pennsylvania Public Utility Commission (“PAPUC”).

Since July 1, 1974, NFGDC has furnished retail gas service to the public within the Commonwealth of Pennsylvania and the state of New York. NFGDC also furnished retail gas service to the public within the state of Ohio until 1986, when it sold its Ohio utility properties. A list of counties, cities and other governmental subdivisions in which such service is provided (including areas outside of Pennsylvania), and total population served, follows this narrative.

Since July 1, 1974, NFGDC has acquired the properties of three companies furnishing retail gas service. On May 22, 1975, the PAPUC at A-99200 issued a certificate of public convenience authorizing, inter alia, the transfer, by sale, by Gasco, Inc. to NFGDC of the transmission and distribution property used by Gasco, Inc. in furnishing retail gas service to the public in the Borough of Karns City and in the Townships of Concord, Fairview, Parker Washington and Venango, Butler County. On February 25, 1977, the PAPUC, at A-99910 issued a certificate of public convenience authorizing, inter alia, the transfer, by sale, by Edward S. Dewey and Laurie T. Dewey Trust t/a Dewey Gas Company to NFGDC, of the transmission and distribution property used by Dewey Gas Company in a portion of the Township of Brady’s Bend, Armstrong County. On October 31, 1989, NFGDC acquired certain assets of Mercer Gas Company in a transaction approved by both the PAPUC and the United States Bankruptcy Court for the Western District of Pennsylvania. The PAPUC approved the transfer by order of September 14, 1989, at Docket Nos. T-880494, A-121650 F200, A-121850, A-97939, and P-890378. The bankruptcy court issued its order on October 17, 1989, confirming the sale at Case No. 88-00465E. These actions assured continuation of service to approximately 1,420 customers in Mercer Borough and the Townships of East Lackawannock, Findley and Cool Spring.

On January 31, 1989, NFGDC sold to T.W. Philips Gas & Oil Co. a portion of its assets associated with gas utility service in Mars and Callery Boroughs, and Adams, Butler, Forward, Oakland, Penn and Summit Townships Butler County, Pennsylvania. A certificate of public convenience, docketed at A-122350, and dated January 12, 1989, was issued by the PAPUC

approving the transfer which affected approximately 1,250 residential and commercial customers.

In the matter of application, A-121850 F0014, the PAPUC issued a certificate of public convenience on November 29, 2007, for application of NFGDC to transfer by sale of real estate property located in the City of Warren, Warren County, Pennsylvania to Mr. John D. Anderson. On August 1, 2020, National Fuel Resources, Inc. (“NFR”), which operated an energy marketing business, completed the sale of its commercial and industrial contracts and certain other assets to Marathon Power LLC. A notice of customer transfer dated July 28, 2020, was filed, and docketed at A-125010. This sale, in conjunction with the turn back of NFR’s residential customers to NFGDC, effectively ended NFR’s operations.

Please see the chart below for all counties and cities to which service is provided and the total population in the area served

Docket No. R-2022-3035730
2022 Base Rate Case
Responses to Section 53.53 - I-A - Valuation - All Utilities
Delivered on October 28, 2022

I-A-2

Request:

Provide a schedule showing the measures of value and the rates of return at the original cost and trended original cost measures of value at the spot, three-year and five-year average price levels. All claims made on this exhibit should be cross-referenced to appropriate exhibits. Provide a schedule similar to the one listed above, reflecting respondent's final claim in its previous rate case.

Response:

National Fuel's claim is based on original cost measures of value. Since Pennsylvania's state law mandates original cost for ratemaking, there was no cost study prepared. Refer to National Fuel's Exhibit A (HTY, FTY, FPFTY), schedule A-1 and C-2.

National Fuel's last rate case was a black box settlement. National Fuel's Rate Base final claim per R-00061493 settlement was:

Gas Plant in Service	431,374
Customer Advances For Construction	<u>(135)</u>
Subtotal	431,239
Reserve For Depreciation	<u>(147,657)</u>
Net Plant	283,582
Working Capital	
Cash Allowance	37,739
Gas Storage Inventory	10,517
Prepayments	631
Materials and Supplies	<u>1,136</u>
Total Working Capital	50,023
Deferred Income Taxes	
Investment Tax Credit	(1,869)
Liberalized Depreciation	<u>(40,939)</u>
Total Deferred Income Taxes	(42,808)
Customer Deposits	<u>(3,174)</u>
Miscellaneous Other Programs	<u>225</u>
Total Rate Base	<u><u>\$287,848</u></u>

2022 Base Rate Case
Responses to Section 53.53 - I-A - Valuation - All Utilities
Delivered on October 28, 2022

I-A-3

Request:

Provide a description of the depreciation methods utilized in calculating annual depreciation amounts and depreciation reserves, together with a discussion of all factors which were considered in arriving at estimates of service life and dispersion by account. Provide dates of all field inspections and facilities visited.

Response:

The depreciation methods utilized in calculating annual and accrued depreciation are discussed in National Fuel Exhibit C in the section titled "Calculation of Annual and Accrued Depreciation" beginning on page IV-2. The factors considered in arriving at estimates of service life and dispersion by account begin in the section on page III-2 and the section on page III-5.

Field trips and facilities visited over the years for NFGDC are presented in National Fuel Exhibit C, in the section "Field Trips" beginning on page III-2.

Delivered on October 28, 2022

I-A-4

Request:

Set forth, in exhibit form, charts depicting the original and estimated survivor curves and a tabular presentation of the original life table plotted on the chart for each account where the retirement rate method of analysis is utilized.

- a. If any utility plant was excluded from the measures of value because it was deemed not to be “used and useful” in the public service, supply a detailed description of each item of property.
- b. Provide the surviving original cost at test year end by vintage by account and include applicable depreciation reserves and annuities.
 - (i) These calculations should be provided for plant in service as well as other categories of plant, including, but not limited, to contributions in aid of construction, customers’ advances for construction, and anticipated retirements associated with any construction work in progress claims (if applicable).

Response:

- a. Charts depicting the original and estimated survivor curves and a tabular presentation of the original life table plotted on the chart for each account where the retirement rate method of analysis is utilized are presented in National Fuel Exhibit C in Part VI Service Life Statistics.
- b. Detailed Depreciation Calculations by account and vintage are set forth in Part II of National Fuel Exhibit C – Depreciation Study – Historic, Part VIII of National Fuel Exhibit C – Depreciation Study – Future for the future test year and Part II of National Fuel Exhibit C – Depreciation Study – Fully Projected for the fully forecasted test year.

Request:

Provide a comparison of respondent's calculated depreciation reserve v. book reserve by account at the end of the test year.

Response:

A comparison of the calculated depreciation reserve vs. book reserve by account as of June 30, 2022 is listed on Pages 2 and 3 of this response.

See Pages 4 through 7 for the comparison of the calculated depreciation reserve vs. book reserve as of June 30, 2023 and as of July 31, 2024.

Request:

Supply a schedule by account and depreciable group showing the survivor curve and annual accrual rate estimated to be appropriate:

- a. For the purposes of this filing.
- b. For the purposes of the most recent rate increase filing prior to the current proceeding.
 - (i) Supply a comprehensive statement of any changes made in method of depreciation and in the selection of average service lives and dispersion.

Response:

- a. Please refer to pages I-3 through I-4 of National Fuel Exhibit C – Depreciation Study – Historic.
- b. Please refer to National Fuel Exhibit C – Depreciation Study, Schedule No. 3, Pages 2 to 3 for the most recent prior filing.
 - (i) The depreciation methods and procedures used in this filing are the same as those used in previous filings. Explanations of the depreciation methods and procedures are presented in National Fuel Exhibit C.

The estimated survivor curves used in this filing have not changed from those used in the most recent annual depreciation report filed in March 2022.

Docket No. R-2022-3035730
2022 Base Rate Case
Responses to Section 53.53 - I-A - Valuation - All Utilities
Delivered on October 28, 2022

I-A-7

Request:

Provide a table, showing the cumulative depreciated original cost by year of installation for utility plant in service at the end of the test year (depreciable plant only) as claimed in the measures of value, in the following form:

- a. Year installed.
- b. Original cost--the total surviving cost associated with each installation year from all plant accounts.
- c. Calculated depreciation reserve--the calculated depreciation reserve associated with each installation year from all plant accounts.
- d. Depreciated original cost--(Column B minus Column C).
- e. Total--cumulation year by year of the figures from Column D.
- f. Column E divided by the total of the figure in Column D.

Response:

Please reference pages II-3 through II-6 of National Fuel's Historic Test Year depreciation study included in Exhibit No. C - Historic.

Please refer to pages VII-3 through VII-6 of National Fuel's Future Test Year depreciation study included in Exhibit No. C - Future.

Please refer to pages II-3 through II-6 of National Fuel's Fully Projected Future Test Year depreciation study included in Exhibit No. C - Fully Projected.

I-A-8

Request:

Provide a description of the trending methodology which was utilized. Identify all indexes which were used (include all backup workpapers) and the reasons particular indexes were chosen. If indexes were spliced, indicate which years were utilized in any splices. If indexes were composited, show all supporting calculations. Include any analysis made to “test” the applicability of any indexes.

- a. Supply a comprehensive statement of any changes made in the selection of trend factors or in the methodology used in the current rate filing compared to the most recent previous rate filing.

Response:

Trended original cost is omitted in accordance with 52 Pa. Code Section 53.51(c).

I-A-10

Request:

Supply an exhibit indicating the percentages of undepreciated original cost which were trended with the following indexes:

- a. Boeckh
- b. Handy-Whitman
- c. Indexes developed from suppliers' prices.
- d. Indexes developed from company records and company price histories.
- e. Construction equipment.
- f. Government statistical releases.

Response:

Trended original cost is omitted in accordance with 52 Pa. Code Section 53.51(c)

Prepared by or under the supervision of: Tracy L. Wesoloski

Delivered on October 28, 2022

I-A-11

Request:

Provide a table, showing the cumulative trended depreciated original cost (at the spot price level) by year of installation for utility plant in service at the end of the test year (depreciable plant only) as claimed in the measures of value, in the following form:

- a. Year installed.
- b. Trended original cost (at the spot price level)--the total surviving cost associated with each installation year from all plant accounts.
- c. Trended calculated depreciation reserve--the calculated depreciation reserve associated with each installation year from all plant accounts.
- d. Depreciated trended original cost--(Column B minus Column C).
- e. Total--cumulation year by year of the figures from Column D.
- f. Column E divided by the total of the figures in Column D.

Response:

Trended original cost is omitted in accordance with 52 Pa. Code Section 53.51(c).

Request:

If a claim is made for construction work in progress, include, in the form of an exhibit, the summary page from all work orders, amount expended at the end of the test year and anticipated in-service dates. Indicate if any of the construction work in progress will result in insurance recoveries, reimbursements, or retirements of existing facilities.

Describe in exact detail the necessity of each project claimed if not detailed on the summary page from the work order. Include final completion date and estimated total amounts to be spent on each project.

[These exhibits should be updated at the conclusion of these proceedings.]

Response:

There is no claim being made for construction work in progress.

I-A-15

Request:

If materials and supplies comprise part of the cash working capital claim, attach an exhibit showing the actual book balances for materials and supplies by month for the thirteen months prior to the end of the test year. Explain any abrupt changes in monthly balances.

[Explain method of determining claim if other than that described above.]

Response:

Materials and supplies are included in National Fuel Exhibit A (HTY), Schedule C-8. These are book balances per our general ledger for accounts 154 (Materials and Supplies) and 163 (Stores Expense Undistributed). Account 154 includes the balance of the cost of materials and supplies in warehouse inventories. Account 163 includes the balance of related costs of supervision and other expenses incurred in the operation of the general storeroom and for storage, handling and distribution of materials and supplies. Materials and supplies are added to Rate Base but are not a part of working capital.

Request:

Provide, with respect to the scope of operations of the utility, a description of all property, including an explanation of the system's operation, and all plans for any significant future expansion, modification, or other alteration of facilities.

This description should include, but not be limited to the following:

- a. If respondent has various gas service areas, indicate if they are integrated, such that the gas supply is available to all customers.
- b. Provide all pertinent data regarding company policy related to the addition of new consumers in the company's service area.
- c. Explain how respondent obtains its gas supply, as follows:
 - (i) Explain how respondent stores or manufactures gas; if applicable.
 - (ii) State whether the company has peak shaving facilities.
 - (iii) Provide details of coal-gasification programs, if any.
 - (iv) Describe the potential for emergency purchases of gas.
 - (v) Provide the amount of gas in MCF supplied by various suppliers in the test year (include a copy of all contracts).
 - (vi) Provide the amount of gas in MCF supplied from company-owned wells during the test year.
- d. Provide plans for future gas supply, as follows:
 - (i) Supply details of anticipated gas supply from respondent's near-term development of gas wells, if any.
 - (ii) Provide gas supply agreements and well development ventures and identify the parties thereto.

National Fuel Gas Distribution Corporation

NFGDC 2022 Base Rate Case
Responses to Section 53.53 - I-C - Valuation - Gas Utilities
Delivered on October 28, 2022

I-C-1 (Continued)

- e. Indicate any anticipated curtailments and explain the reasons for the curtailments.
- f. Provide current data on any Federal Power Commission action or programs that may affect, or tend to affect, the natural gas supply to the gas utility.

Response:

- a. National Fuel is a public utility providing, in a 14-county area of northwestern Pennsylvania, gas service to 196,121 residential, 16,000 commercial and public authority customers and 589 industrial customers. All of the many local distribution systems are interconnected although, in many instances, they are interconnected by means of pipelines of National Fuel Gas Supply Corporation (“Supply”). Major municipalities located within the area serviced by National Fuel include Erie, Meadville, Sharon, Franklin, Oil City, Clarion, Corry, Warren, DuBois, and Bradford. The majority of gas supplies for the National Fuel gas requirement are brought to National Fuel through Supply and three other interstate pipelines. These pipelines are Tennessee Gas Pipeline Company (“TGP”), Texas Eastern Transmission, LP (“TETCO”), and Columbia Gas Transmission, LLC (“Columbia”). Pursuant to the governing procedures for confidential treatment of submitted materials, please refer to attachment Schedule No. 1 for a summary and the most recent agreements with the pipelines listed above. NFGDC allocates portions of the Supply EFT Service Agreement #E00528 contract and the TGP Service Agreement 2752 contract to National Fuel and National Fuel - NY.
- b. National Fuel is permitted to attach new customers under the terms and conditions contained in the Company's tariff, the Commission's regulations codified at 52 Pa. Code Ch. 59 and orders of the Commission adopted pursuant thereto.
- c. (i) NFGDC has no facilities to store or manufacture gas but has entered into gas storage service agreements with Supply and Columbia. Of these storage agreements, NFGDC relies most heavily on the Supply services. Pursuant to the governing procedures for confidential treatment of submitted materials, a summary and the most recent storage agreements with Supply and Columbia are attached in Schedule No. 2. NFGDC allocates portions of the Supply Service Agreement #G00539 contract to National Fuel and National Fuel - NY.
 - (ii) National Fuel does not own or operate peak shaving facilities.
 - (iii) National Fuel is unaware of gas supplies obtained from its suppliers as produced through coal gasification processes or programs.

National Fuel Gas Distribution Corporation
Docket No. R-2022-3035730
NFGDC 2022 Base Rate Case
Responses to Section 53.53 - I-C - Valuation - Gas Utilities
Delivered on October 28, 2022

(iv) National Fuel does not expect to make any emergency purchases of gas.

(v) Please refer to IV-B-14 and the related attachment which contains line items for the gas supplied by upstream suppliers and Gas purchased from independent producers. Pursuant to the governing procedures for confidential treatment of submitted materials, a copy of Distribution's confidential standard long-term contracts (Master Agreement & NAESB) for supplies is provided at Schedule No. 3 and will be available subject to a protective order.

(vi) National Fuel does not own gaswells.

d. (i) National Fuel does not own gas wells, nor does it plan to drill or otherwise acquire gas wells in the future

(ii) Attachment Schedule No. 3 contains a copy of NFGDC's NAESB contract that would be used for future gas supply agreements. As stated in response (i), National Fuel does not plan to participate in future gas well development ventures.

e. National Fuel does not anticipate any curtailments.

f. With the exception of certain certificates it holds from FERC, National Fuel is not under direct regulation by the FERC (formerly known as Federal Power Commission); however, it is affected by Federal regulations and actions covering the sources, transportation, and prices associated with suppliers providing gas to Distribution.

National Fuel has adopted a FERC action program whereby National Fuel participates and actively represents its position as a local distribution company in those proceedings before the FERC that may have a direct impact on National Fuel. National Fuel's activity at the FERC during the past year was provided in National Fuel's 1307(f) proceeding at PGC Exhibit No. 6 which is incorporated in Exhibit No. 12, Schedule No. 8.

Increased permitting burdens imposed on applicants for new natural gas infrastructure has delayed many projects necessary to deliver natural gas supplies to gas utilities.

Docket No. R-2022
NFGDC 2022 Base Rate Case
Responses to Section 53.53 - II-A - Rate of Return - All Utilities
Delivered on October 28, 2022

II-A-7

Request:

Supply financial data of Company and/or Parent for last five years:

- a. Earnings-price ratio (average)
- b. Earnings-book value ratio (per share basis) (avg. book value)
- c. Dividend yield (average)
- d. Earnings per share (dollars)
- e. Dividends per share (dollars)
- f. Average book value per share yearly
- g. Average yearly market price per share (monthly high-low basis)
- h. Pre-tax funded debt interest coverage
- i. Post-tax funded debt interest coverage
- j. Market price-book value ratio

Response:

Please see attached.

II-A-8

Request:

State amount of debt interest utilized for income tax calculations, and details of debt interest computations, under each of the following rate case bases:

- a. Actual test year
- b. Annualized test year-end
- c. Proposed test year-end

Response:

- a. The actual amount for the twelve months ended June 30, 2022 is \$6.7 million.
- b. The annualized amount for the twelve months ended June 30, 2022 is \$6.8 million.
- c. The proposed amount for the twelve months ended June 30, 2023 is \$7.7 million.
The proposed amount for the twelve months ended July 31, 2024 is \$10.9 million.

II-A-9

Request:

State amount of debt interest utilized for income tax calculations which has been allocated from the debt interest of an affiliate, and details of the allocation, under each of the following rate case bases:

- a. Actual test year
- b. Annualized test year-end
- c. Proposed test year-end

Response:

The amount of debt interest used for the income tax calculation is not allocated from an affiliate. Instead, interest is "synchronized" by application of the embedded debt cost rate used to determine the fair rate of return to the rate base of National Fuel.

II-A-10

Request:

Under Section 1552 of the Internal Revenue Code and Regulations 1.1552-1 thereunder, if applicable, Parent Company, in filing a consolidated income tax return for the group, must choose one of four options by which it must allocate total income tax liability of the group to the participating members to determine each member's tax liability to the federal government. (If this interrogatory is not applicable, so state.)

- a. State what option has been chosen by the group.
- b. Provide, in summary form, the amount of tax liability that has been allocated to each of the participating members in the consolidated income tax return.
- c. Provide a schedule, in summary form, of contributions, which were determined on the basis of separate tax return calculations, made by each of the participating members to the tax liability indicated in the consolidated group tax return. Provide total amounts of actual payments to the tax depository for the tax year, as computed on the basis of separate returns of members.
- d. Provide annual income tax return for group, and if income tax return shows net operating loss, provide details of amount of net operating loss allocated to the income tax returns of each of the members of the consolidated group.

Response:

- a. National Fuel is a subsidiary of NFG, which was subject to regulation by the Securities and Exchange Commission ("SEC") pursuant to the Public Utility Holding Company Act of 1935 prior to the repeal of such Act in 2006. NFG continues to allocate its income tax liability in accordance with Rule 45(C) promulgated by the SEC pursuant to this Act. A copy of the intercompany tax agreement is included as Attachment II-A-10.
- b. See Exhibit VI.II.RR.55.
- c. No Federal payments were made.
- d. See Exhibit VI.II.RR.55

II-A-12

Request:

Set forth provisions of Company's and Parent's charter and indentures (if applicable) which describe coverage requirements, limits on proportions of types of capital outstanding, and restrictions on dividend payouts.

Response:

1. Restrictions contained in the NFG Restated Certificate of Incorporation, as amended ("Charter"):

The Charter provides that dividends may be declared and paid on NFG stock only out of the funds legally available for the payment of such dividends. Otherwise, the Charter contains no currently effective restrictions on the payment of dividends, as there currently is no outstanding preferred stock issued by NFG.

However, if any shares of preferred stock are outstanding, the authority of the Board of Directors to declare and pay dividends on NFG common stock is subject to the rights and preferences of each series of preferred stock outstanding, as such rights and preferences may be determined by the Board of Directors (See Article FOURTH, Paragraph 4 on Schedule 1, page 3 of 3.) The Board of Directors may determine the designation, the number and the special and relative rights, powers, preferences and limitations of each series of preferred stock created. This power includes, among other things, the power to determine the following terms:

The preference or relation that dividends on any series of preferred stock shall bear to the dividends payable on any other class or classes or any other series of capital stock; and

The limitations and restrictions, if any, to be effective while any shares of any series of preferred stock are outstanding, upon the payment of dividends on the common stock or any other class or classes or any other series of capital stock of the corporation ranking junior to the shares of such series.

(See Article FOURTH, Paragraphs 1(c) and 1(h) on schedule 1, pages 1 and 2 of 3.)

The Charter does not contain any coverage requirements or any currently effective restrictions on the proportions of types of capital outstanding. However, the Board of Directors has the authority to determine the conditions and restrictions, if any, to be effective while any

shares of any series of preferred stock are outstanding, upon the creation of indebtedness of the corporation or upon the issuance of any additional stock ranking on a parity with or prior to the shares of such series. (See Article FOURTH, Paragraph 1(i) on Schedule 1, page 2 of 3.)

2. Restrictions contained in outstanding debentures' indentures and indenture supplements.

NFG's October 15, 1974 Indenture with The Bank of New York (formerly Irving Trust Company) and the indenture supplements thereto (collectively, the "1974 Indenture") provide generally that NFG may not increase its debt (other than short-term debt) if such increases would cause interest coverage to be less than 2 times. Likewise, generally, such debt may not be increased if doing so would cause debt to exceed 60% of consolidated assets as defined under the 1974 Indenture.

NFG may not pay dividends if the aggregate of dividends and certain other distributions subsequent to December 31, 1967, would exceed income available for dividends since such date, plus \$10,000,000 plus such additional amounts as may be authorized or approved by the SEC.

The 1974 Indenture does not contain any currently effective limits on proportions of types of capital outstanding or restrictions on dividend payouts with respect to National Fuel, as National Fuel currently has no long-term debt outstanding to any party other than NFG, and no preferred stock outstanding.

NFG may not permit National Fuel to issue long-term debt or preferred stock to a party other than NFG or its subsidiaries if the amount of National Fuel's long-term debt held by non-affiliates and preferred stock held by non-affiliates would exceed 60% of National Fuel's total capitalization. In addition, NFG may not permit National Fuel to pay dividends if such payment would increase that ratio above 60%.

NFG may not permit any subsidiary to issue long-term debt or preferred stock to a party other than NFG or its subsidiaries if, in the aggregate, the amount of subsidiary long-term debt held by non-affiliates and subsidiary preferred stock held by non-affiliates would exceed 15% of NFG's consolidated assets as defined under the 1974 Indenture. None of NFG's subsidiaries currently has any long-term debt or preferred stock outstanding to any non-affiliate.

Schedule 2 and Schedule 3 contain excerpts from the 1974 Indenture setting forth in detail the provisions described in the above two paragraphs. Schedule 4 contains excerpts from the Third Supplemental Indenture to the 1974 Indenture,

II-A-12 (Cont.)

which changed the 2-1/2 times interest coverage test (see Schedule 4, page 1 of 1) to a 2 times test. The 2 times test is now the effective test, as no debentures issued prior to the date of the Third Supplemental Indenture are now outstanding. Other indenture supplements to the 1974 Indenture are not excerpted because, except as already described, they do not differ from the 1974 Indenture respecting coverage requirements, limits on proportions of types of capital outstanding, and restrictions on dividend payouts.

NFG's October 1, 1999 Indenture with The Bank of New York does not contain coverage requirements, limits on proportions of types of capital outstanding, or restrictions on dividend payouts.

Prepared by or under the supervision of: Shannon M. Buffington

ARTICLE FOURTH
Capital Stock

The total authorized capital stock of this corporation shall consist of Ten Million (10,000,000) shares of Preferred Stock having the par value of One Dollar (\$1.00) per share and Two Hundred Million (200,000,000) shares of Common Stock having the par value of One Dollar (\$1.00) per share.

The designations and relative rights, powers, preferences and limitations of the different classes of capital stock of this corporation are as follows:

1. Characteristics of Common Stock and Preferred Stock.

The Board of Directors shall have the authority to amend this Certificate of Incorporation from time to time to divide the shares of the Preferred Stock into one or more series and to determine the designation, the number, and the special and relative rights, powers, preferences and limitations of the shares of each series so created. For illustrative purposes only, the forgoing power of the Board of Directors shall include, but shall not be limited to, the determination of the following terms:

- (a) the maximum number of shares to constitute each such series, which may subsequently be increased or decreased (but not below the number of shares of such series then outstanding) by resolution of the Board of Directors, the distinctive designation thereof and the stated value thereof if different from the par value thereof;
- (b) whether the shares of each such series shall have voting rights and, if such shares are given voting rights, the terms of such voting rights, subject to the provisions of paragraph 7 hereof;
- (c) the dividend rate or rates, if any, on the shares of each such series or the manner in which such rate or rates shall be determined, the conditions and dates upon which such dividends shall be payable, the preference or relation that such dividends shall bear to the dividends payable on any other class or classes or any other series of capital stock (including whether such dividends shall be participating or non-participating with respect to any other class or classes or any other series of capital stock), whether such dividends shall be cumulative or noncumulative, and if cumulative, the date or dates from which any such dividends shall be cumulative;

- (d) whether the shares of each such series shall be subject to redemption, and, if made subject to redemption, the time or times, price or prices and other terms, limitations, restrictions or conditions of such redemption, including whether such redemption shall be made at the election of the corporation or the holders of such shares;
- (e) the relative amounts, and the relative rights or preferences, if any, of payment in respect of shares of each such series which the holders of shares of each such series shall be entitled to receive upon the voluntary or involuntary liquidation, dissolution or winding-up of the corporation, including whether such rights shall be limited or participating with respect to shares of any other class or classes or any other series of capital stock upon the voluntary or involuntary liquidation, dissolution or winding up of the corporation;
- (f) whether or not the shares of each such series shall be subject to the operation of a retirement or sinking fund and, if so, the terms and provisions relative to the operation of such retirement or sinking fund;
- (g) whether or not the shares of each such series shall be convertible into, or exchangeable for, shares of any other class or classes or any other series of capital stock, or other securities, whether or not issued by the corporation, and if so convertible or exchangeable, the price or prices or the rate or rates of conversion or exchange, the method, if any, of adjusting any such price or prices or rate or rates and whether such shares shall be convertible or exchangeable at the election of the corporation or the holders of such shares;
- (h) the limitations and restrictions, if any, to be effective while any shares of each such series are outstanding, upon the payment of dividends or the making of other distributions on, and upon the purchase, redemption or other acquisition by the corporation of, the Common Stock or any other class or classes or any other series of capital stock of the corporation ranking junior to the shares of such series either as to dividends or upon liquidation, dissolution or winding-up of the corporation;
- (i) the conditions or restrictions, if any, to be effective while any shares of each such series are outstanding, upon the creation of indebtedness of the corporation or upon the issuance of any additional stock (including additional shares of such series or of any other class) ranking on a parity with or prior to the shares of such series as to dividends or distribution of assets upon liquidation, dissolution or winding-up of the corporation; and
- (j) any other preference, relative, participating, optional or other special rights, and the qualifications, limitations or restrictions thereof, as shall

not be inconsistent with law, this Article FOURTH or any amendment creating such series.

Each share of Common Stock shall be equal in all respects to every other share of the Common Stock. The Common Stock shall be subject to the express terms of the Preferred Stock and any series thereof.

2. Dividends on Preferred Stock.

No holder of outstanding shares of any series of the Preferred Stock shall be entitled to receive any dividends thereon other than the dividends provided therefor pursuant to paragraph 1 hereof.

3. Redemption and Repurchase of Preferred Stock.

If, on or before the redemption date with respect to any shares of any series of Preferred Stock that are subject to redemption, as fixed or determined pursuant to paragraph 1 hereof, this corporation shall deposit with a bank, trust company or other financial institution monies necessary for the redemption of such shares, then, notwithstanding that any certificate for such shares so redeemed shall not have been surrendered for cancellation, from and after such redemption date, all rights and preferences with respect to such shares so redeemed shall forthwith on such redemption date cease and terminate, except only the right of the holders thereof to receive, out of the monies so deposited, the amount payable upon redemption of such shares, without interest. Any such monies so deposited by this corporation and unclaimed at the end of six (6) years from such redemption date shall be repaid to this corporation upon its request, after which repayment the holders of the shares so called for redemption shall look only to this corporation for the payment thereof.

Nothing herein contained shall limit any legal right of this corporation to purchase or otherwise acquire any shares of the Preferred Stock to the extent permitted by law. All or any shares of Preferred Stock at any time redeemed, purchased or otherwise acquired by this corporation may thereafter, in the discretion of the Board of Directors, be reissued or otherwise disposed of at any time or from time to time, to the extent and in the manner now or hereafter permitted by law.

4. Dividends on Common Stock.

Subject to the rights and preferences of each series of Preferred Stock, as determined pursuant to paragraph 1 hereof, such dividends (payable in cash, stock or otherwise) as may be determined by the Board of Directors may be declared and paid on the Common Stock, but only out of funds legally available for the payment of such dividends.

SECTION 1.04. The term "Consolidated Assets" of the Company and its Subsidiaries shall mean the total assets appearing on a consolidated balance sheet of the Company and its Subsidiaries, less the following:

- (i) excess of carrying value over original cost of property, plant and equipment of Subsidiaries in all cases where original cost of property, plant and equipment has been determined in accordance with the requirements of any regulatory body;
- (ii) unamortized debt discount and expense, and other deferred debits;
- (iii) all current and accrued liabilities (other than Funded Debt) and deferred credits;
- (iv) all reserves (other than reserves for retirement of items in the foregoing clause (i) specified) not already deducted from assets;
- (v) minority interests in common stocks and surpluses of Subsidiaries; and
- (vi) excess of the minimum amount of depletion and depreciation determined as provided in clause (b) of the definition of "Income Available for Interest and Subsidiary Preferred" over the aggregate amount of depletion and depreciation charged on the books of the Company and its Subsidiaries from January 1, 1966 to the date of the consolidated balance sheet referred to above.

SECTION 1.05. The term "Control" means the power to direct the management and policies of a Person, directly or through one or more intermediaries, whether through the ownership of voting securities, by contract or otherwise, and the terms "Controlling" and "Controlled" shall have meanings correlative to the foregoing.

SECTION 1.06. The term "Debenture" shall mean any Debenture authenticated and delivered under this Indenture.

The term "Debentureholder" or "Holder" shall mean the Person or Persons in whose name or names the particular Debenture shall be registered on the books of the Company kept for that purpose in accordance with the terms of this Indenture.

SECTION 1.07. The term "Engineer" shall mean a person engaged in engineering, whether or not such person shall be an officer, director or employee of the Company or of any Affiliate.

SECTION 1.08. The term "Funded Debt" shall mean any Indebtedness maturing by its own terms more than one year from the date of the creation thereof, including any Indebtedness renewable or extendable at the option of the obligor to a date later than one year from the date of the original creation thereof.

SECTION 1.09. The term "Income Available for Dividends" shall mean the consolidated net income of the Company and its Subsidiaries, adjusted to reflect any known debits or credits to earned surplus applicable to the period in question, determined in accordance with accepted accounting principles and practices or with the requirements of any regulatory body having jurisdiction over the accounting procedure of the Company and/or its Subsidiaries, including deductions (or additions) for the elimination of intangibles or amounts included in utility plant acquisition adjustment accounts or utility plant adjustment accounts, or any accounts of a similar nature, whether such deductions (or additions) are made through periodic amortization charges or otherwise debited or credited to earnings or directly to earned surplus. If, in determining Income Available for Dividends, the aggregate amount of depletion, depreciation and amortization (including periodic amortization of intangibles or of amounts included in utility plant acquisition adjustment accounts or utility plant adjustment accounts or any accounts of a similar nature) charged on the books of the Company and its Subsidiaries during the period in question shall be less than the minimum amount of depletion, depreciation and amortization determined as provided in clause (b) of the definition of "Income Available for Interest and Subsidiary Preferred," an additional deduction for depletion, depreciation and amortization shall be made, equal to the difference between the amount so charged on the books of the Company and its Subsidiaries and said minimum amount.

SECTION 1.10. The term "Income Available for Interest and Subsidiary Preferred" of the Company and its Subsidiaries shall mean income of the Company and its Subsidiaries, on a consolidated basis (with all inter-company items eliminated) ascertained in accordance with accepted accounting principles and practices or with the requirements of any regulatory body

having jurisdiction over the accounting procedure of the Company and/or its Subsidiaries, as follows:

(a) the total of the operating revenues, income from plants leased, and the net non-operating revenues, including income from securities and other investments, of the Company and all Subsidiaries shall be ascertained;

(b) from the total, determined as provided in subdivision (a), there shall be deducted:

(i) all operating expense of the Company and its Subsidiaries, including taxes (other than income and excess or other profits taxes which are based on income after the deduction of interest charges) and maintenance, depletion and depreciation expense and amortization expense (including charges (less credits) for elimination or amortization of intangibles, or of amounts included in utility plant acquisition adjustment accounts or utility plant adjustment accounts, or any account of a similar nature whether through charges (or credits) to earnings or earned surplus); and

(ii) net non-operating losses, if any, of the Company and its Subsidiaries;

provided, however, that the net non-operating revenues or losses shall not exceed ten per centum (10%) of the balance remaining after deducting the amount referred to in (b) (i) from the total operating revenues and income from plants leased; and provided, further, that the aggregate amount so deducted for maintenance, depletion, depreciation and amortization expense shall not be less than the aggregate of:

(aa) the actual charges for maintenance during the period;

(bb) an amount equal to four cents per thousand cubic feet of Natural Gas Produced in the states of New York, Pennsylvania and Ohio during the period;

(cc) if during the period the Company or its Subsidiaries own producing natural gas properties located elsewhere than in said states, an amount calculated per thousand cubic feet of Natural Gas Produced from such properties during the period at the number of cents and/or fractions of a cent determined for such purpose

by an Independent Engineer who shall file with the Trustee and with the Company a certificate signed by him in which shall be stated the number of cents and/or fractions of a cent per thousand cubic feet which in his judgment fairly reflects the then current requirements (determined in accordance with accepted engineering and accounting principles and practices) of the Company and its Subsidiaries with respect to depletion of producing gas lands and gas land rights and producing gas well construction located elsewhere than in said states of New York, Pennsylvania and Ohio;

(dd) an amount for such period determined for each year in the period by multiplying depreciable property in use during the year in question, excluding producing gas well construction, by the percentage specified below for such year; 2% for each of the years 1954 through 1965; and for 1966 and each year thereafter, 2½% or such lower percentage, not less than 2%, as the Securities and Exchange Commission, or any successor regulatory authority administering the Public Utility Holding Company Act of 1935, may from time to time approve or authorize, upon application by the Company, by order or other written determination, which may authorize the use of any such lower percentage for each year or any part of a year that has elapsed between January 1, 1966 and the date of any such order or determination;

(ee) an amount equal to the amortization expense for such period (including periodic amortization of intangibles or amounts included in utility plant acquisition adjustment accounts or utility plant adjustment accounts or any account of a similar nature); and

(ff) the actual charges for depletion during such period other than the charges for depletion of producing gas lands and gas land rights and producing gas well construction;

and provided further that the respective number of cents and/or fractions of a cent per thousand cubic feet of Natural Gas Produced to be used in the calculation of item (bb) or item (cc) above as hereinbefore provided may at the option of the Company be redetermined from time to time in the manner hereinafter provided, but no such redetermination shall be made effective within three years from the effective date of

the last previous redetermination. Such redetermination shall be made by an Independent Engineer, who shall file with the Trustee and with the Company a certificate signed by him in which shall be stated the number of cents and/or fractions of a cent per thousand cubic feet of Natural Gas Produced which in his judgment fairly reflects the then current requirements (determined in accordance with accepted engineering and accounting principles and practices) of the Company and its Subsidiaries with respect to depletion of producing gas lands and gas land rights and producing gas well construction located, respectively, as aforesaid, and such rate or rates of depletion stated in such certificate shall, beginning with the first of the calendar year in which such certificate shall be filed with the Trustee, be substituted for the minimum rate or rates of calculating such respective items in effect at the time of filing such certificate and shall remain in effect until a further redetermination thereof shall become effective in accordance with the provisions of this clause (b); and

(c) the balance remaining after the deduction of the total amount computed pursuant to subdivision (b) from the total amount computed pursuant to subdivision (a), and after making appropriate deductions for any portions thereof applicable to minority holdings of common stocks of Subsidiaries, shall constitute the "Income Available for Interest and Subsidiary Preferred" of the Company and its Subsidiaries.

In making such computations there shall not be included (i) gains or losses resulting from the sale, abandonment, revaluation or other disposition of, or increase or diminution in the book costs or recorded values of, securities or other investments and (ii) deductions (or additions) for interest charges on Funded Debt and amortization of stock and debt discount and expense or premium.

In case, within or after the particular period for which the calculation of such consolidated income of the Company and its Subsidiaries is made, the Company or a Subsidiary shall acquire any property, for a consideration in excess of \$500,000, which within six months prior to the date of such acquisition has been used or operated by another Person in a business similar to that in which it has been or is to be operated by the Company or its Subsidiary, or in case any Subsidiary shall be consolidated or merged with any other corporation and the corporation resulting from such consolidation or con-

tinuing after such merger shall become a Subsidiary, or in case any other corporation shall become a Subsidiary, then in computing such consolidated income of the Company and its Subsidiaries (unless such property shall have been acquired in exchange or substitution for property of the Company or a Subsidiary the earnings of which have been included) there shall be included on a consolidated basis, to the extent the same may not have been otherwise included and shall be ascertainable, the earnings or losses of such property, or of such other corporation, as the case may be, for the whole of such period.

In case, within or after the particular period for which the calculation of consolidated income of the Company and its Subsidiaries is made, the Company or a Subsidiary shall dispose of (other than to the Company or to a Subsidiary) any property, the proceeds of which exceed \$500,000, or in case a Subsidiary shall cease to be such, then in computing such consolidated income of the Company and its Subsidiaries there shall be excluded to the extent practicable the earnings or losses of such property or of such corporation which shall have ceased to be a Subsidiary, as the case may be, for the whole of such period.

SECTION 1.11. The term "Incur" as applied to Indebtedness shall mean create, issue, assume or otherwise become obligated for, either directly or indirectly, by guaranty or otherwise.

The term "Indebtedness" shall mean, as to a particular corporation, all obligations of such corporation, whether or not represented by bonds, debentures or notes, for the repayment of money borrowed by such corporation, all deferred obligations of such corporation for the payment of the purchase price of property purchased by such corporation and all such obligations assumed or guaranteed by such corporation, but shall not include any customers' deposits or employees' deposit accounts.

The term "Indenture" shall mean this Indenture, either as originally executed or as the same may from time to time be supplemented, modified or amended by any supplemental indenture entered into pursuant to the provisions hereof.

The term "Independent" when applied to any Accountant, Engineer or other expert shall mean such a Person who is in fact independent, selected by the Company and satisfactory to the Trustee, but such Person may be regularly retained by the Company or by an Affiliate or by an Obligor. If such Person be an individual he shall not be a director, officer or employee of the

Company or of an Affiliate or of an Obligor. If such Person be a partnership or corporation it shall not be an Affiliate and shall not have a partner, director or officer who is a director, officer or employee of the Company or of an Affiliate or of an Obligor.

SECTION 1.12. The term "Natural Gas Produced" shall mean the excess of (i) gas sold and used in operations less the net amount, if any, of gas withdrawn from storage over (ii) the sum of all gas purchased and manufactured gas produced less the net amount, if any, of gas put into storage; provided that "free gas" furnished pursuant to gas leases and franchises shall not be deemed gas sold or used in operations.

SECTION 1.13. The term "Obligor" shall mean the Company and any other Person who is at the time an obligor on the Debentures.

The term "Officers' Certificate" shall mean a certificate, complying with the provisions of Section 15.03, signed by the President or a Vice-President and the Secretary or the Treasurer or an Assistant Secretary or Assistant Treasurer of the Company.

Any Officers' Certificate as to accounting matters of the Company and its Subsidiaries shall state that the accounting statements involved in the certificate have been prepared in accordance with the applicable requirements of this Indenture and have been based upon accounts of the Company which have been certified to by the Company's Independent Accountants or, if such accounts are for a period subsequent to the latest period for which such accounts have been audited by such Accountants, that such accounts have been kept in a manner consistent with the accounts of the Company and its Subsidiaries during the latest period for which such accounts have been so audited and certified.

SECTION 1.14. The term "Opinion of Counsel" shall mean an opinion in writing, complying with the provisions of Section 15.03, signed by counsel (who may be of counsel to the Company or any Subsidiary or Affiliate) appointed by the Board of Directors of the Company and satisfactory to the Trustee. The acceptance by the Trustee of an Opinion of Counsel or of a certificate or opinion of any Independent Accountant or Independent Engineer shall be sufficient evidence that the signer or signers thereof are satisfactory to the Trustee within the meaning of this Indenture.

SECTION 1.15. Subject to Section 8.02 the term "Outstanding", when used with reference to Debentures, shall mean, except as otherwise expressly provided, as of any particular time, all Debentures authenticated and delivered under this Indenture, except

(a) Debentures cancelled by the Trustee or surrendered to the Trustee cancelled or for cancellation at or prior to said particular time,

(b) Debentures for the payment or redemption of which sufficient cash (to be immediately available for payment) shall theretofore have been, or simultaneously be, irrevocably deposited with the Trustee in trust (whether upon or prior to the maturity or the redemption date of such Debentures), provided that if such Debentures are to be redeemed prior to the maturity thereof, notice of such redemption shall have been given as in Article V provided or provisions satisfactory to the Trustee shall have been made therefor, and

(c) Debentures (other than any Debenture as to which proof satisfactory to the Trustee shall have been presented that such Debenture is held by a holder in due course) in lieu of and in substitution for which other Debentures shall have been authenticated and delivered pursuant to Section 2.09.

The term "Outstanding" when used with reference to any Indebtedness of the Company or any Subsidiary or any Consolidated Debt of the Company and its Subsidiaries, or any Subsidiary Preferred Stock shall mean, as of any particular time, all such Indebtedness or Consolidated Debt or Subsidiary Preferred Stock Incurred or issued at or prior to the time in question, except

(a) Indebtedness or Consolidated Debt which has been paid or otherwise discharged or Subsidiary Preferred Stock which has been redeemed or otherwise retired, and Indebtedness or Consolidated Debt or Subsidiary Preferred Stock for the payment or redemption or retirement of which sufficient cash shall theretofore have been, or simultaneously be, irrevocably deposited with a bank or trust company in trust for the purpose of such payment or redemption or retirement, provided that any notice necessary for such payment or redemption or retirement shall have been given or provision for the giving of such notice satisfactory to the Trustee shall have been made, and

(b) Indebtedness or Subsidiary Preferred Stock, whether or not pledged, owned by the Company or by any Subsidiary.

SECTION 1.16. The term "Person" shall mean an individual, a corporation, a partnership, an association, a joint stock company, a trust in which the interest or interests of the beneficiary or beneficiaries are evidenced by a Security, an unincorporated organization, or a government or political subdivision thereof.

SECTION 1.17. The term "Record Date" with respect to an interest payment date for Debentures shall mean, for an interest payment date which is the fifteenth day of a Calendar Month, the last day (whether or not a business day) of the next preceding Calendar Month and, for an interest payment date which is the first day of a month, the fifteenth day (whether or not a business day) of the next preceding Calendar Month.

The term "Resolution" shall mean a resolution certified by the Secretary or an Assistant Secretary of the Company to have been duly adopted by the Board of Directors and to be in full force and effect on the date so certified.

The term "Responsible Officer" when used with respect to the Trustee shall mean the chairman of the board of directors, the president, any vice president, any assistant vice president, the secretary, any assistant secretary, any trust officer, any assistant trust officer, or any other officer or assistant officer of the Trustee customarily performing functions similar to those performed by the persons who at the time shall be such officers, respectively, or to whom any corporate trust matter is referred because of knowledge of and familiarity with a particular subject.

SECTION 1.18. The term "Restricted Subsidiary" shall mean any corporation all of the common shares of which (other than directors' qualifying shares) and at least 75% of the Voting Shares of which are at the time owned by the Company and by other Subsidiaries of the Company which are Restricted Subsidiaries or by any one or more of them.

SECTION 1.19. The term "Security" shall mean any bond, note, debenture, evidence of indebtedness, share of stock, certificate of interest or participation in any profit sharing agreement, voting trust certificate, certificate of deposit for a security, or, in general, any interest or instrument commonly known as a "security", but shall not include a bond of or treasury certificate

of or other obligation of the United States of America. For the purposes of paragraphs (6), (7), (8) and (9) of subsection (IV) of Section 10.09 the terms "Security" and "Securities" shall include only such securities as are generally known as corporate securities, but shall not include any note or other evidence of indebtedness issued to evidence an obligation to repay moneys lent to a Person by one or more banks, trust companies, or banking firms or any certificate of interest or participation in any such note or evidence of indebtedness.

SECTION 1.20. The term "Subsidiary" shall mean any corporation a majority of the Voting Shares of which are at the time owned by the Company and by other Subsidiaries or by any one or more of them.

SECTION 1.21. The term "Subsidiary Preferred Stock" shall mean capital stock of any Subsidiary of the Company, which shall be preferred over the common stock of such Subsidiary as to assets upon liquidation and shall be entitled to limited dividends in preference to the common stock of such Subsidiary. For the purpose of determining the amount of Subsidiary Preferred Stock being issued or sold or Outstanding, the Subsidiary Preferred Stock shall be taken at the greater of its par value (if any) or liquidating value upon involuntary liquidation, exclusive of accrued dividends; provided that in the case of Subsidiary Preferred Stock Outstanding at any time, the amount thereof shall include any preferred dividends then in arrears.

The term "Successor Corporation" shall mean any resulting, surviving or successor corporation, as the case may be, with or into which the Company shall have consolidated or merged or to which the Company shall have transferred all or substantially all of its assets as an entirety, as permitted by Article XIII, but any such corporation shall be deemed a Successor Corporation only for the period subsequent to such consolidation, merger or transfer.

SECTION 1.22. The term "Total Capitalization", as applied to a Subsidiary of the Company, shall mean the aggregate of its Indebtedness and capital stock (including that held by the Company and by other Subsidiaries) and its surplus, as shown by its books of account.

The term "Trustee" shall mean the Trustee under this Indenture for the time being, whether original or successor.

SECTION 1.23. The term "Voting Shares" shall mean, as to shares of a particular corporation, all shares of stock of any class of such corporation, at

the time outstanding, entitled to vote in the election of directors, excluding shares entitled so to vote only upon the happening of some contingency even though such contingency may have happened.

ARTICLE II

FORM, EXECUTION, DELIVERY, REGISTRATION AND EXCHANGE OF DEBENTURES

SECTION 2.01. The Debentures issued hereunder shall be issued in fully registered form. At the option of the Company, the Debentures may be issued in one or more series, the Debentures in each series maturing on such dates and bearing interest at such rates and having such other terms and provisions not inconsistent with this Indenture as the Board of Directors may determine. The Debentures of each series shall be designated as "Debentures", with such further descriptive designations added to such title for any particular series as the Board of Directors may determine. The form of each series of Debentures shall be established by Resolution of the Board of Directors or, at the option of the Company, by a supplemental indenture approved by Resolution of the Board of Directors, and shall specify the descriptive title of the Debentures, the designation of the series, the rate of interest to be borne, the date of maturity, the dates for the payment of interest and the place or places for the payment of principal and interest and for the registration and transfer of the Debentures. The text of the Debentures of each series shall be substantially in the form hereinbefore set forth, with such insertions, omissions, substitutions and variations, established as above provided, as may be appropriate to the terms and provisions thereof.

The terms and provisions of each series of Debentures shall be set forth in a supplemental indenture, and may include such provisions in respect of such series as the Board of Directors may determine:

(a) expressing any obligation of the Company to create a purchase, sinking or analogous fund or to permit the conversion or exchange of Debentures of such series into capital stock or other securities of the Company or of any other corporation;

(b) imposing conditions, limitations or restrictions on any or all of the exchanges referred to in Section 2.06;

In case the Company shall propose to pledge, mortgage or hypothecate any assets or property at any time owned by it to secure any indebtedness, other than as permitted by subdivisions (a) to (d), inclusive, of this Section it will prior thereto give written notice thereof to the Trustee, and will prior to or simultaneously with such pledge, mortgage or hypothecation, by supplemental indenture to which the Trustee is a party (or to the extent legally necessary, with another trustee or additional or separate trustee), in form satisfactory to the Trustee, effectively secure all the Debentures equally and ratably with such indebtedness by pledge, mortgage or hypothecation of such assets or property. Such supplemental indenture shall contain the provisions concerning the possession, control, release and substitution of mortgaged and pledged property and securities and other appropriate matters which are required by the Trust Indenture Act of 1939 as then in effect to be included in a secured indenture qualified under said Act, and may also contain such additional and amendatory provisions not inconsistent with said Act as the Company and the Trustee shall deem advisable or appropriate or as the Trustee shall deem necessary in connection with such pledge, mortgage or hypothecation.

SECTION 6.04. So long as any of the Debentures are Outstanding the Company will not

(a) itself sell or permit a Restricted Subsidiary to issue or sell, other than to the Company or another Restricted Subsidiary, common shares or Voting Shares of any Restricted Subsidiary unless either (i) all of the common shares and Voting Shares of such Restricted Subsidiary owned by the Company and its Subsidiaries shall be sold, or (ii) the Company and its other Restricted Subsidiaries collectively shall retain all of the common shares (except directors' qualifying shares) and at least 75% of the Voting Shares of such Restricted Subsidiary, or (iii) after giving effect to such issue or sale the total book value of Securities other than Securities of the Company and its Restricted Subsidiaries, owned by the Company and its Restricted Subsidiaries, shall not exceed 25% of the Consolidated Assets of the Company and its Subsidiaries; or

(b) permit any Subsidiary of the Company to issue or sell any Voting Shares of such Subsidiary unless, after such issue or sale and giving effect thereto, such Subsidiary shall remain a Subsidiary.

SECTION 6.05. So long as any of the Debentures are Outstanding, the Company will not, and will not permit any of its Subsidiaries to, Incur or sell any Funded Debt (other than Funded Debt acquired by the Company or by another Subsidiary, Funded Debt of the Company subordinate to the Debentures as to payment of principal and interest on default, and Funded Debt issued to refund Funded Debt of the Company or its Subsidiaries) and will not permit any of its Subsidiaries to issue or sell (other than to the Company or another Subsidiary) any shares of its preferred stock, unless

(a) the Income Available for Interest and Subsidiary Preferred for any twelve consecutive Calendar Months within the fifteen Calendar Months immediately preceding the date on which such additional Funded Debt is so Incurred or sold or such Subsidiary Preferred Stock is so issued or sold, shall have been not less than two and one-half (2½) times the sum of (i) the total annual interest charges upon the Consolidated Debt of the Company and its Subsidiaries and (ii) the total annual dividend requirements on Subsidiary Preferred Stock, in each case to be Outstanding immediately after the Incurring, issue or sale of such additional Funded Debt or Subsidiary Preferred Stock; and

(b) giving effect to the Incurring, issue or sale of such additional Funded Debt or Subsidiary Preferred Stock and to the application of the proceeds thereof, the sum of (i) the principal amount of Outstanding Consolidated Debt of the Company and Subsidiaries and (ii) the amount of Outstanding Subsidiary Preferred Stock shall be not more than 60% of the Consolidated Assets of the Company and its Subsidiaries, as shown by a pro forma consolidated balance sheet of the Company and its Subsidiaries; such pro forma consolidated balance sheet shall be prepared on the basis of a consolidated balance sheet of the Company and its Subsidiaries as of the last day of the 12 months' period for which income is calculated for the purposes of subdivision (a) of this Section and shall give effect to the proposed Incurring, issue or sale of the additional Funded Debt and Subsidiary Preferred Stock and to the application of the proceeds thereof and to any dividend declared or other distribution of assets made by the Company to its stockholders after the date of the balance sheet and simultaneously with or prior to the proposed transaction.

SECTION 6.06. So long as any of the Debentures are Outstanding, the Company will not permit any Subsidiary of the Company to Incur or

sell any Funded Debt, other than Indebtedness to the Company or to another Subsidiary, nor to issue or sell, other than to the Company or to another Subsidiary, any of its preferred stock unless, giving effect to the Incurring, issue or sale of such Funded Debt or preferred stock and to the application of the proceeds thereof,

(a) the principal amount of Outstanding Funded Debt and the amount of the Outstanding preferred stock of such Subsidiary shall not exceed 60% of the Total Capitalization of such Subsidiary; and

(b) the principal amount of Outstanding Funded Debt and the amount of Outstanding preferred stock of all Subsidiaries of the Company shall not exceed 15% of the Consolidated Assets of the Company and its Subsidiaries, computed in a manner similar to that provided in Section 6.05;

provided, however, that nothing contained in this Section shall prevent the Company from acquiring a new Subsidiary which shall have Outstanding at the time of acquisition, otherwise than in the hands of the Company or any Subsidiary of the Company, Funded Debt or preferred stock, if the principal amount of such Outstanding Funded Debt and the amount of such Outstanding preferred stock shall not exceed 60% of the Total Capitalization of such new Subsidiary.

So long as any of the Debentures are Outstanding, the Company will not permit any of its Subsidiaries to declare or pay any dividend if such declaration or payment would reduce its surplus below the amount required to maintain the ratio of its Outstanding Funded Debt and preferred stock to Total Capitalization specified in subdivision (a) of this Section.

SECTION 6.07. So long as any of the Debentures are Outstanding the Company will not declare or pay any dividend or make any other distribution upon any of its capital stock, nor will it itself purchase or redeem or otherwise acquire for a consideration, or permit any of its Subsidiaries to purchase or redeem or otherwise acquire for a consideration, any of its capital stock (excluding from such restriction and from the calculation in this Section dividends paid in capital stock and capital stock purchased, redeemed or otherwise acquired to the extent that it was so acquired in exchange for, or for an amount not exceeding the proceeds of the issue of, other capital stock) if the cumulative aggregate amount of all dividends and distributions declared

or paid on its capital stock and the amount paid for the purchase, redemption or acquisition of its capital stock subsequent to December 31, 1967 by the Company and its Subsidiaries exceeds the amount of Income Available for Dividends after December 31, 1967 plus \$10,000,000 plus such additional amount as shall be authorized or approved, upon application by the Company, by the Securities and Exchange Commission, or by any successor commission thereto, under the provisions of the Public Utility Holding Company Act of 1935, or any legislation enacted in substitution therefor (the Company hereby reserving the right to apply, at any time and from time to time after October 15, 1974, for such additional amount).

The foregoing covenant shall apply to any corporation during the period in which it shall be a Successor Corporation, so that, so long as any of the Debentures are Outstanding, the Successor Corporation will not declare or pay any dividend or make any other distribution upon any of its capital stock, nor will it itself purchase or redeem or otherwise acquire for a consideration, or permit any of its Subsidiaries to purchase or redeem or otherwise acquire for a consideration, any of its capital stock (excluding from such restriction and from the calculation in this Section dividends paid in capital stock and capital stock purchased, redeemed or otherwise acquired to the extent that it was so acquired in exchange for, or for an amount not exceeding the proceeds of the issue of, other capital stock) if the cumulative aggregate amount of all dividends and distributions declared or paid on its capital stock subsequent to December 31, 1967, and the amount paid for the purchase, redemption or acquisition subsequent to December 31, 1967, of its capital stock by the Company and its Subsidiaries and by any other corporation during the period in which it shall be a Successor Corporation and by the Subsidiaries of such Successor Corporation during such period exceeds the amount of Income Available for Dividends of the Company and its Subsidiaries subsequent to December 31, 1967 and of such Successor Corporation and the Subsidiaries of such Successor Corporation during the period in which it shall be a Successor Corporation, plus \$10,000,000 (the Income Available for Dividends of such Successor Corporation and Subsidiaries being computed for this purpose in accordance with the definition in Section 1.09 as if such Successor Corporation were the Company).

SECTION 6.08. The Company will not participate in any consolidation or merger with, or transfer its properties and assets as an entirety or substantially as an entirety to, another corporation unless such corporation shall

Excerpts from the Third Supplemental Indenture dated as of December 1, 1982:

THIRD SUPPLEMENTAL INDENTURE dated as of December 1, 1982, made and entered into by and between **NATIONAL FUEL GAS COMPANY**, a corporation of the State of New Jersey, with its Post Office address at 30 Rockefeller Plaza, New York, New York 10112 (hereinafter sometimes called the Company), party of the first part, and **IRVING TRUST COMPANY**, a corporation of the State of New York, whose Post Office address is One Wall Street, New York, New York 10015 (hereinafter sometimes called the Trustee), party of the second part, as Trustee under the Indenture dated as of October 15, 1974 executed and delivered by the Company:

ARTICLE TWO
MISCELLANEOUS PROVISIONS

SECTION 7. Section 6.05(a) of the Indenture is hereby amended to change the reference to two and one-half (2½) to two (2) wherever it appears in that subsection, such amendment to take effect when all Debentures of the First and Second Series are no longer Outstanding.

D. Use of Proceeds

National Fuel Gas Distribution Corporation

It is anticipated that, from time-to-time, Distribution will need to incur short-term borrowings of up to approximately \$500 Million from sources external to Distribution. This capital requirement arises in connection with Distribution's construction program, the purchase of gas to be placed in storage during the summer months and withdrawn for sale in the winter months, the financing of deferred purchased gas costs and accounts receivable, and other general corporate purposes.

National Fuel Gas Supply Corporation

It is anticipated that, from time-to-time, Supply will need to incur short-term borrowings of up to approximately \$500 Million from sources external to Supply. This capital requirement arises from Supply's construction program, including the possible development of underground storage facilities which would be used to serve non-affiliated utilities, the financing of deferred accounts receivable, and for general corporate purposes.

Seneca Resources Corporation

It is anticipated that, from time-to-time, Seneca will need to incur short-term borrowings of up to approximately \$1 Billion from sources external to Seneca. This capital requirement arises from Seneca's oil and gas exploration and development program, including lease acquisitions, geological programs, well construction and completion, the construction or acquisition of production and transportation facilities, margin calls on derivative financial instruments and for general corporate purposes.

Empire Pipeline, Inc.

It is anticipated that, from time-to-time, Empire will need to incur short-term borrowings of up to approximately \$400 Million from sources external to Empire. This capital requirement arises from Empire's construction program which would be used to serve non-affiliated utilities, the financing of deferred accounts receivable, and for general corporate purposes.

NFG Midstream Company, LLC and directly held subsidiaries

It is anticipated that, from time-to-time, NFG Midstream Company, LLC and its directly held subsidiaries (collectively, "Midstream") will need to incur short-term borrowings of up to \$975 Million from sources external to Midstream. This capital requirement arises from Midstream's construction program, including building and operating natural gas processing and pipeline gathering facilities in the Appalachian region.

Leidy Hub, Inc.

It is anticipated that, from time-to-time, Leidy Hub will need to incur short-term borrowings of up to approximately \$1 Million from sources external to Leidy Hub. This capital requirement will arise in connection with Leidy Hub's general corporate purposes.

E. Prospective Future Needs

Because of the seasonal nature of the natural gas business and its effect on cash flow during certain periods, it is necessary for National Fuel Gas to establish lines of credit with banks and other lending institutions. Availability of these lines would provide capital for the purposes discussed under "Use of Proceeds."

Request:

Submit details on Company or Parent common stock offerings (past 5 years to present) as follows:

- a. Date of Prospectus
- b. Date of offering
- c. Record date
- d. Offering period--dates and number of days
- e. Amount and number of shares of offering
- f. Offering ratio (if rights offering)
- g. Per cent subscribed
- h. Offering price
- i. Gross proceeds per share
- j. Expenses per share
- k. Net proceeds per share (i-j)
- l. Market price per share
 1. At record date
 2. At offering date
 3. One month after close of offering
- m. Average market price during offering
 1. Price per share
 2. Rights per share--average value of rights
- n. Latest reported earnings per share at time of offering
- o. Latest reported dividends at time of offering

Response:

Please see attached.

Prepared by or under the supervision of: Shannon M. Buffington

For the five fiscal years ended September 30, 2021 plus the 9 months ended June 30, 2022, National Fuel Gas Company (the "Company") issued 6,347,000 shares of common stock, issued under its stock and benefit plans and a public offering of common stock in fiscal 2020.

Details of stock offerings:

Stock issued (in thousands of shares) ¹ : Fiscal Year	Number of Shares
2022 through June 30	284 (2)
2021	227 (3)
2020	4,640 (3)
2019	358 (3)
2018	414 (3)
2017	424 (3)
Total	<u>6,347</u>

- (1) All Shares issued are those under stock and benefit plans, with the exception of fiscal year 2020, of which 4,370 are issued from sale of common stock and 270 are issued under stock and benefit plans.
(2) Amounts per 06/30/2022 SEC 10-Q report, Note 7
(3) Amounts per annual report, Note H (2021 10-K) for 2019-2021 and Note E (2018 10-K) for 2017-2018

Per the National Fuel Gas 10-K filed 11/20/2020, "on July 31, 2020, the Company completed its acquisition of certain upstream assets and midstream gathering assets in Pennsylvania from SWEPI LP, a subsidiary of Royal Dutch Shell plc ("Shell") for total consideration of \$506.3 million."

The proceeds of the stock issuance that is detailed below were used to fund a portion of the purchase price of Shell's upstream assets and midstream gathering assets in Pennsylvania that closed on July 31, 2020.

a. Date of Prospectus:	May 28, 2020
b. Date of Offering:	May 28, 2020
c. Record date	n/a
d. Offering period—dates and number of days	May 28, 2020, 1 day
e. Amount and number of shares of offering	4,370,000 *
f. Offering ratio (if rights offering)	n/a
g. Per cent subscribed	100 **
h. Offering price	\$39.50
i. Gross proceeds per share	\$39.50
j. Expenses per share	\$1.54
k. Net proceeds per share (i-j)	\$37.96
l. Market price per share***	
1. At record date	n/a
2. At offering date	\$43.04
3. One month after close of offering	\$41.28
m. Average market price during offering****	
1. Price per share	\$43.25
2. Rights per share—average value of rights	n/a
n. Latest reported earnings per share at time of offering	\$1.06
Basic EPS / GAAP / Twelve Months Ended March 31, 2020	
o. Latest reported dividends at time of offering - TME as of quarterly dividend payable April 15, 2020	\$1.74/share

* 3,800,000 shares of common stock offered by the Company, plus an additional 570,000 shares of common stock purchased by the underwriters pursuant to an option granted by the Company to cover sales of shares by the underwriters in excess of 3,800,000 = 4,370,000 shares.

** 100% subscribed excluding shares purchased by the underwriters pursuant to the option granted by the Company as described above.

*** Represents closing price

**** Represents average of the open and closing price

 K.L. Metzger
 Page 1 of 1

Accumulated Provision for Uncollectible Accounts
Accruals, Write-Offs & Recoveries for the Twelve Months Ended
June 2020, 2021, 2022

Account 144
National Fuel

<u>Period</u> <u>Ending</u>	<u>Beginning</u> <u>Balance</u>	<u>Accruals</u>	<u>Write-Offs</u>	<u>Recoveries &</u> <u>Other</u>	<u>Ending</u> <u>Balance</u>
6/30/20	2,684,527	4,109,053	(3,632,110)	79,537	3,241,007
6/30/21	3,241,007	3,089,460	(2,323,132)	1,370,232	5,377,567
6/30/22	5,377,567	3,040,383	(2,450,057)	312,490	6,280,383

The allowance method is used for book purposes. Each of the years shown are actual per book amounts. The accrual is based upon Management's analysis of receivables.

The monthly accrual rate is based upon the estimated percentage of each month's sales to estimated annual sales. Uncollectible account write-offs are made after an unpaid final bill is at least twelve months old.

(Footnote each adjustment to the above statements with explanation in sufficient clarifying detail.)

Response:

Please refer to National Fuel Exhibit A (HTY), National Fuel Exhibit A (FTY), and National Fuel Exhibit A (FPFTY), schedules in Section D, for the Company's presentation of the requested Statements of Income and adjustments to operating revenues and expenses.

Please refer to the Direct Testimony of Donald N. Koch, National Fuel Statement No. 2, Direct Testimony of Anthony Formato, National Fuel Statement No. 3 and the Direct Testimony of Jeremy R. Barber, National Fuel Statement No. 14, for explanations of the Statements of Income and adjustments to operating revenues and expenses depicted in the Section D schedules of National Fuel Exhibit A (HTY), (FTY) and (FPFTY), the underlying sources of budgeted information, and the basis for the adjustments.

Please refer to the Direct Testimony of Paul R. Moul, National Fuel Statement No. 10, Direct Testimony of Shannon Buffington, National Fuel Statement No. 11 and related National Fuel Exhibit B, Schedule 6, for the derivation of the weighted average cost of debt used in the Company's debt interest synchronization adjustment, including the treatment of debt issuance expense, premiums and discounts used in calculating the effective cost rate for each series of long-term debt.

Please refer to the Direct Testimony of Jeremy R. Barber, National Fuel Statement No. 14, for an explanation on the derivation of future test year and fully projected year sales and revenues.

Please refer to the Direct Testimony of James Rizzo, National Fuel Statement No. 12, for an explanation of the Company's income tax adjustments.

Docket No. R-2022
NFGDC 2022 Base Rate Case
Responses to Section 53.53 - III-A - Balance Sheet and Operating Statement
Delivered on October 28, 2022

III-A-18

Request:

Provide comparative operating statements for the test year and the immediately preceding 12 months showing increases and decreases between the two periods. These statements should supply detailed explanation of the causes of the major variances between the test year and preceding year by detailed account number.

Response:

Please see Attachment III-A-18 for the comparative operating statements.

Explanations of major variances, defined as amounts greater than \$1,000 or 10%, are shown below (in thousands):

Gas Service Revenue – Increase of \$45,564 primarily due to an increase in gas costs, which was partially offset by a reduction in base rates as a result of the PAPUC's approval of National Fuel Gas Distribution Corporation's Supplement No. 228 to Tariff Gas – PA PUC No. 9 regarding Other Post-Employment Benefits (OPEB) expense (Accounts 480, 481.1, 481.2, and 481.3).

Other Operating Revenue – Decrease of \$1,259 due to an increase in the estimated refund of tax benefit resulting from the 2017 Tax Cuts and Jobs Act (Account 495).

Operating and Maintenance Expense – Increase of \$21,906 primarily due to an increase of in gas costs (Account 401.999), which was partially offset by a decrease in OPEB expense related to the PAPUC order listed above (Account 401.9).

Miscellaneous Income / Expense – Increase of \$979 due to an increase in unrealized losses on Grantor Trust investments partially offset by a realized gain on such investments (Account 421).

Tax Expense – Increase of \$2,421 due to increase in taxable income (Account 411.1).

Re: National Fuel Gas Distribution Corporation - Service Agreement with National Fuel Gas Company and Subsidiary Companies
Docket No. G-2018-3002838

Dear Secretary Chiavetta:

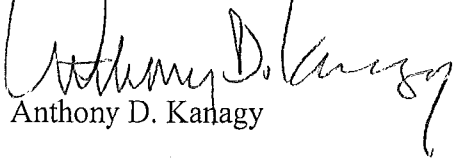

Enclosed for filing on behalf of National Fuel Gas Distribution Corporation (“Distribution” or the “Company”) is the executed Service Agreement between Distribution and National Fuel Gas Company (“National”), including certain subsidiaries of National. This Service Agreement is being filed pursuant to Chapter 21 of the Public Utility Code, 66 Pa. C.S. Ch. 21, governing relationships with affiliates. The Commission approved the changes to the Service Agreement by letter dated September 21, 2018.

Distribution notes that NFG Midstream Mt. Jewett, LLC and Seneca-NFG Midstream Owls Nest, LLC have been dissolved and are no longer parties to the Service Agreement.

Rosemary Chiavetta, Secretary

SERVICE AGREEMENT

AGREEMENT, dated as of the 21st day of September, 2018, among National Fuel Gas Company, a New Jersey corporation ("National"), and the undersigned subsidiaries of National.

WITNESSETH:

WHEREAS, National is a holding company that owns, directly or indirectly, voting securities of the undersigned subsidiary companies;

WHEREAS, National and the undersigned subsidiary companies are referred to herein as the National Fuel Gas System ("System"), which is organized for, and presently engaged primarily in, the business of exploring for, producing, storing, transporting, gathering, marketing and distributing natural gas; and

WHEREAS, System companies desire, need and require from time to time the administrative, engineering and technical aid, assistance and advice of personnel experienced in the operation and management of natural gas and other properties who are employed by members of the System, and have agreed concerning the nature and extent of the assistance and service required, and the amounts to be paid as compensation therefor, and do hereby desire to evidence their agreement in writing;

NOW, THEREFORE, in consideration of the mutual covenants and undertakings herein contained, the parties hereto agree as follows:

ARTICLE I

SERVICES TO BE FURNISHED

National Fuel Gas Distribution Corporation ("Distribution Corporation") or any of the other affiliated members of the System may from time to time perform, on a regular

or temporary basis, administrative, engineering, accounting, maintenance, management or other services, including the leasing of property, for one or more of the other companies in the System. Distribution Corporation and companies in the System that receive services from, or provide services to, Distribution Corporation are listed in Exhibit A to this Agreement. Descriptions of services are included in Exhibit B to this Agreement. Notwithstanding anything to the contrary in this Agreement, no System company may perform any service for any other System company in contravention of any applicable law, regulation, rule, order, judgment or decision of any governmental entity ("Applicable Laws"), including, without limitation, any Applicable Laws governing transactions or communications between utility companies and their affiliates or natural gas companies and their affiliates.

ARTICLE II

ASSIGNMENT OF COSTS

In consideration of services rendered, the companies receiving such services agree to reimburse their share of the costs thereof, as it is the intention of this Agreement that the reimbursement for services rendered to System companies shall cover the costs of providing said services, including overhead expenses. Costs are assigned pursuant to the following guidelines:

1. Directly assign as many costs as possible. For example, labor costs, inventory costs and vendor invoices that pertain to a specific affiliate are charged to that affiliate.
2. Allocate based on cost causative factors. For example, for costs driven by the number of employees, the factor used to allocate the costs among affiliates is

relative number of employees. As another example, for costs driven by computer connectivity to various systems through the System's intranet or mainframe, the factor used to allocate the costs among affiliates is relative number of computers.

3. Use a general allocation when costs cannot be directly assigned or allocated based on cost causative factors. The general allocation is used for administrative and general costs related to common departments (those departments whose services benefit some or all affiliates). The costs are allocated across the affiliates based on a three-factor common expense formula. The three factors included in the formula are: net plant, operation and maintenance expense, and total throughput. The formula is updated annually on a fiscal basis using the prior year's fiscal results in the computation.

ARTICLE III

DETERMINATION OF COST

In determining the cost to be assessed as provided in Article II, there shall be added to the salaries of all employees for whom service charges are to be made, a percentage sufficient to cover the general overhead associated with such personnel which will include an allowance for vacation and holiday pay, payroll taxes and all employee benefits. Unit hourly equipment costs shall be developed based on operating expenses, insurance, maintenance and depreciation costs attributable to each individual class of equipment. Costs of materials shall be computed based on the cost of the item as shown on the books of account of the individual company supplying the item plus the standard inventory overhead charge.

In making the foregoing calculations, no overhead shall be charged by National, and no general overhead of any System company shall be added to costs incurred for services of nonaffiliated consultants employed by such company.

ARTICLE IV

BILLING PRACTICES

As soon as practical after the last day of each month, or such other period as may be agreed upon by the respective companies, a billing shall be rendered for all amounts due for services and expenses for such period, computed pursuant to this Agreement. Bills shall be in reasonable detail and amounts billed shall be paid within a reasonable time after receipt. The System companies shall keep their books and records available for inspection by representatives of the other companies and, upon request by any System company, shall furnish information required by such System company with respect to services rendered, the costs thereof and the allocation of such costs among the System companies.

ARTICLE V

MISCELLANEOUS

This Agreement sets forth the System's general principles relating to the determination and allocation of costs among System companies.

This Agreement shall be in full force and effect as of the date first mentioned above, subject to any necessary approval of governmental agencies having jurisdiction over this matter.

National may from time to time consent to the addition of other subsidiaries as parties to this Agreement, including without limitation subsidiaries that may be formed or

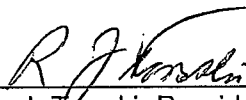

acquired after the date hereof. With such consent, any such additional subsidiary shall become a party to this Agreement by executing a signature page hereto.

This Agreement shall terminate with regard to any System company upon not less than ninety days written notice of termination from such company to the other System companies; provided, however, this Agreement shall terminate immediately with regard to any company as of the date such company ceases to be an affiliated member of the System.

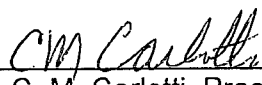

This Agreement may be executed in counterparts, each of which shall be deemed an original, and all of which taken together shall constitute one instrument.

IN WITNESS WHEREOF, the parties have hereunto executed this Agreement as
of the date first written above.

EXHIBIT B
DESCRIPTION OF SERVICES

Services Provided By National Fuel Gas Company

SERVICE	DESCRIPTION
Executive	Provide management services for all aspects of the business.
Financing	Provides financing for affiliates through issuance of commercial paper, bank lines of credit and equity. Additionally, monitors corporate credit rating and bank relationships.
Office Space Rental	Provides office space at the headquarters building to certain affiliates.

Services Provided By National Fuel Gas Distribution Corporation

SERVICE	DESCRIPTION
Accounting	Provide accounting services to maintain the books and records of the company, provide financial reports and analysis, prepare statutory reports, provide accounting research, set accounting policy, maintain allocations and inter-company billings. Maintain the general ledger (GL) system.
Accounts Payable	Provide non-payroll disbursement processing and analysis including account distribution to the general ledger. Resolve problems associated with invoice processing and maintain the accounts payable system.
Asset Management	Provide services to maintain and manage plant accounting and depreciation for affiliate assets.
Audit Services	Perform audit services for management and the Board of Directors, assist external auditors, provide analysis and safeguard company assets.
Benefit Administration	Provide services to design, implement and administer employee benefit programs.
Budget	Develop and maintain an operating budget, provide management with variance reports and analysis. Provide training and instruction to budget preparers.
Cash Management	Provide services to plan, manage and maintain corporate cash flow, maintain the 'money pool', track miscellaneous billings and cash related items.
Corporate Communications	Provides services related to public and media relations, as well as communicating company information to employees and retirees.
Credit, Collections & Receivables Management	Provide services to maximize customer collections and reduce bad debt write-offs. Additionally, provide credit risk analysis of customers and marketers.
Engineering	Provide engineering service and support functions for pipelines and construction projects.
Executive	Provides management and administrative services related to the overall operation and direction of the affiliates.
Finance - General	Provides services to analyze, maintain and monitor corporate financing activities.

SERVICE	DESCRIPTION
Financial Planning	Provide services to prepare, analyze and maintain the corporate earnings forecast, cash and financing needs.
Government Affairs	Provides services to monitor the political arena and maintain relationships with governmental institutions on a state and federal level.
Human Resources	Provide services to manage and maintain employee compensation policies, recruiting and training programs and worker's compensation and disability programs. Additionally, implement and maintain employee programs and statutory programs.
Information Services	Provide services to manage, design, develop, implement, monitor and maintain information technologies, application systems, networks, mainframe, software, data security, data recovery and data backup.
Investor Relations	Develop and implement programs to educate and inform potential investors, and communicate information to current investors.
Land	Provide service related to facilities management and land support for operations and construction.
Leasing	Lease property to affiliates and provide services to manage and maintain leasing activities and disposition of leased materials.
Legal	Provide service related to labor and employment law, litigation, contracts, environmental matters, financial reporting and/or advice on other legal matters.
Materials Management	Manage and maintain material inventories and material logistics. Additionally, monitor material requirements planning (MRP) activity and project material planning.
Operating & Maintenance – Distribution	Provides service to operate and maintain lines, including changing charts, servicing valves and meters, and other routine maintenance.
Operating & Maintenance – Gathering	Performs routine maintenance and operating functions on gathering lines of affiliates.
Operating & Maintenance – Transmission	Performs routine maintenance and operating functions on transmission lines of affiliates.
Payroll	Provide services related to wage distribution, including the distribution of accounting charges to the GL. Manage withholding liabilities and coordinate filing of statutory reports.
Purchasing	Provide services to procure material, equipment and services, analyze corporate spending and support the materials management function.
Risk	Provide service related to Risk mitigation, Insurance, Environmental issues and compensation and damage claims.
Security	Provide security services for company buildings, structures, work sites and personnel.
Tax	Provide services related to tax filing compliance requirements and perform research and consulting on tax issues.
Telecommunications	Provide services to design, implement, monitor and maintain telecommunication networks throughout the affiliates for voice, data, cellular and satellite communication.

Services Provided By National Fuel Gas Supply Corporation or Empire Pipeline, Inc.

SERVICE	DESCRIPTION
Engineering	Provide engineering service and support functions for pipelines and construction projects.
Leasing	Lease property to affiliates
Legal	Provide service related to labor and employment law, litigation, contracts, environmental matters, financial reporting and/or advice on other legal matters.
Operating & Maintenance – Distribution	Provides service to operate and maintain distribution lines of affiliates, including changing charts, servicing valves and meters, and other routine maintenance.
Operating & Maintenance – Gathering	Performs routine maintenance and operating functions on gathering lines of affiliates.

Request:

List and explain all non-recurring abnormal or extraordinary expenses incurred in the test year which will not be present in future years.

Response:

.....

On September 15, 2021, the PaPUC issued an order approving Supplement No. 228 to Tariff Gas - PaPUC No. 9 that Distribution Corporation originally filed on July 22, 2021 to become effective October 1, 2021. Pursuant to this order, Distribution Corporation debited Account 182319 for \$18,532,932 and credited Account 582290 for \$18,532,932 in October 2021 accounting. This was a one-time entry to reduce the Other Post Employment Benefits (OPEB) regulatory liability for the operation and maintenance expense component of SFAS 106 (ASC 715) income that had accumulated since Distribution Corporation's last base rate proceeding.

Request:

List and explain all expenses included in the test year which do not occur yearly but are of a nature that they do occur over an extended period of years. (e.g.--Non-yearly maintenance programs, etc.)

[Responses shall be submitted and identified as exhibits.]

Response:

Account 580405 – Pipeline Integrity Management Compliance \$34,177.23

Pipeline Integrity Management Compliance expense varies from year to year in order to meet federal safety standards for gas pipeline facilities at 49 C.F.R. Part 192 in the Federal Register, published by the Pipeline and Hazardous Materials Safety Administration (PHMSA) on October 1, 2019. These expenses include the cost to meet new requirements for verifying pipeline materials, reconfirming maximum allowable operating pressure, and performing periodic assessments of pipeline segments located outside of high consequence areas as well as additional reporting and recordkeeping.

VERSION HISTORY	159

Introduction

The Company has prepared this Accounting Policy Manual (Manual) to provide assistance and guidance to staff in determining the proper accounting treatment for financial transactions.

This Manual contains the policies and principles that apply to financial transactions throughout National Fuel Gas Company (National Fuel or the Company) and its subsidiaries. A major objective of the Manual is to help individuals to understand the financial management obligations and the meaning and usefulness of financial management information. It represents good financial management practice that is designed to enable compliance with the Uniform System of Accounts and Generally Accepted Accounting Principles (GAAP), and to ensure consistency and comparability of financial statements.

The policies and procedures included in this manual represent the controls established and confirmed for purposes of SEC and Sarbanes-Oxley certification.

Entities Bound by This Manual

The accounting policies set out in this Manual generally apply to all National Fuel Gas Company Subsidiaries though exceptions may arise for Seneca Resources Corporation. Where discrepancies occur, the Principal Accounting Officer should be informed and will make a determination as to the proper accounting treatment.

Deviations from the stated procedures and controls are not permitted without the approval of the Principal Accounting Officer.

Responsibilities/Accountability

Policies and procedures assist staff in processing financial transactions correctly and ensure consistency is maintained in financial records for the protection of both the staff and the Company.

All managerial staff of the Company are accountable for the areas of responsibility under their control and must ensure that the operating practices are consistent with the requirements of the Accounting Policy Manual.

It is the responsibility of staff to ensure that they are aware of the financial policies and procedures of the Company before any action is taken. If a member of staff does not understand a particular policy or procedure, they should raise the matter with their Supervisor, Manager, or with a member of the Accounting Department.

Failure to comply with the policies and procedures included in this Manual may result in the breakdown of internal control, reporting of inaccurate financial information, non-compliance with legal/statutory requirements and/or loss of Company assets.

Development and Maintenance

This manual was prepared in conjunction with the staff of the Accounting and other Financial Departments. It was then reviewed and approved by the Principal Accounting Officer, and final reviewed by the President of the Company.

The manual will be reviewed annually. Policy changes enacted during the year are added to the Accounting Policy Manual.

Changes and all updates to policy will be approved by the Principal Accounting Officer and then communicated as they occur.

Contacts

For questions regarding Company policy, please contact:

Name: Elena Mendel – Controller and Principal Accounting Officer
Phone: 716-857-7910
Email: MendelE@Natfuel.com
Fax: 716-857-7439

Name: William Erdman – General Manager – Accounting
Phone: 716-857-7663
Email: ErdmanW@Natfuel.com
Fax: 716-857-7439

For questions regarding the policy manual, please contact:

Name: Caitlin Bakewell, Assistant Manager – Accounting
Phone: 716-857-7406
Email: BakewellC@Natfuel.com
Fax: 716-857-7439

Structure of the Manual

The Accounting Policy Manual is divided into twelve sections as noted below.

Introduction
Financial Accounting and Reporting
Income
Expenses
Assets
Liabilities
Equity
Special Issues
Allocations
Loading Factors
Other Topics
Glossary

The sections are further broken down to roughly match the line items reported in the Forms 10-K and 10-Q. Additionally, there are certain special issues that are separated into their own section. These are items that have special accounting treatment or are more complex.

Additional Resources

The following are additional resources that are available for your use:

InfoNet – E-Docs

The Company's InfoNet includes an E-Docs link that includes forms and reference materials that you will find useful. In the reference section, there are files that contain the chart of accounts, a department listing, a product listing, and the FERC Uniform System of Accounts sections related to Gas Utilities.

<https://infonet.natfuel.com/Corporate/Forms/employeeforms.htm>

PeopleSoft Resource Center

The PeopleSoft Resource Center, which is also available through the InfoNet, has training materials and procedural reference materials related to the PeopleSoft Financial System.

https://infonet.natfuel.com/apps/resource_people_soft/default.asp

Web links

The following web links provide additional information that you may find useful in understanding the policies and procedures included in this manual.

Financial Accounting & Reporting

This chapter is designed to provide the general policies and procedures related to the overall accounting process at National Fuel. It is intended to provide the framework around which the financial accounting process is built.

Regulation

The Company is subject to regulation by certain state and federal authorities. The Company has accounting policies which conform to accounting principles generally accepted in the United States of America, as applied to regulated enterprises, and are in accordance with the accounting requirements and ratemaking practices of the regulatory authorities.

Regulation – GAAP Accounting

As stated above, the Company has policies that conform to Generally Accepted Accounting Principles (GAAP). Of special note is the Company's adherence to Accounting Standards Codification Topic 980 "Regulated Operations" (ASC 980) [formerly the Financial Accounting Standards Boards' (FASB) Statement of Financial Accounting Standard (SFAS) No. 71]. This Topic provides guidance in preparing general-purpose financial statements for most public utilities. The following is a summary taken from ASC 980:

Regulation of an entity's rates (also referred to as prices) is sometimes based on the entity's costs. Regulators use a variety of mechanisms to estimate a regulated entity's allowable costs, and they allow the entity to charge rates that are intended to produce revenue approximately equal to those allowable costs. Specific costs that are allowable for rate-making purposes result in revenue approximately equal to costs.

For a number of reasons, revenues intended to cover some costs are provided either before or after the costs are incurred. If regulation provides assurance that incurred costs will be recovered in the future, this Statement requires companies to recognize those current costs as assets until such time as recovery in rates begins. When rate recovery begins, the asset is amortized. If current recovery is provided for costs that are expected to be incurred in the future, this Statement requires companies to recognize those current receipts as liabilities until such time as the costs are incurred. When the costs are incurred, the liability is amortized.

This authoritative guidance also requires recognition of two types of allowable costs that include amounts not usually accepted as costs in the present accounting framework for non-regulated enterprises, as follows:

If rates are based on allowable costs that include an allowance for the cost of funds used during construction (AFUDC) (consisting of an equity component and a debt component), the Company should capitalize and increase net income by the amount used for rate-making purposes--instead of capitalizing interest in accordance with ASC 835 "Interest" [formerly SFAS 34].

If rates are based on allowable costs that include reasonable intercompany profits, the company should not eliminate those intercompany profits in its financial statements.

The authoritative guidance for regulated operations may require that a cost be accounted for in a different manner from that required by other authoritative guidance. In that case, the authoritative guidance for regulated operations is to be followed because it reflects the economic effects of the ratemaking process approved by regulatory authorities--effects not considered in other authoritative guidance. Excluding the accounting impact related to the economic effects of the ratemaking process, regulated enterprises must follow all authoritative accounting guidance that is applicable to non-regulated enterprises.

Regulation – Energy Policy Act of 2005 – (PUHCA Repeal)

Included in the Energy Policy Act of 2005 was the repeal of the Public Utility Holding Company Act of 1935 ('35 Act). The Public Utility Holding Company Act (PUHCA) of 1935 prevented utility holding companies from subsidizing unregulated business activities from profits obtained from their regulated business activities and captive customers. PUHCA required that all side businesses be kept separate from the regulated business. This new legislation requires holding companies and their affiliates to provide the Commission, as well as state regulators, access to their books and records and also grants the Commission additional authority for oversight of holding company transactions.

Regulation – Regulatory Accounting

The Federal Energy Regulatory Commission (FERC), the Pennsylvania Public Utility Commission (PA PUC), and the New York Public Service Commission (NY PSC) regulate various subsidiaries within the National Fuel system. The Company is required to account for certain items on the Balance Sheet and Income Statement in a manner that is different from GAAP accounting procedures for a non-regulated company. As explained in Section 2.1.1, the Company follows ASC 980 “Regulated Operations” (formerly SFAS 71) guidance to prepare financial statements.

The Company fully embraces compliance with FERC requirements as noted in the annual Supervisory review process as well as through required annual FERC training.

Internal Controls and Financial Audit

As a publicly held company, National Fuel is required to submit to an annual financial statement audit by independent auditors. Additionally, the Sarbanes-Oxley Act of 2002 requires management to assess and report on the adequacy of internal control over financial reporting on an annual basis. The independent auditors must attest to and report on the effectiveness of the Company's internal controls over financial reporting.

Internal Controls

Under Section 404 of the Sarbanes-Oxley Act of 2002, the Company shall maintain a system of internal controls to ensure the accuracy of reported financial information including the proper execution and recording of transactions. It is the Company's policy to also maintain various operational controls to ensure assets are safeguarded and operations are efficient.

Under the Sarbanes-Oxley Act of 2002, National Fuel has documented its internal controls over financial reporting and performs a self-assessment of the internal controls of the Company on a quarterly basis. Any deficiencies found during the assessment process are noted and an action plan developed to correct the deficiency in a timely manner. The Company's internal and external auditors review the assessment process and provide feedback and assurances to management that proper internal controls are in place.

Internal Audit

Under its Audit Activity Charter, approved by the Chief Executive Officer and President and the Audit Committee of the Board of Directors, the Audit Services Department has the following Mission and Scope of Work:

Mission

The mission of National Fuel's Audit Services Department is to provide, as directed by the Audit Committee and senior management, an independent, objective assurance function designed to add value and improve National Fuel's business processes. The Audit Services Department also has the function of reporting to the Audit Committee of the Board of Directors and senior management on the adequacy and effectiveness of National Fuel's internal control, and in this connection provides recommendations to improve internal control. These functions help National Fuel accomplish its objectives by bringing a systematic, disciplined approach to evaluate and improve the effectiveness of risk management, control, and governance processes.

Scope of Work

As directed by the Audit Committee and senior management, the scope of work of the Audit Services Department encompasses the examination and evaluation of risk exposure and the adequacy and effectiveness of National Fuel's internal controls. The scope includes:

Reviewing the accuracy, reliability and integrity of financial and operational information and the means used to identify, measure, classify, and report such information.

Reviewing the systems established to ensure compliance with those policies, plans, procedures, laws, and regulations that could have a significant impact on the Company's financial reports.

Reviewing established systems of internal control to ascertain whether they are adequately designed and are functioning in an effective manner.

Reviewing the means of safeguarding assets and, as appropriate, verifying the existence of such assets.

Reviewing specific operations at the request of the Audit Committee or senior management, as appropriate.

Monitoring and evaluating the effectiveness of National Fuel's risk management process.

Opportunities for improving management control and profitability may be identified during audits. They will be communicated to the Audit Committee and senior management.

Financial Audit

As a publicly held company, National Fuel is required to submit to an annual financial statement audit by independent auditors. To fulfill this requirement, the Audit Committee of the Board of Directors is responsible for appointing and overseeing the public accounting firm that will perform the year-end financial audit.

The independent auditors (currently PriceWaterhouseCoopers, LLP) perform their audit, prepare a report for the Board of Directors and issue an audit opinion on the financial statements of the Company.

Business Units

Since National Fuel has many subsidiaries, there needs to be a way to identify which one is being used when applying accounting charges. For this purpose, there is a code called "Business Unit" within the PeopleSoft system or Company for others. The Business Unit helps to ensure that the charges being recorded go to the correct subsidiary for financial reporting and also provides a means to identify transactions that go to multiple subsidiaries. There are currently eighteen Business Units in use by the PeopleSoft system:

Distribution Corp – NY	DNYG1
Distribution Corp – PA	DPAG1
Supply Corp	SUPG1
Empire Pipeline. Inc.	EMPG1
National Fuel Gas Company	NFGG1
National Fuel Gas Foundation	FNDG1
NFG Midstream Corporation	MIDG1
NFG Midstream Covington, LLC	M01G1
NFG Midstream Processing, LLC	M02G1
NFG Midstream Trout Run, LLC	M03G1
NFG Midstream Tionesta, LLC	M06G1
NFG Midstream – Clermont, LLC	M07G1
NFG Midstream – Wellsboro, LLC	M08G1
National Fuel Resources	NFRG1
Pennsylvania Gas Holdings Corporation	PGHG1
DNYG1 – Consolidation Adj ¹	CADNY ¹
DPAG1 – Consolidation Adj ¹	CADPA ¹
SUPG1 – Consolidation Adj ¹	CASUP ¹
EMPG1 – Consolidation Adj ¹	CAEMP ¹
MIDG1 – Consolidation Adj ¹	CAMID ¹
NFGG1 – Consolidation Adj ¹	CANFG ¹

¹ Entity is used to book required consolidation adjustments related to the business unit in PeopleSoft

Additionally, the following subsidiaries are accounted for using systems other than PeopleSoft.

- Seneca Resources Corporation
 - Seneca East
 - Seneca Gulf/ West
 - Highland Field Services, LLC
- Leidy Hub

Chart of Accounts

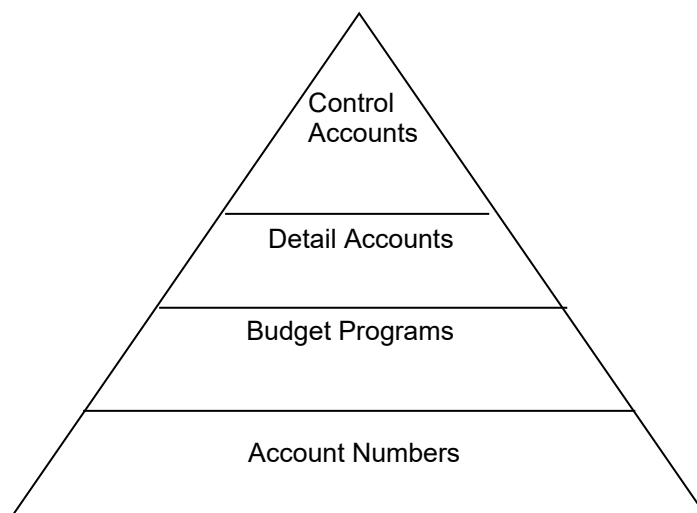

National Fuel's regulated subsidiaries use a chart of accounts that, through hierarchical structures, follows FERC's Uniform System of Accounts (USofA). Although non-regulated, the Midstream entities use the same chart of accounts as the regulated entities since Midstream's business activities are similar in nature to those of the regulated entities. The USofA sets a structure of accounts that all utility companies use. It creates specific groups of accounts that identify the type of costs that a utility company would incur. The USofA is used for reporting information to the various regulatory agencies.

National Fuel Gas Company (the Parent Company) and the NFGG1 – Consolidated Adj uses a separate chart of accounts that does not follow the FERC prescribed account structure. This chart of accounts is more in line with the activities performed by non-regulated companies, though there are many similarities in the account structure used by Midstream and the regulated subsidiaries, especially within the balance sheet accounts.

NFR also uses a separate chart of accounts that does not follow the FERC prescribed account structure. This chart of accounts came over to PeopleSoft when NFR converted its financial systems from Navision to PeopleSoft.

The following is an example of how the hierarchy works within the regulated chart of accounts:

While the USofA provides a level of detail for reporting purposes, we have developed additional levels of detail to assist management to efficiently monitor Company operations. The diagram below shows the levels of detail currently in use.

(Account number reporting hierarchy)

The Control and Detail levels are directly related to the FERC Uniform System of Accounts. The budget level provides an extra level of detail for purposes of budgeting expenditures as well as analyzing the results, and the Account level is where the actual account number values are maintained.

For example, the USofA says that Operating expenses should be charged to control account 401 – Operating Expenses. It further says that Administrative and General Salary expenses should be charged to Detail Account 920. We want additional information about the salary expense so we have set up a few accounts to capture salary expense such as 580010 – General Office Salaries and 580000 – Officer & Executive Salaries. The additional accounts are useful for analyzing labor, however, we only budget for the labor in total, this is where budget programs are useful. Similar accounts are grouped together and budgeted for in total rather than by individual account.

As such the hierarchy looks as follows:

Control Account	401	Operating Expense
Detail Account	920	A&G Salaries
Budget Program	P58000	A&G Salaries
Accounts	580000	Officer & Executive Salaries
	580010	General Office Salaries
	580030	Audit Salaries

Account Number

The Account Number or Account is used to identify the accounting activity that the transaction reflects. It can relate to expenditures for the purchase of an item such as a building or the cost of office supplies. It could also be revenues that were received for gas sales or interest received for deposits in banks.

Accounts are used to collect financial information to perform financial statement analysis, analyze costs and track expenditures. Accounts are used for more than just the accumulation of accounting information; they are also used in the Manpower Planning System (MPS) to track productivity and other statistical information such as Mcf's and customer counts.

National Fuel has established a chart of accounts in the PeopleSoft general ledger system that follows the FERC USofA and is used by the regulated, Midstream, Pennsylvania Gas Holdings Corp and consolidation adjustment business units. Some of the accounts are specific to one business unit while others are used across all business units. A spreadsheet that lists all the account numbers that are used and also shows the hierarchy of the accounts for reporting purposes can be found on the InfoNet under the E-docs reference section.

It is very important to choose the proper account when applying accounting charges; since the account numbers are used in the preparation of financial statements, budget reports, rate case documents and regulatory reports. The important part of selecting the right account is to make sure that the account relates to what is actually happening. If work is performed on the transmission pipeline, an account related to transmission work should be selected. If National Fuel Gas Distribution Corporation (Distribution or Distribution Corporation) main line work is performed, an account number that relates to distribution main line work must be selected. The Accounting Department is available to provide guidance to help determine the proper account. Consult with the Accounting Department any time you are unsure of the proper account to charge.

Our account numbering system for DNYG1, DPAG1, SUPG1, EMPG1, MIDG1, M01G1, M02G1, M03G1, M06G1, M07G1, M08G1, PGHG1, CADNY, CADPA, CAEMP, CASUP and CAMID is as follows:

100000–199999	Balance Sheet Asset Accounts
200000–219999	Balance Sheet Equity Accounts
220000–299999	Balance Sheet Liability Accounts
400000–479000	Misc. Income Statement Accounts
480000–499999	Income Statement Revenue Accounts
500000–599999	Income Statement Expense Accounts (Operating)
600000–699999	Income Statement Expense Accounts (Maintenance)

A spreadsheet listing all the valid account numbers can be found on the NFG InfoNet under the E-Docs Reference section (see PeopleSoft Reference – Account Number Listing NATFL) or at the following web address:

<https://infonet.natfuel.com/Forms/Reference/Account%20Number%20Listing.xlsx>

There will be times when a new account is needed or a change to an existing account is required. To initiate the transaction, an Account Number Maintenance Form is required. The forms are available through the InfoNet in the E-Docs section under General Ledger topic – Chartfield Maintenance Form (Account, DeptID or Product) or through the following link.

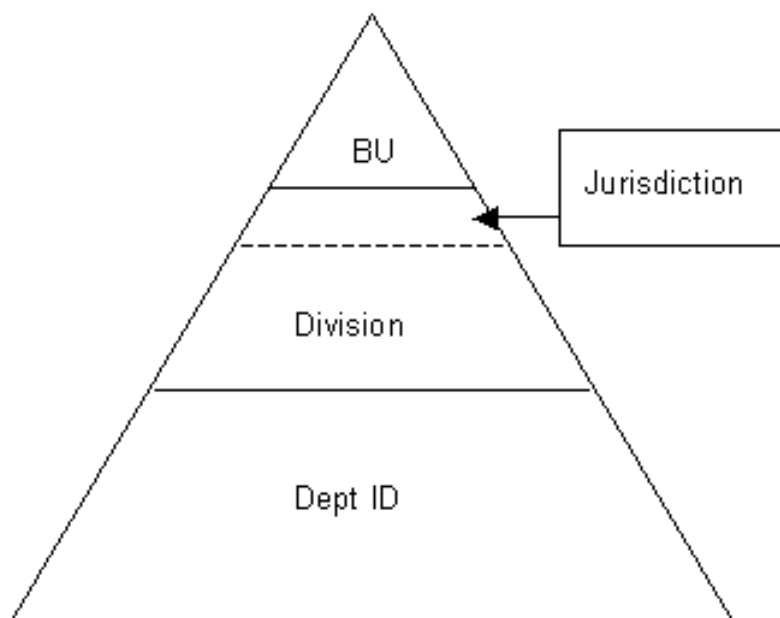

<https://infonet.natfuel.com/accounting/docs/Chartfield%20Maintenance%20Form.xlsm>

The form should be filled out as completely as possible, and forwarded to the Accounting Department. Any additional information about the account that would be helpful if someone is looking to use the account should be included in either a note or email.

Department ID

The DeptID is used to identify the area or person responsible for the accounting transaction. It is not sufficient to know that a transaction relates to the Distribution Corporation. For analysis purposes, the area within the Company that is controlling the costs should be identifiable. To accomplish this, we use a DeptID to identify the area of responsibility.

While FERC dictates which accounts to use, National Fuel selects the DeptIDs. Each DeptID can only belong to one company or business unit and one budget division. The DeptIDs are grouped numerically to make it easier to recognize which company they reside in. The following diagram shows the hierarchical relationship developed for the DeptIDs.

The top of the hierarchy is Business Unit (BU) or Company. In Distribution, expenditures are separated by jurisdiction – NY or PA, by using separate BUs. The next step down is the division level. Division is used for budgeting purposes and groups together similar DeptIDs such as MSW, Batavia, and Orchard

Park, which are grouped as the Operations Division. On the bottom of the pyramid is the DeptID. DeptIDs can be set up to identify a Department or in some cases an activity or task such as the construction of a pipeline extension.

The following chart identifies the ranges of DeptIDs assigned to each company:

Distribution – NY	DNYG1	0001 – 0299
		1000 – 1998, 2000-2999
Distribution – PA	DPAG1	0300 - 0499
		4000 – 4998, 5000-5299
Supply Corp	SUPG1	0500 – 0799
		6000 – 7360
		8200 – 8250
Empire Pipeline	EMPG1	0800 – 0899
		5500 – 5998
National Fuel Gas Company	NFGG1	7501 – 7598
NFG Midstream Corporation	MIDG1	0900
NFG Midstream – Covington, LLC	M01G1	0901, 9101
NFG Midstream Processing, LLC	M02G1	0902
NFG Midstream Trout Run, LLC	M03G1	0903
NFG Midstream Tionesta, LLC	M06G1	0906
NFG Midstream – Clermont, LLC	M07G1	0907
NFG Midstream – Wellsboro, LLC	M08G1	0908
National Fuel Resources	NFRG1	
National Fuel Gas Foundation	FNDG1	7500
Pennsylvania Gas Holdings Corp	PGHG1	9800
DNYG1 – Consolidation Adj	CADNY	1999
DPAG1 – Consolidation Adj	CADPA	4999
EMPG1 – Consolidation Adj	CAEMP	5999
MIDG1 – Consolidation Adj	CAMID	9899
NFGG1 – Consolidation Adj	CANFG	7599
SUGP1 – Consolidation Adj	CASUP	7999

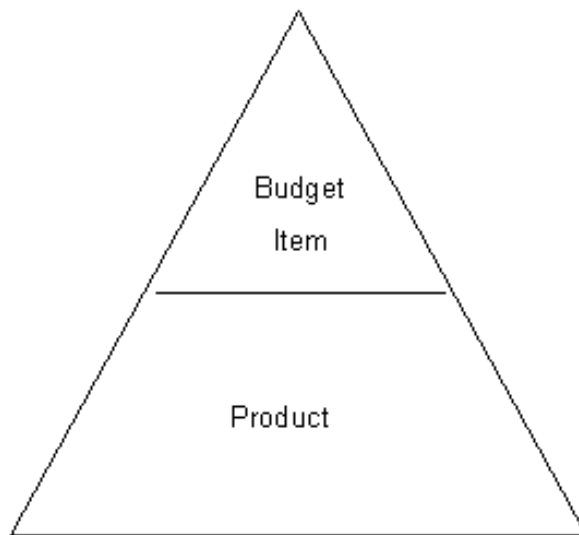

A complete listing of the valid Department IDs can be found on the NFG InfoNet in the E-Docs PeopleSoft Reference section or at the following link:

<https://infonet.natfuel.com/Forms/Reference/DeptID%20Listing.xlsx>

Product

Product is used to categorize transactions. It is another analysis tool and helps National Fuel to understand how money is spent. For instance, National Fuel spends \$10,000 to plug a leak. It is useful to know how much of the \$10,000 related to material, how much to labor and how much, if any, was paid to an outside party.

Product codes are used mainly to analyze budgets and for rate case purposes, but are also useful to understand the charges that have been recorded in the accounting records.

There may be many products that categorize cost components like material or outside services. For rate and budget purposes however, those products are grouped together into Budget Items or Cost Elements in the Rates and Regulatory Affairs Department. The Budget Item would be material while the products might be inventory issues, sand, stone and gravel, or pipe and fittings. So in the example above, there could be separate products for all the costs within the \$10,000 leak repair and National Fuel would be able to understand how the money was spent.

A complete listing of the current Products is located on the InfoNet in the E-Docs – PeopleSoft Reference – Products Listing.

<https://inonet.natfuel.com/Forms/Reference/Product%20Listing.xlsx>

Project ID

National Fuel, especially the Utility and Pipeline and Storage segments, constructs a significant portion of its assets. To keep track of the costs associated with these construction projects, as well as any other projects, National Fuel uses a work order system. This work order system uses Projects to keep track of the costs. In the PeopleSoft accounting system, the work order system is called the Project Costing module.

A project is a five to eight character identifier, which is attached to a specific General Ledger account, that is placed on all transactions related to the project being worked on. Those costs are accumulated and then later, when the project is completed, the costs are “unitized” and an asset is recorded in the Asset Management module of PeopleSoft.

Chartfield Maintenance

There may be times when a new chartfield value needs to be added. There will also be times when a chartfield value needs maintenance, such as inactivation or a name change. In these situations, a maintenance form should be submitted to the Senior Financial Systems Analyst or the Senior Manager responsible for the general ledger to request the required changes. The form should be filled out as completely as possible so that the Account, DeptID or Product is set up properly and added to the correct tables and trees in the PeopleSoft Financial system. The General Ledger Accountant will review the request and make the proper updates. The form will then be forwarded to a Senior Accountant or Manager for review and approval.

After being approved and documented, the forms will be scanned in and saved to the Chartfield Setup folder for future reference and auditing. The naming convention to use is the chartfield type and the chartfield value (i.e. Account 145201.pdf).

Policy:

A chartfield maintenance form must be submitted for all updates.

A Senior Manager or the General Manager must review and approve all updates.

A chartfield checklist form should be attached to each maintenance form and kept for control purposes.

All chartfield documentation should be scanned and saved for audit purposes.

Reporting Trees

Reporting Trees are the hierarchical structures used by the PeopleSoft system to “roll up” the various chart fields for reporting purposes. There are several reporting trees that are key to the preparation of the financial statements and analysis reports.

Each business unit or company has its own financial statement tree (FIN_STMNT_XXXXX), since the presentation of the financial statements varies from business unit to business unit. This tree must be reviewed whenever a new account is added to the system.

There is a FERC tree to prepare reports using the FERC designated Uniform System of Accounts that is used by all the regulated Business Units. This tree is reviewed when new accounts are added, however it will only need to be updated if a new FERC control or detail account is added. A separate tree named TRIAL_BALANCE_NREGS has been created for use when writing reports related to the non-regulated business units.

Additionally, there are trees used to roll up the Dept IDs and Products that must be updated when new chartfield values are added to the system.

All of the trees are maintained through the Accounting Department. While many people may view the trees, only certain designated people can update the trees. Whenever changes are made to the trees, a tree audit is run to verify that the tree is in a valid state and ready for use by the system.

Financial Statement Trees

The following trees are key to financial statement reporting at National Fuel:

FIN_STMNT_DIST	Distribution Corp Accounts
FIN_STMNT_SUPLY	Supply Corp. Accounts
FIN_STMNT_EMPIRE	Empire Pipeline Accounts
FIN_STMNT_NFGG1	National Fuel Gas Company
FIN_STMNT_MIDG1	Midstream
FIN_STMNT_FND	National Fuel Gas Foundation
NFR_FINANCIALS	National Fuel Resources, Inc.
FERC_ACCOUNTS	FERC Chart of Accounts – All BU use
ALL_DEPTS	Dept IDs to Identify Companies
PRODUCT	Products used by all Companies

Policy

Only Designated Accounting Department personnel, with proper security access, can change trees.

Reporting trees should not be changed without the proper approval of a Senior Manager or General Manager of Accounting. The impact of making an incorrect change is, minimally, incorrect financial statements. The reports may not run at all if the change leaves the tree in a non-valid state.

Trees should be audited prior to running the monthly financial statements to ensure that they are all in a ‘Valid’ state.

Fiscal Year and Accounting Periods

National Fuel uses a fiscal year period that begins on October 1st and ends September 30th for accounting and reporting purposes. All adjustments are made in the twelve accounting months during the fiscal year. No adjustment period is used for accounting adjustments.

Only two fiscal months should be open at any time. The month being closed and the current processing month will be available for posting transactions. With the approval of a General Manager, future accounting periods may be opened for special processing such as the creation of budgets, the posting of forecast information or the creation of contract rent vouchers.

Only under extreme circumstances will prior accounting months be opened for processing. This would be the result of a restatement of the financials and would be a rare occurrence. No prior period entries will be posted without the approval of the Principal Accounting Officer.

Ledgers

A Ledger represents a set of books for each accounting entity. The General Ledger stores the posted transaction activity for a set of chartfield values by accounting period and fiscal year. The transactions booked to the ledger are primarily journal entries. National Fuel follows GAAP with regards to the maintenance, updating and reporting of data from its ledgers.

Detail Ledgers

National Fuel employs three separate detail ledgers to accumulate accounting data for reporting and analysis purposes:

Actuals: Contains the official financial data for the Company. It is a balanced ledger and is the source of all financial reporting data.

Budget: Contains only the financial data related to the Company's budget projections. It is not a balanced ledger and therefore single sided journals are permitted.

Forecast: Contains the financial statement forecast data. This differs from the budget data in the level of detail entered, as forecast info is stored at the financial statement line level. It is not a balanced ledger.

Data is stored in the ledgers at the chartfield value level within a subsidiary business unit. The primary chart field is the Account number, with the Department and Product also used.

Summary Ledgers

Summary ledgers are kept for reporting purposes. Summary ledgers use the data in the detail ledgers summarized at various levels to reduce the volume of data for report generation. The summarized data can be used in queries for analysis purposes.

For instance, since the Company completes some reports based on FERC detail accounts, a summary ledger is maintained that groups all the account numbers within a FERC detail account. This makes it easier to summarize the data without having to manually calculate the amounts each time. A Trial Balance by Detail account is maintained to verify that the summary ledger is in balance with the actual books.

The Company maintains five summary ledgers within the PeopleSoft system. Each rolls up the data at a different level in the *account* hierarchy.

NFG_CT_DV_BI	Control Account	Division	Budget Item
NFG_DT_DV_BI	Detail Account	Division	Budget Item
NFG_AC_DV_BI	Account Number	Division	Budget Item
NFG_PRG_D_BD	Budget Program	Division	Budget Item
NFG_PG_DV_BI	Budget Program	Division	Budget Item

With the exception of the last summary ledger, all summary ledgers are built on a monthly basis. The NFG_PG_DV_BI summary ledger is run once per fiscal year after the detail budgets have been entered into the system.

Policy:

It is fundamental that the Company's General Ledger (actuals ledger) is in balance at all times to ensure system integrity.

Summary ledgers should be generated after all data has been entered in the other ledgers to insure that they are in synch.

Summary Ledgers should be built after every general ledger update is completed.

Statistical data may be entered into the actuals, forecast and budget ledgers.

Accounting Charge Application

When entering accounting data into the General Ledger or any of the subsidiary ledgers, there are required chartfields that must be present to make sure that the transaction is accounted for in the proper way. These chartfields insure that the transaction is accounted for in the correct business unit, for the proper expenditure type, for the correct department and in the proper category. It is essential that they are included on all transactions.

Non-Project Accounting

For all transactions that are not capital expenditures, the following chartfields are required:

Business Unit	EMPG1	Empire State Pipeline
Account Number	530020	Compressor Station Expense
Department ID	0850	Empire – Field Operations
Product	1704	Outside Services

The four chartfields give a good description of the: who, what, where, and why of the transaction. With the addition of an accounting date, we have the when and can analyze the transaction much better.

Project Accounting

In addition to booking the normal routine accounting transactions; there are times when we will be recording transactions that are related to capital projects or Operating & Maintenance expense projects. Since those transactions are not only recorded in the General Ledger, but are additionally recorded in a projects ledger, there is some extra information required when preparing the accounting charges. The fields are needed in addition to those shown above:

Project BU	EMPP1	Empire State Pipeline - Projects
Project ID	50125	Project to expand pipeline
Activity ID	11	CWIP
Resource Type	GLADJ	General Ledger Adjustment
Resource Analysis Type	GLE	General Ledger Entry

Policy:

The following policy items must be adhered to when applying accounting charges to transactions:

Transactions being charged to budgeted accounts, whether expense items, inter-company or undistributed, must not use a clearing DeptID.

Transactions being charged to Balance Sheet accounts that are not budgeted for, must use a clearing DeptID.

Transactions being charged to accounts 107xxx, 108xxx, 1832xx and 186080 within the Projects module must have a project number with the accounts.

See the Cost Application and Allocation Manual (CAAM) for more details.

Journals

Journals are the source transactions within the Accounting system that are used to update the General Ledger. Journals come into the system through various methods: manual entry, external system interfaces, journal generation, and the spreadsheet journal entry process. Regardless of the method of entry, the journals go through the same process on their way to updating the ledger.

Procedures and Guidelines

All journals are required to come into the General Ledger in a specified format. For journals coming over through interfaces, the required formats are built into the processes. For spreadsheet journals, the spreadsheet templates have been pre-defined to include the fields that are required. For manual entries, it is up to the individuals preparing the journals to ensure that all of the required information is included.

All manual journals must be submitted using one of the pre-defined journal entry forms. The forms include all of the required fields needed to process the journal. All fields must be completed before submitting the journal for data entry and the journal must be approved.

All manual journals must be submitted electronically. An approved hard copy can be scanned and emailed to the Senior Manager or the pdf journal entry form can be approved electronically. The electronic approved journal should contain the following:

1. The appropriate approver should stamp the pdf journal entry to be submitted. (Documentation for this process will be sent with the memo)
2. The approver should send an email to the journal entry preparer approving the journal entry. The email approval should include the business unit, brief description of the entry and the total amount of the entry. (Ex. I approve the DPAG1 entry for \$34,822.42 to record the monthly vehicle and tool adjustment). This email should be part of the pdf file sent to Accounting for processing

The checklist will be sent electronically to all journal preparers. It will be updated by the Accounting Department, reviewed and updated as the journals are entered into the system and posted to the ledger to provide the General Ledger Manager with guidance approaching the monthly closing.

Journal Approvals

All journals submitted for processing are required to be approved. The approver should be a supervisor, manager or assistant manager of the department creating the transactions. Signature or electronic approvals are verified and journals without approvals will be returned. The journal approver must be someone other than the journal preparer.

On recurring journals, the memo or schedule that is used to build the recurring entries must include an approval signature or electronic approval. The subsequent journals generated from the schedule or memo will not have original signatures.

Journal Internal Controls

Internal Control measures have been put in place to ensure that only appropriate data entry personnel enter valid, approved journals into the system.

The internal controls that are in place:

All journals must contain full information or they will be returned to the journal creator -- including responsible person's initials in the reference field.

All journals must have an appropriate approval.

Journals should contain data for only one business unit.

Journals should be processed for only one product (a few exceptions to the rule exist, call the Accounting Department if you have an entry that has multiple products.)

Journals must be balanced, that is debits equal credits.

Appropriate supporting documentation must be supplied with each journal entry to justify the transaction. The support must clearly explain the reason for the journal entry.

All journals made to correct another transaction must reference the transaction being corrected. (i.e. – journal id, voucher id, etc.)

All copied, un-posted or recurring journals must have back-up documentation included. A copy of the original journal with appropriate notes is acceptable backup.

Journals containing project information must be submitted prior to the fifth working day to allow time for the journal to be passed to the project costing system.

Journals containing statistical data should only contain statistical data. A separate entry should be entered for financial information.

Journals created after the pre-tax closing must be submitted to a General Ledger Supervisor for review before they are entered into the system.

PeopleSoft Processes

When journals are presented for processing, the following steps are taken to post the information to the general ledger:

Journal approvals are verified.

Journals are entered into the system by approved data entry staff.

Journals are validated by the system for proper dates and values.

Journals are edited to verify valid chart field combinations.

Journals are posted to the General Ledger.

Journals are updated with the system generated Journal ID.

Journals are saved electronically. Shortly after the close, these journals will be transferred to the Data Center and indexed so they can be obtained through PeopleSoft.

Journal Numbering

Journals created in the PeopleSoft system are numbered in sequential order across all business units. The sequential numbering will have the following exceptions:

Standard journals will use a 'D' prefix for diarized journals and a "R" for recurring journals. Diarized journals are journals that are repetitive but the amounts change from month to month, and recurring journals are repetitive for the same amount each month.

Journals generated from other PeopleSoft modules will contain a prefix to identify the journals as follows: AP – Accounts Payable, PC – Project Costing

Journals created by the allocation process will include a prefix to identify the allocation that generated the journal.

Journal Un-posting & Reversals

There may be times when a journal that has been posted needs to be reversed out of the ledger. Un-posting is a process by which a journal is reversed by the PeopleSoft system. The system creates an exact duplicate of the original entry, except the debits and credits are reversed. Reversals are manual entries that are made to reverse a journal that has been posted to the ledger. If required, the General Ledger Accountant will perform the un-post.

Policy:

If the journal was entered as a part of the current month's processing, the PeopleSoft un-posting function may be used.

If the journal relates to previous month's activity, a reversing journal entry should be created and entered.

Combination Edits

PeopleSoft Financials uses a process known as combination editing to validate the combination of chart fields on journal entries. Combination Edits are created and maintained by the General Ledger Manager Role, typically a Senior Manager or Senior Systems Analyst, and are updated whenever a new chartfield value is added to the database.

The system is defined to recycle or reject any journal entry line that does not pass through the combination edits, including non-PeopleSoft journals such as CGA, SBS and Time & Labor. This includes journal entries created by the Inventory, Accounts Payable, Purchasing and General Ledger modules. The Asset Management module does not use combination edits. Any errors on Asset Management journals are caught when the journals are edited in the General Ledger module.

Policy:

Combination edits must always be in place during times when data entry is occurring.

An Accounting Manager must approve changes to combination edits.

Only designated persons have security access to make changes to combination edits.

Edits are reviewed periodically to insure their validity.

Journal Corrections

There are instances when transactions submitted to the General Ledger from subsidiary ledgers contain errors that need to be corrected before it can be posted. Whenever feasible, the journals in error should be corrected by the originating application (i.e., AP or IN) and resubmitted. This will ensure that the links for drilldowns remain intact in the system. Journals received from other subsidiary ledgers should be corrected in GL with the appropriate authorizing documents retained.

Minimally, the documentation supporting a journal change should include business unit, journal ID, journal date, issue description, issue resolution, and authorization. If sent via email, a copy of the email should be kept for support.

Changes to manual journal entries must be annotated on the journal worksheet with changes initialed by the originator; significant changes must have management approval. If numerous changes are to be made on a journal form, a new journal form should be generated.

Policy:

Whenever feasible, feeder system journals should be corrected in the feeder system and re-submitted.

All journal changes made by the General Ledger Dept. must be documented in the change logs.

All changes to the face of a journal after it has been approved must be initialed by the originator and, if the changes are significant, must be re-approved.

Monthly Closing Process

The monthly closing process is the series of steps that are required to properly record all monthly transactions in the general ledger, generate financial statements, and provide management with an analysis of the results

Closing Schedule

A closing schedule is produced monthly and distributed to the individuals responsible for the various transactions and events needed to close the books. The company seeks to close the books in a timely manner, while ensuring that the information is accurate and complete. The Senior Manager responsible for the general ledger will strive to keep as close to the schedule as possible and will notify the Accounting Department Manager of any delays or problems.

Data Cut-off

In order to meet the deadlines for producing the financial reports, the gathering of information to use in making the month end entries must be cut-off by a certain date. In the event that the data is not received in time for the cut-off, the person responsible may need to use estimates to complete the journal.

Significant transactions are sometimes received after the closing of the sub-system or cut-off for journals. In those cases where the transactions are material, an accrual entry can be made (i.e. delayed invoice in Accounts Payable) or a journal entry can be processed with the approval of an Accounting Manager.

Since the year-end close is the most important period cut-off, the general ledger will continue to be held open for additional material transactions through the conclusion of the financial audit fieldwork.

Policy:

An Accounting Manager must approve significant estimates used within a journal entry.

The Principal Accounting Officer must approve changes related to significant estimates used in financial reports. The use of the estimate must also be disclosed for financial reporting.

Process

A Closing Checklist is maintained to verify that all steps within the closing process have been completed and the results of the steps verified.

Generally speaking, the monthly closing process is as follows:

- Create and enter journal entries.
- Edit and post the journals.
- Run allocations and then edit and post the resulting journals.
- Generate a set of pre-tax preliminary financial statements.
- Calculate the tax provision and create journals.
- Enter, edit and post the journals.
- Generate a set of after-tax financial statements.
- Review and approve the financial statements.
- Pass the results on to be consolidated.
- Perform the consolidation of the subsidiary financial statements.

Policy:

The monthly Processing Checklist must be completed and signed off by an Accounting Manager upon completion.

Deviation from normal processing must be noted and approved by the General Manager of Accounting.

Results

The end product of the Monthly Closing Process is a set of consolidated financial statements for National Fuel, a set of financial statements for all subsidiaries, plus a set of budget and analysis reports.

The consolidated results are distributed to individuals on an as needed basis. The subsidiary financial statements are also available for individuals who need them. For subsidiaries using PeopleSoft, the financial statements and reports are available online through the InfoNet.

Quarterly Closing Process

The quarterly closing process is the same series of steps that are required to close the month in the general ledger. However, on the quarter end, the Company releases earnings to the investment community and files financial summaries with the various regulatory agencies. With that in mind, there is some additional analysis that is performed to help management to understand the variances in the financial results.

Schedule

A schedule is produced monthly and distributed to the individuals responsible for the various transactions and events needed to close the books. On the quarter, it is even more important to keep to the schedule so that proper analysis can be done prior to the earnings release, and to complete the required statutory reporting.

Additionally, for tasks related to the various external reports, a quarterly schedule is prepared and distributed.

See Reporting Schedules for a sample of the closing schedule.

Process

A Closing Checklist is maintained to verify that all steps within the closing process have been completed and the results of the steps verified.

The Quarterly closing process is as follows:

- Create and enter journal entries.
- Edit and post the journals.
- Run allocations and then re-edit and post the resulting journals.
- Generate a set of pre-tax preliminary financial statements.
- Calculate the tax provision and create journals.
- Enter, edit and post the journals.
- Generate a set of after-tax financial statements.
- Review and approve the financial statements.
- Pass the results on to be consolidated
- Perform the consolidation of the subsidiary financial statements
- Prepare the earnings release
- Review the results with the Audit Committee
- Teleconference with investment analysts
- Quarterly statutory reporting

Results

The end product of the Quarterly Closing Process is a set of consolidated financial statements for National Fuel, a set of financial statements for all subsidiaries, plus a set of budget and analysis reports.

In addition, there will be analysis needed to help management interpret the results and prepare for the earnings release and the quarterly investor relations analyst call.

Earnings Release

The Company generally releases earnings to the public within five weeks of the quarter end. There is a press release plus a teleconference for the financial community. Prior to public release, the financial statements are reviewed with the Audit Committee.

External Reporting

At the quarter end, the Company must also prepare certain statutory reports to comply with SEC, FERC, NYPSC and PAPUC regulations.

Allocations

There are many cost items whose costs relate to multiple departments, subsidiaries or jurisdictions. When the cost is a one-time cost item, the costs can be directly assigned when an invoice is paid or a journal entry can be written. In other cases, allocations are used to assign the costs to the various entities.

Procedures and Guidelines

Allocations are generally set up to allocate the costs of a department or function. A clearing account or deferred debit account would normally be set up to collect all of the costs, though the common cost allocation gathers its charges from Distribution Administrative & General accounts. Then, based upon a methodology that best represents how the costs are used, the allocation is created. Most allocations are run monthly as a step in the monthly closing process.

The key to allocating the costs is to ensure that the method used to assign the costs is based on a causative factor. National Fuel routinely reviews its allocations to insure that the factors used to allocate the costs provide an accurate basis for the allocation and accurately reflect the way the costs should be split.

Requests for new allocations or changes to the current allocation factors should be made through the Accountant responsible for allocations or the Senior Manager who reviews allocations. Documentation regarding the allocation must be completed prior to the allocation being created and run.

Review and Maintenance

Since many factors related to the Company allocations change regularly, allocation methodologies and allocation set up must be reviewed on a regular basis. See the Cost Allocation and Application Manual (CAAM) for more details regarding allocations.

Policy:

All allocations are reviewed annually and updated as necessary.

Allocations are reviewed whenever a significant event within the Company occurs, including mergers, acquisitions or re-alignments.

A Senior Manager or General Manager of Accounting must approve all changes to allocation methodologies.

Documentation of all changes to allocations is kept on file for audit purposes.

PeopleSoft Process

To run an allocation, there are a series of steps that need to be followed. The following is a summary of those steps:

The allocation steps must be defined within PeopleSoft

The allocation steps must be placed into an existing allocation group or a new group must be created.

The allocation must be run in test mode to verify that it works as intended.

The allocation group must be added to a run control to be run with the monthly allocations.

The allocation group to be run is indicated on a run control along with the business unit, period to run the allocation and the type of output desired. Unless we are testing changes to a new or updated allocation, the output options are “create calc log and output.”

Policy:

Allocations must be run in the order provided in the monthly closing checklist.

Allocation journal entries must be edited and posted before going on to the next group of allocations.

The message log must be reviewed upon completion of the PeopleSoft process to insure that the allocation ran properly and not just to completion.

The GL1601 Clearing Account Summary report must be run after the allocation process is completed to verify that the clearing accounts being allocated have been cleared properly.

Inter-company charges generated for non-PeopleSoft subsidiaries are billed to the subsidiaries on a monthly invoice that is created once the closing process for that particular month is complete. For example, the invoice for charges during the month of February would be created once the close is completed for February.

Consolidations

After financial statements are generated for each individual subsidiary, National Fuel then generates a set of consolidated financial statements. The consolidated financial statements provide an overall look at the financial results of the Company. It is also through the consolidation process that segment reporting is performed.

Consolidation Policy

The Company consolidates all entities in which it has a controlling financial interest. All significant inter-company balances and transactions are eliminated.

The Company uses proportionate consolidation when accounting for drilling arrangements related to oil and gas producing properties accounted for under the full cost method of accounting.

The preparation of the consolidated financial statements, in conformity with GAAP, requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. Actual results could differ from those estimates.

Data Gathering

In keeping with the monthly closing schedule, each National Fuel subsidiary sends a file containing final monthly financial results to the Consolidation Accountant. The Consolidation Accountant uploads the files into the Consolidation system and verifies that the data from all subsidiaries is complete. The Consolidation Accountant will then compare the Consolidation system data from the individual subsidiaries with the financial statements of those subsidiaries - differences are identified and corrected.

Financial information for Seneca Resources Corporation is consolidated prior to being sent to Corporate Accounting for inclusion in the Company consolidation.

Internal Controls

To protect the integrity of the consolidation information and to insure that the financial statements have been properly produced, the following controls are in place.

Policy:

Access:

- Only designated consolidation personnel have update access to the Consolidation software.
- Only designated consolidation personnel have access to open and close data within the system.
- The ability to maintain ledger consolidation definitions is restricted to designated consolidation personnel.

Data Integrity:

- Subsidiary data files are compared with the subsidiary financial statements to insure that the same data was used for both reports.
- Discrepancies in balances between subsidiaries are investigated and resolved in a timely manner.
- The Consolidation Accountant verifies that all Business units are included within a Consolidation Hierarchy Tree.
- A reconciliation of inter-company accounts is performed and reconciling items are properly accounted for on a timely basis.

Review and Distribution:

- The consolidation accountant completes a Consolidation Checklist to insure that all steps have been completed in the consolidation process. The checklist is independently reviewed and approved.
- An Accounting Manager or Assistant Accounting Manager reviews and approves all journal entries and the consolidation reports and workpapers.
- Consolidation reports are only distributed on an "as-needed" basis.
- Consolidated results are reviewed with the Audit Committee prior to their release on the quarters.

Monthly Management Reporting

Standard Monthly Management Reports (MMR's) are available to Company personnel to assist in the analysis of financial performance. It is vital that financial performance is monitored on a regular basis to check the integrity of the transactions and balances. The MMR's include financial statements, analysis reports and budget reports, and are generally available as a result of various month-end closing processes.

Procedures and Guidelines

The Accounting Department and the Budget Department are responsible for the design, upkeep and running of the MMR's. The reports are created and maintained through the use of a PeopleSoft tool called nVision. Consolidated and Consolidating reports are created through the Consolidation software. The subsidiaries that are not a part of the PeopleSoft system are responsible for compiling their own set of reports as required by management.

The reports are generally run at the end of the accounting closing cycle for the month. Some preliminary reports are available sooner for use in the closing review process and budget review process.

The General Ledger Accountant is responsible for ensuring that the reports have been run and notifying the end users of their availability.

Policy:

A Tree Audit of 'All Trees' must be run each month prior to the running of MMR's to ensure that all trees are in a valid state.

Trial balances for all PeopleSoft system business units are generated and reviewed prior to their release. The review ensures that the trial balances balance to \$0.00.

The trial balance is compared to the balance sheet to ensure that the financial statements include all data for the period.

The General Ledger Accountant is responsible for ensuring that the reports have been run and notifying the end users of their availability.

Only the latest version of a report will be displayed for use by end users.

Report Distribution

Reports are available for use as soon as they have been independently reviewed and approved for release. The reports are generally distributed to an on-line facility, emailed to the end users or printed for manual distribution.

Policy:

The Senior Manager responsible for the general ledger administers security access to the online reports.

Management reports are run within the PeopleSoft system and are available as soon as they are posted.

Consolidated reports are available to individuals with access to the Consolidation software, or can be sent to individuals via E-mail.

Report Updates and Additions

Reports are regularly reviewed for accuracy and completeness. When it is determined that changes are needed, the Senior Manager responsible for the general ledger or Budget Manager will approve or make the changes to the PeopleSoft reports. For the non-PeopleSoft subsidiaries, a designated person makes changes.

Policy:

Only approved personnel who have had the proper nVision report writing training are allowed to update reports.

All financial report changes must be logged and the update info must be noted on the report layout. The logging must include the date of the change, the person making the change, and the reason for the change.

All report layouts must be tested thoroughly before being moved to production.

Requests for additional reports must be forwarded to the Senior Manager responsible for the general ledger or Budget Manager for review and recommendation.

Statutory Reporting

There are certain mandatory reports that the Company is required to file with the SEC, FERC, NYPSC and PAPUC. Most of the reports require consolidated information for National Fuel, though there are some reports that are specific to a company and jurisdiction. These are financial statements in nature, though some require additional information and disclosure. The reports are typically filed Quarterly or Annually and are meant to protect the Utility Customers and the Company's investors.

Required Reports

The following reports are required to be filed by the Company:

NFG	Annual Report to Shareholders	Annually	NFG
SEC	Form 10-K	Annually	NFG
SEC	Form 10-Q	Quarterly	NFG
SEC	Form 11-K	Annually	NFG
PSC	Annual NYPSC Report	Annually	DIST-NY
PSC	Quarterly NYPSC Report	Quarterly	DIST-NY
PUC	Annual PAPUC Report	Annually	DIST-PA
PUC	Statement of Gross Intrastate Operating Revenues	Annually	DIST-PA
FERC	FERC Form 3-Q	Quarterly	Supply, Emp
FERC	FERC Form 2	Annually	Supply, Emp
FERC	FERC Form 552 (required if transaction(s) cross materiality threshold)	Annually	DIST, Supply, Emp, Seneca

Internal Controls

National Fuel places a high priority on reporting accuracy, as such; there are controls that must be met prior to submitting reports to the various commissions and agencies. The following controls are intended to provide re-assurance to the Principal Accounting Officer and Principal Financial Officer that the reports are complete and correct.

Reports are created using approved financial statements and ledger information. Preliminary reports are not used to create the external reporting.

All pertinent workpapers must be included with the reports when submitted for review.

All reporting to outside parties must be reviewed and approved by the General Manager of Accounting.

Due Dates and Responsible Parties

A schedule is generated for each report indicating the due dates, and the schedule by which the responsible parties must complete their piece of the various reports. Adherence to the schedule is extremely important in order to meet filing deadlines.

Review and Approval

All statutory reports are routed through an extensive review and approval procedure. Reports are created by knowledgeable accounting staff and reviewed by a senior staff member. The reports are then forwarded for review and approval to the General Manager of Accounting. The reports are then reviewed by the Principal Accounting Officer, and if necessary, by the Legal Department, the Principal Financial Officer, the Audit Committee and Senior Executives of the Company.

Filing and Distribution

The reports are distributed either in hard copy form or electronically (SEC reporting is handled through the Edgar system). The reports are available through the Accounting Department on the Company's website (<https://investor.nationalfuelgas.com/financials/sec-filings/default.aspx>), and are also available through the SEC using the EDGAR system.

Disclosure Controls

The Company is required by the SEC and GAAP to disclose certain information about transactions, balances or events surrounding the financial statements. These disclosures are designed to provide the SEC and our investors with information to help them to understand the numbers being provided on the statements.

Disclosure Policy

The Company's disclosure policy is to report any financial facts significant enough to influence the judgment of an informed reader. Such disclosures are prepared in accordance with the rules and regulations established by the FASB, the SEC and other state and federal regulators.

Internal Controls

A Disclosure Checklist is maintained to ensure that all requirements and steps are completed prior to the filing of the financial statements for the quarter or year-end. Upon completion of a step by either the General Manager of Accounting or the Principal Accounting Officer, the checklist is updated.

When all of the steps are complete, the financial statements will have been thoroughly reviewed by management and the Independent Auditors, as well as the Company's Audit Committee.

Disclosure Committee

A Disclosure Committee is in place to determine and discuss items for disclosure in the Company's financial statements. The following are activities of the Disclosure Committee:

Conduct regular meetings of the Disclosure Committee:

The Company has formed a Disclosure Committee to monitor the quality of the Company's disclosures. Though the composition of the Disclosure Committee will change from time to time, at a minimum its members will include the Treasurer/Chief Financial Officer, Controller/Chief Accounting Officer, and Secretary of the Company, in-house legal counsel of Distribution, Supply, Empire, Midstream and Seneca Resources, Assistant Vice President of Distribution responsible for taxes, Chief Auditor, and one or more additional Exploration and Production personnel with operational knowledge. The Chief Executive Officer and Treasurer/Chief Financial Officer appoint members to the Committee and the Committee Chairman. The Committee meets at least quarterly (prior to the filing of the Form 10-K / 10-Q), but may meet more frequently as disclosure issues arise. The Chief Executive Officer and Treasurer/Chief Financial Officer attend each Disclosure Committee meeting. Assuming they are satisfied with the proposed disclosures, the Chief Executive Officer and Treasurer/Chief Financial Officer then sign their respective certifications. Following the meeting, draft minutes are prepared and distributed to all Disclosure Committee members and the Chief Executive Officer.

Procedures Relating to Form 8-K and NYSE Disclosure Requirements:

Periodically, the Disclosure Committee will send to each officer of the Company and its subsidiaries a letter reminding the recipients of the Company's Form 8-K and New York Stock Exchange disclosure obligations. The letter will request that officers immediately inform the Committee of any unusual, significant events within their areas of responsibility.

Members of the Committee who receive information regarding potential Form 8-K or NYSE triggering events will provide that information to the Chairman of the Committee and at least one legal representative on the Committee. The Chairman of the Committee will consult with other Committee members to determine whether the Company is required to file a Form 8-K or otherwise disclose the reported event. In making this determination, members of the Committee may consult with the Company's outside securities counsel.

Legal representatives on the Committee will draft any Form 8-K the Company determines to file and consult as appropriate with other Committee members as to the language of the draft. Legal representatives on the Committee will also coordinate the preparation of any press release or other

notice the Company determines to issue pursuant to NYSE requirements. Legal representatives on the Committee will cause any such Form 8-K or notice to be filed or any such press release to be issued.

Fiscal Year End Closing

Fiscal year end closing is processed like any other quarterly closing. The major difference from the other quarter closes is that at the end of the fiscal year, the Company has some special reporting requirements that it must meet on a timely basis. The first requirement is an earnings release with the annual results of operations. Next, come the Company's Annual Report on Form 10-K and the Annual Report to Shareholders.

There is an additional process that takes place after the books are closed for the fiscal year. The company must go through a physical closing of the books for the current year to ready them for the next year's processing. This process includes closing the books, carrying over Balance Sheet account balances, and closing out revenue and expense accounts to retained earnings.

Schedule

A schedule is produced prior to fiscal year end and distributed to the individuals responsible for the various transactions, events and reports needed. There are separate schedules related to the various fiscal year reports and analysis that must be completed.

Reporting

The main reports that are produced at year-end are the Form 10-K and the Annual Report to Shareholders. These reports wrap up the fiscal year results for the SEC and our investors, and include disclosures that will help the investors to understand the results.

PeopleSoft Process

Within PeopleSoft, the year-end closing process begins once the books are declared closed for the final quarter. This signals the General Ledger Accountant to begin the process of closing the books by running a final trial balance -- this will be the basis for comparison once the system process is complete.

Once the final trial balance is run, the next step is to run the close ledger process. The process clears the revenue and expense accounts to the retained earnings account, closes out the balance sheet accounts and moves the ending balance to the beginning balance field. Another trial balance is run to compare the year-end totals with the beginning balances. The two trial balances should match in total, though the new year's trial balance will have an updated retained earnings amount and will show zeroes for the revenue and expense balances.

If all the accounts balance properly, the next step is to open the new fiscal year and accounting period for processing of transactions. It is best to NOT post any transactions for October until the year-end close process has been completed and is reconciled.

Financial Forecast

On an annual basis, the Finance Department (financial forecast team) prepares a five-year financial forecast for the Company and its subsidiaries. This forecast is the base upon which earnings guidance is provided to internal parties and to the investment community. It is also integral to Credit Rating Agency presentations, M&A analysis, Board and Officer presentations, financing decisions and rate case support. Quarterly, the current fiscal year forecast is updated with known forecast adjustments in order to provide a rolling forecast. On a monthly basis the current fiscal year forecast is updated with actual data and variances to forecast are reviewed with senior officers. For various planning and forecasting purposes during the course of the year, the full five-year forecast is reviewed and updated. A software package called Hyperion Strategic Finance (HSF) is used to prepare the forecast. This software was purchased from Oracle.

Policies

For purposes of establishing the current fiscal year's base forecast, this is typically the forecast finalized for the year-end earnings call. The current and five-year forecast for the consolidated Company and each subsidiary is reviewed with the Treasurer/Chief Financial Officer and the Chief Executive Officer. The Treasurer/Chief Financial Officer reviews the current and/or upcoming fiscal year forecast quarterly, in addition to the five-year forecast/strategic plan annually, with the Company's Board of Directors.

Procedures

Annually

In early spring of each year (March or April), data requests are sent out to all departments/subsidiaries responsible for providing forecast information. Following is a list of the major data requests:

Capital Budgets (NY, PA, Supply, Empire)	Engineering Department
O&M Budgets (NY, PA, Supply, Empire, Midstream, Parent)	Budget Department
Stock Compensation	Treasurer/Chief Financial Officer
Property Taxes (NY, PA, Supply, Empire)	Tax Department
Income Tax Information	Tax Department
Pension, TopHat, OPEB and ERP Expense	Accounting & Human Resources Departments
Distribution NY & PA Master Estimate (Volumetric data)	Rates & Regulatory Affairs Department
Distribution NY & PA Revenues and Gas Costs	Rates & Regulatory Affairs Department
Supply & Empire Revenue and Volume Forecast	Interstate Marketing Department
Parent Company Forecast	Accounting Department
Midstream Corporation Forecast	Midstream Manager/Officer
Seneca Oil and Gas Forecast	Houston Strategic Planning Department

Each department/subsidiary sends their data to the financial forecast team. This is normally done electronically via Excel spreadsheets. Data from these spreadsheets is then imported into HSF.

All financing (long-term debt, short-term debt and equity) issues/retirements are modeled by the financial forecast team after discussion and review with the Treasurer/Chief Financial Officer. The financial forecast team also completes revenue requirement modeling for the regulated subsidiaries after discussions and review with the Rates and Regulatory Affairs and Interstate Marketing departments.

Once all of the data has been entered into HSF and the output verified for accuracy and reasonableness, a complete set of financial statements and other reports are generated in Excel using Oracle's Essbase/SmartView software. The reports are reviewed for accuracy and reasonableness. A

selection of these reports is assembled into the Five Year Forecast booklet which is published, typically after the Board of Directors planning meeting which is held annually in June.

At the beginning of the fiscal year, once the base forecast is finalized, the monthly forecast data for the current fiscal year is provided to the Accounting Department so that it can be input into the general ledger system for comparatives on the actual monthly income statements for the regulated companies and Midstream. Quarterly, updated monthly forecast data for the current fiscal year is sent to Seneca Resources for input into their Quorum accounting system.

Monthly/Quarterly

After the accounting close each month, the financial forecast team reviews variances to forecast for each of the regulated subsidiaries (NY, PA, Supply and Empire) and Midstream. Any unusual items are reviewed and documented. Recommendations for adjusting journal entries are made when necessary. The financial forecast team prepares summary reports documenting and explaining the variances each month. These are reviewed monthly with the Treasurer/Chief Financial Officer and Controller/Chief Accounting Officer. Copies of these reports are also emailed to the Presidents' of the respective subsidiaries as well as to the Chief Executive Officer, Chief Financial Officer and Chief Operating Officer. Seneca Resources performs their own variance analysis versus the forecast. The financial forecast team will request explanations from Seneca Resources when there are significant unexpected variances.

When the actual monthly consolidation is complete, the Accounting Department sends the financial forecast team a download file from Longview. In addition, certain actual data is provided by the Tax Department and Seneca Resources. The actual balance sheet and income statement data for the month for each subsidiary is imported into HSF. On a quarterly basis, actual cash flow and tax payment data is input into HSF. In addition, known forecast adjustments are input into HSF. The system is then run to obtain an updated forecast (rolling forecast). The output and related reports are reviewed for accuracy and reasonableness. This rolling forecast is the foundation for the earnings guidance updates that are given to the financial community throughout the year. In addition, depending upon when the request is made, the base forecast or the rolling forecast is the basis for the financial data provided to credit rating agencies and other potential users.

Scenarios

The financial forecast team prepares financial projections or scenarios when requested by senior management (ex. commodity pricing). To the extent possible, the HSF system is utilized. The most current forecast is used as a starting point and additional data and/or modeling logic changes are made to accomplish the objectives of the scenario.

Rate Case Support

The financial forecast team utilizes the HSF system to provide projected capital structure and cost of debt data to witnesses in rate cases as well as other support as needed. Depending upon the timing of the rate case, the base or rolling forecast data will be used.

Budgets

National Fuel employs a budgetary control process as a means to manage costs and track expenses and to communicate spending and spending patterns to management. Budgets are prepared annually at a detailed level by individual departments or divisions and then presented to Senior Management. Once approved by Senior Management, the divisional budget data is combined at the subsidiary level and then forwarded to the Finance Department. This data becomes a part of the overall financial forecast.

Monthly reports are made available for analysis at both the subsidiary and division levels. Persons responsible for the budgets in each area review the budget reports and explain critical variances between the budgeted amounts and actual amounts.

Budget Procedures

Budgets are prepared based on the Company's fiscal year of October through September. In order to have the budgets completed, reviewed and approved in time for the upcoming fiscal year, the budget process usually begins in April/May. The team within the Finance Department facilitates the data gathering required to assist budget preparers in devising their labor budgets based on their staffing compliment. Additionally, a budget worksheet is developed containing data from historical periods to help the preparer understand their prior spending patterns.

Once the preparers have the information that they need, they begin to prepare their budgets. Labor is the starting point for the budgets as the number of employees and labor costs drives many other costs. The costs other than labor are then budgeted based on departmental needs and requirements. Each department has their own cost profile based on the type of work that they perform and their location.

After the budget is created, the preparers present their budget to Senior Management for approval. Upon approval, the cost data is then allocated over the fiscal year based on historical spending patterns and/or their best estimate by month. When all the data has been entered into the system and verified, the budget is then locked down for the year so that no unauthorized changes can be made to the approved totals.

Monthly budget analysis reports are generated and distributed to the individual departments. The departments are responsible for checking their budgets and explaining significant variances between their budget and the actual amounts spent.

For the Consumer Business, Human Resources, Information Services, Operations, Executive, and Midstream divisions, a significant variance is defined as any month or year-to-date variance where the absolute value of the budget line item variance is greater than or equal to \$10,000 and 10%.

For all other budget divisions, a significant variance is defined as any month or year-to-date variance then the absolute value of the budget line item variance is greater than or equal to \$5,000 and 10%.

Budget Reports

Budget reports are generated monthly and are made available to the budget users after the pre-tax accounting close. The PeopleSoft reports are all numbered as 500 series reports (i.e. GL1501, GL2502, GL3504, etc.) and can be found in the nVision output area of PeopleSoft Financials, accessed through the InfoNet.

There are generally two sets of budget reports generated. The first set is generated for use by budget preparers to analyze their monthly and Year-to-date budget variances. The second set is used by the Budget Department management to analyze the overall budget position for the month and year-to-date.

Data Retention

Data retention of general ledger detail information and journal entry information has two aspects to consider. The first being regulatory requirements and the second being analysis needs.

Regulatory Requirements:

Regulatory requirements for data retention are in the Company's data retention manual.

General Ledger records must be kept for at least 50 years to fulfill the requirements set forth by the SEC, IRS, NYPSC, PAPUC and FERC.

Journal, journal vouchers and journal entries must be kept a minimum of 50 years.

General Ledger reports, trial balances and financial statements are maintained in PeopleSoft. Reports prior to the installation of PeopleSoft are maintained on microfiche/microfilm at the Main Office.

Consolidation workpapers are stored at the Main Office and Lincoln Storage. Effective with the February 2020 consolidation, consolidation work papers are stored electronically at F:Accounting / SOX Secured Files / Longview Reports / Fiscal 20XX / Final Consolidation Workpapers. Journal voucher information is scanned into OnBase.

Analysis Requirements:

From an analysis standpoint, detailed data for PeopleSoft report drill downs is available going back to fiscal 2011. In order to drill down on PeopleSoft reports prior to fiscal 2011, the reports would need to be re-run. The decision to use fiscal 2011 as a cut-off date for reports was established during the upgrade to PeopleSoft Version 9.2, which was completed in February 2017. Online inquiries and query look-up capability in PeopleSoft is available going back to fiscal 2000 when PeopleSoft was first implemented.

Revenue and Income

“Revenues” means inflows or other enhancements, or savings in outflows, of future economic benefits in the form of increases in assets or reductions in liabilities of the entity, other than those relating to contributions by owners, which result in an increase in equity during the reporting period. Put another way, it’s the money we receive when we sell our gas to customers, transportation and/or storage service, production gas and oil, or timber.

This chapter is designed to provide the general policies and procedures related to the accounting and processing of revenue and income transactions. The policies and procedures are designed to insure that revenues are properly recorded in a timely manner, for the correct amount, and in accordance with GAAP and regulatory requirements.

Revenue Recognition

In accordance with GAAP (ASC 606) and Regulatory Policy, National Fuel Gas recognizes revenues in the proper period and for the proper amount. The following section details the Company’s revenue recognition policies.

Policy

The Company’s Exploration and Production segment records revenue from the sale of the natural gas and oil that it produces and natural gas liquids (NGLs) processed based on entitlement, which means that revenue is recorded based on the actual amount of natural gas or oil that is delivered to a pipeline, or upon pick-up in the case of NGLs, and the Company’s ownership interest. Natural gas production occurs primarily in the Appalachian region of the United States and crude oil production occurs primarily in the West Coast region of the United States. If a production imbalance occurs between what was supposed to be delivered to a pipeline and what was actually produced and delivered, the Company accrues the difference as an imbalance. The sales contracts generally require the Company to deliver a specific quantity of a commodity per day for a specific number of days at a price that is either fixed or variable and considers the delivery of each unit (MMBtu or Bbl) to be a separate performance obligation that is satisfied upon delivery.

The transaction price for the sale of natural gas, oil and NGLs is contractually agreed upon based on prevailing market pricing (primarily tied to a market index with certain adjustments based on factors such as delivery location and prevailing supply and demand conditions) or fixed pricing. The Company allocates the transaction price to each performance obligation on the basis of the relative standalone selling price of each distinct unit sold. Revenue is recognized at a point in time when the transfer of the commodity occurs at the delivery point per the contract. The amount billable, as determined by the contracted quantity and price, indicates the value to the customer, and is used for revenue recognition purposes by the Exploration and Production segment as specified by the “invoice practical expedient” (the amount that the Exploration and Production segment has the right to invoice) under the authoritative guidance for revenue recognition. The contracts typically require payment within 30 days of the end of the calendar month in which the natural gas and oil is delivered, or picked up in the case of NGLs.

The Company uses derivative financial instruments to manage commodity price risk in the Exploration and Production segment related to sales of the natural gas and oil that it produces. Gains or losses on such derivative financial instruments are recorded as adjustments to revenue; however, they are not considered to be revenue from contracts with customers.

The Company’s Pipeline and Storage segment records revenue for natural gas transportation and storage services in New York and Pennsylvania at tariff-based rates regulated by the FERC. Customers secure their own gas supply and the Pipeline and Storage segment provides transportation and/or storage services to move the customer-supplied gas to the intended location, including injections into or withdrawals from the storage field. This performance obligation is satisfied over time. The rate design for the Pipeline and Storage segment’s customers generally includes a combination of volumetric or commodity charges as well as monthly “fixed” charges (including charges commonly referred to as

capacity charges, demand charges, or reservation charges). These types of fixed charges represent compensation for standing ready over the period of the month to deliver quantities of gas, regardless of whether the customer takes delivery of any quantity of gas. The performance obligation under these circumstances is satisfied based on the passage of time and meter reads, if applicable, which correlates to the period for which the charges are eligible to be invoiced. The amount billable, as determined by the meter read and the “fixed” monthly charge, indicates the value to the customer, and is used for revenue recognition purposes by the Pipeline and Storage segment as specified by the “invoice practical expedient” (the amount that the Pipeline and Storage segment has the right to invoice) under the authoritative guidance for revenue recognition. Customers are billed after the end of each calendar month, with payment typically due by the 25th day of the month in which the invoice is received.

The Company’s Gathering segment provides gathering and processing services in the Appalachian region of Pennsylvania, primarily for Seneca. The Gathering segment’s primary performance obligation is to deliver gathered natural gas volumes from Seneca’s wells into interstate pipelines at contractually agreed upon per unit rates. This obligation is satisfied over time. The performance obligation is satisfied based on the passage of time and meter reads, which correlates to the period for which the charges are eligible to be invoiced. The amount billable, as determined by the meter read and the contracted volumetric rate, indicates the value to the customer, and is used for revenue recognition purposes by the Gathering segment as specified by the “invoice practical expedient” (the amount that the Gathering segment has the right to invoice) under the authoritative guidance for revenue recognition. Customers are billed after the end of each calendar month, with payment typically due by the 10th day after the invoice is received.

The Company’s Utility segment records revenue for natural gas sales and natural gas transportation services in western New York and northwestern Pennsylvania at tariff-based rates regulated by the NYPSC and the PaPUC. Natural gas sales and transportation services are provided largely to residential, commercial and industrial customers. The Utility segment’s performance obligation to its customers is to deliver natural gas, an obligation which is satisfied over time. This obligation generally remains in effect as long as the customer consumes the natural gas provided by the Utility segment. The Utility segment recognizes revenue when it satisfies its performance obligation by delivering natural gas to the customer. Natural gas is delivered and consumed by the customer simultaneously. The satisfaction of the performance obligation is measured by the turn of the meter dial. The amount billable, as determined by the meter read and the tariff-based rate, indicates the value to the customer, and is used for revenue recognition purposes by the Utility segment as specified by the “invoice practical expedient” (the amount that the Utility segment has the right to invoice) under the authoritative guidance for revenue recognition. Since the Utility segment bills its customers in cycles having billing dates that do not generally coincide with the end of a calendar month, a receivable is recorded for natural gas delivered but not yet billed to customers based on an estimate of the amount of natural gas delivered between the last meter reading date and the end of the accounting period. Such receivables are a component of Unbilled Revenue on the Consolidated Balance Sheets. The Utility segment’s tariffs allow customers to utilize budget billing. In this situation, since the amount billed may differ from the amount of natural gas delivered to the customer in any given month, revenue is recognized monthly based on the amount of natural gas consumed. The differential between the amount billed and the amount consumed is recorded as a component of Receivables or Customer Advances on the Consolidated Balance Sheets. All receivables or advances related to budget billing are settled within one year.

The Company’s Utility segment has alternative revenue programs that are excluded from the scope of the new authoritative guidance regarding revenue recognition. The NYPSC has authorized alternative revenue programs that are designed to mitigate the impact that weather and conservation have on margin. The NYPSC has also authorized additional alternative revenue programs that adjust billings for the effects of broad external factors or to compensate the Company for demand-side management initiatives. These alternative revenue programs primarily allow the Company and customer to share in variances from imputed margins due to migration of transportation customers, allow for adjustments to the gas cost recovery mechanism for fluctuations in uncollectible expenses associated with gas costs, and allow the Company to pass on to customers costs associated with customer energy efficiency

programs. In general, revenue is adjusted monthly for these programs and is collected from or passed back to customers within 24 months of the annual reconciliation period.

Controls

The individual revenue generating systems – SAP Customer Relationship and Billing, SBS, EBS, LPS, etc., have internal controls over the generation and review of the revenue amounts and volumes that are passed to the General Ledger. Additionally, variance analysis between the actual amounts booked and the forecasted revenues is performed to determine whether the revenues are reasonable, and allow for time to make adjustments or corrections prior to the financial statements release.

Gas Revenues

National Fuel Gas' subsidiaries provide a variety of gas revenue generating services and products. Each subsidiary has certain rules regarding revenues that it must follow based on the regulatory commission and rate tariff that is in effect.

National Fuel Gas Distribution Corporation

Distribution provides retail gas distribution services and transportation services to a variety of customers, including residential, industrial, commercial and public authorities. Distribution records revenue as bills are rendered, except that service supplied but not billed is reported as unbilled utility revenue.

Distribution gas sales revenues are controlled by the rate tariffs in effect. The tariffs indicate the amounts that can be charged for the gas plus any discounts and surcharges that are passed along to the customers. The tariffs come about as a result of a rate settlement or litigated rate case.

New York Jurisdiction

A copy of the current tariff can be found at:

<https://www.nationalfuel.com/business-partners/ny-regulatory-tariff-gtop/>

Pennsylvania Jurisdiction

A copy of the current tariff can be found at:

<https://www.nationalfuel.com/business-partners/pa-regulatory-tariff-gtop/>

Distribution Gas Sales revenue information is primarily sent to the general ledger electronically from SAP Customer Relationship and Billing (SAP). This system provides the general ledger with retail sales revenues, transportation revenues, weather normalization amounts (NY only) and customer forfeited discount amounts.

Gas Transportation Revenue

Certain subsidiaries provide gas transportation services to customers and that revenue must be properly booked to the general ledger. The following are the general guidelines that each subsidiary follows in accounting for, and recognizing, revenues related to gas transportation.

National Fuel Gas Distribution Corporation:

Distribution transports gas for both marketers and stand-alone transportation customers. The revenues generated are both affiliated and non-affiliated transportation revenues. Information to book the transportation revenues comes electronically from SAP.

Marketers selling gas to customers on Distribution's system pay a transportation rate for using Distribution's pipelines. Additionally, Distribution generates bills for some of the marketers and collects a fee for the service.

Stand-alone customers are usually large volume industrial customers who have chosen to purchase their gas from someone else and use our system to deliver the gas to their location.

Pennsylvania Jurisdiction

<https://www.nationalfuel.com/business-partners/pa-rates-information/>

National Fuel Gas Supply Corporation:

Supply provides interstate natural gas transportation services to both affiliated and non-affiliated customers. The Supply Billing System (SBS) is the system source for the revenue and customer information. Journal entries are sent to the GL on a monthly basis.

For information on Supply’s specific rates and policies related to gas transportation, see Service & Rates on the Supply website at:

<https://www.nationalfuel.com/pipeline-storage/national-fuel-gas-supply-corp/about-national-fuel-gas-supply-corporation/>

Empire Pipeline Inc.

Empire Pipeline Inc. (Empire) provides interstate natural gas transportation services for both affiliated and non-affiliated customers. The Empire Billing System (EBS) is the system source for the revenue and customer information. Journal entries are sent to the GL on a monthly basis.

For information on Empire’s specific rates and policies related to gas transportation, see the Empire website at:

<https://www.nationalfuel.com/pipeline-storage/empire-pipeline/about-empire-pipeline/>

Gas Storage Revenue

Supply has developed over 30 underground natural gas storage fields that it uses to provide gas storage service to its customers – both affiliated and non-affiliated. Short-term and long-term storage is available depending on capacity at any time.

Dr:	142095	A/R Customer Gas	xxx
Dr:	146xxx	A/R I/C Gas	xxx

To view Supply's tariff structure for storage services, please see Service & Rates on the Supply website at:

<https://www.nationalfuel.com/pipeline-storage/national-fuel-gas-supply-corp/about-national-fuel-gas-supply-corporation/>

Empire has entered into a contract with one of its customers to provide storage service. Empire does not currently own or operate storage facilities on its system, but Empire has entered into a storage capacity lease with Supply Corporation in order to provide this storage service.

Gathering Revenue

NFG Midstream Corporation and Its Affiliated LLC's

Midstream Corporation and its affiliated LLC's is a set of gathering systems and a processing plant in the Marcellus Shale. Gathering revenue is estimated and recorded on a monthly basis.

Dr:	146023	A/R IC Seneca Resources - Gathering
Cr:	489151	Gathering Revenue - Seneca
Cr:	489152	Gathering Revenue – Reservation Charge

(To record intercompany estimate revenue)

Cashout Revenue

NFG Midstream Corporation

Imbalance gas (cashout revenue) is also recorded on a monthly basis, if applicable.

Dr:	489151	Gathering Revenue - Seneca
Cr:	495301	Cashout Revenue Non-Affiliate

(To record cashout revenue)

Production Revenues

Revenues from Seneca Resources Corporation (Seneca) production activities are accounted for directly by Seneca. Revenues are first booked as estimates, and then adjusted based on actual volumes once the amounts are determined. Since some wells are not fully owned and operated by Seneca, Seneca's percentage of the revenues is calculated and that is the amount that is booked.

Prices vary according to the market, though much of Seneca's gas is hedged so prices are known and less volatile.

Unbilled Revenues

Due to the timing of the billing process, there are circumstances in which utility service is supplied but not billed. In those instances, the revenue is reported as unbilled utility revenue and is included in operating revenues for the period in which service is furnished:

Calculation

The Company calculates unbilled gas revenues by taking the volumes for the calendar month that have not been billed in the current month and multiplying them by the tariff rates or the customer's contractual rate (in most cases the contractual rate will equal the tariff rate however there are negotiated/discounted rates).

Journal Entry

Dr:	173000	Utility Accrued Revenue
Cr:	480006	Unbilled Residential Revenues
Cr:	481106	Unbilled Commercial Revenue
Cr:	481206	Unbilled Industrial Revenue
Cr:	481306	Unbilled Public Authority revenue
Cr:	186040	Unbilled-Imputed Deferral (NY only – used to capture non-margin elements of unbilled)
Dr:	591300	Purchased Gas Expense Unbilled
Cr:	191140	Deferred Unbilled Gas Costs
Cr:	489269	Unbilled Transportation Revenue

Policy:

Unbilled gas is calculated and booked monthly. Given that the unbilled revenue entry is merely adjusting the "unbilled receivable" from one month to the next month, there will be times when the above entry will be reversed (e.g. going from the "unbilled receivable" at March 31st (with March typically being colder than April) to April 30th (with April typically being warmer than March)).

Other Operating Revenues

Other operating revenues are revenue items that are indirectly related to the sale of gas. These can be lost discounts or late charges, services performed for others, sales of inventory material, or miscellaneous items where the accounting treatment prescribes the use of a miscellaneous account. The following are examples of Other Operating Revenues on the books of the Company.

Customer Forfeited Discounts

This amount pertains to lost discounts on customer bills or the additional late charges imposed for late payments.

Customer Billing Service Charge w/Back-out Credit

When Distribution bills customers on behalf of third parties, the cost of providing the service less the back out credit for unbundling the costs is charged to this account.

Other Gas Revenues

Other Gas Revenue is used to book miscellaneous transactions that are indirectly related to gas revenues. They are typically items that are included in billings/rates but are separated out for various reasons. Examples would be the revenue offset for the RD&D entry, over/under collection of pensions or OPEBs, and margin adjustments. The key is that revenues are being adjusted as a result of the transaction. The majority of the adjustments will have a rate ruling or order prescribing the accounting treatment.

Sales of Inventory Material (Counter Sales)

On occasion, inventory material will be sold to a contractor. When this occurs, the material is issued from the inventory at the weighted average cost of inventory (and related overhead) and charged to account 495990 – Sales of Inventory Material. The payment received for the material is credited to account 495990, resulting in a net profit or loss.

Dr:	495990	Revenue from Sale of Inventory Material

(To record issuance of inventory for counter sale at weighted average cost plus overhead)

Dr:	131000	Cash
Cr:	495990	Revenue from Sale of Inventory Material

(To record counter sale)

Other Income Items

In addition to each subsidiaries regular operating revenues, there are some miscellaneous revenue items that are routinely booked. These would include such things as interest income, rental income, AFUDC, death benefit gain(s) on life insurance, and jobbing revenues from customer work. These items are booked monthly or quarterly, and are recognized as they are incurred.

Categories of Other Income

National Fuel and its subsidiaries routinely book the following categories of miscellaneous revenues:

Interest Income:

This is interest received for investments in the system money pool or in the case of National Fuel Gas – Parent Company (Parent), third party investments such as commercial paper.

AFUDC:

AFUDC or allowance for funds used during construction is an interest item related to funds used while constructing assets. Since the assets are not yet in the Company's rate base, an accrual in the form of an income item is calculated.

Death Benefit Gain(s) on Company-Owned Life Insurance:

Investments in life insurance are stated at their cash surrender value or net present value. Any death benefit gain on company-owned life insurance is classified as Other Income on the financial statements.

Miscellaneous:

This would include any other items that are income related such as rental income or jobbing revenues that are booked by the company, and changes in company-owned life insurance.

Procedures and Guidelines

The miscellaneous revenue items each have their own properties with regard to calculating them and booking them. The most important part of the procedure is to verify that the calculations are updated regularly based on new interest rates, or material differences in the company's make-up or debt policy.

The following guidelines or policies should be followed:

Interest Income:

Interest income should be received via memo from the Cash Management Department on a monthly basis.

AFUDC:

AFUDC is calculated by the Project Costing system and sent electronically through the PeopleSoft system. The amounts should be verified between the amount shown in Projects and the amount passed to the GL. An entry must be made monthly to allocate the AFUDC amount generated by the Project Costing module. (See chapter 7 for more info.)

Death Benefit Gain(s) on Company-Owned Life Insurance:

Gain is calculated as the difference between the proceeds received by the Company after death of the insured and the cash surrender value / net present value recorded as an asset on the Company's books at the date of death.

Miscellaneous Income:

Miscellaneous income should be used for items such as rental income – inter-company or third parties, jobbing or shop revenues or other miscellaneous amounts that are booked through the Cash Management system.

Internal Controls

There are certain internal controls that are specific to the Other Income items that must be adhered to:

Interest income related to the system money pool must match the interest expense shown on the books of National Fuel.

Interest income from temporary cash investments must be compared to the Cash Management Departments investment summary to verify the amount received.

The AFUDC rates must be updated at least annually, more often during periods of volatile interest rates. An allocation of the AFUDC amount must be made monthly to split the amount between the equity and debt components of the calculation.

Any Inter-company income for Rentals must balance between companies.

Jobbing and shop revenues should be booked to the 415000 accounts and not used as an offset to Operating and Maintenance expense.

Expense

Expenses are the costs incurred in providing goods and services, and reflect the use of resources available to an organization to satisfy its business objectives. The recognition of expenses can result from both cash and non-cash transactions.

In accordance with GAAP, the Company books expenses when incurred, and accrues for expenses that would otherwise be booked in an inappropriate period. An entity's recognition of expenses on an accrual basis, incorporating all cash and non-cash transactions, provides users of financial reports with information on that entity's performance, by identifying: the outflows of goods and services used or provided; the extent to which costs were incurred; and the types of costs incurred.

This information is useful input to assessments of the efficiency of service delivery, the resources necessary to enable the entity to continue to provide goods and services in the future and the likely cost of those goods and services. Such information is necessary for accountability purposes and is relevant to decisions about matters such as the likely future funding requirements of the entity.

This chapter will provide guidance with regard to the Company's policies for properly accounting for expenses incurred in the course of business.

Operating & Maintenance Expense

Expenses that are incurred in the normal operations of the business, or operation and maintenance of equipment, structures, and furniture and fixtures, are accounted for as Operating and Maintenance Expense. A more thorough explanation of the types of costs included or excluded as expense can be found at the FERC website or on the National Fuel Gas InfoNet, in the E-Docs section.

In choosing an expense account, it is important to select an account that best represents the expense being incurred and the proper functional category. For example, if you are working on a leak repair, you want to pick an account that not only indicates that the expense was related to a leak repair, but also if it was a leak on a transmission line, a distribution line, a storage line or a well line. The functional area is just as important as the actual account number.

Also, keep in mind that some accounts may only be valid in certain subsidiaries. For example, distribution mainline expenses are only good in Distribution. Since Supply and Empire are transmission companies; they should not have any distribution line charges booked to them.

The following chart may help in deciding on the proper account to choose:

National Fuel Gas Company
Operating & Maintenance Expense Account Summary

<u>Control Acct</u>	<u>Description</u>	<u>Account Range</u>	<u>DNYG1</u>	<u>DPAG1</u>	<u>SUPG1</u>	<u>EMPG1</u>	<u>MIDG1</u>	<u>M0XG1</u> (LLC's)

401200	Natural Gas Production (Gathering)	501000 - 509999	Yes	Yes	Yes		Yes	Yes
401300	Other Gas Supplies	510000 - 519999	Yes	Yes	Yes	Yes		
401400	Storage Expense	520000 - 529999			Yes			
401500	Transmission Expense	530000 - 539999	Yes	Yes	Yes	Yes		Yes
401600	Gas Distribution Expense	540000 - 549999	Yes	Yes				
401700	Customer Accounts Expense	550000 - 559999	Yes	Yes	Yes	Yes		
401800	Customer Service Expense	560000 - 569999	Yes	Yes				
401850	Sales Promotion Expense	570000 - 579999	Yes	Yes				
401900	Administrative & General Expense	580000 - 589999	Yes	Yes	Yes	Yes	Yes	Yes
Maintenance Expenses:								
402200	Natural Gas Production	600000 - 609999	Yes	Yes	Yes		Yes	Yes
402300	Other Gas Supply	610000 - 619999	Yes	Yes	Yes			
402400	Storage Expense	620000 - 629999			Yes			
402500	Transmission Expense	630000 - 639999	Yes	Yes	Yes	Yes		Yes
402600	Gas Distribution Expense	640000 - 649999	Yes	Yes				
402900	Administrative & General Expense	650000 - 659999	Yes	Yes	Yes	Yes	Yes	Yes
Purchase Gas Expense								
401999	Purchase Gas Expense	590000 - 599999	Yes	Yes				

It is important to note that at National Fuel, many individuals perform work for multiple subsidiaries. If a Supply employee performs work for Distribution, the employee should be sure to charge a Distribution account number for the work, and should also be sure to charge an exception department so that the charges are distributed to Distribution.

Operating Expense:

Operating Expenses are those costs incurred by the company in the operation of the business. These are the costs to make the pipeline system work, to collect customer accounts, to operate the compressors, to account for the company's results and to account for the administrative and general costs of the company.

For Midstream and the regulated subsidiaries on the PeopleSoft System, the following ranges of account numbers are used for Operation Expense:

500000 – 509999	Natural Gas Production & Gathering Expense
510000 – 519999	Natural Gas Other Gas Supply Expense
520000 – 529999	Natural Gas Storage Expense
530000 – 539999	Natural Gas Transmission Expense
540000 – 549999	Natural Gas Distribution Expense
550000 – 599999	Customer Accounts Expense
560000 – 569999	Customer Service Expense
570000 – 579999	Sales Expense
580000 – 589999	Administrative & General

Maintenance Expense:

Maintenance Expenses are those costs incurred by the company to maintain the on-going operation of the business. These are the costs to maintain the various pipelines, compression and regulation equipment, structures and facilities of the company.

For Midstream and the regulated subsidiaries on the PeopleSoft System, the following ranges of account numbers are used for Maintenance Expense

600000 – 609999	Natural Gas Production Expense
610000 – 619999	Natural Gas Other Gas Supply Expense
620000 – 629999	Natural Gas Storage Expense
630000 – 639999	Natural Gas Transmission Expense
640000 – 649999	Natural Gas Distribution Expense
650000 – 659999	Administrative & General Expense

Since the Parent Company isn't required to follow the FERC chart of accounts, its accounts are much more streamlined, with one range to cover both the operating and maintenance accounts.

401000 – 401999	Operating & Maintenance Expense
-----------------	---------------------------------

It is important when considering maintenance expenditures to determine whether the cost should be charged to Maintenance Expense or to a capital account.

If the cost increases the useful life of the asset or makes it more productive and efficient, there may be an opportunity to capitalize the costs. Please see the section on the Company's Capitalization Policy for an explanation of the policy.

If the cost is a routine cost of maintaining the facilities, equipment or assets, then the costs should be charged to a maintenance expense account.

Purchased Gas Costs

Purchased Gas Costs represent the costs that are directly related to the purchase of gas by the company for delivery direct to its customers. These would include purchases from various sources along with the cost of metering the gas being delivered to the distribution system. Sources of gas include long term contracts, spot gas purchases and storage gas.

Policy

The purchased gas expense, as well as transportation and storage costs for the current month, is the current month estimate plus the difference between the prior month estimate and prior month actual.

Source Reports

Invoices from Gas Accounting

Monthly Reports – Prior Month Actual from Gas Accounting

Monthly Reports – Current Month Estimate from Gas Accounting

ZMONTHLY_CAP_BILL – Monthly Cashout Capacity Summary from SAP-ECC (shows imbalances that were cashed-out in the prior month)

BI-1664 – Aggregator Revenue Summary from SAP-BI launch pad (shows imbalances that were cashed-out in the prior month)

Sales/Purchases of Storage Gas from Transportation Services

Gas Used by Company Worksheet from Financial Accounting Clerk

PeopleSoft Ledger Inquiry for account 590060 current month activity in local production gas. This activity is booked by Gas Measurement staff in Erie, PA.

Process to generate monthly purchased gas entries

Prior Month Actual

Financial Accounting inputs the invoices from Gas Accounting, Marketer Imbalance Cashout Purchases and NFR Marketer Imbalance Cashout Purchases from ZMONTHLY_CAP_BILL, Marketer Gas Stored / Imbalance Gas from the Sales/Purchases of Storage Gas and SC13 DMT/MMT Cashout Purchases from BI-1664. Local Producers – thru LPS are input from a PeopleSoft Ledger Inquiry for account 590060 current month activity. After all of the above are input, then Financial Accounting inputs the totals from the Monthly Reports – Prior Month Actual to verify the information was entered correctly. Differences we allow are for the Marketer Imbalance Cashout Purchases, Marketer Gas Stored/Imbalance Gas, SC13 DMT/MMT Cashout Purchases, Public Utility Tax and Penalty reversals because this activity is not picked up in normal gas purchase transactions. All other differences are investigated and resolved before the journal entry is prepared. Note due to the matching of gas costs to revenues (calculations performed by Rates and Reg Affairs each month) the impact of any difference is deemed not material.

Current Month Estimate

Financial Accounting inputs the amounts from the Monthly Reports – Current Month Estimate. Note that storage commodity is not input because that is included in our storage monthly entry. Then Financial Accounting inputs the totals from the Monthly Reports – Current Month Estimate to verify the information was entered correctly.

The majority of the monthly journal entry amounts are from the above process. In addition we calculate minor amounts for storage injections and withdrawals, shrinkage and gas used by company.

Storage \$ injections and withdrawals are part of the storage monthly entry and we only calculate the volumes from information in the Monthly Reports – Prior Month Actual and Monthly Reports – Current Month Estimate.

Shrinkage volumes are calculated from information in the Monthly Reports – Prior Month Actual and Monthly Reports – Current Month Estimate.

Gas used by company is calculated from information in the Gas Used by Company Worksheet.

After all amounts are input, formulas calculate the purchased gas expense journal entries for the month. An individual independent of the person that prepared the spreadsheet reviews the spreadsheet and journal entries for accuracy each month. Evidence of the review is noted by signature on the journal entry forms.

In addition, every month the AP Recon and FS Recon files are prepared to verify accuracy of amounts posted to the general ledger. Discrepancies are investigated.

Matching Gas Costs

This is the process that matches actual gas costs to gas costs allowed in rate proceedings. Since the gas costs allowed in rates are based on projections, a difference between the actual gas costs and the projected costs is a normal occurrence. The differences between the costs are recorded as deferred gas costs and are usually surcharged or refunded to customers in a future period.

In NY, the deferred gas costs are collected through the monthly Gas Adjustment Clause (GAC).

In PA, an annual regulatory filing (1307(f)) is made to establish and reconcile purchase gas costs.

Lost and Unaccounted For Gas (LAUF)

LAUF is the difference between the total gas available from all sources, and the total gas accounted for as sales and net interchange. The difference likely includes leakage or other actual losses, discrepancies due to metering inaccuracies, variations of temperature and/or pressure, and other variables (e.g. the use of current month estimates in purchased volumes and estimates used in both cycle billed volumes (i.e. for months when a customer's meter is not read) and unbilled volumes).

Policy

A schedule showing the gas purchased and the gas sold is prepared on a monthly basis.

Gas Used By Company

Distribution and Supply Corporations are permitted to use some of the gas being transported or distributed through their lines to fuel the operation of those lines. This would include fuel for compressors, along with gas to heat various company facilities. The Company books this gas as both a debit and credit to expense.

Accounting Procedures

A monthly accounting entry is made to book the gas used by company for NY and PA Distribution. Accounting receives the gas usage for the various company locations from the SAP system using the transaction ZNYPTAX monthly Gas Used by Company Report. The volumes are then multiplied by the monthly rate to determine the value of the gas being used. Each location has assigned accounting charges that are debited, with the offset credit to either Purchase Gas Expense in NYD or Other Gas Expense in PAD.

The entry to book Gas used by company is as follows:

NYD

Dr: O&M Expense
Cr: 591200 - Purchased Gas Expense

PAD

Dr: O&M Expense
Cr: 515000 - Other Gas Expense

Price of Gas Used

The price of the gas used to book the gas used by company is the average cost of gas purchased for the prior month.

Gas used to fuel the Parent Company's Distributed Generation facility at 6363 Main St is priced using NY Distribution's SC 23 rate.

No entry is made in Supply because the volumes are reflected in the Fuel Tracker recorded in Accounting and is considered Supply line gas.

Expense Accruals

In accordance with GAAP, the Company books costs and recognizes liabilities as they are incurred and accrues for costs and liabilities in the period that they are incurred. At the end of the accounting period, usually at quarter end or year end, the Company makes an effort to identify and accrue for known costs that have not yet been booked.

Procedure

A discussion of the procedures for accruing expenses is discussed under “Liability Accruals” section of this Accounting Policy Manual.

Employee Expenses

The Company, based on either Company Policy or in line with IRS guidelines, reimburses reasonable business expenses that are incurred by employees. The typical expenses incurred by employees are vehicle mileage, tolls, travel costs (hotel and meals), and small office purchases. These expenses are processed by the Accounts Payable department and are reimbursed to the employee as soon as possible.

Forms

Official National Fuel Travel and Mileage forms must be used. The forms contain the information needed to process the reimbursement and are formatted to expedite the data entry process. Deviation from the accepted formats may cause a delay in the expense reimbursement.

The forms are available through the Company’s InfoNet in the E-Docs section. They are located in the Accounts Payable section. These forms are routinely updated for changes in Company policy, or IRS policy with regard to the mileage reimbursement rate.

Procedures and Guidelines

The forms must be filled out completely and must be properly approved before being sent to the Accounts Payable Department. Where receipts are required – expenses over \$25 and any hotel bill – they must be attached to the document. Incomplete forms will be returned to the employee and will lead to delays.

Approvals

All reimbursement requests must contain the proper approval signature or they will be returned.

For Employee Mileage reimbursements, the approval must be obtained from a Level 1 approver on the Accounts Payable approval matrix.

Senior Management must approve a travel arrangement request form prior to an employee pursuing travel arrangements outside of NFG’s service territory. For Employee Expense reimbursements, Level 2 approvers and above can approve general expenses up to \$2,000. Level 3 approvers and above can approve general expenses of \$2,000 and higher.

The approval matrix can be found on the InfoNet under Purchasing in E-docs:

<https://infonet.natfuel.com/Forms/Purchasing/ApprovalMatrix.xls>

Tax Expense

National Fuel pays a variety of taxes as part of the normal operations of the Company. These taxes are typically specific to a subsidiary based on the state, county, or city that they operate in. Each subsidiary is responsible for its own taxes, as well as their portion of the corporation's consolidated tax liability.

Consolidated Income Tax Sharing Agreement

National Fuel has entered into an inter-company tax sharing agreement, which specifies how the consolidated income tax liability of the consolidated group is allocated among the member companies.

For additional information on the Tax Sharing Agreement, please refer to the Tax Department Policy & Procedures Manual.

Income Taxes

National Fuel computes income tax expense on both a subsidiary and consolidated basis. As indicated above, any additional tax expense or tax benefits are allocated between the subsidiaries in accordance with the Tax Sharing Agreement.

A tax computation is computed on a monthly basis and forwarded to each subsidiary to be booked.

Quarterly estimated tax payments are made for subsidiaries meeting criteria.

True up entries are made at the end of the fiscal year that bring the prior year's provision in line with the actual tax returns as filed.

Deferred taxes

There are many instances where financial or book income and taxable income are different. The tax expense for financial purposes is determined under GAAP. The income tax liability is determined under the Internal Revenue Code. Deferred taxes are the result of temporary differences between the book and tax recognition of particular items of expense or income.

Deferred taxes can be classified as either an asset or a liability depending on whether the items are recognized earlier or later for income tax purposes.

Miscellaneous Other Taxes

Besides income taxes, the Company pays many other taxes such as property tax, sales and use tax, franchise tax, payroll tax and gross receipt tax. These taxes are usually charged directly to expense when they are incurred, though some may be booked to a prepaid account and amortized over their covered period. The Miscellaneous Taxes are all charged to accounts in the 408xxx grouping.

Miscellaneous Deductions

Miscellaneous Deductions are non-operating expense items such as charitable donations, civic, political and related expenses, and penalties that are usually not recognized as part of the cost of utility service to be included in utility revenues. These costs may be part of operating and maintenance expenses for the non-utility subsidiaries.

Categories of deductions

Contributions and Donations

Contributions and Donations that the Company makes to charitable organizations are charged to account 426.1 in the regulated subsidiaries. In the non-regulated subsidiaries, they are charged to Administrative and General expenses.

Beginning in fiscal year 2004, the Company established the National Fuel Gas Foundation. This is a private foundation that will make contributions on behalf of National Fuel. Subsidiaries may make contributions to the foundation. The Foundation will charge contributions to non-FERC account 905.

Reserve for preliminary survey costs

Preliminary survey and investigation accounts are used when a project is in the preliminary stages of being developed. In this stage, work is performed to determine the feasibility of continuing the project to completion. A reserve may be established for certain preliminary survey and investigation charges. For further discussion, see the "Preliminary Survey & Investigation" section of this manual.

Penalties

Penalties are charged to account 426300. This account shall include payments by the Company for penalties or fines for violation of any regulatory statutes by the company or its officials. In the non-regulated subsidiaries, these costs are charged to administrative and general expense. Penalties should be recorded using product 5114. Penalties should not be capitalized.

Expenditures for certain civic, political and related activities

Costs that are incurred relating to lobbying activities of the regulated subsidiaries are charged to account 426400. This account shall include expenditures for the purpose of influencing public opinion with respect to the election or appointment of public officials, referenda, legislation, or ordinances (either with respect to the possible adoption of new referenda, legislation or ordinances or repeal or modification of existing referenda, legislation or ordinances) or approval, modification, or revocation of franchises; or for the purpose of influencing the decisions of public officials. Lobbying costs should not be capitalized.

Dues and Memberships

It is important in the regulated companies to watch for membership dues that include costs related to lobbying activities. The amount to be charged as lobbying is typically noted on the invoice and as such should be separated from the accounting charge for the membership. The invoice may say "Lobbying constitutes 4% of Company X's activities", "93% of dues will be used to cover operating costs", or "96% of your membership is deductible as a business expense". The account to use for any portion related to Lobbying is 426400 using product 2501. In addition, the cost of dues & memberships should not be capitalized.

For Distribution NY, the full cost of memberships to organizations that engage in lobbying should be recorded as a miscellaneous deduction. The lobbying piece of the membership fee should be recorded in account 426400. The non-lobbying piece should be recorded in account 426410.

In the non-regulated subsidiaries, these costs are charged to account 401425.

Assets

Assets are defined as future economic benefits that an entity controls as a result of past transactions or other past events. The future benefits are not limited to situations involving future cash inflows. The future benefits refer to a capacity to provide goods and services in accordance with the entity's objectives including the provision of goods or services to a beneficiary.

For good asset management it is important to have relevant, reliable and timely information that will assist in:

Identification and recording of assets;
Facilitating the management of risk associated with the control of assets;
Planning for future replacement of assets.

This chapter will assist in identifying the proper handling of the accounting for the various assets on the books of the Company. Detailed instructions on asset accounting and management are the responsibility of each entity and when developed must be consistent with the requirements of this Manual.

Classification of Assets

To facilitate financial analysis, assets are classified in accordance with their relative liquidity; (i.e. an entity should classify its assets as either current or non-current depending upon when the entity expects to either consume the asset or convert it into cash.)

Property, Plant & Equipment

Property, Plant & Equipment is stated at historical cost less accumulated depreciation. National Fuel capitalizes all construction-related direct labor and material costs, as well as indirect construction costs. Indirect costs include general engineering, taxes and the cost of funds used during construction. The cost of renewals and betterments that extend the useful life of property, plant and equipment is also capitalized. The cost of repairs, replacements and major maintenance projects is expensed as it is incurred. Depreciation is generally computed over the asset's estimated useful life using the straight-line method.

When National Fuel retires components of its regulated "group asset" property, plant and equipment, it charges the original cost, plus the cost of retirement, less salvage, to accumulated depreciation and amortization. A gain or loss is not recorded in income. When it retires or sells "unit asset" property, plant and equipment, entire regulated operating units or groups, or non-regulated properties, the cost is removed from the property account and the related accumulated depreciation and amortization accounts are reduced with any resulting gain or loss recorded as income.

Current Assets

Current assets are short-term in nature and are in the form of cash, or expected to be either converted into cash or consumed within 12 months of the reporting balance sheet date. Examples include cash and cash equivalents, accounts receivable, and inventory.

Non-Current Assets

Non-current assets are all assets other than current assets. Put another way, assets that are not expected to be converted into cash or consumed within 12 months after the end of the reporting period. Non-current assets are expected to possess service potential, or provide a benefit, beyond the end of the next reporting period.

Classes of Assets

A "class of assets" means a grouping of assets within a category, having a similar nature or function in the operations of the entity. For the purpose of this manual, the topics are listed in the order that they appear on the Company's financial statements as contained in Forms 10-K / 10-Q. The topics are further broken out by the various accounts that form the classes of assets.

For example, Property, Plant & Equipment is the reporting line item, and within that group Plant in Service, Construction Work in Progress and Held for Future Use are detailed.

Property, Plant & Equipment

Property, Plant & Equipment (PP&E) refers to the physical assets held by the Company. This includes such items as land, pipelines, buildings, vehicles, compressor stations, timber and the full cost pool in the Exploration and Production segment. From the company's standpoint, this represents the largest dollar investment on the balance sheet. For the regulated subsidiaries, it represents the basis for rate base computations that are used in ratemaking to earn a return on our investment.

Classifications of Property, Plant & Equipment:

There are four major classifications of Property, Plant & Equipment. Each one comes with unique rules and procedures that will be discussed later in this section.

Plant in Service (Plant)

Plant in service refers to property, plant and equipment that is currently operational and being used in the business. Once an item is classified as Plant in Service, depreciation begins.

Construction Work in Progress (CWIP)

CWIP represents capital projects that are under construction. Amounts are captured until the project is complete and can be put into service. Assets in this class are not depreciated, however AFUDC is applied.

Plant Held for Future Use (HFU)

Plant Held for Future Use includes plant owned and associated costs that are held for future use. There is generally no depreciation and there is no application of AFUDC.

Accumulated Depreciation

Accumulated depreciation is an offset to the other plant classes. When Plant in Service is depreciated, the credit portion of the entry is to Accumulated Depreciation. The total of the accumulated depreciation subtracted from the plant balance leaves you with a net book value of your PP&E. This will be covered in more detail in the Depreciation section of the manual.

Plant In Service

Plant in Service (Plant) represents the value of the physical assets owned by the Company. These would include buildings, pipelines, compressor equipment, vehicles, timber, land, and amounts in the full cost pool for the Exploration and Production Segment. The assets are long-lived items that will gradually lose their value over time; therefore they are depreciated or depleted.

In the regulated subsidiaries, all charges to the plant accounts are made through the project costing system. This insures that the assets were properly coded with the information needed to process depreciation, update property tax records and accrue appropriate AFUDC. The only exception to this policy involves completed construction not classified (CCNC). CCNC is a component of CWIP and therefore no depreciation is recorded for CCNC. Each quarter CCNC balances are reviewed for materiality. If the estimated depreciation expense is material, entries are made on the general ledger to reclassify CCNC balances from CWIP to plant account 101 and to record the estimated depreciation expense. These entries are reversed in the following month with the expectation that the project costing system will move the CCNC dollars into plant account 101 and record the appropriate amount of depreciation expense.

Plant in the non-regulated entities varies from entity to entity. Seneca Resources follows the full cost accounting method, which means that all costs associated with the exploration and development of oil & gas properties are capitalized.

Policy:

All charges to the 101xxx accounts in the regulated subsidiaries must come through the project-costing module, except in cases where CCNC balances must be reclassified from CWIP to plant account 101, as discussed above.

Construction Work in Progress

Construction Work in Progress (CWIP) relates to the accumulation of costs for a capital project during the construction of an asset. When it is determined that an asset is to be constructed or the work to be completed is capital in nature, a project id is assigned to the project. The project id remains with the project until it is completed and put in service. Once it is completed, the project is unitized and the costs flow from the CWIP account to the proper asset account.

Expenditure Requests:

An Expenditure Request (ER) is a document used to initiate a project. The ER typically has a description of the proposed project and an estimated cost to complete the project. This document along with other backup information is used by the Engineering Department to get the project approved for construction.

Project ID:

When the project is approved, a project id is issued. This project id is a unique identifier that is tied to account number 107000 – CWIP and is used to accumulate the costs of the project. All costs including labor, fringe benefits, vehicle costs, material and contractor costs are charged to the project. Additionally, internal costs such as Unicap and AFUDC are charged to the project.

When charging costs to CWIP, a project id must be used. This is the only way that the costs will be charged to both the general ledger and the project-costing module. It is imperative that the two be updated with the same data if the project detail is to reconcile with the general ledger balance.

AFUDC

AFUDC represents the estimated debt and equity costs of capital funds necessary to finance the construction of new regulated facilities. AFUDC is a non-cash item and is capitalized as a component of Property, Plant and Equipment cost, with offsetting credits to Other Income and Expenses, net and to Interest Expense. After construction is completed, the Company is permitted to recover these costs, including a fair return, through inclusion in the rate base and in the depreciation provision.

Rates used for capitalization of deferred returns and AFUDC by National Fuel's regulated operations are calculated in compliance with GAAP rules.

Unicap

Uniform Capitalization Costs or Unicap are administrative and general costs that are charged as a project overhead during construction. They are primarily engineering overhead costs that reflect labor and indirect costs provided in aid of the construction effort. A complete review of the Engineering costs is done every 3 years to determine an appropriate percentage of work that is related to capital projects.

To apply Unicap to the projects, the system takes the Unicap charged in the previous month and allocates the dollars across the open CWIP projects based on amounts charged to the projects during the month.

Unitization

When a project is completed and put in service, the next step is to unitize the project. Unitization groups the project costs into the proper retirement units for use in depreciating the asset; it also creates the accounting entries to book the cost of the asset and close out the construction work in progress.

Dr:	101xxx	Plant In Service	xx
Cr:	107000	Construction Work in Progress	xx

Property Held for Future Use

Property Held for Future Use is property owned and held for future use in gas service under a definite plan for such use. It includes: (1) Property acquired (except land and land rights) but never used by the utility in gas service, but held for such service in the future under a definite plan, and (2) property (except land and land rights) previously used by the utility in gas service, but retired from such service and held pending its reuse in the future, under a definite plan, in gas service.

This is a regulated entity issue and is booked to the 105xxx account.

Depreciation, Depletion & Amortization

Depreciation is the expense associated with the consumption or loss of service potential or loss of future economic benefit embodied in a non-current asset. It is generally brought about by the use of the asset.

The term depreciation is often used interchangeably with the term amortization. While the terms have similar meanings, depreciation is used in relation to non-current assets that have physical substance and amortization is generally used in relation to intangible non-current assets.

Depreciation

The concept of depreciation is to measure the loss in value of an asset over a time period. For example, let's say that we purchase a truck. The truck loses value the minute you drive it out of the dealership. The truck is considered an operational asset in running your business. Each year that you own the truck, it loses some value, until the truck finally stops running and has no value to the business. The incremental loss of value is our depreciation expense.

There are three aspects to depreciation:

Depreciation expense - the periodic amount representing the loss of value;
Accumulated depreciation - the total loss of value up to the end of the accounting period; and
The net book value of the asset - the cost of the asset less the accumulated depreciation to date.

To determine the amount of depreciation that will be expensed in a given period, you need to know the cost of the asset, the useful life of the asset and whether there will be any salvage value at the end of the asset's life.

The regulated subsidiaries use two different depreciation methods:

Unit depreciation:

Under unit depreciation, an individual asset is tracked and depreciated.

Group depreciation:

Under group depreciation, similar assets are grouped together. These groups are tracked and depreciated together using a composite depreciation rate.

In both cases, the regulatory commissions approve the depreciation rates used in the calculation. The rates, though composite, are based on the straight-line depreciation methodology. Information on the current depreciation rates can be obtained from the Plant Accounting Manager.

Accounting Entries:

Depreciation expense is booked to detail expense account 403000 or to a clearing account in the range 184xxx for vehicle and tool depreciation. The offset is to account 108001 – Accumulated Depreciation.

Dr: 403000 – Depreciation Expense

or

Dr: 184xxx – Vehicle & Tool Clearing
Cr: 108001 – Accumulated Depreciation

Depreciation expense applicable to transportation equipment and construction equipment and other general equipment is charged to clearing accounts in order to properly distribute the expenses between operation expense and capital costs. (FERC Acct 403, Note B)

The non-regulated subsidiaries have more flexibility in deciding the rates of depreciation for their assets and the depreciation methodology.

For all other property, plant and equipment, DD&A is computed using the straight-line method in amounts sufficient to recover costs over the estimated service lives of property in service.

Depletion

Depletion is the method used to amortize the full cost pool in Seneca Resources (Seneca). Seneca uses the units of production method to deplete the capital costs in the full cost pool. DD&A is computed based on quantities produced in relation to proved reserves. The cost of unevaluated oil and gas properties is excluded from this computation. The Company accounts for its exploration and production activities under the full cost method of accounting. Each quarter, the Company must compare the level of its unamortized investment in oil and natural gas properties to the present value of the future net revenue projected to be recovered from those properties according to methods prescribed by the SEC. If, at the end of any quarter, the amount of the unamortized investment exceeds the net present value of the projected future cash flows, such investment may be considered to be “impaired,” and the full cost accounting rules require that the investment must be written down to the calculated net present value. Such an instance would require the Company to recognize an immediate expense in that quarter, and its earnings would be reduced.

For timber properties, depletion, determined on a property-by-property basis, is charged to operations based on the actual amount of timber cut in relation to the total amount of recoverable timber. The depletion relates to the harvesting of timber off of Company-owned land.

Amortization

Amortization is another method used to measure the loss in value of an asset over a time period. Amortization differs from depreciation in that amortization takes an entire year of purchases or ‘vintage’ of assets and treats it as one amortization unit. That vintage is then amortized over a selected time frame and retired as one large unit. The yearly incremental loss of value is our amortization expense.

Amortization is the method used with office equipment, small tools and equipment, communication equipment and other miscellaneous equipment.

Amortization of these items is permitted to simplify tracking and accounting for the many small and moveable items of plant.

Capitalization Policy

The Company's capitalization policy is the set of rules by which accounting charges are applied to expenditures. It provides the framework for you to decide if the expenditure should be charged directly to Operating & Maintenance expense, or if it should be capitalized and expensed over time via depreciation.

General Policy

A capital expenditure is an expenditure, which improves, enlarges or adds to the service potential of an existing asset. An example would be adding a new roof to a building or adding a new compressor.

A maintenance expenditure neither increases nor decreases the value of an asset. Rather, it is incurred to maintain the existing service potential of an asset. An example would be painting a building or replacing a tire on a backhoe.

Expenditure on an existing asset:

Expenditure on an existing asset should be Capitalized and recognized in the Financial Statements as a non-current asset where the following criteria apply:

it is material in amount;

it does not relate solely to revenue which has already been brought to account;

it can be clearly identified as contributing to the planned service potential of the existing asset; and there has been a measurable increase in the existing service potential of the asset as indicated by either an extension to its useful life or its revenue-earning capacity, or both.

Expenditure on an existing asset that does not meet the above criteria should be treated as an expense of the current period. Maintenance expenditure does not affect the service potential of an asset beyond the current accounting period, and is treated as an expense in full in the period in which it is incurred.

Capital expenditure is either added to the book value of an asset, or is included in the new base value of an asset on revaluation, and is depreciated (or expensed) over the remaining (or extended) useful life of the asset created or enhanced.

Capitalization of Office Equipment

To qualify for capitalization, the purchase price of an individual piece of equipment must exceed \$500. This applies to the purchase of new equipment and equipment purchased off lease. FERC also requires that the equipment have a minimum service life of one year.

Amortization accounting is used when capitalizing and depreciating office equipment. This method consists of selecting a fixed period, amortizing amounts added during a vintage year and retiring the entire vintage at the end of the amortization period. Currently, the amortization period for office equipment is 15 years for Distribution – NY, Distribution – PA and Empire, and 43 years for Supply.

There is no descriptive detail maintained in Asset Records for amortized Office Equipment, therefore the accounting records cannot be used for inventory purposes.

Capitalization of Computer Systems

When a new computer system is being developed or purchased, including those involving cloud computing arrangements, certain costs can be capitalized while others must be charged to operating expense. In a project where the software is purchased or developed to reside on Company-owned servers or third-party servers in a cloud computing arrangement, the Company follows the accounting guidance in ASC350-40, Internal-Use Software, to determine whether the software costs should be capitalized or expensed.

Current Assets

Current assets are classified into the following categories:

Cash and Temporary Cash Investments
Receivables
Allowance for Uncollectible Accounts
Unbilled Utility Revenue
Gas Stored Underground
Materials & Supplies
Unrecovered Purchase Gas Costs
Prepayments
Inter / Intra Company Receivables

The following sections will provide guidance pertaining to each of the current asset categories above.

Cash & Temporary Cash Investments

Cash is made up of several items depending on whether you are looking at the Parent Company or at one of the individual subsidiaries. The main items are cash in the bank, cash in the money pool, cash in working funds, cash in transit and cash in investment accounts.

Temporary Cash Investments constitute payment of cash or its equivalent to obtain a subsequent cash or equivalent inflow and include investments in subsidiary entities. Classes of investments include term deposits, short-term securities, government fixed interest bonds, shares and equities, property investments, and interests in business undertakings.

For the treatment of specialized financial instruments such as futures contracts and swaps, entities should make reference to ASC 815 “Derivatives and Hedging” (formerly SFAS 133).

Policy

Cash received into the Company is processed and deposited as quickly as possible so that it becomes available for use or investment.

- Excess cash held by any subsidiary should be invested into the Company money pool or for those not participating, in an interest-bearing instrument.
- All cash balances are reconciled to supporting documentation and General Ledger balances on a monthly basis.
- All cash balances and bank statements are reconciled on a monthly basis.
- Reconciliations should be completed the month following the bank statement date, and no later than 30 days following the date the bank statement was received or 30 days after the Working Fund reconciliation reports are received, whichever is later.

All investments are to be recorded and reconciled to supporting documentation at the close of the reporting period.

Monetary investments are to be measured at the present value of the cash flows associated with their service potential and eventual payment. Such present values should be determined by discounting the cash flows at the rate of interest implicit in the original contract or other arrangement. Most monetary assets and liabilities are recognized at their face values because the implicit rate of interest is zero.

Receivables

Receivables are amounts owed to an entity at the end of an accounting period, for goods the entity sold or services the entity rendered prior to the end of that accounting period. This represents the total value of amounts that the entity is due to receive and that remain uncollected at that date.

The creation of an invoice usually evidences the recognition of a receivable, however, an invoiced amount does not become a receivable until the invoicing entity has provided the relevant goods or services.

The largest receivable balance on the books of the Company is related to the monthly billing for the sale of natural gas and transportation service. There are many additional miscellaneous receivables but none with the materiality of the customer accounts.

Policy

Customer Accounts Receivable (acct 142100) will be reconciled between SAP and the General Ledger system.

Accounts receivable is updated at the time an invoice is created, or a loan or advance given (or as soon as practicable after that date) and the balance due at the end of the accounting period brought to account in the financial statements.

The accounts receivable system and General Ledger includes accounts receivable that exist up to and including the last day of the reporting period.

Entities regularly generate accounts receivable reports, to determine outstanding balances and to facilitate action to collect overdue balances.

At the end of the accounting period, the accounts receivable report is reviewed for balances that are unlikely to be collectible.

Subsidiaries must reconcile accounts receivable records to the General Ledger at the end of the period. The reconciliations are to be documented, with all reconciling items identified and adjusted promptly.

Allowance for Uncollectible Accounts

The allowance for uncollectible accounts is an estimate of the amount of receivables outstanding at the end of the reporting period that the reporting entity does not expect to recover but has not yet written off as bad debts. Bad debts are receivables that the entity considers to be uncollectible.

Policy

Entities calculate and make entries to create an adequate allowance for doubtful accounts at the end of each reporting period. The Company's Utility segment, which has the greatest exposure to collection problems, estimates its accrual for uncollectible accounts expense at the beginning of each fiscal year using forecasted retail and transportation revenue for the upcoming year. The forecasted revenue is then multiplied by a historical average write-off percentage. This "base" expense amount is recorded monthly on a volumetric basis using projected volumes for the year, with monthly expenses increasing during the fall and winter months and decreasing during the spring and summer months. As such, seasonality is taken into account when recording uncollectible accounts expense. In addition, management may use qualitative considerations to increase or decrease the Utility segment allowance for doubtful accounts for economic circumstances affecting the Utility segment's geographic area, such as recessionary conditions or significant changes in gas prices that have not yet been reflected in the historical information.

Entities write off all known bad debts as they become recognized as uncollectible.

Regulated entities follow rate commission specified procedures for the writing off of bad debts.

Each quarter entities evaluate the adequacy of the provision for uncollectible accounts.

Accounting Entries:

On a monthly basis, an accounting entry is made debiting bad debt expense and crediting the allowance.

Dr:	551700 – Uncollectible Accounts Expense	xxx	
Cr:	144000 – Provision for Uncollectible Accounts		xxx

Bad Debt Write-offs:

Unpaid final bills are written off to Bad Debt approximately 365 days from the final bill issue date or 342 days from the final bill due date. Final bill collection activity may continue for an indefinite period and would be booked as a recovery if collected.

Dr:	144000 – Provision for Uncollectible Accounts	xxx	
Cr:	142100 – Customer Accounts Receivable		xxx
Cr:	241105 – Sales Tax		xxx

Unbilled Revenue

Unbilled Revenue is the current asset representing the Distribution revenues which have been earned during the month, but which will not be billed to customers until the next month. The accrual entry is made to accrue both the receivable and the revenues.

The unbilled amount is determined by selecting the qualified accounts, estimating the consumption from the last bill issued to the end of the month, then computing an amount of revenue based upon that consumption. For example, if we are running unbilled revenue for December and an account was last billed through December 20, we estimate the consumption for the account for the period from December 21 through December 31. A bill calculation is then performed producing the unbilled revenue.

Accounts qualify for unbilled revenue processing as follows:

- All active accounts
- Not hand billed
- Not billed as reserve gas
- And not billed as company gas

Once the revenue amount is determined, an entry is made similar to the following:

DR:	173000	Accrued Unbilled Revenue	15,300,000
CR	480006	Residential Unbilled	9,000,000
CR	481106	Commercial Unbilled	2,000,000
CR	481206	Industrial Unbilled	100,000
CR	481306	Public Authority Unbilled	200,000
CR	489269	Unbilled – Transportation	3,000,000
CR	186040	Deferred Unbilled-Imputed (NY only)	1,000,000
DR	591300	Purchased Gas Expense- Unbilled	5,000,000
CR	191140	Deferred Gas Cost	5,000,000

In the following month, the unbilled accrual is adjusted to the new accrual amount. This has the effect of reversing the original accrual and recording the new accrual. Note: the above entry may be recorded in the opposite direction (e.g. when adjusting the unbilled accrual from a colder month (March) to a warmer month (April)).

Gas Stored Underground

Gas Stored Underground relates to the value of the gas inventory that is currently being stored in underground storage facilities for Distribution.

Distribution's gas stored underground is carried at the lower of cost or market, on a last-in, first-out (LIFO) method. There are separate inventories for NY & PA, since each has its own contracts and gas needs.

Under the LIFO method, the last unit purchased for inventory is the first to be sold from inventory. On a monthly basis for NY, injections and withdrawals are priced according to the methodology from the settlement in May 2002 with the NYPSC in Case 00-G-1858. According to that methodology, during the injection cycle (April – October), storage injections and withdrawals are priced at the average commodity cost of gas purchased for the month. During the withdrawal cycle (November – March) storage injections and withdrawals are priced at the weighted average commodity cost of gas calculated over the previous injection cycle. It should be noted, this does not include demand charges.

For PA, the rate includes demand and commodity charges and is based on the period of October – September, which can include actual and projected data (same calculation since 1974). Since Distribution prices injections and withdrawals at the average purchased gas cost rate for each period, the result is that at the end of the storage withdrawal cycle in March, the value of gas left in inventory on a LIFO basis exceeds the value calculated on a FIFO (First in First out) basis.

In accordance with the Uniform Systems of Accounts and Generally Accepted Accounting Principles, Distribution records on its books, a deferred credit (Reserve for Gas Replacement) for the difference between the amount expensed and the inventory value. The basis for recording a credit to the Reserve for Gas Replacement (which rolls up to Other Accruals and Current Liabilities on the financial statements) is that it is expected that storage gas quantities withdrawn and sold will be restored by September 30. The Reserve for Gas Replacement is eliminated as gas is injected into storage, and the layers are restored at the original LIFO cost. The balance of the Reserve for Gas Replacement is included in rate base and effectively acts as a reduction in the Company's rate base.

Distribution Accounting Entries:

In Distribution, the entries related to the Gas Storage Inventory are booked to account 164101 in NY and 164102 in PA. The entries are made on product –1902 – Gas Accounting – Underground Storage.

Dr:	591700 – Gas Withdrawn from Storage – Debit	xx	
Cr:	591800 – Gas Delivered to Storage – Credit		xx
Cr:	164101 – Gas Storage – Current – NY		xx

(The above entry references a month in the heating/withdrawal season (typically November through March). An entry for a month in the injection season (typically April through October) would be recorded in reverse.)

The entries related to the Reserve account are as follows:

Dr:	164101 – Gas Storage – Current – NY	xx	
Cr:	253551 – Reserve for Gas Replacement		xx
or			
Dr:	253551 – Reserve for Gas Replacement	xx	
Cr:	164101 – Gas Storage – Current – NY		xx

The reserve for gas replacement is a liability account used to defer the imbalance between the LIFO Balance Sheet method and the FIFO (GAC current cost) method reported on the Income Statement. This account is adjusted to \$0 at fiscal year end.

Materials & Supplies

National Fuel maintains inventories of materials needed for the operations and maintenance of the pipelines, pipeline facilities and general or administrative facilities. These inventories are used by National Fuel employees or by contractors working on the Company's behalf, and are not inventories held for sale in the normal course of operations. The majority of the inventory value comes from the purchase of materials such as pipe, fittings, and compressor parts.

The Inventory Manager is responsible for managing the inventory system, reviewing the accounting charges generated by the system and reconciling the inventory balance with the General Ledger balances.

Inventory Methodology

Inventory is valued using the average weighted unit cost method. The method continually updates the price of the inventory items based on the value of each unit in the inventory. For example, if the inventory contains 5 items priced at \$1.00 each for a value of \$5.00 the weight average unit cost is \$1.00. If we buy 4 more units at \$1.50, the new inventory value would be \$11.00 for 9 units with a weight average unit cost of \$1.22.

Periodic Inventories

A physical inventory must be taken at least once every two years for the regulated subsidiaries. For the non-regulated subsidiaries with inventory, a physical inventory should be taken at least once every two years.

Additionally, the warehouse locations perform cycle counts of specific items within the inventory on a rotating basis. When certain criteria are encountered by the system, a cycle count is generated and inventory personnel must perform a physical count of the items.

Obsolete Material

An annual review of the inventory is performed to determine what material is obsolete. A "Slow Moving" Material Report is generated and reviewed by the Materials Management Department. Items with no usage in over three (3) years are deemed slow moving and are monitored. If an item continues to have no usage for a total of seven (7) years, the item is determined to be obsolete, the item is scrapped and the stock is not replenished. There is money set aside in the Materials Management Department budget to write-off obsolete material. During the Slow Moving Material Review, if material is determined to be obsolete, the material is charged against the overhead account (163008 – Stores Expense – Damaged Material) and any sales of the scrap material would be credited back to the overhead account to help offset those charges.

Inventory – Vendor Fabricated

In special cases, material that will be used in the construction of an asset may have to be fabricated by a vendor (example – compressor engine). If a prepayment or progress payments are made, the amounts will be booked to the Inventory - Vendor Fabrication account. When the item is completed, it will be transferred to the CWIP project and capitalized. This will prevent the item from accruing UNICAP or AFUDC prior to it being used.

Inventory Overhead

National Fuel uses an inventory overhead account to collect the non-material costs related to the inventory. These would include such costs as tax, freight and discounts related to the material purchases, labor to run the warehouse locations, utilities and maintenance of the warehouse facilities, and the operational costs of the computer system.

These costs are accumulated and then charged to the same accounting charges as was the material based on a loading factor methodology.

Procedures for Calculation

The inventory overhead costs are accumulated and then compared to the material that is issued out of the warehouse. The ratio of the overhead to the material costs becomes the loading factor percentage. The goal is to provide a reasonable overhead rate that would clear the account in a fair manner if the inventory were to be totally liquidated.

Application of overhead

The overhead is loaded on to the cost of all material that is issued from the inventory. It is calculated by multiplying the material costs by the loading factor percentage. The resulting amount is then charged to the same accounting charge as the material with a credit going to the 163000 – Inventory Overhead Account.

In addition to the overhead, there is certain material that has sales tax applied to it in the various states that National Fuel operates. The sales tax is loaded onto the cost of the material in accordance with the tax rate for the local where the material is to be used.

Policy

Cost is assigned to inventory by the weighted average cost method.

A physical inventory is taken at least once every two years.

Inventory overhead is loaded on to all inventory issue transactions.

Inventory value is updated when receiving reports are processed.

Inventory overhead rates are reviewed and updated at least once per year.

Unrecovered Purchased Gas Costs

Unrecovered purchased gas costs are deferred asset accounts that accumulate the amount of purchased gas costs that are not matched with the gas costs included in gas rates. Each month a calculation is made to match the gas costs that were predicted in rates to the actual costs paid by the utility. Keeping in mind that the Company does not make money on the actual gas costs, the difference is then deferred and either surcharged or refunded to the customers once reconciled with the Rate Commissions.

Recovery Methods:

In the New York jurisdiction of Distribution Corporation, the annual reconciliation determines the rate (based on annual volumes) and is collected via the monthly Gas Adjustment Clause (GAC).

In the Pennsylvania jurisdiction of Distribution Corporation, the Company files an annual 1307(f) with quarterly adjustments available. (The base case in the Pennsylvania jurisdiction does not determine gas costs; the 1307(f) filing establishes the rates).

In either case, the amounts that are deferred on the books are recovered or passed back to the customers via the monthly billing process.

Accounting Treatment:

During the matching gas process, deferred differences are booked as follows:

Dr:	Deferred Gas Costs	xxx	
Cr:	Purchased Gas Cost Adjustment		xxx

When being recovered, the entry reverses.

Prepayments and Other Current Assets

Prepayments are payments made in one reporting period, for goods or services that the entity expects to receive or consume in future periods. The most typical examples of these prepayments are: property taxes, insurance premiums, membership dues or leasing. Other current assets can include the current portion of regulatory assets.

Amortization of Costs

The costs subject to prepayment treatment should be amortized to correspond with the use of the costs. As an example, in the case of prepaid property taxes, the prepayment would be recorded when the taxes are paid. An amortization would then be set up to charge 1/12 of the total to property tax expense each month for the year covered by the taxes and to relieve that same amount from the prepayment account.

Reconciliations

Prepayment accounts should be reconciled on an on-going basis to ensure that the proper amounts are being routinely expensed and that the remaining amount reflects the portion that remains to be used. These accounts must be reconciled at least quarterly.

Reconciliations are the responsibility of the person or Department that oversee the expenses that are prepaid.

Policy

Prepayments are recognized in the period that the payment is made, and expenses only for that period should be recognized.

Prepaid accounts are reconciled at least annually to insure that the proper amounts are being amortized and that the remaining balance is correct.

Inter-Company / Inter-Unit Receivables

Inter-Company and Inter-Unit receivables are Accounts Receivable accounts in the account range 146000 – 146999, that are set up to account for transactions between and among National Fuel subsidiaries. Entries to generate an account receivable should always be matched with an entry in another subsidiary to generate an account payable.

Inter-Company

Inter-company Receivables are amounts that are to be collected from another subsidiary as the result of a manual accounting transaction or non-PeopleSoft system transactions (e.g. manual intercompany billing of labor/fringes/vacation).

Inter-Unit

Inter-unit Receivables are amounts that are generated as a result of PeopleSoft system transactions between business units (e.g. transactions processed through the accounts payable, asset management or inventory modules). With the exception of certain adjusting entries, these should always be generated by the PeopleSoft system.

Billing Process

At the end of the accounting period, if intercompany charges equal or exceed \$5,000, an invoice is prepared and issued by the subsidiary that provided the service to the subsidiary that received the service. These amounts should be paid in a timely manner and the appropriate entries made to clear the account receivable. If intercompany charges do not reach the \$5,000 threshold by fiscal year end, an invoice will be prepared and issued in the beginning of the new fiscal year.

Invoices should be rendered with enough detail so that the subsidiary receiving the invoice can identify the amounts owed. The invoice should be approved by an officer of the company owing the amounts prior to being paid via wire transfer or check.

Reconciliation Process

At the end of each accounting period, a reconciliation of the Inter-company and Inter-unit accounts should be performed. The reconciliation should be between the receivable and the offsetting payable on another subsidiaries books. Any differences should be identified and corrected immediately when found.

Differences in the balances will cause the inter-company elimination portion of the consolidation to be out of balance.

Other Assets

Just as current assets are those that are expected to become cash, sold, or consumed in the near future (less than one year), non-current assets are the opposite. They are not considered to be liquid or near cash equivalents.

Generally, non-current assets are stated at their historical cost less depreciation. Non-current assets include items such as property, plant and equipment, goodwill, deferred taxes and regulatory assets.

Non current assets are classified into the following categories:

- Recoverable Future Taxes
- Unamortized Debt expense
- Other Regulatory Assets
- Deferred Charges
- Other Investments
- Goodwill
- Intangible Assets
- Fair Value of Derivative Financial Instruments
- Other

The following sections will provide guidance pertaining to each of the non-current asset classes above:

Recoverable Future Taxes

The Company follows ASC 740 "Income Taxes" (formerly SFAS 109) and in accordance with this authoritative guidance is required to reflect all deferred tax assets and liabilities on its balance sheet. In the case of the rate-regulated entities, certain deferred tax liabilities have been recorded on the balance sheet, largely associated with differences between book and tax depreciation. A regulatory asset called 'Recoverable Future Taxes' has been established as an offset to the deferred tax liability. This regulatory asset recognizes the fact that the deferred future tax expense associated with the deferred tax liability will be recovered in customer rates in the future.

Accounting Treatment:

Journal entries are made quarterly to adjust the balance in the Deferred Asset account based on the creation or dissolution of the timing differences related to the account.

Dr:	182303- Deferred SFAS 109 Asset	xxx	
Cr:	283109 - Accumulated Deferred Income Taxes SFAS 109		xxx

As the differences are resolved, the entry will be reversed.

Unamortized Debt Expense

Unamortized debt expense includes two components, deferred debt issuance costs incurred by National Fuel Gas Company (Parent) and deferred losses associated with the reacquisition of debt by the regulated subsidiaries. At the Parent level, deferred debt issuance costs are amortized over the life of the associated debt. At the regulated subsidiary level, deferred losses associated with the reacquisition of debt are handled in different ways. If the deferred loss resulted from the reacquisition of long-term debt without the issuance of replacement debt, the deferred loss is amortized over the remaining life of the old debt. If the deferred loss resulted from the reacquisition of long-term debt with the issuance of replacement debt, the deferred loss is amortized over the life of the new debt that is issued. Please refer to General Instruction 17 of the FERC Uniform System of Accounts.

Accounting Entries for Regulated Subsidiaries:

The unamortized loss on reacquired debt is booked to account 189000 when paid to the Parent. The monthly amortization is charged to account 428100 – Amortization of Loss on Reacquired Debt.

To record redemption of debt and loss on reacquired debt:

Dr: 189000 – Unamortized Loss on Reacquired Debt
Dr: 223000 – Advances from Associated Companies
Cr: 234102 – A/P Interco – Nat Fuel Gas Co

To record the monthly amortization:

Dr: 428100 - Amortization of Loss on Reacquired Debt.
Cr: 189000 – Unamortized Loss on Reacquired Debt

Accounting Entries for Parent Company:

To record payment of debt issuance costs:

Dr: 186XXX – Deferred Debt Issuance Costs & Debt Discount
Cr: XXXXXX – Cash

To record issuance of debt at discount:

Dr: XXXXXX –Cash
Dr: 186XXX - Deferred Debt Issuance Costs & Debt Discount
Cr: 224XXX – Long-Term Debt

To record monthly amortization:

Dr: 472002 – Amortization of Premium, Discount & Expense
Cr: 186XXX – Deferred Debt Issuance Costs & Debt Discount

At the consolidated National Fuel Gas Company level, the deferred debt issuance and debt discount costs recorded by the Parent Company are presented in the balance sheet as a direct deduction from the carrying value of the debt.

Other Regulatory Assets

Regulatory Assets are assets that result from rate actions of the regulatory agencies. Regulatory assets arise from specific revenues, expenses, gains, or losses that would have been included in net income determinations in one period under the general requirements of the Uniform System of Accounts but for it being probable that such items will be included in a different period(s) for purposes of developing the rates the utility is authorized to charge for its utility services.

Guidelines

To be classified as a regulatory asset, there must be a previous or current rate case, settlement order or regulatory guidance instructing the company to defer the costs associated with an event. The order will usually specify the methodology for collection or amortization of the costs deferred. Currently, deferred pension, OPEB, income taxes not previously recorded because of prior ratemaking practices, environmental site remediation and asset retirement obligations are the major costs included in the regulatory asset accounts.

In cases where the rate case, settlement or regulatory guidance calls for a reconciliation or “true-up” between the revenues collected from the customer and the costs incurred over a specific period of time, a regulatory asset for an undercollection (or regulatory liability for an overcollection, if appropriate) will be recorded at least quarterly when the overcollection or undercollection can be calculated with a reasonable degree of accuracy. NY Distribution’s Merchant Function Charge, Revenue Decoupling Mechanism, 90/10 Symmetrical Sharing Adjustment, and its Lost and Unaccounted For Gas Adjustment are examples of regulatory assets (or regulatory liabilities) being created through reconciliation or “true-up”.

Rate Treatment

Each regulatory asset will have its own rate treatment based upon the decision of the commissions. In some cases, the costs will be amortized over a specific period of time, in others, the Company may collect the costs in rates or offset them with other amounts previously collected.

For additional information regarding the treatment of regulatory assets, a call to the Rates Department or the Accounting Department will bring assistance.

Reconciliation

The accounts included as regulatory assets are reconciled quarterly or for insignificant amounts, annually.

Research, Development & Demonstration

Research, Development & Demonstration (RD&D) relates to costs that are incurred in researching new methods, technologies, and equipment that are designed to provide more efficient uses of gas and to make the process of servicing the pipeline and customers more efficient.

Procedure

RD&D costs are charged to a sub-account of 188000 as they are incurred. Then, depending on the entity and rate treatment, the costs are cleared from the 188xxx account and charged to either O&M expense or a capital account.

Rate Treatment

The Company's various regulatory bodies provide differing rate treatment for RD&D expenditures.

Distribution - New York:

In NYD, the RD&D process is based on a deferral methodology. Amounts collected in rates are matched against expenditures for a period. Costs are expensed up to the point of matching revenues for the period. Excess costs are deferred and excess revenues are also deferred. The deferred revenues or expenses can be matched against future revenues or expenses. At the end of the rate cycle, the remaining deferral amount is subject to future considerations.

Distribution – Pennsylvania:

In PAD, the RD&D expenditures are charged directly to expense.

Supply Corporation:

In Supply, the RD&D costs are directly expensed.

Empire State Pipeline:

In Empire, the RD&D costs are directly expensed.

Reconciliations:

The account should be reconciled on an annual basis to ensure that the costs have been properly charged to expense or in cases where deferred balances remain, the account should be reconciled to the rate policy in effect at the time.

Deferred Charges

Deferred charges are expenses that have been incurred and are being accumulated while awaiting future disposition. The future disposition might be a simple write-off after a project is complete, an allocation between subsidiaries for amounts paid out or capitalization once a determination has been made on a project.

Deferred Asset Account Groupings:

The following account groupings make up the majority of the balance that is usually contained in the Deferred Asset accounts:

Preliminary Survey & Investigation:

Preliminary costs of investigating the feasibility of a project or acquisition.

Clearing Accounts:

Clearing accounts are used to accumulate costs pertaining to a specific department or activity, and are then cleared out and charged to the appropriate expense or capital accounts.

Miscellaneous Deferred Assets:

There are several accounts that are contained in this general group such as Accumulated Deferred Income Tax and the '84 Plan Restricted Stock at the Parent level. Again these accounts are awaiting disposition at a future date.

Right-of-Use Assets:

In accordance with ASC 842, the Company records a right-of-use asset for its operating leases in accordance with the provisions of ASC 842.

Preliminary Survey & Investigation:

Preliminary Survey and Investigation accounts are used by the regulated subsidiaries when a project is in the preliminary stages of being developed. In this stage, work is performed to determine the feasibility of continuing the project to completion. If the project is approved, the costs are transferred to a Construction work in progress (CWIP) project and eventually converted to a plant asset. If the project is not going forward, the costs are transferred to an expense account and charged to the income statement.

Policy:

A reserve will initially be established for all preliminary survey and investigation charges related to expansion projects as well as routine replacement or modernization projects associated with existing pipeline, storage or compression facilities where the preliminary survey and investigation charges are expected to equal or exceed \$5 million. Expansion projects are defined as pipeline, storage or compression projects that do not involve routine replacement or modernization of existing facilities. The decision to stop reserving for such projects and to reverse any previously established reserves must be approved by the subsidiary president, Chief Executive Officer, and the Board of Directors. No reserve is required for expansion projects and routine replacement or modernization projects where the preliminary survey and investigation charges are expected to be less than \$5 million. All charges to preliminary survey must go through a project id, except for manual accruals recorded on the quarter and reversed the following month. The preliminary survey accounts must be reconciled on a quarterly basis. Project status must be monitored quarterly and a determination made on each project with respect to continuing to reserve for preliminary survey costs, discontinuing reserve accounting for preliminary survey costs (including reversal of the previously established reserve), or writing off the project.

Each project will be evaluated for the following: (a) the amount of binding customer commitment to the project, (b) environmental and technical obstacles to constructing the project, (c) the ability of customers to back out of a project, (d) termination provisions in precedent agreements that allow the Company to recover any project costs incurred, and (e) the regulatory risk associated with whether a project will go forward or not. During this process, management will assign one of the following classifications to each project:

- The project is a “no go” or the likelihood of completion is “remote” and should be written off.
- The project is considered “more likely than not to be completed” or the likelihood of completion is “reasonably possible”, in which case preliminary survey costs will continue to be incurred and a reserve established if such costs equal or exceed \$5 million or management otherwise deems it prudent.
- The project is considered “probable of being completed”, in which case reserving for future preliminary survey costs will stop and any previously established reserves will be reversed. For a project to be considered “probable of being completed”, management must consider all the factors above and must determine that the project is financially viable at the current level of binding customer commitment and that there are no known significant obstacles to completing the project. The decision to stop reserving for future preliminary survey costs related to expansion projects and, if applicable, routine replacement and modernization projects where the preliminary survey and investigation charges are expected to equal or exceed \$5 million, and to reverse any previously established reserves associated with those projects must be agreed to by the subsidiary president, the Chief Executive Officer, and the Board of Directors.

The Accounting Department will prepare contemporaneous documentation supporting the decision to classify any preliminary survey expansion project or routine replacement or modernization project where the preliminary survey and investigation charges are expected to equal or exceed \$5 million as “probable of being completed.”

Reserving Projects

Establishing a reserve for a project creates an accounting entry to charge an expense account and an offsetting preliminary survey deferral account.

Dr:	426500 – Misc Other Deductions	1,000.00	
Cr:	183210 – Reserve for Preliminary Survey		1,000.00

If the project does go forward, the reserve would be reversed and the charges booked to the proper project account (107000).

Dr:	183210 – Reserve for Preliminary Survey	1,000.00	
Cr:	426500 – Misc Other Deductions		1,000.00

If the project does not go forward, the reserve should be netted against the preliminary survey and investigation account (183200).

Reconciliations:

The preliminary survey & investigation balance on the trial balance should be reconciled to the value of open projects with accounting charges that include a sub-account of 1832xx. Any discrepancies should be reconciled in a timely manner and corrected.

Clearing Accounts

Clearing accounts are accounts that are used to accumulate costs related to a specific process or department. These costs are then allocated or charged out of the clearing accounts on a regular basis. There are many different clearing accounts used within the subsidiaries at National Fuel.

Most of the clearing accounts gather costs related to a process and then are allocated to multiple departments, jurisdictions or subsidiaries. The basis for the various allocations differs based on the types of costs being gathered. Typically, the basis for the allocations is a causative factor that fairly charges the costs in the manner in which they are used. For example, PC related costs are allocated based on the number of PCs within a department; customer-billing costs are allocated based on the number of customers in NY and PA.

Policy for clearing account usage:

Justification for use must be established as opposed to direct charging the costs.

An allocation methodology must be determined when the account is set up.

Charges must be cleared on a monthly basis and the account must be zeroed out by fiscal year end. (Lagged accounts and Vehicle excluded.)

Accounts are monitored to ensure that charges are properly being allocated and applied to the proper accounting charges.

Allocation methodologies:

Each clearing account must have a stated method for clearing the costs.

The methodologies should be discussed with the Accounting Department and the Rates and Regulatory Affairs Department prior to application to ensure that the accounts are receiving the proper rate treatment.

The methodologies should be reviewed on an annual basis to determine if they are the most appropriate method to fairly clear the costs.

See the Cost Application and Allocation Manual (CAAM) for additional details

Miscellaneous Deferred Assets

Miscellaneous deferred assets consist of accounts from deferred income taxes to deferred project costs. While the costs are very different in nature, their basic characteristics are not substantially different. These are costs that are being accumulated for which disposition of the costs is in a future period.

Accounting Treatment:

From an accounting standpoint, the charges being accumulated are a debit to the deferral account and a credit to an offset such as Accounts Payable.

Dr:	Misc. Deferred Asset	xxx	
Cr:	Accounts Payable		xxx

When the eventual disposition is booked, the charges would likely be a debit to an expense and a credit to the deferred asset account.

Dr:	Expense	xxx	
Cr:	Misc. Deferred Asset		xxx

Other Investments

Other investments include cash surrender values of insurance contracts (or net present value of cumulative premiums paid for split dollar life insurance policies) and marketable equity securities. The insurance contracts and marketable equity securities are primarily informal funding mechanisms for various benefit obligations the Company has to certain employees.

Cash surrender values are updated quarterly from the respective insurance companies / brokers. The net present value of cumulative premiums paid for split dollar life insurance policies is also updated quarterly. The accounting entry is either:

- a.) To record increase in cash surrender value.
- | | | | |
|-----|--|----|----|
| Dr. | Cash Surrender Value/Net Present Value (asset) | xx | |
| Cr. | Other Income | | xx |
- Or
- b.) To record decrease in cash surrender value.
- | | | | |
|-----|--|----|----|
| Dr. | Other Income | xx | |
| Cr. | Cash Surrender Value/Net Present Value (asset) | | xx |

The marketable equity securities are accounted for in accordance with ASC 825-10 "Financial Instruments – Overall." Each month or quarter, the investments are marked-to-market with the change in fair market value recorded as other income (deductions) on the income statement. The accounting entry is either:

- a.) To record an increase in the FMV of the marketable security.
- | | | | |
|-----|------------------------------------|----|----|
| Dr. | Marketable Equity Security (asset) | xx | |
| Cr. | Other Income (Deductions) | | xx |
- Or
- b.) To record a decrease in the FMV of the marketable security.
- | | | | |
|-----|--------------------------------------|----|----|
| Dr. | Other Income (Deductions) | xx | |
| Cr. | Marketable Equity Securities (asset) | | xx |

Goodwill

The Company currently has goodwill on its books related to the acquisition of the Empire State Pipeline in February 2003. Goodwill is defined as the excess of the purchase price over the fair value of the net assets and liabilities acquired.

In accordance with ASC 350 “Intangibles – Goodwill and Other” (formerly SFAS 142), the Company does not amortize the goodwill balance. An annual impairment test of the goodwill balance is a qualitative one, using company specific and industry information to verify that an impairment would be unlikely. If it is found that the value of the Goodwill has been impaired, an impairment entry will be generated.

Policy

No amortization will be booked related to goodwill balances.

An annual impairment test must be performed.

Fair Value of Derivative Financial Instruments

The Company can use a variety of derivative financial instruments to manage a portion of the market risk associated with fluctuations in the price of natural gas and crude oil, including over-the-counter price swap agreements and no cost collars. In addition, the Company uses foreign exchange forward contracts to manage the risk of the US dollar devaluing relative to the Canadian dollar since we utilize Canadian pipeline capacity. Under the price swap agreements, the Company receives monthly payments from (or makes payments to) other parties based upon the difference between a fixed price and a variable price as specified by the agreement. The no cost collars provide for the Company to receive monthly payments from (or make payments to) other parties when a variable price falls below an established floor price (the Company receives payment from the counterparty) or exceeds an established ceiling price (the Company pays the counterparty). Under the foreign exchange forward contracts, the Company receives a fixed price in exchange for paying a variable price.

Accounting Treatment

The Company accounts for its derivative financial instruments in accordance with ASC 815 “Derivatives and Hedging” (formerly SFAS 133). Per this authoritative guidance, the Company’s derivative financial instruments discussed above are classified as cash flow hedges.

Other Assets

Other Assets is a catchall category for items not previously categorized. This includes security deposits, emission credits, investments, due from insurance, cash surrender values and non-current federal taxes receivable.

Liabilities

Liabilities are the financial obligations of an entity to other parties. They represent in monetary terms the amounts the entity “owes” and expects to pay at some time in the future.

It is important that management be fully aware of its obligations and the resources that will be required to settle those obligations at some time in the future. It is also essential that management know when these liabilities are likely to be payable in order that funds can be managed appropriately.

The following section deals with the various categories of liabilities on the Company’s books.

Recognizing Liabilities

The recognition of liabilities is necessary for a Company if the financial reports are to accurately represent the obligations incurred by it and the resources that will be required to be transferred or paid to other entities at some time in the future to settle those obligations. Additionally, where the incurrence of a liability involves a corresponding expense, the omission of the liability from the financial reports would also cause the omission of relevant information about the costs of operations and therefore, the performance of the Company.

A liability should be recognized, when the following conditions exist: it is probable that a payment or other sacrifice of future economic benefits will be required; and the amount of the liability can be reliably measured. The amount recorded as a liability must represent in monetary terms the obligation that must be settled by payment or other sacrifice of economic benefits.

Liability Accruals

At the end of the accounting period, or minimally, at the end of the quarter, an evaluation of potential liability accruals is performed. Any liabilities that are identified are quantified and assessed to determine if journal entries should be made to accrue the liability and offsetting expense or capital charge using the following analysis:

In regards to accrued expenses and accrued revenues, at each quarter end, the Accounting Department will send out a request to all department managers and officers asking them to report to the Accounting Department any expense or revenue generating transactions, including invoice amounts (or anticipated invoice amounts) received after quarter end, which equal or exceed \$200,000 and relate to services received by or provided by the Company during the previous quarter end. These amounts shall be items that impact the income statement. The evaluation by the department managers should include, but not be limited to, uninvoiced receipts, liability claims, environmental claims, probable refunds, services performed not yet billed, and invoices received not yet entered into the accounting system. If there is a question whether or not an item would qualify for an accrual, the Accounting Department should be contacted for assistance. All amounts greater than \$200,000 received prior to the closing of the general ledger will be accrued on the general ledger. For any amounts received after the closing of the general ledger, the Controller/Chief Accounting Officer or General Manager of Accounting will accumulate such responses to determine the necessity of recording any additional accruals on the Company’s financial statements at quarter end. The necessity of recording any additional accruals will be made by aggregating the individual amounts received. If the aggregate amount equals or exceeds a pre-tax dollar amount that approximates \$0.01 per diluted share (calculated as the prior fiscal year weighted average diluted shares times 0.014 divided by 0.79), an additional accrual will be made at quarter end. If the aggregate amount is less than that pre-tax dollar amount, no additional accrual will be made. The Controller/Chief Accounting Officer or General Manager of Accounting will maintain copies of all responses received and the Accounting Department will prepare supporting documentation for the recording of an additional accrual.

For balance sheet accruals, at each quarter end, the Accounting Department will send out a request to all department managers and officers asking them to report to the Accounting Department any balance sheet transactions invoiced on or before quarter end but received after quarter end, which equal or

exceed \$1,000,000 and relate to goods or services received by the Company during the previous quarter end. These amounts shall be items that impact the balance sheet only. The evaluation by the department managers should include, but not be limited to, uninvoiced receipts for inventory or capital items received and services performed not yet billed related to capital projects.

Specifically for capital projects, each project is evaluated by the respective project manager. The project manager determines an estimate of the percentage of completion on the project that is applied to the overall estimated cost of the project to determine an estimate of the cost of the project incurred to date. That estimate is compared to the actual costs recorded for the project and if the estimated cost of the project to date exceeds the actual costs recorded for the project to date by \$1,000,000 or more, an accrual is established for that project.

If there is a question whether or not an item would qualify for an accrual, the Accounting Department should be contacted for assistance. All amounts received prior to the closing of the general ledger will be accrued on the general ledger. For any amounts received after the closing of the general ledger, the Controller/Chief Accounting Officer or General Manager of Accounting will accumulate such responses to determine the necessity of recording any additional accruals on the Company's financial statements at quarter end. The necessity of recording any additional accruals will be made by aggregating the individual amounts received. If the aggregate amount equals or exceeds 1.0% of total consolidated current and accrued liabilities excluding current portion of long-term debt (calculated as 1.0% multiplied by the previous fiscal year end total consolidated current and accrued liabilities, excluding current portion of long-term debt), an additional accrual will be made at quarter end. The majority of such accruals will most likely be capital in nature and therefore will impact consolidated property, plant and equipment. Since consolidated property, plant and equipment is significantly larger than consolidated current and accrued liabilities, the most conservative approach is to base the aggregation threshold for accrual on the smaller of the two numbers. The Controller/Chief Accounting Officer or General Manager of Accounting will maintain copies of all responses received and the Accounting department will prepare supporting documentation for recording an additional accrual.

The Accounts Payable Department also forwards to the Accounting Department any invoices it receives for payment processing after the quarter end that are greater than \$200,000 for items with an income statement impact and \$1,000,000 for items with a balance sheet impact. The Accounting Department then accrues the invoices on the general ledger for all invoices received from Accounts Payable prior to the general ledger close. Any invoices received from Accounts Payable after the general ledger close, are accumulated as indicated in the above paragraphs.

In some cases, the accruals will be reversed when the invoice is received and recorded in the system, or when the claim becomes less probable or is settled. In other cases, the accruals may be ongoing until such time as the claim is settled or a regulatory decision is reached.

Current and Accrued Liabilities

Current and Accrued Liabilities are classified into the following categories:

Notes Payable to Banks and Commercial Paper
 Current Portion of Long-Term Debt
 Accounts Payable
 Amounts Payable to Customers
 Other Accruals and Current Liabilities, including Current Portion of Lease Obligations Under ASC 842
 Fair Value of Derivative Financial Instruments
 Inter / Intra Company Payables

The following sections will provide guidance pertaining to each of the current and accrued liabilities categories listed above.

Notes Payable to Banks and Commercial Paper

The Parent Company borrows short-term money to provide funds for the operations of the subsidiaries. These funds come from short-term bank loans or the issuing of National Fuel Gas Company commercial paper.

The funds borrowed along with funds that are invested by the subsidiaries make up the National Fuel Money Pool. The money pool is an internal vehicle, which allows the subsidiaries to borrow funds or invest extra funds on a short-term basis. The money pool transactions are administered through the Cash Manager. A report of money pool sources and borrowings is maintained and reconciled.

Accounting Treatment:

The accounting for notes payable is a straightforward debit to cash and a credit to notes payable.

Dr:	Cash	xxx	
Cr:	Notes Payable to banks & commercial paper		xxx

As the amounts are paid down, the accounting reverses and any interest paid is charged to interest expense.

Dr:	Notes Payable to banks & commercial paper	xxx	
Dr:	Interest Expense	xxx	
Cr:	Cash		xxx

Current Portion of Long-Term Debt

The Current portion of Long-Term Debt refers to debt that is coming due within the next year. This account plus the long-term debt account should be the total outstanding debt of the Company.

Accounting entries are made to reclassify the Current Portion of the Long-Term Debt on a monthly basis. This takes place on both the books of the Parent Company and the Subsidiary with the matching debt. The Parent's books and the books of the subsidiaries should always be in synch with the current and long-term portions of debt.

Dr:	Long-Term Debt	xxx	
Cr:	Current Portion of Long-Term Debt		xxx

Policy:

Long-term debt due within the next year is reclassified to current.

Current Debt on the Parents books matches the current debt on the subsidiary books.

Current Portion of Long-Term Debt will not include unamortized debt issuance costs if the unamortized debt issuance cost balance is less than \$1 million.

Accounts Payable

Payables represent the amount owed for goods and services received prior to the end of the reporting period that is unpaid at the end of the period. Payables are usually thought of as Accounts Payable or Trade Payables, which are the obligations for which invoices are rendered, and payments are made.

In addition to the Trade Payables, there are also Accrued Expenses, which represent goods or services provided by other parties during the period that are unpaid at the end of the reporting period and where an invoice has not been received or was received after the Accounts Payable Department cut-off date.

The department responsible for the settlement of the liability should maintain payables balances relating to employee benefit programs and other miscellaneous liabilities.

Policy

All invoices that relate to goods and services received during the accounting period that have not been processed at the end of the period equal to or in excess of \$200,000 of an income statement impact or \$1,000,000 of a balance sheet impact should be evaluated and forwarded to the Accounting Department. The Accounting Department accrues all invoices received from Accounts Payable prior to the general ledger close. Any invoices received from Accounts Payable after the general ledger close are accumulated as indicated under the [Liability Accruals](#) section of this Accounting Policy Manual.

All payables accounts must be reconciled to the general ledger at least once per fiscal year.

Vouchers Payable should be reconciled monthly by the Accounts Payable Department to ensure that the detail and the general ledger are in balance.

Amounts Payable to Customers

Amounts Payable to Customers is a liability that occurs when the Company has over-collected amounts contained in rates. This would include not only the refunds, but also any interest that has accrued on the over-collection.

The account balance is typically made up of amounts for supplier refunds, and other customer gas related refunds.

Accounting Treatment:

The accounting for these accounts is a debit to an offsetting expense or revenue account and a credit to a liability account, such as:

Dr:	Other Gas Revenues	xxx	
Cr:	Accrued Bill Credit – NY		xxx

When the amounts are paid or netted against another cost, the entry is reversed.

Other Accruals and Current Liabilities

“Other Accruals and Current Liabilities” represent amounts that have been accrued, collected or withheld with the purpose of remitting the amounts to others. These would include items such as customer security deposits, accrued payroll, accrued income taxes, payroll taxes, accrued legal, accrued annual incentives and current portion of regulatory liabilities.

The charges to these accounts come from many sources, but they all have the same basic characteristics – they will be paid out or resolved within a short period of time.

Accounting Treatment:

The accounting related to these items should be straightforward. The liability accounts are credited and the offsetting debits will most often be charged to an expense account or to a balance sheet account, such as property, plant, and equipment (PP&E) or regulatory asset, depending on the nature of the accrual.

Dr:	Expense, PP&E, or Regulatory Asset	xxx	
Cr:	Accrued Liability		xxx

When resolved, the liability accounts will be debited with an offsetting credit to cash or accounts payable.

Dr:	Accrued Liability	xxx	
Cr:	Cash / Accounts Payable		xxx

Policy:

Any invoices received from Accounts Payable after the general ledger close are accumulated as indicated under the [Liability Accruals](#) section of this Accounting Policy Manual.

These accounts, unless they meet the criteria of significant accounts, should be reconciled at least once per fiscal year.

Accrual entries should include a spreadsheet or worksheet to show the calculation of the amounts.

Fair Value of Derivative Financial Instruments

The Company can use a variety of derivative financial instruments to manage a portion of the market risk associated with fluctuations in the price of natural gas and crude oil, including over-the-counter price swap agreements and no cost collars. In addition, the Company uses foreign exchange forward contracts to manage the risk of the US dollar devaluing relative to the Canadian dollar since we utilize Canadian pipeline capacity. Under the price swap agreements, the Company receives monthly payments from (or makes payments to) other parties based upon the difference between a fixed price and a variable price as specified by the agreement. The no cost collars provide for the Company to receive monthly payments from (or make payments to) other parties when a variable price falls below an established floor price (the Company receives payment from the counterparty) or exceeds an established ceiling price (the Company pays the counterparty). Under the foreign exchange forward contracts, the Company receives a fixed price in exchange for paying a variable price.

Accounting Treatment

The Company accounts for its derivative financial instruments in accordance with ASC 815 “Derivatives and Hedging” (formerly SFAS 133). Per this authoritative guidance, the Company’s derivative financial instruments discussed above are classified as cash flow hedges.

See Section 8 for additional information on Derivative Accounting.

Inter-Company / Inter-Unit Payables

Inter-Company and Inter-Unit payables are Accounts Payable accounts in the account range 234300 – 234999, that are set up to account for transactions between and among subsidiaries of NFG Company. Entries to generate an account payable should always be matched with an entry in another subsidiary to generate an account receivable.

Inter-Company

Inter-company Payables are amounts that are to be paid to another subsidiary as the result of a manual accounting transaction or non-PeopleSoft system transactions.

Inter-Unit

Inter-unit Payables are amounts that are generated as a result of PeopleSoft system transactions between business units. With the exception of certain adjusting entries, these should always be generated by the PeopleSoft system.

Billing Process

At the end of the accounting period, if intercompany charges equal or exceed \$5,000, an invoice is prepared and issued by the subsidiary that provided the service to the subsidiary that received the service. These amounts should be paid in a timely manner and the appropriate entries made to clear the account payable. If intercompany charges do not reach the \$5,000 threshold by fiscal year end, an invoice will be prepared and issued in the beginning of the new fiscal year.

When the invoice is received, it should include enough detail to identify the amounts owed. The invoice should be reviewed and compared to the books to verify the amounts owed. The invoice should be approved by an officer of the company prior to being paid via wire transfer or check.

Reconciliation Process

At the end of each accounting period, a reconciliation of the inter-company and inter-unit accounts should be performed. The reconciliation should be between the payable and the offsetting receivable on another subsidiaries books. Any differences must be identified and corrected immediately when found.

Differences in the balances will cause the inter-company elimination portion of the consolidation to be out of balance.

Deferred Credits

Deferred credits are liabilities that arise from transactions in which there will be a future recognition of revenues or advances from customers for which future delivery of goods or the performance of service will satisfy the obligation. In a regulatory environment, these may also be related to over-collections that may eventually be refunded to customers.

Deferred Credits are classified into the following categories:

- Accumulated Deferred Income Taxes
- Taxes Refundable to Customers
- Unamortized Investment Tax Credit
- Cost of Removal Regulatory Liability
- Other Regulatory Liabilities
- Pension Liability
- Asset Retirement Obligation
- Other Deferred Credits, including Lease Obligations under ASC 842

The following sections will provide guidance pertaining to each of the deferred credit categories listed above

Accumulated Deferred Income Taxes

Accumulated deferred income taxes represent the cumulative balance attributable to deferred income tax expense, which has not been reversed.

A deferred tax liability is recognized for temporary differences that result in tax deductions currently that will not be reflected for financial accounting purposes until later years. An example would be accelerated income tax depreciation.

Entries:

Dr:	410xxx - Provision for Deferred Income Taxes	xxx	
Cr:	282/283xxx – Accumulated Deferred Income Taxes		xxx
Dr:	282/283xxx – Accumulated Deferred Income Taxes	xxx	
Cr:	411xxx – Deferred Income Tax – Credit		xxx

Taxes Refundable to Customers

The Company follows ASC 740 "Income Taxes" (formerly SFAS 109), and in accordance with this authoritative guidance is required to reflect all deferred tax assets and liabilities on its balance sheet. In the case of the rate-regulated entities, certain deferred tax assets have been recorded on the balance sheet.

A regulatory liability called 'Taxes Refundable to Customers' has been established as an offset to the deferred tax asset. This regulatory liability recognizes that excess deferred taxes will be refunded to customers over the life of the assets.

Accounting Treatment:

Journal entries are made quarterly to adjust the balance in the Deferred Liability account based on the creation or dissolution of the timing differences related to the account.

Dr:	283109 - Accumulated Deferred Income Taxes FAS109	xxx	
Cr:	254001 - Deferred FAS109 Liability		xxx

As the differences are resolved, the entry will be reversed.

Unamortized Investment Tax Credit

Unamortized investment tax credit is the remaining balance of investment tax credits taken for tax purposes in prior years, and deferred for book purposes.

The balance is amortized over the book life of the related property.

Dr:	255000 – Investment Tax Credit	xxx	
Cr:	420000 – Investment Tax Credit – Amortization		xxx

Cost of Removal Regulatory Liability

In the Company's Utility and Pipeline and Storage segments, costs of removal are collected from customers through depreciation expense. However, these removal costs are not a legal retirement obligation in accordance with ASC 410 "Asset Retirement and Environmental Obligations" (formerly SFAS 143 and FIN47). Rather, they represent a regulatory liability. See further discussion of cost of removal under "Rate Treatment" below.

Accounting Treatment

The Company follows the authoritative guidance specified in ASC 410. This authoritative guidance requires entities to record the fair value of a liability for an asset retirement obligation in the period in which it is incurred. When the liability is initially recorded, the entity capitalizes the estimated cost of retiring the asset as part of the carrying amount of the related long-lived asset. Over time, the liability is adjusted to its present value each period and the capitalized cost is depreciated over the useful life of the related asset. Refer to the Asset Retirement Obligations section below for further discussion of accounting treatment.

Initial recording of cost of removal liability:

Dr.	101025 – Gas Plant in Service – ARO	xx	
Cr.	230000 – ARO Liability		xx

Quarterly entries to recognize accretion of ARO liability and depreciation of plant assets:

Dr.	182358 – Regulatory Asset – ARO Deferral	xx	
Dr.	254060 – Cost of Removal Reg Liability – ARO	xx	
Cr.	108025 – Accum Depr Gas Plant – ARO		xx
Cr.	230000 – ARO Liability		xx

Annual entry to adjust ARO liability to reflect revised estimate at 9/30/xx:

(the following accounts are used, however, the debit/credit is determined based on the recalculated value)

101025 – Gas Plant in Service – ARO
182358 – Regulatory Asset – ARO Deferral
254060 – Cost of Removal Reg Liability – ARO
230000 – ARO Liability
403100 – Depreciation Expense ARO
411110 – Accretion Expense – ARO

Rate Treatment

As discussed above, the Utility and Pipeline and Storage segments are collecting cost of removal dollars from customers through depreciation expense. These dollars become a component of accumulated depreciation on the balance sheet. When the Utility or Pipeline and Storage segment have asset retirements, the costs of removal that are incurred are charged to accumulated depreciation. In the Utility and Pipeline and Storage segments, the accretion of the liability for asset retirement obligations and the depreciation of the capitalized costs of the asset retirement obligations are recorded as either a reduction to the cost of removal regulatory liability or as a regulatory asset. Such accretion and depreciation is recorded as a reduction to the cost of removal regulatory liability when cost of removal dollars have been collected related to a particular asset retirement. If there is no cost of removal collected associated with a particular asset retirement obligation, the accretion and depreciation recognized for such obligation are recorded to a regulatory asset, since it is expected that these costs would be collected in the future.

Reporting Issues

ASC 410 requires that the Company provide (a) a general description of the asset retirement obligations and the associated long-lived assets, (b) the fair value of assets that are legally restricted for purposes of settling asset retirement obligations, if applicable, and (c) a reconciliation of the beginning and ending aggregate carrying amount of asset retirement obligations showing separately the changes

attributable to (1) liabilities incurred in the current period, (2) liabilities settled in the current period, (3) accretion expense, and (4) revisions in estimated cash flows, whenever there is a significant change in one or more of those four components during the reporting period. In accordance with this authoritative guidance, in addition to the items required to be disclosed above, the Company is required to disclose details regarding the amount of the liability for asset requirement obligations for the beginning of the earliest period presented and at the end of all years presented on a pro forma basis as if ASC 410 had been applied during all periods.

Also note that the Securities and Exchange Commission has taken the position that cost of removal dollars collected in depreciation rates, although not considered to be a legal obligation in accordance with ASC 410, must be reclassified from accumulated depreciation to other regulatory liabilities. The Company makes this reclassification in consolidation on a monthly basis.

Other Regulatory Liabilities

Regulatory Liabilities are liabilities that result from the rate actions of the regulatory agencies. Regulatory liabilities arise from specific revenues, expenses, gains, or losses that would have been included in net income determinations in one period under the general requirements of the Uniform System of Accounts but for it being probable that such items will be included in a different period(s) for purposes of developing the rates the utility is authorized to charge for its utility services.

Guidelines

To be classified as a regulatory liability, there must be a previous or current rate case, settlement order or regulatory guidance instructing the Company to defer the costs associated with an event. The order will usually specify the methodology for collection or amortization of the costs deferred. In cases where the rate case, settlement or regulatory guidance calls for a reconciliation or “true-up” between the revenues collected from the customer and the costs incurred over a specific period of time, a regulatory liability for an overcollection (or regulatory asset for an undercollection, if appropriate) will be recorded at least quarterly when the overcollection or undercollection can be calculated with a reasonable degree of accuracy. NY Distribution’s Merchant Function Charge, Revenue Decoupling Mechanism, 90/10 Symmetrical Sharing Adjustment, and its Lost and Unaccounted For Gas Adjustment are examples of regulatory liabilities (or regulatory assets) being created through a reconciliation or “true-up”.

Rate Treatment

Each regulatory liability will have its own rate treatment based upon the decision of the commissions. In some cases the costs will be amortized over a specific period of time, in others it may refund the costs in rates or offset them with other amounts previously expensed.

For additional information regarding the treatment of regulatory liabilities, a call to the Rates Department or the Accounting Department will bring assistance.

Policy:

The accounts included as regulatory liabilities should be reconciled quarterly, or for insignificant amounts, annually.

Pension Liability

The Company has a tax-qualified, non-contributory, defined-benefit retirement plan (Retirement Plan) that covers certain full-time employees of the Company. The Retirement Plan is designed to provide retirement income that is generally based on a percentage of pre-retirement pay levels, years of employment and age. The Company pays the entire cost of the Plan. The Company's policy is to fund the Retirement Plan with at least an amount necessary to satisfy the minimum funding requirements of applicable laws and regulations and not more than the maximum amount deductible for federal income tax purposes.

The Retirement Plan covers certain non-collectively bargained employees hired before July 1, 2003 and certain collectively bargained employees hired before November 1, 2003. Certain non-collectively bargained employees hired after June 30, 2003 and certain collectively bargained employees hired after October 31, 2003 are eligible for a retirement savings account benefit provided under the Company's Defined Contribution Tax-Deferred Savings Plans.

Accounting Treatment

Refer to Pension Plan under the Special Issues section of this Accounting Policy Manual for a discussion of the accounting treatment.

Other Post-Retirement Employee Benefits (OPEB) Liability

The Company provides health care and life insurance benefits for certain retired employees. These benefits cover certain non-collectively bargained employees hired before January 1, 2003 and certain collectively bargained employees hired before October 31, 2003.

Accounting Treatment

Refer to Pension Plan under the Special Issues section of this Accounting Policy Manual for a discussion of the accounting treatment.

Asset Retirement Obligation

The Company, in its Exploration and Production segment, has a legal obligation to pay for plugging and abandonment costs associated with its crude oil and natural gas wells under ASC 410 “Asset Retirement and Environmental Obligations” (formerly SFAS 143 and FIN 47). The Company identified additional future asset retirement obligations associated with the plugging and abandonment of natural gas storage wells in the Pipeline and Storage segment, the removal of asbestos and asbestos containing material in various facilities in the Utility and Pipeline and Storage segments, and certain costs to be incurred with the retirement of distribution mains and services pipeline systems in the Utility segment and transmission main and other components in the pipeline systems in the Pipeline and Storage segments. The environmental regulations associated with tank removal resulted in the recording of asset retirement obligations in the Utility, Pipeline and Storage and Gathering segments. The Company has also recorded asset retirement obligations for certain costs connected with the retirement of gathering lines and other components in the Gathering segment. The retirement costs within the distribution, transmission and gathering systems are primarily for the capping and purging of pipe, which are generally abandoned in place when retired, as well as for the clean-up of PCB contamination associated with the removal of certain pipe.

In the Company’s Utility and Pipeline and Storage segments, costs of removal are collected from customers through depreciation expense. However, these removal costs are not a legal retirement obligation in accordance with ASC 410. Rather, they represent a regulatory liability. See further discussion of cost of removal under “Rate Treatment” below.

Accounting Treatment

The Company follows the accounting guidance specified in ASC 410. This authoritative guidance requires entities to record the fair value of a liability for an asset retirement obligation in the period in which it is incurred. When the liability is initially recorded, the entity capitalizes the estimated cost of retiring the asset as part of the carrying amount of the related long-lived asset. Over time, the liability is adjusted to its present value each period and the capitalized cost is depreciated over the useful life of the related asset. The authoritative guidance provides clarification of the term “conditional asset retirement obligation” and defines it as a legal obligation to perform an asset retirement activity in which the timing and/or method of settlement are conditional on a future event that may or may not be within the control of the Company. Under this authoritative guidance, if the fair value of a conditional asset retirement obligation can be reasonably estimated, a company must record a liability and a corresponding asset for the conditional asset retirement obligation representing the present value of that obligation at the date the obligation was incurred.

Rate Treatment

In the Utility and Pipeline and Storage segments, the accretion of the liability and depreciation of the capitalized cost of the asset retirement obligation are recorded either as a regulatory asset or as a reduction to the cost of removal regulatory liability. Such accretion and depreciation is recorded as a reduction to the cost of removal regulatory liability when cost of removal dollars have been collected related to a particular asset retirement. As discussed above, the Utility and Pipeline and Storage segments are collecting cost of removal dollars from customers through depreciation expense. These dollars become a component of accumulated depreciation on the balance sheet. When the Utility or Pipeline and Storage segment have asset retirements, the costs of removal that are incurred are charged to accumulated depreciation. If there is no cost of removal collected associated with a particular asset retirement obligation, the accretion and depreciation recognized for such obligations are recorded to a regulatory asset, since it is expected that these costs would be collected in the future.

There is no rate treatment associated with the legal obligation for plugging and abandonment costs in the Company’s Exploration and Production segment nor in its Gathering segment.

Reporting Issues

ASC 410 requires that the Company provide (a) a general description of the asset retirement obligations and the associated long-lived assets, (b) the fair value of assets that are legally restricted for purposes of settling asset retirement obligations, if applicable, and (c) a reconciliation of the beginning and ending aggregate carrying amount of asset retirement obligations showing separately the changes attributable to (1) liabilities incurred in the current period, (2) liabilities settled in the current period, (3) accretion expense, and (4) revisions in estimated cash flows, whenever there is a significant change in one or more of those four components during the reporting period.

Also note that the Securities and Exchange Commission has taken the position that cost of removal dollars collected in depreciation rates, although not considered to be a legal obligation in accordance with ASC 410, must be reclassified from accumulated depreciation to other regulatory liabilities. The Company makes this reclassification in consolidation on a monthly basis.

Other Deferred Credits

'Other deferred credits' is a miscellaneous grouping to catch the other deferrals not grouped in one of the other categories. It includes items such as new services, environmental clean-up, funding of interest expense on pension and OPEB liabilities, ASC 740 (formerly FIN 48) liability, deferred compensation plan liabilities, Executive Retirement Plan/TopHat liabilities, reserve for injuries and damages, special annuity liabilities, lease obligations under ASC 842, and long-term incentive compensation liabilities.

New Services:

Cash collateral is collected from non-qualified subdivision developers for the "free" portion of the pipe in NY and the Load Justified Investment Credit in PA (1). The developer agrees to build a certain number of homes and is refunded when a meter is connected (2). The developer is given 3 ½ years in NY and 5 years in PA to complete the contracted number of homes. If the homes are built, the developer is refunded the money, if he fails to build the homes then the money is transferred from the account to Projects to offset the companies' costs (3 & 4).

Capitalization

Capitalization or Equity is the residual interest in the assets of an entity after deduction of its liabilities. From a Balance Sheet perspective, the equation looks like this:

There are multiple pieces to the equity component. There is the actual par value of the stock that has been issued, there is the premium paid over and above the par value of the stock, and there are also retained earnings.

This chapter is designed to provide the general policies and procedures related to the overall accounting process for Capitalization based on the reporting rules at National Fuel.

Shareholders Equity

Shareholders Equity is the amount of equity that shareholders currently have in the Company. Since the assets less the liabilities equals the equity, it represents the value that would theoretically remain after the assets covered all the liabilities. At National Fuel, there are three pieces to the Shareholder's Equity:

Common Stock

National Fuel has 200,000,000 shares of \$1.00 par value common stock authorized. When new shares are issued, this account is credited at the rate of \$1.00 per share issued, and the remainder would be booked to Paid in Capital.

Paid in Capital

Any excess of the market value received over the par value of the issued shares is credited to an Additional Paid-in Capital account. As the par value of the Company's shares is \$1.00, paid in capital is the difference between the price paid for the stock and the par value. When shares are issued, the paid in capital account is credited with the difference between what we received per share and the par value. [Please refer to the "Stock/Equity Transactions" section for details of Stock Option and Share Repurchase accounting on this account.]

Earnings Reinvested in the Business

Retained earnings are profits of the company that have been retained in the business to finance growth as opposed to paid out to shareholders as dividends. These are the accumulated net effect of reinvesting profits back into the business and do not represent cash that has been set aside. Changes to retained earnings are typically the net income for the period being analyzed less any dividends paid out to shareholders during that period. [Please refer to the "Stock/Equity Transactions" section for details of Stock Option and Share Repurchase accounting on this account.]

Policy:

No direct entries are made to retained earnings without the approval of the General Manager of Accounting or higher.

Accumulated Other Comprehensive Income

Accumulated Other Comprehensive Income comprises the accumulated balance of all components of other comprehensive income, revenues, expenses, gains and losses that, in accordance with GAAP, are recognized in comprehensive income, but excluded from net income.

In compliance with ASC 220 "Comprehensive Income" (formerly SFAS 130), it is required that the Company include these items and give them equal prominence in the financial reports.

Other Comprehensive Income items include:

Funded status of the pension and other post-retirement benefit plans; and
Unrealized gains and losses from derivative financial instruments.

Policy

As directed, "Other Comprehensive Income" is prominently listed on the financial statements of the Company. In accordance with current authoritative guidance, the Company displays its Statement of Comprehensive Income directly following the Income Statement as a separate, but consecutive statement.

Share Repurchase Program

In September 2008, the Company's Board of Directors authorized the repurchase of eight million shares of the Company's common stock. The repurchase program does not have an expiration date. The Company, however, stopped repurchasing shares after September 17, 2008. Since that time, the Company has increased its emphasis on Appalachian basin development and pipeline expansion. As such, the Company does not anticipate repurchasing any shares in the near future.

In accordance with New Jersey law, which is the state of incorporation for the Company, all shares repurchased under the Company's Share Repurchase Program are to be cancelled and restored to the status of authorized but unissued shares, unless the board of directors or the by-laws determine that such shares shall be treasury shares. In the Company's case, neither the by-laws nor the board of directors has called for the formation of treasury shares. Therefore, all shares will be cancelled.

The accounting for the share repurchases under the Company's Share Repurchase Program will be in accordance with ASC 505 "Equity" (formerly APB 6, paragraph 12). ASC 505 allows such repurchases to be accounted for as an adjustment to common stock (at par value) with all the excess charged to retained earnings. Alternatively, it also allows such repurchases to be accounted for as an adjustment to common stock (at par value) with the excess allocated between paid in capital and retained earnings.

The Company has chosen the second alternative, specifically to allocate the repurchase price between common stock (at par value), paid in capital and retained earnings. To explain further, the Company's balance sheet at February 28, 2021 showed the following balances: Common Stock (\$1 Par Value) = \$91,163,797; Paid in Capital = \$1,004,791,876; Earnings Reinvested in the Business = \$1,122,089,259. In March 2021, if 100,000 shares are repurchased (and settled*) at a price of \$40 per share and \$3,000 in broker fees are incurred, the journal entry to record the repurchase will be as follows:

Dr. Common Stock	\$100,000	
Dr. Paid in Capital**	\$1,102,183	
Dr. Earnings Reinvested in the Business	\$2,800,817	
Cr. Cash		\$4,003,000

*Note that stock repurchases will be accounted for on the date that share repurchase is consummated (settled) as opposed to the trade date. At quarter end, if there are any significant pending stock repurchases (i.e., trade date on or before quarter end but settlement after quarter end), such pending stock repurchases will be disclosed in the footnotes to the financial statements.

** Calculated as Paid in Capital balance at February 28, 2021 divided by the number of shares outstanding at February 28, 2021 multiplied by the number of shares repurchased ($\$1,004,791,876 / 91,163,797 \times 100,000$ shares repurchased). Note that this average cost would be updated monthly. So, any repurchases in April 2021 would use March 31, 2021 equity balances, any repurchases in May 2021 would use April 2021 equity balances, etc.

Dividends on Restricted Stock

In addition to stock options, ASC 718 “Compensation – Stock Compensation” (formerly SFAS 123R) distinguishes between non-vested stock and restricted stock. In both cases, there is a vesting period involved; however, in the case of restricted stock, there is an additional restriction after the employee has a vested right to it. National Fuel has restricted stock as defined by ASC 718. The additional restrictions after vesting deal with when the employee can sell the stock (i.e., upon reaching a certain age or retirement). National Fuel also has non-vested stock as defined by ASC 718. In the case of non-vested stock that is expected to vest, dividends issued during the vesting period should be charged to retained earnings when declared. For non-vested stock that is not expected to vest, dividends issued during the vesting period would be recorded as additional compensation expense if employees are not required to return such dividends (i.e., in the case of termination, retirement, etc.). Note that National Fuel’s awards do not have a requirement for dividends to be returned if the stock does not reach the end of the vesting period. However, based on past experience and the vesting periods assigned to non-vested stock, National Fuel’s expectation is that its non-vested stock will vest and that any dividends issued during the vesting period should be charged to retained earnings when declared. In the case of restricted stock, dividends issued during the vesting period should also be charged to retained earnings when declared.

Going forward, all dividends declared on restricted stock and non-vested stock, as currently awarded should be accounted for as a direct reduction to retained earnings at the Parent Company level. Dividends declared on restricted stock are not accounted for at the subsidiary level.

Long-Term Debt

Long-Term Debt (LTD) refers to loans and debentures that will not be due for more than a year. National Fuel Gas Company, the Parent, floats the majority of the long-term debt on the market. The debt is typically medium term notes that are accounted for on the Parent's books.

Dr:	Cash	xxx	
Dr:	Deferred Debt Issuance Costs & Debt Discount (A/C 186...)		xxx
Cr:	Notes Payable	xxx	

Since the proceeds of the notes will usually be allocated to the various subsidiaries based on need. The Parent Co. will then set up receivables from the subsidiaries.

Dr:	Notes Receivable – Sub	xxx	
Cr:	Cash		xxx

The Subsidiaries must also record the transaction on their books:

Dr:	Cash	xxx	
Cr:	Notes Payable – Parent Co.		xxx

When interest is due on the notes, the Parent Co. will bill the subsidiaries and they will pay the interest up to the Parent Co., who in turn pays the interest out on the bonds.

Dr:	Interest Expense	xxx	
Cr:	Cash		xxx

Stock / Equity Transactions

The Company has several programs in effect that are centered on the awarding or issuance of stock. The programs include incentive awards of stock options and SAR's, restricted stock, restricted stock units, performance shares, the Direct Stock Purchase and Dividend Reinvestment Plan, the 401(k) Plans, and the Non-Employee Director Equity Compensation Plan..

Stock options and SAR's:

Stock options and SAR's are accounted for under the provisions of ASC 718 "Compensation – Stock Compensation" (formerly SFAS 123r), which requires compensation expense for share-based payment transactions to be determined at the date of grant, using a fair-value model, and recorded over the requisite service period:

Compensation expense for new grants of unvested stock options and SAR's is calculated using the Black-Scholes model (*formula* = **Market Price** * $e^{-\text{dividend} * \text{term}}$ * **N(d1)** - **Exercise Price** * $e^{-\text{risk free rate} * \text{term}}$ * **N(d2)**), where $d1 = (\ln(\text{Market Price} / \text{Exercise Price}) + (((\text{Interest Rate} - \text{Dividend Yield}) + ((\text{Volatility} * \text{Volatility}) / 2)) * \text{term})) / (\text{volatility} * \text{sqrt of the term})$; $d2 = d1 - (\text{volatility} * \text{sqrt of the term})$; $N(d1)$ = the cumulative normal distribution of $d1$ with mean=0 and standard deviation=1; and $N(d2)$ = the cumulative normal distribution of $d2$ with mean=0 and standard deviation=1). New grants of options and/or SARs would be determined monthly using the Award Summary Report from the Shareworks system.

Compensation expense will be calculated by grantee using the Expensing Report from the Shareworks system, which calculates the expense using the following formula: recorded compensation expense for the period = number of options vesting / vesting period x fair value per share x days outstanding in the period.

Fair value per share for new grants will use the following assumptions (unless terms of the agreement specify otherwise):

Exercise price = market price (average of high and low)

Volatility % = historical volatility using an average of high and low daily prices (obtained from the Shareworks system) over a period equal to the expected term of the option.

Expected term of option (in years) = historical experience

Risk free rate % = interest rate on zero-coupon U.S. government issue with a remaining term equal to the expected term of the option (from Bloomberg)

Dividend yield (annual %) = quarterly dividend rate (at grant date) x 4 / market price (at grant date).

Compensation expense will be allocated to all of the subsidiaries as follows: for executives, the expense will be allocated by officer salary allocation percentages; for non-executives, the expense will be recorded at the employee's primary subsidiary.

The journal entries are as follows, assuming that first quarter compensation expense is as follows: Distribution \$25,000, Supply \$15,000, Seneca \$5,000, Empire \$5,000, Parent \$2,000:
At the parent level:

Dr. Compensation expense	\$ 2,000	
Dr. Investment in Distribution	\$25,000	
Dr. Investment in Supply	\$15,000	
Dr. Investment in Seneca	\$ 5,000	
Dr. Investment in Empire	\$ 5,000	
Cr. Paid in Capital		\$52,000

(To record Parent Company compensation expense and record adjustment to investment accounts for subsidiary ASC 718 expense)

At the subsidiary level (using Distribution, only, as an example):

Dr. Compensation expense	\$25,000	
Cr. Paid in Capital		\$25,000

(to record ASC 718 expense)

Note that the investment in subsidiary accounts at the Parent Company level and the Paid in Capital accounts at the subsidiary level are eliminated in consolidation. Also note that the accounting above would also apply to the award of restricted stock.

Restricted Stock Transactions

The Company has awarded shares of stock to certain employees that have restrictions attached to them, the most significant being that the employee cannot sell the shares until all the restrictions have lapsed. On the date of award, the fair value of the restricted shares is calculated by multiplying the number of shares awarded by the average of the high and low stock price for National Fuel stock on that date. This fair value is then recorded as compensation expense over the restriction period. During the restriction period, the employee is entitled to dividends on the restricted shares. The issuance of these dividends is also recorded as compensation expense. See example below.

Award = 1,000 shares of NFG stock
 Average of High and Low Stock Price = \$45
 Total Compensation = \$45,000
 Restriction Period = Restrictions Lapse as Follows:
 250 Shares at End of Year 1
 250 Shares at End of Year 2
 250 Shares at End of Year 3
 250 Shares at End of Year 4
 Dividend Rate = \$1.78

Date of Award: 1/1/21

(AFMV on date of award=\$45)	Year 1	Year 2	Year 3	Year 4	Total
Number of shares:	250	250	250	250	1,000
Date Restrictions Lapse:	12/31/2021	12/31/2022	12/31/2023	12/31/2024	

Compensation per cycle:	\$ 11,250	\$ 11,250	\$ 11,250	\$ 11,250	\$ 45,000
Amortization Period in months:	12	24	36	48	
From	1/1/2021	1/1/2022	1/1/2023	1/1/2024	
To	12/31/2021	12/31/2022	12/31/2023	12/31/2024	

2021	\$ 11,250	\$ 5,625	\$ 3,750	\$ 2,813	\$ 23,438	Year 1
2022	\$ -	\$ 5,625	\$ 3,750	\$ 2,813	\$ 12,188	Year 2
2023	\$ -	\$ -	\$ 3,750	\$ 2,812	\$ 6,562	Year 3
2024	\$ -	\$ -	\$ -	\$ 2,812	\$ 2,812	Year 4
	<u>\$ 11,250</u>	<u>\$ 11,250</u>	<u>\$ 11,250</u>	<u>\$ 11,250</u>	<u>\$ 45,000</u>	

Accounting on Date of Award:

Paid in Capital	\$1,000	
Common Stock		\$1,000

(To record issuance of 1,000 shares of restricted stock at \$1 par value)

Accounting for Year 1:

Compensation Expense	\$23,438	
Paid in Capital		\$23,438

(To record compensation expense of \$11,250 on shares that lapse in 1st year, \$5,625 on shares that lapse in year 2, \$3,750 on shares that lapse in year 3, and \$2,813 on shares that lapse in year 4)

Retained Earnings	\$1,780	
Accounts (Dividends) Payable		\$1,780

(To record dividends declared on 1,000 shares at a dividend rate of \$1.78)

At the end of year 1, restriction on 250 shares lapse. No entry is required as common stock and paid in capital already reflects the value of 250 shares at \$45 or \$11,250)

Accounting for Year 2:

Compensation Expense	\$12,188	
Paid in Capital		\$12,188

(To record compensation expense of \$5,625 on shares that lapse in year 2, \$3,750 on shares that lapse in year 3, and \$2,813 on shares that lapse in year 4)

Retained Earnings	\$1,335	
Accounts (Dividends) Payable		\$1,335

(To record dividends paid on 750 shares at a dividend rate of \$1.78)

At the end of year 2, restriction on 250 shares lapse. No entry is required as common stock and paid in capital already reflects the value of 250 shares at \$45 or \$11,250)

Accounting for Year 3:

Compensation Expense	\$6,562	
Paid in Capital		\$6,562

(To record compensation expense of \$3,750 on shares that lapse in year 3, and \$2,812 on shares that lapse in year 4)

Retained Earnings	\$890	
Accounts (Dividends) Payable		\$890

(To record dividends paid on 500 shares at a dividend rate of \$1.78)

At the end of year 3, restriction on 250 shares lapse. No entry is required as common stock and paid in capital already reflects the value of 250 shares at \$45 or \$11,250)

Accounting for Year 4:

Compensation Expense	\$2,812	
Paid in Capital		\$2,812

(To record compensation expense of \$2,812 on shares that lapse in year 4)

Retained Earnings	\$445	
Accounts (Dividends) Payable		\$445

(To record dividends paid on 250 shares at a dividend rate of \$1.78)

At the end of year 4, restriction on 250 shares lapse. No entry is required as common stock and paid in capital already reflects the value of 250 shares at \$45 or \$11,250)

Restricted Stock Units

The Company has awarded stock units to certain employees that have restrictions attached to them. Restricted stock units are defined as an employee's right to receive one share of common stock (or the equivalent value in cash), at the end of a specified time period. The accounting for restricted stock units is the same as restricted stock transactions noted above, but with a few exceptions. First, as specified when the units are awarded, the employee is often not entitled to dividends (or the equivalent value of dividends). Therefore, the fair market value at the date of the grant of the unit (the average of the high and low stock prices as indicated above under Restricted Stock Transactions) must be reduced by the present value of forgone dividends over the vesting term of the award (assuming dividend equivalents have not been included in the award). Second, there is nothing recorded on the date of the award because a unit has been awarded, not an actual share of stock. Also, the restricted share units may be settled in cash, in shares of common stock of the Company, or in a combination of cash and shares of common stock of the Company, as determined by the Company. Other than these exceptions, the accounting over the vesting term of the award remains the same as described under Restricted Stock Transactions in that the fair value is recorded as compensation expense over the restriction period.

Performance Shares

The Company has issued two types of performance shares:

The first type must meet a performance goal related to relative return on capital over the performance cycle. The performance goal over the performance cycle is the Company's total return on capital relative to the total return on capital of other companies in a group (Report Group) selected by the Compensation Committee of the Board of Directors. Total return on capital for a given company means the average of the Report Group companies' returns on capital for each twelve month period corresponding to each of the Company's fiscal years during the performance cycle, based on data reported for the Report Group companies in the Bloomberg database. The number of these performance shares that will vest and be paid will depend upon the Company's performance relative to the Report Group and not upon the absolute level of return achieved by the Company. The fair value of these performance shares is calculated by multiplying the expected number of shares that will be issued by the average market price of Company common stock on the date of grant reduced by the present value of forgone dividends over the vesting term of the award. The fair value is recorded as compensation expense over the vesting term of the award.

The second type must meet a performance goal related to total shareholder return over the performance cycle (a market based performance condition per ASC 718). The performance goal over the performance cycle is the Company's three-year total shareholder return relative to the three-year total shareholder return of the other companies in a group (Report Group) selected by the Compensation Committee of the Board of Directors. Three-year shareholder return for a given company will be based on the data reported for that company (with the starting and ending stock prices over the performance cycle calculated as the average closing stock price for the prior calendar month and with dividends reinvested in that company's securities at each ex-dividend date) in the Bloomberg database. The number of these performance shares that will vest and be paid will depend upon the Company's performance relative to the Report Group and not upon the absolute level of return achieved by the Company. The fair value price at the date of grant for these performance shares is determined using a Monte Carlo simulation technique, which includes a reduction in value for the present value of foregone dividends over the vesting term of the award. This price is multiplied by the number of performance shares awarded, the result of which is recorded as compensation expense over the vesting term of the award.

Special Issues

Certain issues or transactions, which may occur during the fiscal year, require special treatment from an accounting, rates or reporting standpoint. This chapter seeks to identify some of those items and provide guidance to properly account for the transactions.

Special Issues and Non-Routine Events

There will be times when issues come up that are new accounting, rate or regulatory issues or are such that they deviate from normal procedures by the nature of the transaction. For these items, it is imperative that the Accounting Department management is involved from the onset of the issue. Examples would include new ASC adoption, unusual rate treatment or deferrals, or non-routine revenue streams.

The Accounting Department will help to make sure that all transactions of this nature are properly accounted for under GAAP, are booked in the proper accounting period, are disclosed if they meet disclosure criteria and are properly included in the Company's financial statements.

The basic rule for these items is to ask if you are not 100% confident of the accounting treatment.

Lease Accounting

Overview

The Company has entered into various leasing arrangements, primarily leasing building space and drilling rigs, and on a limited basis compressor equipment and other miscellaneous assets. The Company determines if an arrangement is a lease at the inception of the arrangement. To the extent that an arrangement represents a lease, the Company classifies that lease as an operating or a finance lease in accordance with ASC 842. The Company does not have any material finance leases and, aside from a sublease of office space at the Company's corporate headquarters, the Company does not have any material arrangements where the Company is the lessor.

Accounting Treatment

The Company accounts for its leasing arrangements in accordance with the provisions of ASC 842, "Leases." In accordance with this standard, operating lease costs, excluding those relating to short-term drilling rig leases that are capitalized as part of oil and natural gas properties under full cost pool accounting, are expensed as incurred and recognized as operation and maintenance expense on the income statement. Right-of-use assets and lease liabilities are recognized at the commencement date of a leasing arrangement based on the present value of lease payments over the lease term. The Company's right-of-use operating lease assets are reflected as deferred charges on the balance sheet. The corresponding operating lease liabilities are reflected in other accruals and current liabilities (current portion) and other deferred credits (noncurrent portion). Short-term leases that have a lease term of one year or less are not recorded on the balance sheet. The right-of-use operating lease assets and the operating lease liabilities are recorded as consolidating adjustments rather than being recorded in each subsidiary's general ledger (see Rate Treatment for further explanation).

Rate Treatment

On December 27, 2018, in Docket No. AI19-1-000, the FERC issued guidance entitled Accounting and Financial Reporting for Leases. In accordance with this guidance, operating leases are not required to be capitalized on the balance sheet; however, an entity under FERC's jurisdiction can elect to implement ASC 842 to report operating leases as right-of-use assets, with corresponding lease obligations, on the balance sheet. Consistent with past practice prior to the adoption of ASC 842, and in accordance with the guidance provided by FERC, Supply Corporation and Empire Pipeline have chosen not to record right-of-use assets and the corresponding lease obligations on their general ledger (i.e., their regulated balance sheets). The Company has also extended this accounting treatment to both the New York and Pennsylvania jurisdictions of Distribution Corporation as there has been no other regulatory guidance from either the NYPSC or the PaPUC. While the regulated books and

records do not reflect the right-of-use assets and the corresponding lease obligations, the consolidated financial statements of NFG do reflect the right-of-use assets and the corresponding lease obligations through consolidating adjustments.

Reporting Issues

Quarterly requests to departments heads is required to determine if there have been any new or modified lease arrangements.

Disclosure Issues

Qualitative and quantitative disclosures are required in the Annual Report/Form 10-K per ASC 842. There are no specific quarterly disclosure requirements, although consideration will be given to updating the annual disclosures if there is a significant change in the types or dollar value of leases.

Executive Retirement Plan (ERP)

Overview

The ERP is a nonqualified benefit plan that covers a group of management employees designated by the Chief Executive Officer of the Company. This plan is currently closed to new entrants. This plan provides for defined benefit payments in either a monthly annuity or a lump sum distribution upon retirement of the management employee, or to the spouse upon death of the management employee. To cover these benefits, the plan has investments in life insurance, the Vanguard Star Mutual Fund, a money market account and a low duration bond fund. The value of the life insurance is recorded at its cash surrender value. The Vanguard Star Mutual Fund and the low duration bond fund are recorded at fair market value.

Accounting Treatment

The ERP is accounted for as a separate entity in consolidation (within the Eliminations and Adjustments column). The expense associated with this plan is calculated by an actuary in accordance with ASC 715 “Compensation – Retirement Benefits” (formerly SFAS 87). The expense is recorded monthly and allocated among the various subsidiaries of the Company based on officer salary allocation percentages. The ERP records an intercompany receivable from the subsidiaries and a long-term liability. Each subsidiary in turn records the expense (a regulatory asset for Distribution NY – see Rate Treatment below) and an intercompany payable to the ERP. Increases or decreases in the cash surrender value of life insurance contracts are recorded as an adjustment to other income. The Vanguard Star Fund and the low duration bond fund are accounted for in accordance with ASC 321 “Investments –Equity Securities” which requires these investments to be measured at fair value and any changes in fair value must be recognized in net income.

Benefit payments for the ERP are made monthly by the individual subsidiaries. When the subsidiaries make a benefit payment, they reduce their inter-company payables to the ERP. The ERP in turn reduces its long-term liability and the intercompany receivable from the subsidiaries. The ERP’s inter-company receivable from the subsidiaries is increased when the ERP reimburses the subsidiaries. This reimbursement comes from rate-funded contributions by Distribution and Supply as well as death benefits received from life insurance policies. Currently, Distribution, Supply and Midstream are the only subsidiaries receiving reimbursement (for benefits paid) from the ERP Trust.

The decision on when and which subsidiaries will fund the ERP is ultimately made by senior management. However, Distribution and Supply do make annual contributions to the ERP based on the amount they collect in rates. When a subsidiary funds the ERP, the subsidiary reduces the inter-company payable established when it recorded the ASC 715 expense discussed above. The ERP, in turn, reduces the inter-company receivable that it established when the ASC 715 expense was allocated to the individual subsidiaries.

The financial and management accounting responsibilities of the Company are detailed in this section, including the chart of accounts, journals, month and year end closing.

Rate Treatment

Distribution – NY has rate recovery of expenses related to the ERP. As discussed above, Distribution – NY establishes a regulatory asset for its portion of the ASC715 expense associated with the ERP. Over the course of the year, Distribution – NY reduces the regulatory asset by the amount collected in rates, and records such amounts as operation expense. The amount of the rate recovery may or may not be equal to the ASC 715 expense amount. This accounting treatment is in accordance with ASC 980 “Regulated Operations” (formerly SFAS 71). Distribution – PA and Supply expense the full amount of ASC 715 expense allocated to them and do not establish regulatory assets or liabilities since there is no difference between what is collected in rates and the actual amount of ASC 715 expense.

Reporting Issues

Other than inclusion in the consolidation of the Company, there are no other reporting issues for the ERP.

Disclosure Issues

A paragraph describing the ERP and providing certain information called for by ASC 715 is disclosed in the Retirement Plan and Other Post-Retirement Benefits footnote of the Annual Report.

Other

For a more detailed discussion concerning the accounting for the ERP, refer to
F:\Accounting\Common\ACCT\SS\mpw\Accounting Department Memos\ Accounting Department
Memos\ ERP Accounting.doc.

Tophat Plan

Overview

The Tophat Plan (Tophat) is a nonqualified benefit plan that covers a group of management employees designated by the Chief Executive Officer of the Company. The Tophat Plan mirrors the National Fuel Gas Co. Retirement Plan except that pay is not subject to the compensation limits under IRC Section 401 (a)(17) for participants who have or are projected to have pay in excess of the limit and are not eligible for the Executive Retirement Plan. This plan provides for defined benefit payments in either a monthly annuity or a lump sum distribution upon retirement of the management employee, or to the spouse upon death of the management employee. To cover these benefits, the plan has investments in life insurance, the Vanguard Star Mutual Fund, a money market account and a low duration bond fund. The value of the life insurance is recorded at its cash surrender value. The Vanguard Star Mutual Fund and the low duration bond fund are recorded at fair market value.

Accounting Treatment

Tophat is accounted for as a separate entity in consolidation (within the Eliminations and Adjustments column). The expense associated with this plan is calculated by an actuary in accordance with ASC 715 “Compensation – Retirement Benefits” (formerly SFAS 87). The expense is allocated among the various subsidiaries of the Company based on officer salary allocation percentages. Tophat records an intercompany receivable from the subsidiaries and a long-term liability. Each subsidiary in turn records the expense (a regulatory asset for Distribution NY – see Rate Treatment below) and an intercompany payable to Tophat. The expense is recorded monthly by Distribution – NY, Distribution – PA and Seneca Oil and Gas and yearly by all other subsidiaries. Increases or decreases in the cash surrender value of life insurance contracts are recorded as an adjustment to other income. The Vanguard Star Fund and the low duration bond fund are accounted for in accordance with ASC 321 “Investments – Equity Securities” which requires these investments to be measured at fair value and any changes in fair value must be recognized in net income.

Benefit payments for Tophat are made monthly by the individual subsidiaries. When the subsidiaries make a benefit payment, they reduce their inter-company payables to Tophat. Tophat in turn reduces its long-term liability and the intercompany receivable from the subsidiaries. The Tophat’s intercompany receivable from the subsidiaries is increased when the Tophat reimburses the subsidiaries. This reimbursement comes from rate funded contributions by Distribution, Supply and Empire as well as death benefits received from life insurance policies.

The financial and management accounting responsibilities of the Company are detailed in this section, including the chart of accounts, journals, month and year end closing.

Rate Treatment

Distribution – NY has rate recovery of expenses related to Tophat. As discussed above, Distribution – NY establishes a regulatory asset for its portion of the ASC715 expense associated with Tophat. Over the course of the year, Distribution – NY reduces the regulatory asset by the amount collected in rates, and records such amounts as operation expense. The amount of the rate recovery may or may not be equal to the ASC 715 expense amount. This accounting treatment is in accordance with ASC 980 “Regulated Operations” (formerly SFAS 71). Distribution-PA, Supply and Empire expenses the amount of funding into the rate-regulated Tophat trust account (the amount funded is equal to the ASC715 Tophat expense that is calculated by the actuary).

Reporting Issues

Other than inclusion in the consolidation of the Company, there are no other reporting issues for Tophat.

Disclosure Issues

A paragraph describing Tophat and providing certain information called for by ASC 715 is disclosed in the Retirement Plan and Other Post-Retirement Benefits footnote of the Annual Report.

Other

For a more detailed discussion concerning the accounting for Tophat, refer to
F:\Accounting\Common\ACCT\SS\mpw\Accounting Department Memos\ Accounting Department
Memos\TopHat Accounting.doc

Deferred Compensation Plan (DCP)

Overview

The DCP is a nonqualified benefit plan that allows a participant to delay receipt of a portion of his or her salary by having the Company retain it and pay it to the participant at a later date. The DCP is currently frozen. No new contributions are being accepted. The primary purposes of the Deferred Compensation Plan (DCP) is to provide employees with a tax-favored vehicle to accumulate assets and to enhance retirement benefits. Selected executives of the Company and its subsidiaries and certain other select management and highly compensated key employees were allowed to participate in the DCP.

Participants who lose benefits under qualified benefit plans because of participation in the DCP or because of certain provisions of the Internal Revenue Code that relate to employee benefit plans are made whole through the Company's Tophat Plan. The DCP tophat is generated when a participant cannot receive the maximum Company matching contribution under the TDSP due to the Internal Revenue Service legal limits of annual compensation.

Accounting Treatment

The Payroll Department prepares a monthly report summarizing annuity payments and payouts. On a monthly basis, the Human Resources Department prepares a report of participant earnings or loss for the quarter. General ledger recording of the annuity payments and the payouts is handled by the Payroll Department. The Human Resource Department records the entry to reflect the participant's earnings or loss, which is to debit or credit interest expense with an offsetting debit or credit to the DCP liability account. Note that a participant's return can be interest only or it can be based on the S&P 500 Index. It is the S&P 500 Index which can create losses for a participant. The Human Resource Department accrues the Tophat provision based on a report prepared by the Human Resources Department.

Rate Treatment

Not Applicable – the DCP is excluded from rate recovery in all jurisdictions.

Disclosure Issues

There are no reporting issues for the DCP.

Pension Plan

Overview

The Company has a tax-qualified, non-contributory, defined-benefit retirement plan (Retirement Plan) that covers certain full-time employees of the Company. The Retirement Plan is designed to provide retirement income that is generally based on a percentage of pre-retirement pay levels, years of employment and age. The Company pays the entire cost of the Plan. The Company's policy is to fund the Retirement Plan with at least an amount necessary to satisfy the funding requirements of applicable laws and regulations and not more than the maximum amount deductible for federal income tax purposes. The Retirement Plan covers certain non-collectively bargained employees hired before July 1, 2003 and certain collectively bargained employees hired before November 1, 2003. Certain non-collectively bargained employees hired after June 30, 2003 and certain collectively bargained employees hired after October 31, 2003 are eligible for a Retirement Savings Account benefit provided under the Company's defined contribution Tax-Deferred Savings Plans.

Accounting Treatment

The Company follows ASC 715 “Compensation – Retirement Benefits” (formerly SFAS 87) in accounting for the Retirement Plan. Pension expense calculated in accordance with ASC 715 (by an actuary) is allocated among all subsidiaries. Distribution – NY and Distribution – PA establish a regulatory asset when recording ASC 715 expense (see Rate Treatment below).

Rate Treatment

As noted above, Distribution – NY and Distribution – PA establish a regulatory asset when they record pension expense calculated in accordance with ASC 715 (Account 182325). Distribution – NY and Distribution – PA reduce the regulatory asset and record operation expense for the amount of pension costs that are being recovered in rates. This accounting treatment is in accordance with ASC 980 “Regulated Operations” (formerly SFAS 71). Distribution – NY is also required to compare the amount of dollars it is collecting in rates to what it is funding to the Retirement Plan. To the extent that there is a difference between what Distribution – NY funds and what it collects in rates, the difference is reclassified from the Accrued Pension account (A/C 228319) to the Internal Reserve account (A/C 228303). If the Internal Reserve account is a credit balance, interest is accrued monthly on amounts recorded in the Internal Reserve account (net of its tax effects) at the Company’s authorized pretax rate of return. If the Internal Reserve Account is a debit balance, then interest income is accrued at fiscal year end (per GAAP) and calendar year end (per the New York Public Service Commission). Distribution – NY is also required to compare what it actually is collecting in rates to what was specified by the rate case/settlement (this comparison is driven by actual volumes (weather normalized between October and May) versus the forecast). Any differences are recorded in Account 182318. Supply and Empire do not establish a regulatory asset for ASC 715 expense. Rather, they expense the amount they fund to the Retirement Plan each year, as prescribed by FERC. For a more detailed discussion concerning the accounting and rate treatment for the Retirement Plan, refer to F:\Accounting\Common\ACCT\SS\mpw\Accounting Department Memos\Pension Accounting.doc.

Reporting Issues

Audited financial statements are prepared for the Retirement Plan. The audited financial statements are attached to the Form 5500 sent to the IRS annually.

Disclosure Issues

The disclosures required by ASC 715 “Compensation – Retirement Benefits” (formerly SFAS 132R) are included in the Retirement Plan and Other Post-Retirement Benefits footnote of the Annual Report.

OPEB Accounting

Overview

The Company provides health care and life insurance benefits for a majority of its retired employees under a post-retirement benefit plan (Post-Retirement Plan). Non-collectively bargained employees of the Company who were hired on or after January 1, 2003 and collectively bargained employees of the Company who were hired on or after October 31, 2003, are not participants in the Post-Retirement Plan. The Company has established Voluntary Employees’ Beneficiary Association (VEBA) trusts for its Post-Retirement Plan. Contributions to the VEBA trusts are tax deductible, subject to limitations contained in the Internal Revenue Code and regulations and are made to fund employees’ post-retirement health care and life insurance benefits. In addition, the Company has established 401(h) accounts for its Post-Retirement Plan. They are separate accounts in the Retirement Plan used to pay retiree medical benefits for the associated participants in the Retirement Plan. Contributions are tax-deductible when made and investments accumulate tax-free.

Accounting Treatment

The Company follows ASC 715 “Compensation – Retirement Benefits” (formerly SFAS 106) in accounting for its Post-Retirement Plan. Post-Retirement Plan expense calculated in accordance with ASC 715 (by an actuary) is allocated among all subsidiaries. Distribution – NY, Distribution – PA and Supply establish a regulatory asset when recording ASC 715 expense (see Rate Treatment below).

Rate Treatment

As noted above, Distribution – NY and Distribution – PA establish a regulatory asset when they record post-retirement plan expense calculated in accordance with ASC 715 (Account 182316-182317 (NY) and 182319-182320 (PA)). They reduce the regulatory asset and record operation expense for the amount of post-retirement costs that are being recovered in rates. As a result of Supply Company's last rate case with the FERC, Supply Company expenses and funds the ASC 715 expense (to avoid the creation of a regulatory asset or liability). This accounting treatment is in accordance with ASC 980 "Regulated Operations" (formerly SFAS 71). Distribution – NY is also required to compare the amount of dollars it is collecting in rates to what it is funding to the Post-Retirement Plan for non-union employees. To the extent that there is a difference between what Distribution – NY funds and what it collects in rates, the difference is reclassified from the Accrued OPEB accounts (A/C 228317 or A/C 228318) to the Internal Reserve account (A/C 228301). Interest is to be accrued monthly on amounts recorded in the Internal Reserve account (net of its tax effects) at the Company's authorized pretax rate of return. Such interest shall be recorded in a separate sub-account in the Internal reserve (A/C 228302) and interest shall be compounded thereon on a monthly basis using the same rate of return. If the cumulative net-of-tax balance in this reserve (including accrued interest) is a debit, no accrual of interest is to be made for that month. Distribution – NY follows tax effective funding, meaning that it only funds an amount for which it believes it can receive a tax deduction. Distribution – NY is also required to compare what it actually is collecting in rates to what was specified by the rate case/settlement (this comparison is driven by actual volumes (weather normalized from October – May) versus the forecast). Any differences are recorded in Accounts 182314 and 182315. For a more detailed discussion concerning the accounting and rate treatment for the Post Retirement Plan, refer to F:\Accounting\Common\ACCT\SS\mpw\Accounting Department Memos\Accounting Department Memos\OPEB Accounting.doc.

Reporting Issues

Limited scope audited financial statements are prepared for each of the VEBAs. The financial statements are attached to the Form 5500 prepared for each of the VEBAs and sent to the IRS annually.

Disclosure Issues

The disclosures required by ASC 715 are included in the Retirement Plan and Other Post-Retirement Benefits footnote of the Annual Report.

Derivative Accounting

The Company can use a variety of derivative financial instruments to manage a portion of the market risk associated with fluctuations in the price of natural gas and crude oil, including over-the-counter price swap agreements and no cost collars. In addition, the Company uses foreign exchange forward contracts to manage the risk of the US dollar devaluing relative to the Canadian dollar since we utilize Canadian pipeline capacity. Under the price swap agreements, the Company receives monthly payments from (or makes payments to) other parties based upon the difference between a fixed price and a variable price as specified by the agreement. The no cost collars provide for the Company to receive monthly payments from (or make payments to) other parties when a variable price falls below an established floor price (the Company receives payment from the counterparty) or exceeds an established ceiling price (the Company pays the counterparty). Under the foreign exchange forward contracts, the Company receives a fixed price in exchange for paying a variable price.

Accounting Treatment

The Company accounts for its derivative financial instruments in accordance with ASC 815 "Derivatives and Hedging" (formerly SFAS 133). Per this authoritative guidance, the Company's derivative financial instruments discussed above are classified as cash flow hedges.

Rate Treatment

Distribution does not utilize derivative financial instruments. However, Distribution may decide to enter into Asset Management Arrangements, which may give rise to embedded derivatives (as a result of differences between billed gas and actual gas received). As the price of the cumulative volume differences change, a regulatory asset may occur. It should be noted that the differences are eliminated before the beginning of the heating season. There is no significant income statement impact nor is there an impact in Accumulated Other Comprehensive Income.

Reporting Issues

Not Applicable

Disclosure Issues

ASC 815 disclosures are included in the Summary of Significant Accounting Policies footnote and the Financial Instruments footnote of the Annual Report. Quantitative and qualitative disclosures about market risk are required pursuant to Regulation S-K Item 305. These disclosures are included in Management's Discussion & Analysis under the heading "Market Risk Sensitive Instruments."

Environmental Accounting

Overview

The Company is subject to various federal, state and local laws and regulations relating to the protection of the environment. The Company has established procedures for the ongoing evaluation of its operations, to identify potential environmental exposures and to comply with regulatory policies and procedures.

Accounting Treatment

It is the Company's policy to accrue estimated environmental clean-up costs (investigation and remediation) when such amounts can reasonably be estimated and it is probable that the Company will be required to incur such costs. Such costs are being recovered either through insurance proceeds received in Distribution – PA and Supply (see Insurance Proceeds Treatment below) or through rate relief in Distribution-NY (see Rate Treatment below), which is collecting \$5,000,000 per year in rates to cover environmental clean-up costs. When clean-up costs are accrued in Distribution-NY, they are either recorded as a debit to A/C 182800 – Amortization of Gas Site Cleanup regulatory asset or a debit to various regulatory asset accounts (A/Cs 186601 – 186645) for legal expenses incurred related to the environmental clean-up sites. Any amounts debited to A/Cs 182801 - 182810 are reclassified to A/C 182800 once annually since A/C 182800 is where the amortization of the \$5,000,000 collected in rates occurs. These debits are offset by recording a credit to various deferred credits (A/Cs 253301-253321). When clean-up costs are incurred in Distribution – PA and Supply, they are recorded as a debit to A/C 254020 – Insurance Settlement Proceeds, a regulatory liability established through the receipt of insurance proceeds, and either as a credit to various deferred credits (A/Cs 253301 – 253321), or as a credit to Accounts Payable, or as a credit to Plant.

Rate Treatment

Distribution-NY is collecting \$5,000,000 per year in rates to cover environmental clean-up costs. Thus, \$5,000,000 of the overall regulatory asset is amortized to expense each year.

Workers' Compensation Claims

National Fuel Gas Company accounts for its workers' compensation claims in accordance with ASC 712 "Compensation – Nonretirement Postemployment Benefits" (formerly SFAS 112). Such claims exist in New York and Pennsylvania jurisdictions of Distribution Corporation, at Supply Corporation, and at Seneca Resources Corporation.

The New York and Pennsylvania jurisdictions of Distribution Corporation account for workers compensation claims in the following fashion:

As claims are processed, they are recorded as a direct debit to workers' compensation expense account (a/c 581830).

At the end of each fiscal year, the Human Resources department analyzes the number of open claims that exist in both New York and Pennsylvania and determines what the estimated liability for those open cases is based on a review of [state workers' compensation] actuarial tables. This estimated liability is then recorded / adjusted on the balance sheet with a corresponding entry to a regulatory asset.

Distribution Corporation records a regulatory asset in both the New York and Pennsylvania jurisdictions because it is deemed probable that there is an adequate amount collected in rates to cover annual workers' compensation costs paid by each jurisdiction. The regulatory asset is presented for financial reporting purposes. For rate case purposes, workers' compensation claims are handled on a pay-as-you go basis.

For Supply Corporation, there is not adequate rate relief to cover workers' compensation claims. As such, a regulatory asset has not been established at this level. At the end of each year, the Human Resources Department analyzes the number of open claims that exist within Supply Corporation and determines what the estimated liability for those open cases is based on a review of [state workers' compensation] actuarial tables. This estimated liability is then recorded / adjusted on the balance sheet with a corresponding entry to operation expense. On a monthly basis throughout the year, workers' compensation claims paid are recorded as a debit directly to operation expense.

For Seneca Resources Corporation, the Human Resources department analyzes the number of open claims that exist within Seneca Resources Corporation and determines what the estimated liability for those open cases is based on a review of [state workers' compensation] actuarial tables. This estimated liability is then recorded / adjusted on the balance sheet with a corresponding entry to operation expense. On a monthly basis throughout the year, workers' compensation claims paid are recorded as a reduction of the estimated liability established annually.

Storage Gas Inventory

Supply Corporation:

Storage gas inventory accounting is recorded in journal entries – one for Retained Gas and a second for System Gas. Both types of storage gas inventory are accounted for in accordance with FERC Order 581 & 581-A.

Retained Gas – Supply follows the Non Revenue Recognition provisions of Order 581 for Shipper Supplied Gas. As of May 1, 2012, Supply Corporation is subject to a tracking mechanism that will adjust fuel retention rates annually to reflect actual experience. On a monthly basis, the retained gas entry is made to record any over-collection or under-collection of retained quantities to an inventory tracker account. This gas represents gas received from shippers under tariff allowances that is not consumed in operations plus or minus any system gain/loss variances. The value of such gas is accounted for as a debit/credit to inventory account 117.3 “Tracker – Gas Stored Pipes” and a debit/credit to regulatory asset account 182.4 “Efficiency Gas Tracker.” This gas is valued at 100% of Supply’s current month’s cash-out index price (See Order 581, pg. 38). Annual filings adjusting the retainage factors for past period over-collection or under-collection of retained quantities have an effective date of April 1st and are based on prior calendar year actual quantities.

In addition, Supply records its gas consumed in transmission compressor stations as a debit to account 854 “ Gas for Compressor Station Fuel” and a credit to account 810 “ Gas Used for Compressor Station Fuel- Cr.” (See Order 581, pg. 34-35). Gas consumed in storage compressor stations is recorded as a debit to account 819 “Compressor Station Fuel and Power” and a credit to account 810 “Gas Used for Compressor Station Fuel – Cr.” LAUF is recorded to account 813 “Other Gas Supply Expenses” with an offsetting entry to account 812 “Gas Used for Other Utility Operations – Credit.”

STEPS FOR RETAINED GAS:

Obtain the (1) Monthly Analysis Fuel Retained and Burned report and the (2) Order 581 Report from the Gas Accounting Department. We are on a one-month lag so we use the prior month column for the current month accounting. (i.e., Nov. 2009 column used for Dec. 2009 accounting month). Note that the Accounting Dept. has requested that Senior Management approve the OPS Availability report before we use it to record the retained gas entries for the month.

The inventory retained for the month is priced out at 100% of Supply’s cash-out index price obtained from Supply’s website or by taking 100% of the line item “Cashout Index” on the Order 581 report. Use the following excel file to update the inventory summary for the month: Sox Secured Files\Supply Retained Gas & System Inventory\Retained Gas\Retainxx.xls [Inventory Summary]. Input the following items for the month (source for all information is the Monthly Analysis Fuel Retained and Burned report, except the cash out index price).

Input into the first row for the month:

Shrinkage volumes (enter into column B).

Fuel Use volumes (enter into column E).

System loss and measurement variance (enter into column G).

Change in variance (enter into column I “Other Unidentified”) Beware if this is a large number. Further investigation by Gas Accounting is warranted.

Enter the “DTH Cumulative Excess Retained” into column L which is from the Fuel Tracker report as the sum of the cumulative gas balances (Gross Transportation Fuel and Company Use Cumulative Balance Qty, Net Transportation LAUF Cumulative Balance Qty and Net Storage Cumulative Balance Qty).

Columns J and K are formula driven, copy the formula from the prior month. Verify that column J agrees to the calculation on the Fuel Tracker report. Enter the 100% cashout index price in column M.

Columns N, O, P and Q are formula driven, just copy the formula from the prior month.

You are now finished with the Inventory Summary and can prepare your entry. Copy the prior month’s entry worksheet and rename it for the current month. Update information on the entry for the current

month. Entry 1 is to record revenue on inventory summary report. Entry 2 is to record the fuel usage for the month. The information for the entry comes from column Q on the inventory summary report.

System Gas – This gas represents volumes maintained for system balancing purposes. Supply follows the Fixed Asset Method in accounting for its System Gas. Under this method, the amount in account 117.2 “System Balancing Gas” does not change. Rather, encroachments upon System Gas are recorded in account 117.4 “Gas Owed to System Gas”. This is a contra asset account and represents the current market value of the volume of System Gas encroached upon. The details of accounting for System Gas under Order 581 are somewhat complex. See a copy of the monthly entry for System Inventory for a detailed breakdown of the accounting. Basically, the accounting involves imbalances, the settlement of imbalances through cashouts or in-kind exchanges, and the purchase of replacement gas to reduce the encroachment.

The accounting for System Gas, and the related accounting for imbalances and cashouts, has a zero net impact on Supply’s earnings. This is based upon the premise that Supply does not bear the risk of price increases (or the benefit of price decreases) from the time a customer cashes out an imbalance to the time the replacement gas is actually purchased. This is due to the fact that Supply has a provision in its tariff that allows it to carry forward under recoveries of cashouts to future periods to net against future over-recoveries. If Supply over recovers on cash outs then it must refund the difference to its customers.

When imbalances are cashed-out, gains on settlements of imbalance receivables and payables are recorded to account 495 “Other Gas Revenues” with the deferred amount of the gain going to account 254 “Other Regulatory Liabilities.” Losses on settlements of imbalance receivables and payables are recorded to account 813 “Other Gas Supply Expenses” with the deferred amount of the loss going to account 182.3 “Other Regulatory Assets.”

Imbalances are recorded on a gross receivable/payable basis to account 806 “Exchange Gas,” with imbalance receivables recorded to contra account 174 “Miscellaneous Current and Accrued Assets” and imbalance payables recorded to contra account 242 “Miscellaneous Current and Accrued Liabilities.”

Empire Pipeline, Inc.:

Retained Gas – Empire follows the Non Revenue Recognition provisions of Order 581 for Shipper Supplied Gas. As of April 1, 2017, Empire is subject to a tracking mechanism that will adjust fuel retention rates annually to reflect actual experience. On a monthly basis, the retained gas entry is made to record any over-collection or under-collection of retained quantities to an inventory tracker account. This gas represents gas received from shippers under tariff allowances that is not consumed in operations. The value of such gas is accounted for as a debit/credit to inventory account 117.3 “Tracker – Gas Stored Pipes” and a debit/credit to regulatory asset account 182.4 “Compressor Fuel/OGFTU Tracker.” This gas is valued at 100% of Empire’s current month cash-out index price (See Order 581, pg. 38). Annual filings adjusting the retainage factors for past period over-collection or under-collection of retained quantities have an effective date of April 1st and are based on prior calendar year actual quantities.

In addition, Empire records its gas consumed in compressor stations as a debit to account 854 “Gas for Compressor Station Fuel” and a credit to account 810 “Gas Used for Compressor Station Fuel – Cr.” Other gas for transporter’s use (OGFTU) is recorded in account 813 “Other Gas Supply Expenses” and account 812 “Gas Used for Other Utility Operations – Credit.” This accounting is outlined in Order 581, pg. 34-35.

System Gas – This gas represents volumes maintained for system balancing purposes. Empire follows the Fixed Asset Method in accounting for its System Gas, accounting for imbalances in account 117.4 “Gas Owed to System Gas” with offsets to either account 174 or account 242. The accounting involves imbalances, the settlement of imbalances through cashouts or in-kind exchanges, and the purchase of replacement gas.

Distribution Corporation:

Policy

Distribution uses the last in first out (LIFO) method of valuing inventory. Under the LIFO method, the last unit purchased for inventory is the first to be sold from inventory. On a monthly basis for NY, injections and withdrawals are priced according to the methodology from the settlement in May 2002 with the NYPSC in Case 00-G-1858. According to that methodology, during injection cycle (April – October), storage injections and withdrawals are priced at the average commodity cost of gas purchased for the month. During the withdrawal cycle (November – March) storage injections and withdrawals are priced at the weighted average commodity cost of gas calculated over the previous injection cycle. Note it does not include demand charges. For PA, the injection and withdrawal rate includes demand and commodity charges and is based on the period of October – September using a combination of actual and projected data (same calculation since 1974). The Rates and Regulatory Affairs Department provides Accounting with the PA storage rate (injection and withdrawal) on a quarterly basis. The pricing of storage injections and withdrawals in NY and PA results in a storage value that approximates a FIFO (First in First out) basis. During the heating season, as gas is withdrawn from storage, the inventory value on a FIFO basis is significantly lower than what the inventory balance would be on a LIFO basis. In accordance with the Uniform Systems of Accounts and Generally Accepted Accounting Principles, Distribution credits Reserve for Gas Replacement and debits Storage Gas Inventory for the difference between the inventory value on a FIFO basis and what it would be under LIFO. This entry adjusts the inventory value to a LIFO basis. The basis for recording a credit to the Reserve for Gas Replacement (which rolls up to Other Accruals and Current Liabilities on the financial statements) is that it is expected that storage gas quantities withdrawn and sold will be restored by September 30. The Reserve for Gas Replacement is eliminated as gas is injected into storage and the layers are restored at the original LIFO cost. The Reserve for Gas Replacement is always zero at September 30 when a final determination of the LIFO layers is calculated.

Purchased Gas Summary Report from Accounting

Process to generate monthly storage entries

Financial Accounting inputs the Prior Month and Current Month Estimate Monthly Storage Summary Report information from Gas Accounting. After all amounts are input, formulas calculate the storage rates and amounts and journal entries for the month. An individual independent of the person that prepared the spreadsheet reviews the spreadsheet and journal entries for accuracy each month. Evidence of the review is noted by signature on the journal entry forms. Also, the storage spreadsheet is tested as part of our annual spreadsheet testing.

In addition, every month the AP Recon and FS Recon files are prepared to verify accuracy of amounts posted to the general ledger. Discrepancies are investigated.

Allocations

Common Cost Allocation

The Common Cost Allocation is a monthly allocation of “common” administrative and general department costs. The common costs represent costs incurred in New York Distribution departments that have a benefit to the other National Fuel subsidiaries. While some costs may be direct charged to the subsidiaries receiving the benefits, others are more generic in nature and cannot be specifically charged. The common cost allocation seeks to allocate these charges using a three-factor formula. The basic three-factor formula has been in place since October 2014. It was developed as part of a New York management audit proceeding. The three factors are net plant, throughput, and O&M expense (excluding purchased gas costs, A&G expenses, and Account 858 in Supply Corp.).

Update Procedures

The formula is updated annually at the start of the new fiscal year using the prior year’s fiscal results in the computation. The allocation is reviewed to ensure that the departments included in the allocation are valid based on the work that they perform. The allocation is also reviewed routinely to determine if the factors used in the formula are appropriate based on the business.

Responsible Parties

The allocation is reviewed and maintained by the Accounting Department. All changes to the allocation must be approved by the Senior Manager of Accounting responsible for the general ledger or General Manager of Accounting and logged on an allocation update form.

Reconciliation

The allocation results are reviewed monthly to ensure that all expected amounts are allocated properly and that the appropriate overheads are included in the amounts charged out.

Documentation

Refer to the “Cost Assignment and Allocation Manual” for detail on allocations.

Officer Cost Allocations

The Officers of National Fuel have duties and responsibilities that cause them to provide valuable service and oversight to multiple subsidiaries. As such, the cost of their salaries, benefits, vehicles, and other expenses are allocated across the subsidiaries that they provide the service or benefit. Each officer enters their time into the Time & Labor system. Accordingly, officer time is direct charged to the various subsidiaries. Any portion of their time that is not direct charged is allocated to various subsidiaries based on an allocation provided by the officer.

Reconciliation

The Payroll department reviews the time sheets monthly, and any discrepancies are investigated and corrections are made.

Documentation

Refer to the “Cost Assignment and Allocation Manual” for detail on allocations.

Information Services

The costs associated with providing access, support and maintenance for users of the Company's network and mainframe are accumulated in Information Services clearing accounts. The costs are then allocated to the various subsidiaries and down to the functional accounting level through a series of allocations.

Update Procedure

The overall allocation is updated on an annual basis. This would include updating the PC counts by subsidiary, common expense factors within the system breakdowns and updating factors for other system breakdowns such as leak system, meter maintenance, etc.

Since the allocation is performed using Excel, the changes are all made to an Excel spreadsheet, which is then reviewed by a department manager.

Responsible Party

Preparation and updating of the allocation is the responsibility of the Accounting Department. All changes to the allocations must be documented and should be made in conjunction with the Information Services Manager.

Reconciliation

The entire balance of the accounts is allocated each month. The balance in the account, after posting the allocation, should always be equal to zero. Any differences should be noted and examined.

Documentation

Refer to the "Cost Assignment and Allocation Manual" for detail on allocations.

Telecom Costs

The costs associated with providing access, support and maintenance for users of the Company's telecommunication's network are accumulated in Telecom clearing accounts. The costs are then allocated to the various subsidiaries and departments through a series of allocations.

There are multiple clearing accounts that contain different portions of the Telecom costs. Each one has a slightly different allocation to reflect the area or equipment covered in that account.

Update Procedure

The Accounting Department works with the Telecom Manager to develop the updates to the allocations. The rates are reviewed and updated annually.

Responsible Party

The allocations are maintained by the Accounting Department.

Documentation

Refer to the "Cost Assignment and Allocation Manual" for detail on allocations.

Vehicle and Tool Clearing

The costs associated with operating and maintaining a fleet of vehicles and construction tools are accumulated in several clearing accounts. The costs are subsequently allocated out of the clearing accounts using an hourly usage rate that charges the vehicle costs to both operating and maintenance costs and capital accounts.

Update Procedure

The Accounting Department oversees the vehicle and tool clearing process. An analysis is performed monthly to determine if the rates in effect are proper to allocate the costs that are being charged into the accounts. If the account becomes over or under cleared, an adjustment is made to the hourly usage rates. When the rates are updated, they are passed on to the Payroll Supervisor to be updated in the payroll system.

Responsible Party

The Accounting Department is ultimately responsible for watching over the account. Due to the impact of the rates on the O&M budget and the capital budget, others, from the Budget Manager to the Fleet Manager, review the costs.

Reconciliation

The costs in the account are cleared out based on an annual cost / usage theory. The only time that the account is near zero is at year-end. At that time, the accounts are cleared out and any remaining costs from the year are included in the miscellaneous cost bucket and become part of the new year's rates. The account will not necessarily go to absolute zero at any time.

Documentation

Refer to the "Cost Assignment and Allocation Manual" for detail on allocations.

Additional Allocations

Allocations are maintained for many other clearing accounts. The same policy and methodologies are used to clear them all. The methods are based on the type of costs that are being cleared and the most meaningful method to allocate the costs.

Update Procedure

The Accounting Department updates allocation factors annually. Each update is documented and tested before being reviewed and approved by at least a Senior Manager of Accounting. The PeopleSoft system is updated online and tested prior to the first live run of the allocation.

Responsible Party

The Accounting Department is responsible for the review and maintenance of the allocations. The allocations are reviewed with the department heads that control the costs so that they are aware of the procedures being followed to allocate their costs.

Reconciliation

The accounts are reviewed monthly to insure that the allocations were properly run. Additionally, each clearing account is reviewed to ensure that the balance has been cleared to zero at month end, unless they are based on a month lag.

Documentation

Refer to the "Cost Assignment and Allocation Manual" for detail on allocations.

Loading Factors

General

This chapter is designed to provide the general policies and procedures related to the application of Overhead Loading factors at National Fuel. Overhead loading factors are designed to capture certain costs – fringe benefits, vacation & holiday, vehicle & tool, Materials Management Inventory overhead, etc., and then load them on to the accounting charges based upon a causative event. For instance, if we were looking to apply fringe benefits, the most causative event would seem to be labor. Applying the overhead based on miles driven would not appear to be the best event to choose. Each loading factor has its own characteristics and rules to be followed.

Updating of factors

Loading factors are generally updated annually at either fiscal or calendar year end. If circumstances arise that would significantly impact the factor, changes will be made during the year as appropriate.

Budgeting of Loading Amounts

The various loading factors are used in the budgeting process to budget for the actual application of the loading and the clearing of the loading from the accounts where the amounts are accumulated. Preliminary factors are calculated prior to the beginning of the budget preparation process and forwarded to the Budget Department for use in their calculations.

Vacation & Holiday Loading

National Fuel and its regulators believe that vacation & holiday pay should be charged the same way that labor costs are charged. To accommodate this policy, a vacation & holiday loading factor is calculated and applied to all labor charged to a capital job or an intercompany account. The cost of the vacation & holidays is initially charged to a pension & benefits expense account. Then, based on where the actual labor is charged, it is credited from the expense account and debited to the same account that the labor has been charged to (i.e. capital job or intercompany account). The vacation & holiday benefit program is administered by the Benefit Services Department, while the Accounting Department is responsible for the calculation of the loading rates.

Application

Vacation & Holiday loading is loaded on to all labor that is charged through the payroll system to a capital job or intercompany account. Each subsidiary has its own vacation & holiday rate based upon the employee benefits that are provided to the employees of that subsidiary. Executive labor is not loaded with vacation & holidays.

For accounting and budgeting purposes, the vacation & holidays are accounted for with the actual labor costs. The differentiation between labor and vacation & holidays can be seen by the use of the product code applied to the accounting transactions.

Computation

The factor is computed by dividing the total company labor into the vacation & holiday amounts to get a labor percentage. The factors will vary from subsidiary to subsidiary based on the amount of vacation time granted to the employee group.

There are a couple exceptions to the general rule; first, we do not always use the total labor to compute the value. Since vacation & holidays are not loaded on executive labor, the executive labor is excluded from the computation. Supplemental vacation & holiday rates are calculated by using a simple average of the amount of labor that is authorized for the group and divided by an average wage rate. This is mainly because of the number of new hires coming into this category and the different benefit structures that they are receiving. (Accounting distributes the rates to persons needing the percentages. Call or email if a copy is needed).

Update Procedures

The factors are currently updated in October of each year based on the twelve months ended September. Once updated and approved, the vacation & holiday rates are forwarded to the Accounting, Payroll, Benefit Services, and Budget Departments for their use.

Fringe Benefit Loading

National Fuel and its regulators believe that, like vacation & holiday costs, fringe benefit costs should follow the same accounting as labor costs in the Company. Therefore, a fringe benefit loading factor is calculated and applied to labor as it is charged to capital, clearing, undistributed or intercompany accounts.

The cost of providing fringe benefits is initially charged to an operating & maintenance expense account. Then, based on where the actual labor is charged, it is credited from the expense account in the employee's home company and debited to capital, clearing, undistributed or inter-company accounts.

The fringe benefit programs are administered and accounted for by the Benefit Services Department, while the Accounting Department is responsible for the calculation of the fringe benefit rates.

Application

Fringe benefits are loaded on to certain labor that is charged through the payroll system. It is applied to all labor that is charged to capital projects, clearing accounts, some other undistributed accounts and inter-company labor charges. Fringe benefits are loaded on to all labor charged between subsidiaries and also between jurisdictions in Distribution Corporation.

The eligible labor is first loaded with vacation & holiday costs. That total is then loaded with fringe benefits based on the appropriate loading factor. Each subsidiary has its own fringe benefit rate based upon the benefits that are provided to the employees of that subsidiary. Separate rates are also calculated for executives.

For accounting and budgeting purposes, the fringe benefits are accounted for separate from the actual labor costs. While the labor costs flow through the Labor or Loaned & Borrowed labor budget items, fringe benefits go to the Employee Benefits budget item. The differentiation can be seen by the use of the product code applied to the accounting transactions.

Computation

The fringe benefit loading factor is, for the most part, computed by dividing the total company labor into the fringe benefit costs to get a percentage of labor percentage. The various factors are then added together and become the fringe benefit load.

There are a couple exceptions to that rule; first, we do not always use the total labor to compute the value. There are certain items, such as the Deferred Non O&M Pension and OPEBs that only use a portion of labor. Since it is based on only the non O&M piece of the OPEBs and pensions, we also only use the non O&M labor to divide into the figure.

Each item is scrutinized before being added to the fringe benefit loading factor and to ensure that the proper amount will be loaded and budgeted. (A copy of the current fringe benefit loading factors can be obtained from the Accounting department).

Update Procedures

The factors are currently updated in October of each year based on either the twelve month ended September benefit amounts or amounts included in the various rate filings or rate awards for the upcoming fiscal year.

The factors will also be updated at any time that there is a significant change in the benefit amounts such as from a rate settlement or due to a large increase or decrease in the cost of providing a benefit. Once updated and approved, the fringe benefit rates are forwarded to the Payroll, Benefit Services, Budget and IS Departments.

Reconciliation and Review

The fringe benefit loading process is reviewed through the budget process by both the Benefit Services Department and the Budget Department. Any material changes to the benefit amounts or labor charges will be reviewed by Accounting and an update to the rates will be reviewed.

Vehicle & Tool Rates

The Company maintains a fleet of vehicles that are used for transportation and construction purposes. It also owns and maintains various construction tools that are available to the operating personnel. The Mechanical Division controls the overall fleet as far as maintenance, replacements and coordinating the movement of vehicles if necessary, however the vehicles are kept and accounted for by the various operating locations or departments who use them. It is up to the persons responsible for the vehicles to ensure that the vehicles are properly reported on their payroll timesheets each week or month.

Application

The vehicle costs are charged out based on the hourly usage of the vehicle. An hourly usage rate is calculated for each grade of vehicle. That hourly rate multiplied by the number of hours the vehicle was used equals the amount that is charged for the vehicle or tool use. The payroll system is used to accumulate the vehicle hours and to apply the charges. Separate product codes have been set up and are used on the accounting transactions to identify the transactions as being vehicle and tool loading.

Computation

The computation of the rates is done on an annual basis prior to the start of the new fiscal year. The total number of vehicles in each class is multiplied by the total number of work hours in the year to come up with a base total available hours figure. Next, using the costs from the previous twelve months and adding or subtracting the remaining balance in the vehicle and tool account from the prior year, a total cost figure is determined. This figure is then divided by the total available hours to come up with a rate per hour per class of vehicle. That rate is then used when applying the charges through the payroll system and in Accounting when calculating the idle time charges. (A schedule of the current rates may be obtained from the Accounting Dept.).

Update Procedures

The vehicle & tool rates are reviewed monthly to ensure that the costs being collected are being charged out and not accumulating. If it is determined that there is either an over-clearing or under-clearing of the account, the rates will be adjusted accordingly.

Reconciliation and Review

The accounts are reviewed routinely through the budget process by both the Budget department and the budget preparers. Additionally, the Accounting department reviews the rates monthly. At fiscal year-end, the balances of the accounts are netted against each other to clear the accounts for the upcoming year. At that time, the balance in the overall accounts should be close to zero. Small balances are rolled into the rates for the upcoming year; significant over or under collections would be considered for manual clearing.

Idle Time Charges

Since there can be large variances as a result of individuals not properly entering their vehicle time on their timesheets, a procedure was added to make sure that the charges are properly being applied. Each month an idle vehicle entry is made to charge a location for the hours that the vehicle was not used. Since we know how many hours of work time are available each month, a location is charged for the difference between the number of hours that they reported and the expected hours. If hours are repeatedly under-charged, the location is notified so that they can properly charge the hours or make corrections with the Mechanical Division in case the vehicle count at their location has changed.

Accounting Application

There are two separate accounting issues with the vehicle & tool clearing accounts:

The first deals with the charges going into the accounts. When invoices are paid, labor is charged, material issued from the inventory or depreciation expense calculated, the accounting charges for those transactions are a debit into the clearing accounts. There is a separate account number for each class of vehicle so that the expenses can be tracked and the loading rates can be developed.

The second issue is related to the charges coming out of the account. The clearing accounts are offset when the vehicles are used via an hourly usage rate. The vehicles are charged in the same way that the labor is charged. If labor is capitalized, the vehicle charges are also capitalized. If the labor is

expensed, the vehicle charges are expensed. The credit transaction goes to one of the two vehicle credit accounts 184070 for Construction tools and 184575 for vehicles.

AFUDC

As regulated companies earnings are based on the rate base that they have in service, the various regulatory bodies have adopted a process whereby these companies can accrue interest on their projects that are being constructed – Allowance for funds used during construction or AFUDC. AFUDC represents the cost to the Company of the capital that is used during a construction project. In other words, when we are constructing an asset such as a regulator station or a pipeline, we may borrow money or use other funds to pay for the project. The interest that we are paying on those borrowed funds or the cost of the other funds (equity) becomes a cost of building the station or pipeline and is capitalized with the other costs of the project.

Application

AFUDC is applied by the Project Costing system at National Fuel Gas Company. It is calculated monthly based on the amount of costs that were used for a construction project. There are a couple of rules governing the application of AFUDC on projects:

We do not accrue AFUDC on blanket projects (projects for small tools, vehicles or services.)

The project must be in CWIP for thirty days or more.

A half-month convention is used for current monthly charges.

AFUDC stops when the project is put into service. ⁽¹⁾

AFUDC is compounded on a semi-annual basis in March and September.

AFUDC should not be accrued for the period prior to the date of the application to the Commission for a certificate to construct facilities.

For joint interest capital projects, AFUDC should not be accrued on the portion of capital costs that will be billed to the partners.

⁽¹⁾ There may be circumstances when one part of a larger project is completed prior to the rest of the project. This component of the larger project will only be placed in service if the asset is useful (meaning it does not rely on other components of the larger project to be useful). If being placed in service, the in service plant cost is moved from CWIP to Plant and AFUDC is no longer accrued. The remaining parts of the project that remain under construction will continue to accrue AFUDC until placed in service.

Update Procedures

In determining the annual AFUDC rates to be used by the Project Costing system, there are two calculations that need to be made. The first calculation is to determine the estimated rates for the year. This rate is used throughout the calendar year to book the AFUDC. At the end of the calendar year an actual rate is calculated which is based on updated figures for short-term debt and CWIP balances. If the actual rate varies from the estimated rate by more than 25 basis points or .25%, then an entry must be recorded to adjust the entries made throughout the year.

Computation

AFUDC rates are calculated annually and are based on a formula that was developed by the FERC. As National Fuel Gas Company's corporate structure is unique in comparison to most regulated companies, the FERC methodology for determining the average short-term debt balance was amended and agreed-upon between both the Company and FERC audit staff during the 2019 National Fuel Gas Supply Corp. FERC audit. The formula continues to consider all of the normal sources of funds such as short term and long term borrowing, as well as the sale of stock. The result of the formula is a blended rate, which is applied to the costs incurred during the construction of the asset.

Ai = Gross Allowance For Borrowed Funds Used During Construction Rate

Ae = Allowance For Other Funds Used During Construction Rate

S = Average Short Term Debt

s = Short Term Debt Interest Rate

D = Long Term Debt (Prior Year End)

d = Long Term Debt Interest Rate (Weighted Average)

P = Preferred Stock (Prior Year End)

p = Preferred Stock Cost Rate (Weighted Average)

C = Common Equity (Prior Year End)

c = Common Equity Cost Rate(Rate Granted in Last Rate Proceedings)

W = Average Balance in CWIP (13 Month Average)

$$A_i = s(S/W) + d(D/(D+P+C)) * (1-(S/W))$$

$$A_e = [(1-S/W)] * [(p*(P/D+P+C)) + (c*(C/D+P+C))]$$

Reconciliation and Review

AFUDC is reviewed by the Engineering Services Department (plant accounting team) as well as the Finance Department (financial forecast team). The plant accounting team monitors the application of the funds to the various projects as well as ensuring that AFUDC stops when the plant is placed in service. Significant AFUDC variances compared to forecast are investigated by the financial forecast team on a monthly basis.

UNICAP

The uniform capitalization rules of Section 263A of the Internal Revenue Code require that certain costs relating to self-constructed assets be capitalized. National Fuel Gas applies these rules to the costs associated with constructing pipelines, regulator facilities and compression facilities. There is a per-tax segment and a per-book segment to the application of the charges. The following pertains to the per-books segment monitored by the Accounting Department.

Application

For tax purposes, National Fuel Gas performs a calculation to determine the full amount of costs to be capitalized. For book purposes, the company capitalizes Engineering and some vehicle related charges directly to the capital projects. This is done via a monthly allocation run in the project-costing module of PeopleSoft. The non-regulated subsidiaries based on the nature of the work that they perform, do not apply UNICAP per books.

Computation

Unicap is determined by first reviewing the work performed within the Engineering Department. A percentage of time worked on capital related activities is derived and that percentage is then used to compute the amount of Operating costs to be applied to the various projects. The allocation is then run taking a percentage of a project against the total cost of projects. That percent is multiplied by the amount previously determined to come up with the amount of Unicap to charge to the project.

Other Topics

This chapter contains topics that cover many different accounts or are general policy items that relate to the overall Accounting Policy of the Company.

Reconciliation Procedures

Routine reconciliations of balance sheet accounts are necessary to provide comfort that the balance sheet accounts are being properly accounted for and that appropriate management decisions based on those balances can be made.

Since assets are probable future economic benefits of past events and liabilities are probable future sacrifices of economic benefits from present obligations, it is important to the company to properly measure those benefits and sacrifices. To ensure that Balance Sheet account balances are not over or under stated, regular reconciliations of the accounts are to be performed.

Policy:

Accounting Department will assist the process owner to identify the balance sheet accounts they are responsible for reconciling and the frequency of the reconciliations.

Accounting Department will determine the frequency of reconciliations for each balance sheet account and notify the account owners of the requirements.

Accounting Department will review balance sheet accounts on at least a quarterly basis to determine which accounts are considered significant (high balance or high activity). Significant accounts must be reconciled quarterly to satisfy management and audit requirements.

All balance sheet accounts must be reconciled at least annually. Annual account reconciliations should be submitted to Accounting Department for review off of any month end between October and June 30, unless Financial Accounting has agreed to another date.

Any active account having activity during the current or prior fiscal year, regardless of the period end balance of the account, will be reconciled annually if it is not a significant account or quarterly if it is a significant account. Significance will be determined once a year based on the previous fiscal year end balances.

If an account is inactivated during a fiscal year, a reconciliation will be required for such account up to the point that it is inactivated (annually if it was not a significant account; quarterly if it was a significant account).

If a business unit is dissolved during a fiscal year, a reconciliation of accounts related to the business unit will be required up to the point that the business unit is dissolved (annually if it was not a significant account; quarterly if it was a significant account) with the following caveat. It is possible that a business unit could have zero financial activity in an account and a zero account balance for several years before the business unit is dissolved. If that is the case, the need for reconciliations will be based on whether the account for that business unit has had activity in the current or prior fiscal year and is active.

Zero balance accounts with no activity should be considered for closure.

A Reconciliation Statement is required to be submitted for each account.

Material reconcilable differences must be corrected within (90) ninety days of the reconciliation. Extensions must be requested in writing with details of the circumstances and approved by the Principal Accounting Officer.

Accounting Department will maintain a checklist to track the completion of reconciliations.

Newly created accounts do not have to be reconciled in the quarter/year they are created.
Insignificant accounts – if created during the 4th quarter, no need to reconcile until the next year
Significant accounts – reconcile in the quarter after they are created

Due Dates

Quarterly reconciliation statements should be prepared and forwarded to Accounting Department no later than two weeks before the scheduled filing date of the 10-Q or 10-K. Annual reconciliation statements should be sent to Accounting Department no later than August 31st. Accounting Department will notify the reconciliation preparers of the annual and quarterly reconciliation due dates via e-mail.

Procedures and Guidelines

The reconciliations are intended to verify the balances in the various Balance Sheet accounts. As such, the procedure is one of reconciling the account balance to a sub-ledger balance or proving an account balance against a detailed schedule.

Individuals will be informed of the reconciliation schedule for the accounts for which they are responsible.

A Reconciliation Statement has been developed for use in the reconciliation process. The statement should be used to provide details for the reconciliation and to note discrepancies.

Accountants are to ensure that Balance Sheet reconciliations are received each quarter from their areas of responsibility and that the reconciliations are reviewed. The review is to ensure that relevant supporting documentation / information is provided to explain the balance in the account and any corrective action is then promptly taken.

Reconciliation Statements

Reconciliation statements have been created to provide a standard format for the reporting of reconciliation results. The forms should be used for every account being reconciled and must be signed by the person completing the reconciliation and the reviewer of the reconciliation. Current forms can be obtained from the Accountant assigned to monitor the balance sheet account reconciliation process in the process owner's area of responsibility.

Responsibility and Accountability

Monitoring of the Balance Sheet account reconciliation process is the overall responsibility of the Accounting Department. Individual asset and liability accounts will be assigned and must be reconciled by the person or department responsible for the processing of accounting charges through those accounts.

This would be true for such accounts as Cash, Prepaid Insurance, Leasing and Taxes, Inventory, Vouchers Payable, Plant in Service, Construction Work in Progress and Retirement Work in Progress, as well as most other accounts.

The accountant assigned to monitor the balance sheet accounts being reconciled will be available to advise the process owners on the reconciliation process and to follow-up with the areas to ensure that corrective action is taken.

Glossary

Accounting Policy: The specific accounting principles, basis or method applied in preparing and presenting financial statements.

Accounting System: The total structure of records and procedures that discover, record, classify, summarize and report information on the financial position and results of operations of an organization or entity.

Accrual Basis: The basis of accounting under which transactions are recognized when they occur, regardless of the timing of the related cash flow.

Accruals: adjust the cash position at year-end to reflect the true financial position of the entity. Adjusting accounts at year-end may be reversed in the subsequent period to show the true financial position for that period.

Accrued Expenses: represent goods or services provided by other parties during the period that are unpaid at the end of the reporting period and where an invoice has not been received.

Accrued Revenue: is a class of receivables that represents revenue earned at the end of the reporting period that the entity has not raised an invoice for, or otherwise billed, by the close of the reporting period. A previous period accrual may be reversed at the beginning of the new financial year, to show the true financial position in that new period.

Accumulated Depreciation: is the total, at a given point in time, of the depreciation expense charged for a particular depreciable asset or a class of assets.

Acquisition: in relation to assets, means undertaking the risks, and receiving the rights to future benefits, as would be conferred with ownership, usually in exchange for a cost of acquisition. Acquisition includes establishing control over an asset.

Acquisition Cost: is the purchase consideration plus any costs incidental to the acquisition.

Aggregate Assets: are a group of assets with similar characteristics, or that constitute an interdependent unit, which individually fall below the recognition threshold of an entity but which in total are significant and may be recorded as a single asset in the asset register.

Amortization: means the gradual extinguishment of an amount in an account by distributing such amount over a fixed period, over the life of the asset or liability to which it applies, or over the period during which it is anticipated the benefit will be realized.

Annual Budget: A budget applicable to a single fiscal year.

Assets: are future economic benefits controlled by an entity as a result of past transactions or other past events.

Asset Classes: are the means by which categories of assets may be disclosed in the notes to the financial statements.

Associated (affiliated) companies: means companies or persons that directly or indirectly, through one or more intermediaries, control, or are controlled by, or are under common control with the accounting company.

Bank Accounts: are accounts maintained for banking purposes and associated activities at a bank or credit union or building society.

Budget: A plan of financial operation representing an estimate of proposed expenditures for a given period.

Capital: is the accumulated wealth that an entity possesses and relates to owner's equity in the entity.

Capital Budget: A plan of proposed capital outlays.

Capital Expenditure: is a cost incurred in the course of adding to the future economic benefits provided by an asset as a result of physical addition, improvement or extension of the useful life of the asset. Capital Expenditure is also the purchase of any new assets above the asset capitalization threshold.

Cash: comprises cash on hand, cash in bank accounts, and cash equivalents.

Cash Accounting: (or Cash Basis of Accounting) involves recognizing and recording transactions solely on the basis of the receipt and payment of cash, and does not recognize the timing of related resource movements or the stocks of resources (other than cash) at the end of a reporting period.

Cash Equivalents: are highly liquid investments which are readily convertible to cash on hand at the entity's option, and which an entity uses in its cash management function on a day-to-day basis.

Cash Flows: are cash movements resulting from transactions with parties external to the entity.

Chart of Accounts: is a systematic coding system for classification and arrangements of accounts within the accounting system.

Commission: for the regulated subsidiaries, refers to the regulatory group with oversight of its operations.

NFG Supply Corporation - Federal Energy Regulatory Commission (FERC).

NFG Distribution Corporation – NY – NYS Public Service Commission (PSC).

NFG Distribution Corporation – PA – PA Public Utility Commission (PUC).

Empire Pipeline Inc. – Federal Energy Regulatory Commission (FERC).

Cost of removal: means the cost of demolishing, dismantling, tearing down or otherwise removing gas plant, including the cost of transportation and handling incidental thereto.

Current Assets: are cash or other assets of the department that would in the ordinary course of operations of the department be consumed or converted into cash within twelve months.

Current Liabilities: are liabilities of the department that would in the ordinary course of operations of the department be due and payable within twelve months.

Current Cost: in relation to an asset, means its cost measured by reference to the lowest cost at which the gross service potential of that asset could currently be obtained in the normal course of business.

Date of Acquisition: is the date on which the risks and rights to future benefits of an asset, as would be conferred with ownership, pass to the acquiring entity.

Deferred Revenues: Amounts for which asset recognition criteria have been met, but for which revenue recognition criteria have not been met.

Department ID: is the number or value assigned to each department to identify costs associated with it.

Depreciable Amount: is the historical cost of a depreciable asset, or other revalued amount substituted for historical cost, in the financial report, less in either case the net amount expected to be recovered on disposal of the asset at the end of its useful life.

Depreciable Asset: is a non-current asset having a limited useful life.

Depreciation: Expiration in the service life of fixed assets attributable to wear and tear, deterioration or obsolescence.

Entity: is any legal, administrative, or fiduciary arrangement, organizational structure or other party having the capacity to deploy scarce resources in order to achieve objectives.

Equity Instrument: is any contract that evidences a residual interest in the assets of an entity after deducting all of its liabilities.

Expense: is the consumption or loss of future economic benefits in the form of reductions in assets or increases in liabilities of the entity that result in a decrease in capital during the reporting period.

Extraordinary Items: are items of revenue and expense, which are attributable to transactions, or other events of a type that are outside the ordinary operations of the entity and are not of a recurring nature.

Fair Value: is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. The fair value of an investment is the amount that the plan could reasonably expect to receive for it in a current sale between a willing buyer and a willing seller, that is, other than in a forced or liquidation sale. Fair value shall be measured by the market price if there is an active market for the investment. If there is no active market for the investment but there is a market for similar investments, selling prices in that market may be helpful in estimating fair value. If a market price is not available, a forecast of expected cash flows, discounted at a rate commensurate with the risk involved, may be used to estimate fair value. The fair value of an investment shall be reported net of brokerage commissions and other costs normally incurred in a sale.

Fair Value Hedge: is a hedge of the exposure to changes in the fair value of a recognized asset or liability, or of an unrecognized firm commitment that are attributable to a particular risk.

Financial Asset: is any asset that is cash, or a contractual right to receive cash or other financial asset from another entity, or a contractual right to exchange financial instruments with another entity under potentially favorable conditions, or an equity instrument of another entity.

Financial Instrument: is any contract that gives rise to both a financial asset of one entity and a financial liability or equity instrument of another entity.

Financial Liability: is any liability that is a contractual obligation to either deliver cash or another financial asset to another entity, or to exchange financial instruments with another entity under conditions that are potentially unfavorable.

Financial Report: A report intended to meet the information needs common to users who are unable to command the preparation of reports tailored so as to satisfy, specifically, all of their information needs.

Financial Statements: ordinarily means a Statement of Financial Performance, Statement of Financial Position, Cash Flow Statement, and associated notes to the Financial Statements. Departments are also required to produce other Financial Statements, as specified in the Financial Statement Guidelines.

Fiscal Period: Any period at the end of which an organization determines its financial condition and the results of its operations and closes its books.

Fiscal Year: A 12-month period to which the annual operating budget applies and at the end of which an organization measures its financial position and the results of its operations. NFG's fiscal year begins on October 1 of each calendar year and ends on September 30 of the succeeding calendar year.

Fixed Assets: Assets of a long-term character, which are intended to continue to be held or used, such as land, buildings, improvements other than buildings, machinery and equipment.

Generally Accepted Accounting Principles (GAAP): Uniform minimum standards of and guidelines for financial accounting and reporting. They govern the form and content of the basic financial statements of an entity. GAAP encompasses the conventions; rules and procedures necessary to define accepted accounting practice at a particular time. They include not only broad guidelines of general application, but also detailed practices and procedures.

Historical Cost: The amount representing the original cost of an asset.

Inventories: include materials or gas:
held for sale or consumption in the ordinary course of service delivery; or
to be used up in the production of goods, other property or services for sale or consumption including consumable stores and supplies, but does not include depreciable assets.

Investments: Assets held by an entity primarily for the accretion of wealth through receipt of distributions (such as interest, royalties, dividends and rentals) or for capital appreciation, and includes items of property, plant and equipment which are held for sale other than in the ordinary course of the department's operations which do not satisfy the definition of "property, plant and equipment".

Liabilities: Future sacrifices of economic benefits that an entity is presently obliged to make to other entities as a result of past transactions or other past events. Liabilities are a broader concept than debt. They also include obligations, which do not have a predetermined repayment schedule, and those that do not require payments of interest.

Maintenance: Expenditure on an asset that does not substantially improve its future economic benefit, and which generally restores the asset to a reasonable condition without substantially increasing or decreasing the useful life of the asset.

Materiality: In general an item of information is material if its omission, non-disclosure or misstatement would cause the financial statements to mislead users when making evaluations or decisions.

Net Worth: (i.e. Capital) is the residual interest in the assets of the entity after deduction of its liabilities.

Non-current Asset: Any asset other than a current asset.

Non-current Liability: Any liability other than a current liability.

Obsolescence: The process of ageing of an asset due either to commercial or technical factors.

Operating Activities: Those activities that relate to the provision of goods and services.

Operating Lease: a leasing arrangement by which substantially all risks and benefits incidental to the ownership of the leased property effectively remain with the lessor (the owner of the property) rather than passing to the lessee (which would make it a 'finance' lease).

Ordinary Operations: Operations of a kind carried on regularly from reporting period to reporting period to achieve the objectives of the entity.

Operating Result: is the operating surplus or deficit for the period being reported.

Parent entity: means an entity, which controls another entity.

Payments: Cash outflows for a period, irrespective of when related costs are incurred.

Prepayments: are payments made in one reporting period, in respect of goods or services that the entity expects to receive or consume in future periods.

Property, Plant and Equipment:

are assets that:

are held by the entity for use in the production or supply of goods and services, for rental to others, or for administrative purposes, and may include items held for the maintenance, construction or repair of such assets;

have been acquired, obtained or constructed with the intention of being used on a continuing basis; and are not intended for sale in the ordinary course of business or service delivery.

Provision: means liabilities for which the amount or timing of the future sacrifice of economic benefits that will be made is uncertain (provisions are a subset of liabilities).

Purchase Order: A document that authorizes the delivery of specified merchandise or the rendering of a certain service, showing the amount authorized.

Purchasing: the acquisition of properties, goods, services and materials in exchange for something of value (money).

Reconciliation: A process conducted at the end of a fiscal period to ensure that the department maintained records and centrally maintained records are in agreement.

Receipts: are cash inflows for a period, irrespective of when the moneys are earned.

Recognize: To recognize an item (in an accounting sense) means to report the item, or include it in an amount reported, in the financial statements of an entity

Recognition: in an accounting sense refers to the reporting of an item, or its incorporation in amounts reported, in the financial statements of an entity.

Recoverable Amount: means, in relation to an asset, the net amount that is expected to be recovered through the cash inflows and outflows arising from its continued use and subsequent disposal.

Regulatory Assets and Liabilities: are assets and liabilities that result from rate actions of regulatory agencies. Regulatory assets and liabilities arise from specific revenues, expenses, gains, or losses that would have been included in net income determinations in one period under the general requirements of the Uniform System of Accounts but for it being probable:

That such items will be included in a different period(s) for purposes of developing the rates the utility is authorized to charge for its utility services; or

In the case of regulatory liabilities that refunds to customers not provided for in other accounts, will be required.

Replacement Cost: in relation to an asset, refers to a basis of determining the current cost of an asset. Replacement cost measures what it currently costs to obtain the service potential or economic benefits embodied in the existing asset by using a technologically up-to-date reference asset.

Reporting Date: The end of the reporting period to which the financial report relates.

Reporting Entity: Means an entity in respect of which it is reasonable to expect the existence of users dependent on general purpose financial reports for information, which will be useful to them for making and evaluating decisions about the allocation of scarce resources.

Residual Life: The remaining useful life of an asset at a specified date.

Revaluation: The act of recognizing a reassessment of values of non-current assets at a particular date.

Revenues: are inflows or other enhancements, or savings in outflows, of future economic benefits in the form of increases in assets or reductions in liabilities of the entity, that result in an increase in capital during the reporting period.

Right-of-use asset: An asset that represents a lessee's right to use an underlying asset for the lease term.

Subsidiary: An entity that is controlled by a parent entity.

Uniform System of Accounts: a system of accounts for natural gas companies under the Natural Gas Act. Created by FERC, the system of accounts and the rules and regulations contained therein are to be kept and observed by natural gas companies subject to the jurisdiction of the Commission. Both the NY PSC and the PA PUC, for use in recording transactions and reporting results of operations, have adopted these rules.

Unit of Measure: The units by which assets are to be measured to enable recording in the asset register of an entity.

Useful Life: the estimated period of time over which a depreciable asset is expected to be able to be used, or the benefits represented by the asset are expected to be able to be derived; or the estimated total service, expressed in terms of production or similar units, that is expected to be obtained from the asset.

Valuation: The process of placing a value on an asset, liability, revenue or expense.

Write Off: means, in relation to amounts receivable, removal of the receivable from the books of the agency.

III-A-52

Request:

Provide detailed computations showing the deferred income taxes derived by using accelerated tax depreciation applicable to post-1969 utility property increases productive capacity, and ADR rates on property. (Separate between state and federal; also, rate used)

- a. State whether tax depreciation is based on all rate base items claimed as of the end of the test year, and whether it is the annual tax depreciation at the end of the test year.
- b. Reconcile any difference between the deferred tax balance, as shown as a reduction to measures of value (rate base), and the deferred tax balance as shown on the balance sheet.

Response:

See Schedules D-11 and D-12 in Exhibit A (HTY), Exhibit A (FTY), and Exhibit A (FPFTY) for the computation of federal and state deferred income taxes.

- a. Tax depreciation subject to normalization is based on depreciable property as of the end of the test year. Tax depreciation for the Future and Fully Projected test years is based on forecasted additions/retirements.
- b. The accumulated deferred tax balance, as shown as a reduction to measures of value (rate base), represents the annualized balance based on the plant in service included in the measures of value, and then pro-rated according to the normalization rules under Treasury Regulation 1.167(l)-1(h)(6)(ii). The Historic balance sheet reflects the accumulated deferred tax balance based on book activity.

Re: National Fuel Gas Distribution Corporation's Supplement No. 244 to Tariff Gas Pa. P.U.C. No. 9 in Compliance with Commission Orders adopted May 17, 2018 in Docket Nos. M-2018-2641242 and R-2018-3000527

Dear Secretary Chiavetta:

Enclosed, for filing, is Supplement No. 244 to National Fuel Gas Distribution Corporation's ("Distribution") Tariff Gas - Pa. P.U.C. No. 9. Supplement No. 244 is being filed in compliance with the May 17, 2018 Commission Orders in Docket Nos. M-2018-2641242 and R-2018-3000527 (Commission Tax Orders). This filing updates the negative surcharge that was established on October 1, 2021 in order to implement the effects of the Tax Cuts & Jobs Act (TCJA). There are two components of the filing, the first of which reconciles Distribution's Fiscal Year 2021 tax savings versus the actual amount refunded to customers. The second component of the filing establishes a new refund rate for the upcoming fiscal year. Supplement No. 244 has an issue date of August 31, 2022 and an effective date of October 1, 2022.

The Commission Tax Orders required a reconciliation to be filed within 120 days from the end of Distribution's fiscal year. Distribution's fiscal year ended September 30, 2021 and the reconciliation was filed on January 28, 2022. After the filing was made, the Company finalized its federal tax return for fiscal year ended September 30, 2021, updated the current year ARAM amortization amount and updated the change in accumulated deferred income taxes (ADIT) – rate base to reflect the accumulated change since the TCJA was enacted.

On August 31, 2020, Distribution filed rates effective October 1, 2020 to pass back the estimated fiscal year tax savings to ratepayers. During the twelve month period ended September 30, 2021, Distribution refunded \$3,761,410. Compared to actual tax savings of \$3,498,505 for the same period, Distribution is owed \$262,906 from ratepayers for the twelve month reconciliation period. Interest was calculated on the amount to be collected at the residential mortgage lending rate specified by the Secretary of Banking in accordance with the Loan Interest and Protection Law (41. P.S. §§ 101, et seq.). Including interest, the total amount to be collected is \$284,714. Based on this reconciliation, Workpaper A of the attached filing calculates surcharges by service class, on an equal percentage of non-gas revenue. This calculation is supported by Workpaper B, which shows the calculation of Distribution's tax savings for the fiscal year. Workpaper C calculates the Over/Under Refund amount for the twelve months ended September 30, 2021. The reconciliation rates will become effective October 1, 2022. Tariff Page No. 170 provides a table detailing the unit rate per Mcf that will be applied as a credit to customer bills for service on and after October 1, 2022.

The second component of the filing establishes new refund rates for Fiscal Year 2023, which begins on October 1, 2022. Based on estimated tax savings using actual financial results for the twelve months ended June 30, 2022, Distribution has calculated a total estimated credit of \$4,257,866 (Workpaper E). Pursuant to the Commission Tax Orders, the total credit provided to customers through the negative surcharge established with this filing is to be reconciled with the actual difference in federal income tax on a pre- and post-TCJA basis. It should be noted that the credit is an estimate based on historical financial results and not a final calculation of the impact of the TCJA changes for the upcoming fiscal year. The negative surcharge for each service class is calculated on Workpaper D, Page 1. Page No. 170 of the tariff provides a table detailing the unit rate per Mcf that will be applied as a credit to customer bills for service on and after October 1, 2022.

As shown on the enclosed certificate of service, copies have been served on parties in the manner indicated. Please direct any questions concerning this filing to the undersigned (suarezs@natfuel.com) at (716) 857-7568 or Donald Koch (kochd@natfuel.com) at (716) 857-7954.

Respectfully submitted,

Sheila Suarez

TCJA TEMPORARY SURCHARGE

To implement the effects of the Tax Cuts and Jobs Act (TCJA), on March 15, 2018 the Pennsylvania Public Utility Commission (Commission) issued a Temporary Rates Order at Docket No. M-2018-2641242 directing the utility to file its current base rates and riders as temporary rates, pursuant to Section 1310(d) of the Public Utility Code. 66 Pa. C.S. § 1310(d). Subsequently, on May 17, 2018, the Commission entered Orders in the above case and at Docket No. R-2018-3000527 superseding the March 15, 2018 Temporary Rates Order directing the utility to establish temporary rates as follows:

A negative surcharge will apply as a credit to all customer bills at an equal percentage of non-gas revenue among the various customer classes, exclusive of STAS and automatic adjustment clause revenues, for bills rendered for intrastate service on and after October 1, 2022. The credit will be applied on a per Mcf basis, by service class, as indicated in the table below. The total credits provided to customers through this negative surcharge will be reconciled with actual differences in federal income tax expense of a pre- and post-TCJA basis and will remain in place until the Company files and the Commission approves new base rates for the utility pursuant to Section 1308(d) that include the effects of the TCJA tax rate changes. Interest on over or under collections shall be computed monthly at the residential mortgage lending rate specified by the Secretary of Banking in accordance with the Loan Interest and Protection Law (41 P.S. §§ 101, et seq.) from the month that the over or under collection occurs to the mid-point of the recovery period. Upon determination that the negative surcharge, if left unchanged, would result in a material over or under collection, the Company may file with the Commission, on at least 10 days' notice, for an interim revision of the TCJA Temporary Surcharge. The TCJA Temporary Surcharge will be filed with the Commission by September 1 of each year to become effective the following October 1, reflecting estimated TCJA savings for the fiscal year.

TCJA TEMPORARY SURCHARGE

To implement the effects of the Tax Cuts and Jobs Act (TCJA), on March 15, 2018 the Pennsylvania Public Utility Commission (Commission) issued a Temporary Rates Order at Docket No. M-2018-2641242 directing the utility to file its current base rates and riders as temporary rates, pursuant to Section 1310(d) of the Public Utility Code. 66 Pa. C.S. § 1310(d). Subsequently, on May 17, 2018, the Commission entered Orders in the above case and at Docket No. R-2018-3000527 superseding the March 15, 2018 Temporary Rates Order directing the utility to establish temporary rates as follows:

A negative surcharge will apply as a credit to all customer bills at an equal percentage of non-gas revenue among the various customer classes, exclusive of STAS and automatic adjustment clause revenues, for bills rendered for intrastate service on and after October 1, 2022. The credit will be applied on a per Mcf basis, by service class, as indicated in the table below. The total credits provided to customers through this negative surcharge will be reconciled with actual differences in federal income tax expense of a pre- and post-TCJA basis and will remain in place until the Company files and the Commission approves new base rates for the utility pursuant to Section 1308(d) that include the effects of the TCJA tax rate changes. Interest on over or under collections shall be computed monthly at the residential mortgage lending rate specified by the Secretary of Banking in accordance with the Loan Interest and Protection Law (41 P.S. §§ 101, et seq.) from the month that the over or under collection occurs to the mid-point of the recovery period. Upon determination that the negative surcharge, if left unchanged, would result in a material over or under collection, the Company may file with the Commission, on at least 10 days' notice, for an interim revision of the TCJA Temporary Surcharge. The TCJA Temporary Surcharge will be filed with the Commission by September 1 of each year to become effective the following October 1, reflecting estimated TCJA savings for the fiscal year.

National Fuel Gas Distribution Corporation
Pennsylvania Division
Docket No. R-2022
NFGDC 2022 Base Rate Case
Responses to Section 53.53 - III-A - Balance Sheet and Operating Statement
Delivered on October 28, 2022

III-A-60

Request:

Explain the reason for the use of cost of removal of any retired plant figures in the income tax calculations.

Response:

Costs of removal of any retired plant, which are charged to Reserve for Depreciation, are deductions for income tax purposes because the Internal Revenue Code permits the expensing of these costs as incurred.

Prepared by or under the supervision of: James A. Rizzo

National Fuel Gas Distribution Corporation
Pennsylvania Division
Docket No. R-2022
NFGDC 2022 Base Rate Case
Responses to Section 53.53 - III-A - Balance Sheet and Operating Statement
Delivered on October 28, 2022

III-A-61

Request:

Submit the corresponding data applicable to Pennsylvania Corporate Income Tax deferral.

- a. Show the amounts of straight line tax depreciation and accelerated tax depreciation, the difference between which gave rise to the normalizing tax charged back to the test year operating statement.
- b. Show normalization for both Federal and State Income Taxes.
- c. Show tax rates used to calculate tax deferral amount.

Response:

a. & b.

Refer to National Fuel Exhibit A (HTY), National Fuel Exhibit A (FTY), National Fuel Exhibit A (FPFTY), Schedules D-11 and D-12, which provide details of the deferred income taxes from normalized depreciation separately for Federal and State.

- c. The U.S. gross federal income tax rate is 21%, but net of the federal benefit for state taxes it becomes 18.90%. The state tax rate is 9.99%.

Docket No. R-2022
NFGDC 2022 Base Rate Case
Responses to Section 53.53 - III-A - Balance Sheet and Operating Statement
Delivered on October 28, 2022

III-A-62

Request:

Provide the accelerated tax depreciation and the book depreciation used to calculate test year deferrals in amounts segregated as follows:

For:

- a. Property installed prior to 1970
- b. Property installed subsequent to 1969 (indicate increasing capacity additions and nonincreasing capacity additions).

Response:

- a. The Company does not defer taxes on tax depreciation related to property installed prior to 1970.
- b. See response to Regulation 53.53.III A.52.

Prepared by or under the supervision of: James A. Rizzo

Delivered on October 28, 2022

III-A-65

Request:

State whether the company eliminates any tax savings by the payment of actual interest on construction work in progress not in rate base claim.

If response is affirmative:

- a. Set forth amount of construction claimed in this tax savings reduction. Explain the basis for this amount.
- b. Explain the manner in which the debt portion of this construction is determined for purposes of the deferral calculations.
- c. State the interest rate used to calculate interest on this construction debt portion, and the manner in which it is derived.
- d. Provide details of calculation to determine tax saving reduction. State whether state taxes are increased to reflect the construction interest elimination.

Response:

The Company does not eliminate any tax savings by the payment of actual interest on construction work in progress not in rate base claim.

Request:

Provide a detailed analysis of Taxes Accrued per books as of the test year date. Also supply the basis for the accrual and the amount of taxes accrued monthly.

Response:

Please see Attachment III-A-66.

Prepared by or under the supervision of: James A. Rizzo

NATIONAL FUEL GAS DISTRIBUTION CORPORATION
 ACCRUED TAXES AND BASIS FOR ACCRUALS
 TWELVE MONTHS ENDED JUNE 30, 2022

Taxes Accrued	Total Company Amount	Pennsylvania Rate Jurisdiction	Basis for Accrual of Tax	Amount of Tax Accrued Monthly
Federal				
Federal Insurance Contribution Act	5,655,230	1,501,291	FICA includes a 6.2% Social Security tax and 1.45% Medicare tax on gross earnings. The earnings base subject to tax is adjusted annually. Taxes are accrued at a rate of 7.65% of these wages. The monthly accrual is based on payroll data for the period.	Accrual is computed monthly by applying the tax rate to taxable earnings.
Federal Unemployment Compensation	30,996	12,692	Tax is based on the first \$7,000 of wages paid to an employee. The monthly accrual is based on payroll data for the period.	Accrual is computed monthly by applying the tax rate to taxable earnings.
Federal Income Tax	15,542,938	8,313,016	Tax is based on the taxable net income as defined and reported to the Internal Revenue Service. The tax rate is 21% of taxable income. The monthly accrual is based on the taxable income achieved from our level of operations for that month.	Accrual is computed monthly by applying the rate to taxable income for the month.
Pennsylvania				
Corporate Net Income Tax	(634,579)	(634,579)	Tax is based on the taxable net income as defined by the Internal Revenue Service before the deduction for the Pennsylvania corporate net income tax. The tax rate is 9.99% of taxable income. The monthly accrual is based on the taxable income achieved from our level of operations for that month.	Accrual is computed monthly by applying the rate to taxable income for the month.
Unemployment Compensation	68,398	68,398	Tax is based on the first \$10,000 of wages paid to an employee and taxes are accrued at various rates depending upon experience. The monthly accrual is based on payroll data for the period.	Accrual is computed monthly by applying the tax rate to taxable earnings.
Utility Realty Tax	83,894	83,894	Tax is based on the market value of public utility land, building, and other on an estimate of the final tax liability that the Company will incur.	Monthly accrual is one twelfth of total estimated tax.
Property Tax	24,913,996	75,365	Tax is based on the assessed valuation of property owned by the Company in various municipalities where the Company operates. The tax rate varies with each locale.	Monthly accrual is one twelfth of total estimated tax.

Docket No. R-2022
NFGDC 2022 Base Rate Case
Responses to Section 53.53 - III-A - Balance Sheet and Operating Statement
Delivered on October 28, 2022

III-A-67

Request:

For the test year as recorded on test year operating statement:

- a. Supply the amount of federal income taxes actually paid.
- b. Supply the amount of the federal income tax normalizing charge to tax expense due to excess of accelerated tax depreciation over book depreciation.
- c. Supply the normalizing tax charge to federal income taxes for the 10% Job Development Credit during test year.
- d. Provide the amount of the credit of federal income taxes due to the amortization or normalizing yearly debit to the reserve for the 10% Job Development Credit.
- e. Provide the amount of the credit to federal income taxes for the normalizing of any 3% Investment Tax Credit Reserve that may remain on the utility books.

Response:

- a. None.
- b. See National Fuel Exhibit A, Schedule D-12.
- c. None.
- d. None.
- e. None.

Prepared by or under the supervision of: James A. Rizzo

NFGDC 2022 Base Rate Case
Responses to Section 53.53 - III-A - Balance Sheet and Operating Statement
Delivered on October 28, 2022

III-A-68

Request:

Provide the debit and credit in the test year to the Deferred Taxes due to Accelerated Depreciation for federal income tax, and provide the debit and credit for the Job Development Credits (whatever account) for test year.

Response:

The debit and credit in the test year to the Deferred Taxes due to Accelerated Depreciation for federal income tax (book depreciation greater than tax) is as follows:

A/C #	Account Description	Debit	Credit
282XXX	Accumulated Deferred Taxes	\$XXX,XXX	
410XXX	Deferred Tax Expense		\$XXX,XXX

The Company has no Job Development Credits.

Prepared by or under the supervision of: James A. Rizzo

Delivered on October 28, 2022

III-A-69

Request:

Reconcile all data given in answers to questions on income taxes charged on the test year operating statement with regard to income taxes paid, income taxes charged because of normalization and credits due to yearly write-offs of past years' income tax deferrals, and from normalization of investment tax and development credits. (Both state and federal income taxes.)

Response:

Refer to National Fuel Exhibit A (HTY), National Fuel Exhibit A (FTY), and National Fuel Exhibit A (FPFTY), Section D, Schedules D-11 and D-12. Also, refer to the Direct Testimony of James A. Rizzo, Statement No. 12.

Distribution does not have investment tax or development credits.

Prepared by or under the supervision of: James A. Rizzo

Docket No. R-2022
NFGDC 2022 Base Rate Case
Responses to Section 53.53 - III-A - Balance Sheet and Operating Statement
Delivered on October 28, 2022

III-A-70

Request:

With respect to determination of income taxes, federal and state:

- a. Show income tax results of the annualizing and normalizing adjustments to the test year record before any rate increase.
- b. Show income taxes for the annualized and normalized test year.
- c. Show income tax effect of the rate increase requested.
- d. Show income taxes for the normalized and annualized test year after application of the full rate increase.

[It is imperative that continuity exists between the income tax calculations as recorded for the test year and the final income tax calculation under proposed rates. If the company has more than one accounting area, then additional separate worksheets must be provided in addition to those for total company.]

Response:

Refer to National Fuel Exhibit A (HTY), National Fuel Exhibit A (FTY), and National Fuel Exhibit A (FPPTY), Section D, Schedules D-11 and D-12.

Prepared by or under the supervision of: James A. Rizzo

Delivered on October 28, 2022

III-A-71

Request:

In adjusting the test year to an annualized year under present rates, explain any changes that may be due to book or tax depreciation change and to debits and credits to income tax expense due to accelerated depreciation, deferred taxes, job development credits, tax refunds or other items.

(The above refers only the adjustments going from recorded test year to annualized test year.)

Response:

Adjustments relative to the subject matter were made to recorded data to annualize the years' data and are based on property balances at the end of the test year to reflect a full year's expense of deferral. See the Direct Testimony of James A. Rizzo Statement No. 12.

Prepared by or under the supervision of: James A. Rizzo

Delivered on October 28, 2022

III-E-4

Request:

Provide detailed calculations substantiating the adjustment to revenues for annualization of changes in number of customers and annualization of changes in volume sold for all customers for the test year.

- a. Break down changes in number of customers by rate schedules.
- b. If an annualization adjustment for changes in customers and changes in volume sold is not submitted, please explain.

Response:

- a. Please refer to the testimony and exhibits of Company witness Jeremy R. Barber, National Fuel Statement No. 14. Monthly revenue calculations are provided for the fully projected future test year, future test year, and historic test year. Schedule 4 of each of Mr. Barbers' exhibits includes monthly customer counts and volumes by service class. The annual totals by service class are summarized on Schedule 2 of each exhibit.
- b. Not applicable.

III-E-7

Request:

Provide details of respondent's attempts to recover uncollectible and delinquent accounts.

Response:

ACTIVE DELINQUENT RESIDENTIAL COLLECTIONS

Residential collection activity in Pennsylvania is governed by Title 52 Pennsylvania Code Chapter 56, Chapter 14, and other guidelines and/or directives issued by the Bureau of Consumer Services.

1. The net amount billed becomes due for all residential accounts no less than twenty (20) days after the mailing of the monthly bill. Industrial, commercial and public authority accounts are due no less than fifteen (15) days after the mailing of the monthly bill.
2. Approximately thirty-one (31) days following the mailing of the monthly bill, residential accounts considered "sufficiently delinquent" are mailed a final termination notice.

A formula is used to determine those accounts which are "sufficiently delinquent." Among other things, the formula considers the following:

- a. the amount of the arrears
 - b. any energy assistance pledges
 - c. any credit in the balanced billing plan associated with the prior balance
3. The final termination notice states that service will be terminated no less than (10) days from the date of mailing unless one of the following occurs:
 - a. A payment is received
 - b. A satisfactory payment arrangement is made
 - c. A billing dispute is filed with National Fuel ("Company") or the Pennsylvania Public Utility Commission; or
 - d. A certified medical emergency exists

Statement - Gas Utilities
Delivered on October 28, 2022

III-E-7 (Cont.)

4. The Company must review with the customer certain items prior to discussing payment agreements.

When a customer contacts the Company before termination, we must first explain:

- 56.97(a)(1) The reasons for the proposed termination.
- 56.97(a)(2) All available methods for avoiding a termination, including:
 - i. Tendering payment in full or otherwise eliminating the grounds for termination.
 - ii. Entering a payment arrangement.
 - iii. Paying what is past due on the most recent previous company negotiated or Commission payment arrangement.
- 56.97(a)(3) Information about the universal service programs, including customer assistance program. Refer customer to the program to determine eligibility and to apply for enrollment.
- 56.97(a)(4) The medical emergency procedures.

After explaining the above, the Company may negotiate a payment arrangement. If the Company and the customer are not successful in negotiating an agreement, then 56.97(b)(1)(2) and (3) would be provided when appropriate.

- 56.97(b)(1) The right of the customer to file a dispute with the utility and, thereafter, an informal complaint with the Commission.
- 56.97(b)(2) The procedures for resolving disputes and informal complaints, including the address and telephone number of the Commission.
- 56.97(b)(3) The duty of the customer to pay any portion of a bill which the customer does not dispute.

5. For those customers who have not taken steps to avoid termination, the Company “shall attempt to contact the customer or occupant, to provide notice of the proposed termination at least three days prior to the scheduled termination, using one or more of the following methods” [1406 (b)(1)(ii)]
- a. in person;
 - b. by telephone. Phone contact shall be deemed complete upon attempted calls on two separate days to the residence between the hours of 8 a.m. and 9 p.m. if the calls were made at various times each day; or

III-E-7 (Cont.)

- c. by e-mail, text message or other electronic messaging format consistent with the commission's privacy guidelines and approved by commission order.
 - d. In the case of electronic notification only, the customer must affirmatively consent to be contacted using a specific electronic messaging format for purpose of termination.
6. On the proposed termination date, the serviceperson will: (1) accept payment of arrears or a specified amount, leaving service on; or (2) determine a medical emergency exists, leaving service on; or (3) see a receipt, leaving service on; or (4) terminate service. "During the months of December through March, unless personal contact has been made with the customer or responsible adult by personally visiting the customer's residence, the public utility shall, 48 hours of the scheduled date of termination, post a notice of the proposed termination at the service location." [1406(b)(1)(iii)]
7. For Winter Termination 1406(e)(1) severely restricts service terminations for customers with household incomes at or below 250% of the Federal Poverty Level.
8. Per 56.100(h), a survey of terminated accounts is conducted for premises where heat related service has been terminated within the past year for any of the grounds in 56.81 (relating to authorized termination of service). The survey is completed by December 1 and results reported to the Bureau of Consumer Services on or before December 15 of each year. On February 1 of each year, updated survey results are reported to the Bureau of Consumer Services reflecting any change in the status of the accounts subsequent to the December 15 filing, including any accounts terminated in December. A recent copy of the letter from the Bureau of Consumer Services and survey dated August 22, 2022, are part of the exhibit at pages 5 to 7.

FINAL BILL COLLECTIONS

Below is a description of the final bill placement process:

1. Approximately twenty-two (22) days after posting of the final statement, the net bill becomes due.
2. Approximately forty-seven (47) days after posting or twenty-five (25) days past due, the final bill is outsourced to a primary collection agency. The primary collection agency attempts telephone contact, mails additional past due notices and performs skip tracing where applicable. Past due accounts are credit reported at the time the debt is submitted to a primary collection agency.

National Fuel Gas Distribution Corporation
Pennsylvania Division
Docket No. R-2022
NFGDC 2022 Base Rate Case
Responses to Section 53.53 - III-E - Balance Sheet and Operating
Statement - Gas Utilities
Delivered on October 28, 2022

III-E-7 (Cont.)

3. Approximately four-hundred-twelve (412) days after posting of the final statement or three-hundred-ninety (390) days past due, the final bill is returned to National Fuel from the primary collection agency.
4. Approximately four-hundred-fifteen (415) days after posting of the final statement or three-hundred-ninety-three (393) days past due, the final bill is referred to a secondary collection agency. Additional telephone contact is attempted by the agency, notices are mailed and skip tracing occurs. The debtors are also credit reported.
5. Approximately seven-hundred-eighty (780) days after posting of the final statement or seven-hundred-fifty-eight (758) days past due, the secondary placement is returned to National Fuel from the secondary collection agency.
6. Approximately seven hundred-eighty-three (783) days after mailing of the final statement or seven-hundred-sixty-one (761) days past due, the final bill is referred to a tertiary collection agency. Additional telephone contact is attempted, notices are mailed and skip tracing occurs. Once again, the debtors are credit reported.
7. Approximately one-thousand-one-hundred-forty-eight (1,148) days after posting or one-thousand-one-hundred-twenty-six (1,126) days past due, the account is returned to National Fuel. The account is no longer actively pursued by the collection agency but remains assigned to the agency for warehousing purposes.

UNCOLLECTIBLE ACCOUNTS

Unpaid finals are determined to be uncollectible and are written off to Bad Debt approximately three-hundred-sixty-five (365) days after the mailing of the final statement or three-hundred-forty-three (343) days past due. As indicated above final bill collection activity may continue up to two (2) years after write-off, for a total of three (3) years.

COMMONWEALTH OF PENNSYLVANIA
PENNSYLVANIA PUBLIC UTILITY COMMISSION
COMMONWEALTH KEYSTONE BUILDING
400 NORTH STREET
HARRISBURG, PENNSYLVANIA 17120

August 22, 2022

Dear Utility Company Executive:

In accordance with 52 PA Code § 56.100(h) and § 56.100(i), all utilities subject to this Chapter are required to conduct the Cold Weather Survey (CWS) on those premises where heat-related services, including any landlord-ratepayer accounts, have been terminated during the year. Utilities are reminded that all accounts terminated in accordance with the regulations at § 56.81 (relating to authorized termination of service) or § 56.98 (relating to termination for unauthorized use, fraud, tampering, or tariff violations) must be included in the survey results – including those terminated for failure to permit access to meters.

The regulations require utilities to, within 90 days prior to December 1, survey and attempt to make post-termination personal contact with an occupant or responsible adult at the premises and in good faith attempt to reach an agreement regarding payment of any arrearages and restoration of service. In order to ensure that personal contact is made prior to December 1, the Bureau of Consumer Services (BCS) recommends beginning to survey off accounts starting September 1, 2022.

The primary goal of this survey is to afford occupants at the affected premises the opportunity to avoid going through the winter months without heat-related services. BCS is particularly concerned about residential service accounts where service was terminated on or after January 1, 2022 and has not been reconnected.

For any accounts terminated in 2022, utilities should make at least four attempts to contact a responsible adult occupant at properties where services were terminated and remain off. These four contact attempts should include a combination of telephone calls, letters, emails, texts, and personal visits to the premises. Utility representatives should make attempts to establish contact on different days of the week and at different times of the day (including evening hours). If these attempts are unsuccessful, BCS requests a personal visit to the premises for a final attempt to communicate with the occupants or to determine that the premises is vacant.

National Fuel Gas Distribution Corporation

III-E-7 (Cont.)

When reporting the results of the 2022 CWS, please use the attached *2022 Cold Weather Survey Template* (Excel Workbook) to report the status of accounts terminated through November 30, 2022. The report should be returned to BCS no later than the close of business on December 15, 2022. Reporting instructions are provided along with the Template.

Along with the 2022 CWS results, BCS requests that utilities provide a follow-up count of premises where services were terminated in 2021, not re-established, and have remained off through 2022. Please submit 2021 follow-up data on the separate spreadsheet tab of the Template (2021 Follow-up). BCS asks that you make sure to also include these premises in your 2022-2023 contact attempts, but do not report again.

BCS monitors the accounts categorized and reported as vacant in the survey and requests detailed information including the address, zip code, date verified, and means of determination for each property. Please provide this information by completing the 2022 Vacant List tab on the Template.

BCS strongly encourages utilities to refer consumers to available low-income assistance programs and 211 resources (e.g., Customer Assistance Program, the Low-Income Home Energy Assistance Program, and Hardship Fund Program, 211 website, and county assistance offices) and to leave special information packets at premises where service is off. The packets should contain information about contacting the utility directly, applications for energy assistance, and information about any other special assistance programs.

Thank you for your continued cooperation with this important health and safety matter. Please direct your responses or any questions to Kathy Solence at ksolence@pa.gov and Sarah Dewey sdewey@pa.gov.

Sincerely,

Alexis Bechtel

Alexis Bechtel, Director
Bureau of Consumer Services

Statement - Gas Utilities
Delivered on October 28, 2022

III-E-8

Request:

Describe how the net billing and gross billing is determined. For example, if the net billing is based on the rate blocks plus FCA and STA, and the gross billing is determined by a percentage increase (1, 3 or 5 percent), then state whether the percentage increase is being applied to all three items of revenue--rate blocks plus FCA and STA.

Response:

National Fuel does not have a provision for gross and net billing in its tariff.

Prepared by or under the supervision of: Jeremy R. Barber

III-E-9

Request:

Describe the procedures involved in determining whether forfeited discounts or penalties are applied to customer billing.

Response:

The following is contained in the Rules and Regulations section of Company's current tariff.

Section 15 (Billing): "The late payment date specified on the monthly bill is not less than fifteen days from date the bill is mailed except that, for service under, or billed in conjunction with, residential rate schedules, the late payment date is not less than twenty days from the date the bill is mailed."

Section 16 (Penalty Charges): "If the customer fails to pay his gas bill by the late payment date, a penalty will be charged. Payments received by mail will be considered paid on the date of the postmark. Where a customer receives natural gas supply service from a qualified Supplier under Rate Schedule SATS but is not participating in the Company POR program, late payment charges will be applied to the Supplier charges only if the customer has agreed to pay Supplier late payment charges. Otherwise, late payment charges will be based on the distribution charges of the Company and natural gas supply charges of either the Company or Supplier. The penalty charged to all customers shall be 1.50% on the full unpaid and overdue balance.

Responses to Section 53.53 - III-E - Balance Sheet and Operating
Statement - Gas Utilities
Delivered on October 28, 2022

III-E-13

Request:

Provide a schedule of present and proposed tariff rates showing dollar change and percent of change by block. Also, provide an explanation of any change in block structure and the reasons therefor.

Response:

Please refer to National Fuel Statement No. 19, direct testimony of John Taylor for further detail concerning block structure changes.

III-E-14

Request:

Provide the following statements and schedules. The schedules and statements for the test year portion should be reconciled with the summary operating statement.

- a. An operating revenues summary for the test year and the year preceding the test year showing the following (Gas MCF):
 - (i) For each major classification of customers
 - (a) MCF sales
 - (b) Dollar Revenues
 - (c) Forfeited Discounts (Total if not available by classification)
 - (d) Other and Miscellaneous revenues that are to be taken into the utility operating account along with their related costs and expenses.
 - (ii) A detailed explanation of all annualizing and normalizing adjustments showing method utilized and amounts and rates used in calculation to arrive at adjustment.
 - (iii) Segregate, from recorded revenues from the test year, the amount of revenues that are contained therein, by appropriate revenue categories, from:
 - (a) Fuel Adjustment Surcharge
 - (b) State Tax Surcharge
 - (c) Any other surcharge being used to collect revenues.
 - (d) Provide explanations if any of the surcharges are not applicable to respondent's operations.
- [The schedule should also show number of customers and unit of sales (Mcf), and should provide number of customers by service classification at beginning and end of test year.]
- b. Provide details of sales for resale, based on periods five years before and projections for five years after the test year, and for the test year. List customers, Mcf sold, revenues received, source of Mcf sold (storage gas, pipeline gas, manufactured gas, natural or synthetic), contracted or spot sales, whether sales are to affiliated companies, and any other pertinent information.

Response:

- a. (i) Please see the testimony and exhibits of Company witness Jeremy R. Barber. The information requested in subparts (a) through (d) is summarized by service class in Schedule 2 of Exhibit JRB-1 through JRB-7. Additional supporting detail is available in subsequent schedules, which show customers and usage by service class for each month in the FPFTY, FTY and HTY.
- (ii) Please see the testimony of Company witness Jeremy R. Barber, Statement No. 14.
- (iii) The detailed price out of revenues found in Schedule 4 National Fuel Exhibits JRB-1 through JRB-7 contains a detailed breakout of all billed line items, including NFG's Rider A for gas costs, state tax adjustment surcharge, and all other riders included in the Company's tariff.
- b. Not applicable.

Request:

If the utility has a Fuel Adjustment Clause:

- a. State the base fuel cost per MCF chargeable against basic customers' rates during the test year. If there was any change in this basic fuel charge during the test year, give details and explanation thereof.
- b. State the amount in which the fuel adjustment clause cost per MCF exceeds the fuel cost per MCF charged in base rates at the end of the test year.
- c. If fuel cost deferment is used at the end of the test year, give
 - (i) The amount of deferred fuel cost contained in the operating statement that was deferred from the 12-month operating period immediately preceding the test year.
 - (ii) The amount of deferred fuel cost that was removed from the test period and deferred to the period immediately following the test year.
- d. State the amount of Fuel Adjustment Clause revenues credited to the test year operating account.
- e. State the amount of fuel cost charged to the operating expense account in the test year which is the basis of Fuel Adjustment Clause billings to customers in that year. Provide summary details of this charge.
- f. From the recorded test year operating account, remove the Fuel Adjustment Clause Revenues. Also remove from the test year recorded operating account the excess of fuel cost over base rate fuel charges, which is the basis for the Fuel Adjustment charges. Explain any difference between FAC Revenues and excess fuel costs. [The above is intended to limit the operating account to existing customers' base rate revenues and expense deductions relative thereto].

NATIONAL FUEL GAS DISTRIBUTION CORPORATION
PENNSYLVANIA DIVISION
GAS EMERGENCY PLAN

**NATIONAL FUEL GAS DISTRIBUTION CORPORATION
PENNSYLVANIA DIVISION
GAS EMERGENCY PLAN**

A. General

National Fuel Gas Distribution Corporation ("Company" or "Distribution") is filing the following Natural Gas Emergency Plan ("Plan") with the Pennsylvania Public Utility Commission ("Commission"), in accordance with the requirements set forth at 52 Pa. Code § 59.71-59.75, reflecting the Company's unique operational characteristics and design criteria. The Plan contains simplified and understandable rules and regulations so that all of the Company's customers and each Natural Gas Supplier ("NGS") licensed to provide services to their customers can have a responsive action plan in place to protect themselves and their property in the event of a crisis. Provisions governing the Plan included in the Company's Tariff under Rule 26, Rules and Regulations are referenced within the Plan as "Rule 26". The Plan is also located at the Company's website www.nationalfuelgas.com. The Company shall file revisions to the Plan when and as appropriate, or as directed by the Commission.

As part of the emergency planning process the Company shall attempt to make every reasonable effort to make contractual or informal arrangements with our transportation customers, the NGSs serving transportation customers, sales customers and others to obtain supplies or, as an alternative, to implement usage reductions so that resorting to firm service reductions under § 59.73 Emergency Action can be avoided, or the severity of the supply or capacity disruption can be mitigated. The purpose of these arrangements is to provide a means to minimize the potential of supply shortfalls that threaten public health and safety, and not to make up for inadequate performance by individual parties.

B. Preliminary Actions

The Company's natural gas emergency plan includes provisions addressing:

1. Load Management Actions:
 - a. If not already in effect, declare overrun service to be unavailable for all transportation service customers without contractual standby service.
 - b. Interrupt all Load Balancing Service retail sales volumes in excess of established customer Billing Demand Units.
 - c. Interrupt customer loads categorized as interruptible, whether contractual or by character of service.
2. Operational Flow Orders:
 - a. During any period in which Distribution determines, in its sole discretion, that its ability to accommodate imbalances is restricted or impaired (i.e. "Critical Period"), or in order to maintain system operational integrity, or to prevent a curtailment or gas emergency, an

National Fuel Gas Distribution Corporation

Delivered on October 28, 2022

**NATIONAL FUEL GAS DISTRIBUTION CORPORATION
PENNSYLVANIA DIVISION
GAS EMERGENCY PLAN
(continued)**

Operational Flow Order (“OFO”) shall be issued. OFOs are issued when other actions have failed to eliminate reliability concerns. A Critical Period is a period of operational stress or impending potential stress that may impact the integrity of Distribution's system or a force majeure event. Non-compliance with OFOs, in addition to penalties, could lead the system into a curtailment situation. A primary purpose of an OFO is to keep or restore the system or an affected part of the system into operational balance. Upon request of a Direct Customer or a NGS, Distribution shall consider, if time permits, adjustments to deliveries or consumption outside of DDQ levels/tolerances if, in Distribution's sole discretion, such adjustments benefit system operations and are confirmable by Distribution.

- b. Distribution will attempt to provide 24 hours notice of an OFO unless circumstances exist which require an immediate response. The OFO notice will note the time of issuance, date and time the OFO takes effect, and estimated duration. The OFO notice will communicate the actions required of NGSs and Direct Customers, the reasons for those actions required, and will provide periodic update(s) to enable parties to continue their planning functions. Such actions as required in the OFO notice will be limited in scope and duration and as localized as possible to meet the required objective.

3. Voluntary usage reductions:

To the extent possible Distribution will appeal to all gas customers to voluntarily reduce gas usage. The Company has a communications plan containing a series of pre-drafted news releases and a list of media contacts, telephone numbers, fax numbers, and e-mail addresses. During a natural gas event information will be developed and disseminated through Distribution's Corporate Communications department. The Company will coordinate with the necessary officials and/or agencies to keep the public apprised of the status and duration of any natural gas event.

The Company will attempt to reach larger commercial and industrial customers by issuing news bulletins, through any means necessary, requesting that nonessential natural gas usage be reduced.

Appeals will also be made to residential and smaller commercial customers, including requests that they turn their thermostats back by (number) degrees and maintain that temperature until further notice. In addition other small, non-residential customers who use natural gas for purposes other than space heating would be encouraged to reduce their natural gas consumption by a minimum of (number) %.

The Company has established a toll free emergency hotline at 1-866-866-5958. Customers may call this number to hear more information on the status of this emergency and updates will be offered frequently as National Fuel continues to monitor conditions and the status of natural gas deliveries on its system.

**NATIONAL FUEL GAS DISTRIBUTION CORPORATION
PENNSYLVANIA DIVISION
GAS EMERGENCY PLAN
(continued)**

Customers may also refer to the Company's web site at <http://www.nationalfuelgas.com> for up to date information.

- C. Emergency Action/Mandatory usage reductions:
1. An emergency exists whenever the aggregate demand of firm service customers on the Company's system or confined segment of the system exceeds or threatens to exceed the gas supply or capacity that is actually and lawfully available to the Company to meet the demands, and the actual or threatened excess creates an immediate threat to the Company's operating integrity with respect to Priority 1 customers as defined in Rule 26. A (4).
 2. If, in the sole judgment of the Company, there is sufficient time, the Company shall use reasonable business and operational efforts to: interrupt all interruptible services, issue operations flow orders, and call for voluntary usage reductions by all customers before taking action under subsection 3. The Company shall take these three actions sequentially to the extent feasible.
 3. In the event of an emergency as described in subsection 1, the Company may require each commercial and industrial retail and transportation customer that is not a Priority 1 customer under subsection 9 to reduce its consumption of gas.
 - a. The reduction required shall be determined by the Company without regard to priorities of use, as necessary to minimize the potential threat to public health and safety.
 - b. The minimum authorized usage may not be lower than the minimum usage of firm service for plant protection use.
 - c. When all other service has been curtailed except for Priority 1 service and the Company continues to be unable to meet Priority 1 requirements, the Company shall utilize measures designed to minimize harm to customers if curtailments to plant protection use are found to be necessary.
 - d. Consistent with the Company's responsibility to maintain system integrity at all times, the Company shall restore service as soon as practicable to any gas-fired electric generation facility that is deemed critical to electric system reliability by the electrical system's control area operator.
 4. Mandatory reduction under subsection 3 shall be for a period specified by the Company until further notice. The Company may change a customer's authorized usage, upon notice, at any time during an emergency.
 5. Mandatory reductions under subsection 3 shall be for a maximum duration of 5 business days unless extended by Commission order. As an alternative to extending mandatory reductions under subsection 3, the Commission may order the Company to initiate priority-based curtailments under subsection 6.

Delivered on October 28, 2022

**NATIONAL FUEL GAS DISTRIBUTION CORPORATION
PENNSYLVANIA DIVISION
GAS EMERGENCY PLAN
(continued)**

6. In determining whether to order the Company to initiate priority-based curtailments, the Commission will examine whether the Company did the following:
 - a. Interrupted all interruptible services.
 - b. Issued operation flow orders.
 - c. Called for voluntary usage reduction by all customers.
7. Upon issuance of a Commission order to initiate priority-based curtailments, the Company shall provide all affected customers the maximum notice possible, via telephone, fax, electronic data interchange, or any other reasonable means of notification specifying the curtailment percentage of the customer's firm gas service and resulting allowances as may be the case.
8. Upon issuance of a Commission order to initiate priority-based curtailments, the available gas supplies to the Company shall be prorated, if practicable, among its customers according to the following priorities of use:
 - a. Customers in a higher priority category shall not be curtailed until all customers falling into a lower priority category have been restricted to plant protection use levels, unless operational circumstances or physical limitations warrant a different result.
 - b. Where only a partial restriction of a classification is required, implementation shall be prorata, to the extent practical under the circumstances as set forth in the Company's curtailment plan.
9. Following are the priority categories, listed in descending order, pertaining to the curtailment of firm services:
 - a. Priority 1. Service for essential human needs use.
 - b. Priority 2. Firm services not included in essential human needs use.
 - (2.1) Plant protection gas.
 - (2.2) All other consumption not contained in (2.1) above and Priority 1. Service for essential human needs use (excluding plant protection gas).
 - (2.3) Intermediate Volume Industrial Service (IVIS) / Commercial / Public Authority consuming > 12,000 Mcf per year (excluding plant protection gas).

National Fuel Gas Distribution Corporation

**NATIONAL FUEL GAS DISTRIBUTION CORPORATION
PENNSYLVANIA DIVISION
GAS EMERGENCY PLAN
(continued)**

- (2.4) Large Volume Industrial Service (LVIS), all industrial accounts consuming greater than 50,000 Mcf per year (excluding plant protection gas).
- (2.5) Large Industrial Service (LIS), all industrial accounts consuming greater than 200,000 Mcf per year (excluding plant protection gas).

D. Utility Liability

The Company may restrict or discontinue service in accordance with this section without hereby incurring any penalty or liability for any loss, injury or expense that may be sustained by the customer except when the restriction or discontinuation of service is a result of the Company's willful or wanton misconduct, for the duration of an emergency, to a customer that continues to take gas in violation of § 59.73.

E. Definitions:

The following words and terms have the following meanings unless the text clearly indicates otherwise:

1. Alternate fuel - Any fuel other than natural gas.
2. Alternate fuel capability - The installed and operable ability to use any fuel other than natural gas on a time sensitive basis.
3. Commercial use - Gas usage by customers engaged primarily in the sale of goods and services including consumption by office buildings, institutions and government agencies.
4. Essential human needs - Gas usage in any building where persons normally dwell including residences, apartment houses, dormitories, hotels, hospitals and nursing homes.
5. Firm service - Natural gas service offered to consumers under tariffs or contracts that anticipate no interruption.
6. Industrial use - Gas usage by customers engaged primarily in a process which creates or changes raw or unfinished materials into another form or product including the generation of electric power.
7. Interruptible service - Natural gas services that can be temporarily discontinued under term and conditions specified by tariff or contract.
8. Plant protection use - Minimum usage of natural gas required to prevent physical harm to an industrial or commercial consumer's facility, or danger to personnel at the facility, when the protection cannot be afforded through the use of an alternate fuel. Plant protection use includes usage necessary for the protection of

the material in process as would otherwise be destroyed, but does not include deliveries required to maintain production.

9. Residential use - Gas usage in a residential dwelling or unit for space heating, air conditioning, cooking, water heating or other domestic purpose.
10. Daily Delivery Quantity ("DDQ") – A daily delivery requirement provided by the Company to the NGS based upon customer historical load profiles and/or estimates of consumption, actual consumption readings as available, as applied to any forecasted weather for a given period; either monthly, weekly, or daily.

F. Communication, Notice and Other Plan Procedures

1. Issuance of periodic reports to the media concerning the existing natural gas emergency:
 - a. The Company has a communications plan containing a series of pre-drafted news releases and a list of media contacts, phone numbers, fax numbers, and e-mail addresses. During a natural gas emergency information will be developed and disseminated through Distribution's Corporate Communications department. The Company will coordinate with public officials, regulatory agencies, media, and civil defense in keeping the public advised of the status and duration of a service interruption.
 - b. Further, the Company has established a toll free emergency hotline at (866) 866-5958. Customers may call this number to hear more information on the status of an emergency and updates will be offered frequently as National Fuel continues to monitor conditions and the status of natural gas deliveries on its system. Customers may also refer to the Company's web site at www.nationalfuelgas.com.

2. Notice to affected customers and NGSs of the expected initiation of emergency actions under § 59.73:

After the Company determines the appropriate emergency action, the Company shall issue notices to affected customers and their NGSs as soon as reasonably possible.

- a. Energy Services/Consumer Business notifies large customers via phone, fax and/or e-mail, with a follow-up letter.
- b. Corporate Communications notifies customers through various media outlets.
- c. Transportation Services notifies NGSs via automated outbound text messages and/or phone calls, the Company's web-site and e-mail lists; reminding them of their obligation to deliver or cause to be delivered at

the city gate the DDQ for each day of the month, for each of their transportation service customers, within the appropriate tolerance bands.

- d. Government Affairs contacts local officials.
 - e. Rates & Regulatory Affairs contacts the Commission.
3. Customer and NGS delivery requirements that apply during the term of emergency action under § 59.73, regardless of customer-specific usage reductions that arise or may arise from end-use curtailments:
- a. Transportation Service may be interrupted or curtailed whenever the Company invokes emergency action provisions as set forth in this Gas Emergency Plan.
 - b. The Transportation Service Customer or its NGS must deliver or cause to be delivered at the city gate the DDQ for each day of the month, within the appropriate tolerance bands.
 - c. In the event of interruption or curtailment of Transportation Service and during such period of interruption or curtailment, the Transportation Service Customer or its NGS must sell to the Company all or a portion of the Customer's supply of gas at the higher of: the city gate cost of the appropriated natural gas, including transportation charges up to the Company's city gate, or the reasonable cost actually paid by the customer for delivered substitute energy, as documented to the Company.
4. A procedure for focusing emergency measures to confined geographic or operational portions, segments or zones of the Distribution system where a natural gas emergency exists:
- a. After the Company has defined the geographic or operational segment(s) or zone(s) of the system where a natural gas emergency exists, and an assessment has been made of the natural gas emergency, then that particular event will be coordinated between the Company's gas supply, transportation and operations areas (Emergency Response Team).
 - b. The Emergency Response Team, based on the Company's definition of the geographic or operational segment(s) or zone(s) of the system where a natural gas emergency exists, and an assessment has been made of the natural gas emergency, will implement the necessary actions required to restore the system to normal operations.
5. Procedures for establishing communications with the electric system control area operators, when the Company provides gas service to electric generation stations:
- a. PJM Interconnection LLC (PJM) shall be notified via at least one of the following means: telephone, text message, fax, electronic data interchange or any other reasonable means of notification upon

NATIONAL FUEL GAS
DISTRIBUTION CORPORATION

RULES AND REGULATIONS APPLYING TO ALL TERRITORIES SERVED

1. RULES AND REGULATIONS

The customer's application for service, the Pennsylvania Public Utility Code and the rules and regulations promulgated by the Pennsylvania Public Utility Commission, as amended from time to time, and the rules and regulations contained herein are a part of the contract with each Customer, and each Customer agrees to be bound thereby.

2. APPLICATIONS FOR SERVICE

The Company may require any applicant for service to sign an application. Regardless of the manner in which an application is made, the acceptance of such application by the Company shall result in a contract service governed by Rule 1.

3. DETERMINATION OF COMPANY INVESTMENT FOR UPGRADE/EXTENSION OF FACILITIES

A. Maximum Company Investment Level

The Company investment for upgrade/extension of facilities for a firm gas customer shall be limited to an amount determined as follows:

Maximum Company Investment = $\frac{\text{Additional Annual Revenues} \times \text{Justified Company Investment per Dollar of Additional Annual Revenue}}$

B. Determination of Additional Annual Revenues

The Additional Annual Revenues are calculated as follows:

(1) The Company will estimate the customer's projected firm annual volumes as follows:

(a) Residential

For guideline purposes, the Company shall use annual gas consumption figures for gas space heating and for various gas appliances as shown below (These figures are based on current insulation standards as well as 92% efficient furnaces): (C)

(C) Indicates Change

Issued: December 29, 2006

NATIONAL FUEL GAS
DISTRIBUTION CORPORATION

RULES AND REGULATIONS APPLYING TO ALL TERRITORIES SERVED (Cont'd)

3. DETERMINATION OF COMPANY INVESTMENT FOR UPGRADE/EXTENSION OF FACILITIES
(Cont'd)

Gas Space Heating:
Single Family Home - [(square footage x .029) - 5.4] Mcf
Apartment/Condominium - [(square footage x .024) + 3.14] Mcf
Manufactured Home - [(square footage x .0267) + 6.98] Mcf

Gas Appliances:

Gas Water Heater - 20.4 Mcf
Gas Dryer - 3.6 Mcf
Gas Range - 7.6 Mcf

Other Gas Appliances - Determined by the Company on a case-by-case basis.

(b) Commercial or Public Authority: Industrial

The Company shall estimate projected firm annual volumes on a case-by-case basis.

(2) This annual volume is then distributed into 12 monthly amounts based on an average distribution in the appropriate revenue classification. (Alternatively, the customer's annual usage estimate may be distributed according to his own historic or projected monthly load profile pursuant to the Company's review and approval.)

(3) The appropriate rate schedule is applied to each monthly volume, and the results are added to produce annual gross revenues.

(4) For each monthly volume the costs shall be determined for the portion of monthly gross revenues for recovery of purchased gas costs pursuant to applicable provisions of Rider A to this tariff and the applicable rate schedule.

The portion of monthly gross revenues for recovery of Purchased Gas Costs and Transition Costs for each month shall be added together to produce annual revenues for recovery of Purchased Gas Costs and Transition Costs.

(5) The amount calculated under item (4) above, shall be subtracted from the amount calculated under item (3) above.

(6) Additional annual revenues resulting from the upgrade/extension shall be determined by reducing the annual revenues for recovery of non-gas costs as calculated in (5) above, by the customer's currently generated annual revenues for recovery of non-gas costs, if any, as determined by the Company.

(C)

(C) Indicates Change
(D) Indicates Decrease

RULES AND REGULATIONS APPLYING TO ALL TERRITORIES SERVED (Cont'd)

3. DETERMINATION OF COMPANY INVESTMENT FOR UPGRADE/EXTENSION OF FACILITIES
(Cont'd)

Additionally, the Company reserves the right to require a guaranteed revenue contract from a commercial, public authority or industrial customer if any of the following conditions exist:

- (1) The investment is for a dual fuel or partially dual fueled facility;
 - (2) The Company determines that a customer's financial status does not demonstrate that the customer will be able to pay bills for the projected term of use of the facilities; or
 - (3) The actual investment by the Company is greater than \$50,000.
- (3) Recomputation

The Company may recompute, modify, alter or amend the foregoing Justified Company Investment Per Dollar of Additional Annual Revenue amounts as the Company may deem necessary or convenient in the conduct of its business, provided, however, that such recomputation, modification, alteration or amendment shall not become effective unless and until included in this tariff.

(C)

D. Application of Maximum Company Investment

The Maximum Company Investment as determined above shall be applied, first, to the installed meter cost, if any, and then will be applied towards any mainline and/or service line extension, service connection, and/or the upgrade of any of the Company's facilities to accommodate increased volumes of sales or transportation. However, if the Maximum Company Investment is less than the installed meter cost, Company will provide and install the meter at no cost to the Customer.

4. UPGRADE/EXTENSION OF FACILITIES

A. Residential

Whenever the owner or occupant of any property eligible for service as a residential customer makes a written application for service to the Company, and the Company has authority to render service to said applicant, the Company shall extend its facilities so as to serve said property or new residential development, provided that the applicant shall first have executed an agreement to pay to the company the rate charged under the appropriate service classification and to contribute to the cost of extending facilities, an amount equal to the difference between the total cost of construction of facilities less the Company's Maximum Investment (as calculated in Rule No. 3, above).

Income taxes, if any, paid with respect to the Contribution will be recorded in a deferred account and such taxes, less the income tax effect of depreciation received with respect to the property constructed with the Contribution, will be included in the Company's rate base in subsequent rate case proceedings.

B. Commercial or Public Authority; Industrial

Whenever the owner or occupant of any property eligible for service as a Commercial or Public Authority customer, or as an Industrial customer, makes a written application for service to the Company, and the Company has authority to render service to said applicant, the Company shall extend its system so as to serve said property, provided said applicant shall first have executed an agreement to pay to the Company the rates charged under the appropriate service classification and to contribute to the cost of extending facilities, an amount equal to the difference between the total cost of construction of facilities less the Company's Maximum Investment (as calculated in Rule No. 3, above).

Income taxes, if any, paid with respect to the Contribution will be recorded in a deferred account and such taxes, less the income tax effect of depreciation received with respect to the property constructed with the Contribution, will be included in the Company's rate base in subsequent rate case proceedings.

The Company's Maximum Investment for Commercial or Public Authority and Industrial customers shall equal the Maximum Company Investment as calculated in Rule No. 3 above; provided, however, that, in the event that the Company reasonably believes that the Company's installation of facilities will be completed substantially in advance of date that the Customer's use will equal projected annual volumes used to calculate the Maximum Company Investment as calculated in Rule No. 3 above, the Company may discount the Maximum Company

4. UPGRADE/EXTENSION OF FACILITIES (Cont'd)

Investment as calculated in Rule No. 3 above to present value based upon the Company's most recent Commission-approved fair rate of return. (C)

C. Developer/Builder - Residential

Whenever the Developer/Builder of a residential property eligible for service makes a written application for service to the Company, and the Company has authority to render service to the property to be developed, the Company shall extend its system to serve said property, provided that, if the cost to extend the facilities exceeds the Maximum Company Investment, as calculated below, the Developer/Builder shall have entered into an agreement to contribute to the cost of extending facilities. (C)

The Maximum Company Investment for extensions involving a Developer/Builder shall be calculated as follows:

(1) The Developer/Builder shall provide a reasonable schedule of unit completion within the property to be developed;

(2) The Maximum Company Investment shall be calculated (as provided in Section 3) separately based on the number of units scheduled to be completed:

(a) within twelve months from the date of the estimated completion of construction of the new facilities; and

(b) during each successive twelve month period following the date of the estimated completion of construction of the new facilities.

(3) For all units not scheduled for completion within twelve months from the estimated date of completion of the construction of the new facilities, the Maximum Company Investment, as calculated above, shall be discounted to present value at the projected date of the completion of Company installed facilities using the Company's most recent Commission-approved fair rate of return.

(4) The sum of the discounted Maximum Company Investment for units to be installed more than twelve months after construction of Company facilities and the Maximum Company Investment for units scheduled for completion within twelve months of the estimated date of completion of construction of Company facilities shall equal the total Maximum Company Investment for the extension.

4. UPGRADE/EXTENSION OF FACILITIES (Cont'd)

The Developer/Builder shall contribute to the cost of extending facilities, an amount equal to the difference between the total cost of construction of facilities less the Maximum Company Investment (as calculated above).

Income taxes, if any, paid with respect to the Contribution will be recorded in a deferred account and such taxes, less the income tax effect of depreciation received with respect to the property constructed with the Contribution, will be included in the Company's rate base in subsequent rate case proceedings.

In the event that the Developer/Builder does not achieve the projected annual completion rate, the Maximum Company Investment and the amount to be contributed will be recalculated, in the same manner stated above, based upon actual units completed. If the recalculated amount to be contributed is greater than the previously calculated amount to be contributed, the Developer/Builder will be required to pay such difference to the Company; provided, however, that no amount will be required to be paid if the recalculated amount to be contributed exceeds the Company's actual cost of construction less the recalculated Maximum Company Investment.

C1. Developer/Builder Commercial or Industrial

Whenever the Developer/Builder of a commercial or industrial property eligible for service makes a written application for service to the Company, and the Company has authority to render service to the property to be developed, the Company shall extend its system to serve said property, provided that, if the cost to extend the facilities exceeds the Maximum Company Investment, as calculated below, the Developer/Builder shall have entered into an agreement to contribute to the cost of extending facilities.

The Maximum Company Investment for extensions involving a Developer/Builder shall be calculated as follows:

(1) The Developer/Builder shall provide a reasonable schedule of customer attachments and projected additional annual revenues from volumes to be transported by or purchased from the Company and consumed by the attaching customers;

(2) The Maximum Company Investment shall be calculated (as provided in Section 3) separately based on the historical and projected additional annual revenues from volumes to be transported by or purchased from the Company and consumed by the attaching customers:

(a) within twelve months from the date of the estimated completion of construction of the new facilities; and

(b) during each successive twelve month period following the date of the estimated completion of construction of the new facilities.

4. UPGRADE/EXTENSION OF FACILITIES (Cont'd)

The Developer/Builder shall contribute to the cost of extending facilities, an amount equal to the difference between the total cost of construction of facilities less the Maximum Company Investment (as calculated above).

Income taxes, if any, paid with respect to the Contribution will be recorded in a deferred account and such taxes, less the income tax effect of depreciation received with respect to the property constructed with the Contribution, will be included in the Company's rate base in subsequent rate case proceedings.

In the event that the Developer/Builder does not achieve the projected annual completion rate, the Maximum Company Investment and the amount to be contributed will be recalculated, in the same manner stated above, based upon actual additional annual revenues from volumes transported by or purchased from the Company and consumed by the attaching customers during the 60-month period following completion of the extension and the projected additional annual revenues from volumes to be transported by or purchased from the Company and consumed by the customers attached as of the last day of such 60-month period. If the recalculated amount to be contributed is greater than the previously calculated amount to be contributed, the Developer/Builder will be required to pay such difference to the Company; provided, however, that no amount will be required to be paid if the recalculated amount to be contributed exceeds the Company's actual cost of construction less the recalculated Maximum Company Investment.

D. Upgrade

The Company's investment for the upgrade of facilities shall be subject to the formula described in Rule No. 3. An upgrade is required when the customer needs dictate increasing, decreasing or otherwise changing the current service line, main line or meter size for the increased, decreased or otherwise changed volume or pressure requirements or when the customer requests installation of an excess flow valve or natural gas related equipment or facilities not otherwise required by regulation and the Company has deemed such installation appropriate. (C)

E. Advance Payment and Construction

Construction of any extension or installation of excess flow valves or natural gas related equipment or facilities not otherwise required by regulation will not be undertaken until the amount of the applicant's contribution has been paid to the Company by the applicant. In the case of an excess flow valve or natural gas related equipment or facilities not otherwise required by regulation, the amount of the applicant's contribution will be determined based upon the Company's cost to install such equipment. The actual construction of the extension shall be scheduled at the Company's discretion. (C)

4. UPGRADE/EXTENSION OF FACILITIES (Cont'd)

F. Refunds of Customer Investment

Any customer attaching to a facility extended/upgraded within five (5) years of completion thereof will be required to contribute to the cost of the extension/upgrade in accordance with Rules 3 and 4. In the event a new customer attaches to an extension/upgrade of the Company's facilities paid for by a customer or a developer/builder, within five (5) years of the date of completion thereof, a pro rata refund will be made to customers or developer/builder who were charged for such extension. In the alternative, the customer or builder/developer and Distribution may mutually agree in writing that the refund, if any, shall equal the Company's Maximum Company Investment for the attaching customer less the Company's actual attachment cost of construction. An annual review of such extensions is made on the anniversary date of completion thereof, during said five (5) years, and any refunds due are made at that time except for extensions for a developer/builder of commercial or industrial property which shall be reviewed at the end of year five (5) and any refunds due will be made at that time. No refunds will be paid for attachments occurring more than five (5) years after the completion date and in no case will the aggregate amount of refunds to a customer or developer/builder exceed the amount which the customer or developer/builder paid for the mainline extension/upgrade.

↑
(C)
↓

5. MAINTENANCE OF FACILITIES

After initial installation of facilities has been made, pursuant to Rule Nos. 3 and 4, above, all facilities including mains, customer service lines (i.e., the portion of the service line from the outlet of the Company's service stop cock to the inlet of the meter) and Company service lines (i.e. the portion of the service line from the gas main to and including the curb box and service stop cock), shall be maintained, replaced or renewed, as required, at the expense of the Company.

5A. SPECIAL UTILITY SERVICES

The provisions of Rules 3 and 4 do not apply to applications for special utility service. "Special utility service" shall include (a) a request for utility service when the applicant has an installed alternative fuel capability, including service from a natural gas well; (b) a request for utility service when the applicant is already receiving natural gas service from another Pennsylvania public utility; (c) a request for utility service from an applicant located in an area in which another natural gas utility is authorized to serve the applicant; (d) a request for utility service by an applicant who was the owner or ratepayer of record for the premises at the time the Company last provided service to the premises; (e) any request for service by an applicant who, in the Company's view, is unlikely to remain on the Company's system for a sufficient period of time to justify the extension. Applications for special utility service shall be resolved on a case-by-case basis through negotiations between the applicant and the company.

RULES AND REGULATIONS APPLYING TO ALL TERRITORIES SERVED (Cont'd)

6. METERS

Gas delivered to customers from services attached to distribution lines shall be measured by meters to be furnished, installed and owned by the Company.

If, at any time after the installation of a meter, conditions are changed so that its location becomes unsuitable, the Company shall have the right to move the meter to a suitable place at the expense of the customer or property owner.

The cost of changes in location of meters made at the request of the property owner shall be borne by the owner. The customer shall not tamper with the meter and shall permit no one except employees of the Company to connect or disconnect the meter.

The customer shall be responsible to the Company for any injury to, or loss of, any meter arising out of or caused by the customer's negligence or carelessness, or that of his servants, employees, members of his household, or any person upon his premises under or by his consent, or sufferance. The customer shall at once notify the Company of any injury to, or any cessation in registration of, the meter as soon as it comes to his knowledge.

The Company, in its sole discretion, may install, together with its meter, an automated meter reading device ("AMD"), which can communicate automatically data from the meter to the Company by use of the telephone system. Customer shall provide the Company a suitable location for installation of an AMD, and the customer shall permit the Company to connect the AMD to the customer's existing telephone inside wiring. The customer shall not be required to install or modify telephone inside wiring or to subscribe to public utility telephone service in order to receive service from the Company.

The Company shall provide at least 72 hours' notice of the installation of an AMD at the customer's premises. The Company will not install an AMD at a customer's premises unless the AMD is designed to relinquish control of the customer's telephone line when the customer's telephone equipment is activated. If an AMD installed by the Company fails to relinquish control of a customer's telephone line when the customer's telephone equipment is activated, then such AMD will be replaced or repaired by the Company at the Company's expense. The Company will not install any AMD capable of transmitting voice communications unless specific permission is obtained from the Commission prior to installation.

If a Customer of the Company is billed by a telephone public utility specific charges for usage of telephone service (toll charges or local message unit charges) or charges for maintenance services that were caused by the Company's installation or use of AMD's, then the Company will reimburse the Customer for such charges.

7. CUSTOMER'S PIPING AND EQUIPMENT

Prior to the installation of house piping by the customer in new or altered premises, inquiry shall be made of the Company to determine the requirements, sizes of pipe, quality and other specifications.

House lines, piping, connections and appliances are subject to inspection by the Company and no gas will be delivered unless all conditions are satisfactory.

The Company gives no warranty, expressed or implied, as to the adequacy or safety of any structure, equipment, piping, appliance or device owned, installed, leased or maintained by or for the customer or the owner of the premises served.

8. ACCESS TO PREMISES

The authorized agents of the Company shall, at all reasonable times, have free access to any premises supplied with gas or to which a service connection has been made, for the purpose of reading, inspecting, repairing or removing meters, piping, or other appliances therein belonging to the Company and of inspecting the piping and appliances belonging to the customer.

Every industrial customer shall permit the Company, during business hours and upon reasonable notice, to inspect the customer's facilities so that the Company may determine whether facilities have been installed which would enable the customer to obtain volumes of gas without using the Company's system ("Bypass Facilities"). If a customer refuses to permit the Company to inspect the customer's facilities, it shall be presumed that Bypass Facilities have been installed.

9. INTERRUPTION OF SERVICE

In accordance with the Public Utility Code, the Company will provide service which shall be reasonably continuous and without unreasonable interruptions or delay. The Company shall not be liable, in any amount, for damages, direct or consequential, where service meets requirements of the Public Utility Code. This limitation of liability, however, shall not apply to Company conduct which is found to be willful, wanton or reckless. If the Company shall know, in advance, of an expected interruption of service, the Company will take all reasonable steps, such as personal contact, phone contact or the use of mass media, to notify affected customers of the cause and expected duration of the interruption.

10. LEAKS

The responsibility for detecting leaks or defects in piping between the Company's service connection and the point of consumption shall be upon the customer. The customer shall give immediate notice to the Company of inadequate, irregular or failing gas supply, leakage, abnormally high or low pressures, or any dangerous conditions.

Should any leak or defect be discovered in the mains, service connections, customer's service line, piping, or appliances, the Company shall have the right to shut off the supply of gas until satisfactory repairs have been made.

11. REFUSAL OR TERMINATION OF SERVICE

The Company may decline to serve an applicant (1) until he has complied with state and municipal regulations governing gas service and the approved Rules and Regulations of the Company contained in this Tariff and any supplement thereto, (2) if the Company does not have adequate facilities to render the service desired or if rendering such service would affect unfavorably service to other customers, (3) if in the Company's judgment, the applicant's installation of piping or gas equipment is regarded as hazardous or of such character that satisfactory service cannot be given, (4) if an extension of street main is required beyond length warranted by anticipated revenues, and the customer refuses to pay the charges required by Rule 3 of this Tariff, (5) until all amounts due for regulated service or amounts purchased from a Natural Gas Supplier (NGS) through the Company's Purchase of Receivables Program (POR) pursuant to Rate Schedule SATC Section F ("Lesser Of" calculation) at a previous location have been paid or covered by a payment agreement (unless the amount owed is more than four years after the date of the final bill, in which case service cannot be refused), (6) or where the service proposed is from a gathering, production or transmission pipeline (see Rule 25). (C)

The Company may terminate service for nonpayment of a billing or billings for regulated services or NGS provided natural gas supply charges purchased through the Company's POR Program pursuant to Rate Schedule SATC Section F ("Lesser Of" calculation), and such termination of service shall be in accordance with general regulations of the Pennsylvania Public Utility Commission applicable thereto and in accordance with the Pennsylvania Public Utility Code. (C)

The Company may not threaten termination of service for nonpayment of unregulated Natural Gas Supplier charges incurred by the customer from qualified Suppliers under Rate Schedule SATS if the Company did not purchase the receivables from the Supplier. (C)

12. RECONNECTION OF SERVICE

When the supply of gas to any customer is turned off due to the customer's failure to pay for regulated service or NGS provided natural gas supply charges purchased through the POR Program pursuant to Rate Schedule SATC Section F ("Lesser Of" calculation), for any other infraction of these Rules and Regulations or at the customer's request, and if there has been no change in ownership or occupancy of the premises served, the supply of gas will not be turned on until the customer or applicant has paid a reconnection fee of \$69.00. The Company will reconnect a residential customer or applicant's gas service in accordance with the general regulations of the Pennsylvania Public Utility Commission applicable thereto and in accordance with the Pennsylvania Public Utility Code. Company may determine liability for outstanding balance for residential gas service based upon the methods set forth in 52 Pa. Code §56.191 and Company records. (C)

If the supply of gas was turned off due to a non-residential customer's failure to pay for regulated service or NGS provided natural gas supply charges purchased through the POR Program pursuant to Rate Schedule SATC Section F ("Lesser Of" calculation) and if the former customer reapplies for service or if a court, district justice or administrative agency has determined that the applicant is legally obligated to pay for the service previously furnished, the supply of gas will not be turned on until the non-residential customer or applicant has paid all outstanding bills for service. (C)

The reconnection of service cannot be denied for the nonpayment of Natural Gas Supplier charges billed to the customer for services rendered by Rate Schedule SATS Suppliers if the Company did not purchase the receivables from the Supplier.

13. DISCONTINUANCE NOTICE BY CUSTOMER

Any customer who is about to vacate any premise supplied with gas, or who for any reason wishes to have service discontinued, shall give at least seven days' notice to the utility specifying the date on which it is desired that service be discontinued. The customer who fails to give proper notice shall be liable for all gas which passes through the meter, until: the account is terminated; another party occupies the premises and agrees to assume responsibility for gas service; or, the customer notifies the Company or the Company learns that he has or will vacate the premises, in which case he shall be responsible for gas used for the period, not to exceed seven days, before the company is able to discontinue service.

14. GAS DELIVERED UNDER HIGH PRESSURE

The rates contained in this tariff are based upon gas delivered under conditions generally applicable to low pressure service (four ounce base). Bills for gas metered under high pressure will be computed upon the volume as indicated by the meter registration increased to the equivalent volume at standard pressure.

15. BILLING

Bills will be rendered and will be payable once each month. The Company may read any meter once each month but ordinarily it will read meters of domestic and commercial customers once each two months.

Gas - Pa. P.U.C. No. 9
Third Revised Page No. 22
~~Canceling Second Revised Page No. 22~~

RULES AND REGULATIONS APPLYING TO ALL TERRITORIES SERVED (Cont'd)

15. BILLING (Cont'd)

As to any customer whose meter is read once each two months, the consumption for the first month of each bimonthly meter reading period shall be determined by calculation on the basis of the customer's previous usage adjusted for weather conditions; and the consumption for the second month of each bimonthly meter period shall be determined by subtracting the first month's calculated consumption from the total actual consumption for the bimonthly period as shown by the meter. The bill for each month shall be the result of applying to the consumption, determined as aforesaid, the applicable rates and charges contained in this tariff.

Under 52 Pa Code § 56.222 the Company requested and was granted a waiver from 52 Pa. Code § 56.12(2) (i) - (ii) by the Commission. In accordance with this waiver, the Company will only accept customer supplied readings by telephone or through the Company's Internet website when such readings are: (1) reasonable based on historical usage information; and, (2) received by the Company within the proper billing window 3 business days prior to the bill being rendered. Acceptable customer readings will be used to compute a bill that otherwise would have been determined by calculation.

If the meter reader in any month is unable to gain access to the premises for the purpose of reading the meter, a calculated bill will be rendered and adjustments, if any, will be made by the Company when the meter is read.

In those instances where the Company's agent or representative is unable to gain access to the customer's premises during the regular scheduled working hours to obtain a meter reading, the number of calculated readings shall be limited to six consecutive months, and the customer's service, thereafter, is subject to termination, after due notice.

The late payment date specified on the monthly bill is not less than fifteen days from date the bill is mailed except that, for service under, or billed in conjunction with, residential rate schedules, the late payment date is not less than twenty days from the date the bill is mailed.

At the time the Company receives a notice to transfer service from one customer to another, the Company will provide customers with the option to either have the Company read the meter or to have the disconnecting and reconnecting customer read the meter. The Company will read the meter if the two customer readings are significantly different. The Company will inform the customers that if they elect the customer meter reading and the customer fails to provide the Company with an acceptable reading in a timely manner, the Company may estimate the final meter reading.

RULES AND REGULATIONS APPLYING TO ALL TERRITORIES SERVED (Cont'd)

15. BILLING (Cont'd)

The Company will make reasonable efforts to obtain actual meter readings: (a) when the Company has insufficient data to estimate the Customer's usage; (b) when disconnect and reconnect orders are executed on different days; and (c) when the customer, at least seven days prior to the disconnect order date, specifically requests that the meter be read. The Company reserves the right to estimate a Customer's usage for a final bill whenever the Company is unable to gain access to its meter on the disconnect order date. The Company will accept meter readings from customers for final bills if the customer reading is provided in a timely manner and if, upon review, the Company finds the customer reading to be reasonable and consistent with prior usage levels. Notwithstanding the foregoing, the Company may not discontinue service unless in compliance with the Rules, Regulations or Orders of the Pennsylvania Public Utility Commission pertaining thereto and in effect at the time of such discontinuation.

16. PENALTY CHARGES

If the customer fails to pay his gas bill by the late payment date, a penalty will be charged. Payments received by mail will be considered paid on the date of the postmark.

Where a customer receives natural gas supply service from a qualified Supplier under Rate Schedule SATS but is not participating in the Company POR program, late payment charges will be applied to the Supplier charges only if the customer has agreed to pay Supplier late payment charges. Otherwise, late payment charges will be based on the distribution charges of the Company and natural gas supply charges of either the Company or Supplier. (C)

18. BALANCED BILLING PLAN

The company has available a budget payment plan for Residential, Commercial, and Public Authority customers. The budget payment plan is available for all qualifying Company regulated services and for services provided to the customer by qualified Suppliers under Rate Schedule SATS where the Company provides billing service for the Supplier. At the request of any Residential, Commercial or Public Authority customer who uses gas as the primary source for space heating and who satisfies the company's credit standards, monthly payments for such customers may be made as follows:

Monthly payments shall be based on an amount equivalent to 1/12th of the customer's estimated annual bill rounded to the next higher dollar amount.

If a debit balance has accrued as of the 12th cycle month of this plan, the customer may either incorporate it all in the 12th cycle month's payment or at the company's discretion, spread all or part of the debit in equal monthly installments over the next cycle year. If the credit balance is accrued, the customer shall have the option of either receiving a cash refund, having it applied against the current bill, or having it used to reduce the monthly installments in the next cycle year. Absent an indication from the customer of his preference, the debit or credit will be applied to the first monthly installment in the ensuing year.

19. SEASONAL SERVICE

Service to Residential, Commercial, Public Authority, and Industrial premises occupied seasonally will be supplied at the rates and minimum charges of the applicable rate schedule.

20. SUPPLYING OF GAS SUPPLIES TO OTHER CUSTOMERS

No branch, valve or fixture which would permit gas to be withdrawn without registering on the meter shall be connected to a customer service line (i.e., the portion of the service line from the outlet of the Company's service stop cock to the inlet of the meter).

No extension of facilities, including the customer service line and facilities connected thereto and extending into a customer's premises, may be used to provide gas service at any additional or different premises. As used herein, a premises is defined as a single building; or the several buildings of a housing development under one ownership within a single parcel of land not intersected by a public highway or city street; or the several buildings of a religious, charitable, educational, or benevolent corporation if used exclusively for such purposes, if situated on adjoining properties even if intersected by a public highway or city street; or an industrial plant if situated on adjoining properties even though intersected by a public highway or a city street.

21. CONJUNCTIVE BILLING

The Company's rates are based upon gas supply through a single delivery point, as measured by one meter. Separate supply for the same customer at other points of delivery or through more than one meter shall be billed separately. However, the Company may, when engineering or operational conditions warrant, or to improve service, install two or more meters on the

21. CONJUNCTIVE BILLING (Cont'd)
same premises to service a single customer, in which event the consumption registered by such meters may be consolidated and the rates under which service is taken applied to the total consumption. The term "same premises" means a single building; or the several buildings under one ownership within a single parcel of land not intersected by a public highway or city street; provided, however, that the Company, in its sole discretion, may permit conjunctive billing at premises not conforming to the above definition of "same premises" if it is reasonably necessary to do so to meet competition from another supplier of energy, including gas.

An established conjunctive billing arrangement shall be permitted to continue so long as the customer remains at the premises presently served. The conjunctive billing arrangement shall neither be expanded to the customer's newly-acquired premises, nor transferred in whole or in part to different premises, nor continued at the same premises for different customers, unless, in the Company's sole discretion, it is reasonable to expand, transfer or continue the conjunctive billing arrangement.

22. ADJUSTMENT OF BILLS FOR METER ERROR

Charges to customers will be adjusted for fast, slow and nonregistering meters, as per Section 59.22 of the regulations of the Pennsylvania Public Utility Commission for Gas Service, 52 Pa. Code Paragraph 59.22.

23. METER TEST ON REQUEST OF CUSTOMER

Meters which are not due for periodic tests will be tested for accuracy as per Section 59.21 of the regulations of the Pennsylvania Public Utility Commission for Gas Service, 52 Pa. Code Paragraph 59.21, upon written request by the customer and payment to the Company of a deposit in the amount specified by said regulations.

24. RULES FOR SECURING DEPOSITS

The Company may require customers to provide deposits for services. The Company may not deny the customer regulated services based on the customer's failure to provide deposits for unregulated services.

Deposits may be required from customers taking service for a period of less than thirty days in an amount equal to the estimated bill for such temporary period.

Deposits may be required from Commercial or Industrial customers but shall not exceed the amount equal to the sum of amounts computed by applying the applicable sales rate schedule to the volumes of gas transported by or purchased from the Company, and consumed by the customer during the two, of the most recent twelve months of greatest usage by the Customer. In lieu of actual experience, the determination will be based on an estimate considering all relevant information and data.

Deposits may be required from Residential customers in accordance with the Pennsylvania Public utility Code and the Rules and Regulations of the Pennsylvania Public Utility Commission. (C)

24. RULES FOR SECURING DEPOSITS (Cont'd)

Security, in the form of a cash deposit, letter of credit, surety bond, or third-party guarantee, will be required from the applicants for Non-residential service unless: A) the premises to which gas service is to be supplied is a branch of, or additional facility operated by, financially responsible, enterprise which will be the ratepayer of record with respect to gas bills incurred at the premises; or, B) in the case of a premises not covered by "A" above, the Company determines, through relevant Company records covering past direct dealings with the applicant over a period of at least one year, that a deposit is not necessary. Security, in the form of a cash deposit, letter of credit, surety bond, or third-party guarantee, will be required from existing Non-residential customers where the Company determines that the customer's credit standing warrants concern as to its continuing ability to pay. In evaluating a customer's credit standing, the Company will take into account certain factors, including, but not limited to, the following: i) average monthly consumption; ii) average monthly bill; iii) payment history during the immediately preceding twelve month period; iv) customer's general credit standing as evaluated by any available applicable credit rating indices or rating services; v) customer's payment history and credit standing with other lenders or providers of utility and other services.

Until returned or credited, interest will accrue on Residential deposits at the rate of interest as determined by the Secretary of Revenue for interest on the underpayment of tax under Section 806 of the Act of April 19, 1929 (P.L.343, No. 176), known as The Fiscal Code. Interest accrued on Residential deposits will either be applied, together with the deposit, to any outstanding balance for service or will be paid at the time the deposit is returned. Interest will be paid on non-residential deposits at the rate of six percent (6%) per annum without deductions for any taxes thereon. Upon non-residential deposits held for more than a year, the Company shall pay to the patron, at the end of the calendar year, the interest accrued thereon. (C)

25. CUSTOMERS SERVED THROUGH SERVICE CONNECTIONS ATTACHED TO FACILITIES OTHER THAN DISTRIBUTION SYSTEM LINES

Service from a line outside the Company's low pressure and medium pressure distribution systems will not be furnished unless such line is at that time being operated in a manner which will permit gas to be served to the applicant without interference with its operation. The furnishing of such service will be with the understanding that the use or manner of use of the Company's line from which gas is to be supplied is not permanent and that such service is subject to temporary or absolute change or discontinuance at the sole discretion of the Company which may at any time remove, repair or change the use or manner of operating said line after having first canceled the service contract by thirty days' written notice to the customer.

25. CUSTOMERS SERVED THROUGH SERVICE CONNECTIONS ATTACHED TO FACILITIES
OTHER THAN DISTRIBUTION SYSTEM LINES (Cont'd)

The customer assumes sole responsibility, financially and otherwise for obtaining alternative sources of fuel in the event that customer's service is interrupted or discontinued permanently or temporarily, as described in the preceding paragraph.

The Company has the right to cancel the service contract for any such reason or in accordance with any other published rule or regulation of the Company, and, during the term of the contract, the Company shall not be liable for any deficiency in the supply of gas caused by the use of compressing stations, breakage of lines or other causes or for any claim for damages on account of any matters set forth in this paragraph.

All materials used in connecting the meter and regulators from the outlet of the Company's service stop cock to the outlet of the meter, and including the box or structure housing the meter and regulators, shall be furnished and installed by the Company at the expense of the customer. The meter and regulators shall belong to the Company and will be installed as near to the Company's lines as is practicable.

RULES AND REGULATIONS APPLYING TO ALL TERRITORIES SERVED

1. RULES AND REGULATIONS

The customer's application for service, the Pennsylvania Public Utility Code and the rules and regulations promulgated by the Pennsylvania Public Utility Commission, as amended from time to time, and the rules and regulations contained herein are a part of the contract with each Customer, and each Customer agrees to be bound thereby.

2. APPLICATIONS FOR SERVICE

The Company may require any applicant for service to sign an application. Regardless of the manner in which an application is made, the acceptance of such application by the Company shall result in a contract service governed by Rule 1.

3. DETERMINATION OF COMPANY INVESTMENT FOR UPGRADE/EXTENSION OF FACILITIES

A. Maximum Company Investment Level

The Company investment for upgrade/extension of facilities for a firm gas customer shall be limited to an amount determined as follows:

Maximum Company Investment = $\frac{\text{Additional Annual Revenues} \times \text{Justified Company Investment per Dollar of Additional Annual Revenue}}$

B. Determination of Additional Annual Revenues

The Additional Annual Revenues are calculated as follows:

(1) The Company will estimate the customer's projected firm annual volumes as follows:

(a) Residential

For guideline purposes, the Company shall use annual gas consumption figures for gas space heating and for various gas appliances as shown below (These figures are based on current insulation standards as well as 92% efficient furnaces): (C)

Apartment/Condominium - [(square footage x .024) + 3.14] Mcf
Manufactured Home - [(square footage x .0267) + 6.98] Mcf

Gas Appliances:

Gas Water Heater - 20.4 Mcf
Gas Dryer - 3.6 Mcf
Gas Range - 7.6 Mcf
Other Gas Appliances - Determined by the Company on a case-by-

case basis.

(b) Commercial or Public Authority: Industrial

The Company shall estimate projected firm annual volumes on a case-by-case basis.

(2) This annual volume is then distributed into 12 monthly amounts based on an average distribution in the appropriate revenue classification. (Alternatively, the customer's annual usage estimate may be distributed according to his own historic or projected monthly load profile pursuant to the Company's review and approval.)

(3) The appropriate rate schedule is applied to each monthly volume, and the results are added to produce annual gross revenues.

(4) For each monthly volume the costs shall be determined for the portion of monthly gross revenues for recovery of purchased gas costs pursuant to applicable provisions of Rider A to this tariff and the applicable rate schedule.

|
(C)
|

The portion of monthly gross revenues for recovery of Purchased Gas Costs and Transition Costs for each month shall be added together to produce annual revenues for recovery of Purchased Gas Costs and Transition Costs.

(5) The amount calculated under item (4) above, shall be subtracted from the amount calculated under item (3) above.

(6) Additional annual revenues resulting from the upgrade/extension shall be determined by reducing the annual revenues for recovery of non-gas costs as calculated in (5) above, by the customer's currently generated annual revenues for recovery of non-gas costs, if any, as determined by the Company.

3. DETERMINATION OF COMPANY INVESTMENT FOR UPGRADE/EXTENSION OF FACILITIES
 (Cont'd)

C. Determination of Justified Company Investment Per Dollar of
 Additional Annual Revenue

(1) Residential

The Justified Company Investment Per Dollar of Additional Annual
 Revenue for residential customers is \$4.58. (D)

(2) Commercial and Public Authority; Industrial

The Justified Company Investment Per Dollar of Additional Annual
 Revenue for commercial, public authority or industrial customers shall be
 selected from the table below based upon the projected term of use by the
 customer of the new or upgraded facilities.

Projected Term of Use of New/Upgraded Facilities (Years)	Justified Company Investment Per Dollar of Additional Annual Revenue	
1	\$.47	
2	.91	
3	1.30	
4	1.66	
5	1.99	
6	2.29	
7	2.57	
8	2.82	
9	3.05	
10	3.26	
Greater than 10	4.58	

Because the term of use has a substantial effect on the determination of
 the Justified Company Investment Per Dollar of Additional Annual Revenue, the
 Company may require a letter of intent from commercial, public authority and
 industrial customers projecting the term of use of the new or upgraded
 extension of facilities being requested.

The Company reserves the right to require a guaranteed revenue contract
 if the customer projects a term of use of the new or upgraded facilities in
 excess of 10 years or if the customer does not demonstrate that the customer's
 term of use is reasonable.

3. DETERMINATION OF COMPANY INVESTMENT FOR UPGRADE/EXTENSION OF FACILITIES
(Cont'd)

Additionally, the Company reserves the right to require a guaranteed revenue contract from a commercial, public authority or industrial customer if any of the following conditions exist:

- (1) The investment is for a dual fuel or partially dual fueled facility;
 - (2) The Company determines that a customer's financial status does not demonstrate that the customer will be able to pay bills for the projected term of use of the facilities; or
 - (3) The actual investment by the Company is greater than \$50,000.
- (3) Recomputation

The Company may recompute, modify, alter or amend the foregoing Justified Company Investment Per Dollar of Additional Annual Revenue amounts as the Company may deem necessary or convenient in the conduct of its business, provided, however, that such recomputation, modification, alteration or amendment shall not become effective unless and until included in this tariff.

|
(C)
|

D. Application of Maximum Company Investment

The Maximum Company Investment as determined above shall be applied, first, to the installed meter cost, if any, and then will be applied towards any mainline and/or service line extension, service connection, and/or the upgrade of any of the Company's facilities to accommodate increased volumes of sales or transportation. However, if the Maximum Company Investment is less than the installed meter cost, Company will provide and install the meter at no cost to the Customer.

4. UPGRADE/EXTENSION OF FACILITIES

A. Residential

Whenever the owner or occupant of any property eligible for service as a residential customer makes a written application for service to the Company, and the Company has authority to render service to said applicant, the Company shall extend its facilities so as to serve said property or new residential development, provided that the applicant shall first have executed an agreement to pay to the company the rate charged under the appropriate service classification and to contribute to the cost of extending facilities, an amount equal to the difference between the total cost of construction of facilities less the Company's Maximum Investment (as calculated in Rule No. 3, above).

Income taxes, if any, paid with respect to the Contribution will be recorded in a deferred account and such taxes, less the income tax effect of depreciation received with respect to the property constructed with the Contribution, will be included in the Company's rate base in subsequent rate case proceedings.

B. Commercial or Public Authority; Industrial

Whenever the owner or occupant of any property eligible for service as a Commercial or Public Authority customer, or as an Industrial customer, makes a written application for service to the Company, and the Company has authority to render service to said applicant, the Company shall extend its system so as to serve said property, provided said applicant shall first have executed an agreement to pay to the Company the rates charged under the appropriate service classification and to contribute to the cost of extending facilities, an amount equal to the difference between the total cost of construction of facilities less the Company's Maximum Investment (as calculated in Rule No. 3, above).

Income taxes, if any, paid with respect to the Contribution will be recorded in a deferred account and such taxes, less the income tax effect of depreciation received with respect to the property constructed with the Contribution, will be included in the Company's rate base in subsequent rate case proceedings.

The Company's Maximum Investment for Commercial or Public Authority and Industrial customers shall equal the Maximum Company Investment as calculated in Rule No. 3 above; provided, however, that, in the event that the Company reasonably believes that the Company's installation of facilities will be completed substantially in advance of date that the Customer's use will equal projected annual volumes used to calculate the Maximum Company Investment as calculated in Rule No. 3 above, the Company may discount the Maximum Company

Investment as calculated in Rule No. 3 above to present value based upon the Company's most recent Commission-approved fair rate of return. (C)

C. Developer/Builder - Residential

Whenever the Developer/Builder of a residential property eligible for service makes a written application for service to the Company, and the Company has authority to render service to the property to be developed, the Company shall extend its system to serve said property, provided that, if the cost to extend the facilities exceeds the Maximum Company Investment, as calculated below, the Developer/Builder shall have entered into an agreement to contribute to the cost of extending facilities. (C)

The Maximum Company Investment for extensions involving a Developer/Builder shall be calculated as follows:

(1) The Developer/Builder shall provide a reasonable schedule of unit completion within the property to be developed;

(2) The Maximum Company Investment shall be calculated (as provided in Section 3) separately based on the number of units scheduled to be completed:

(a) within twelve months from the date of the estimated completion of construction of the new facilities; and

(b) during each successive twelve month period following the date of the estimated completion of construction of the new facilities.

(3) For all units not scheduled for completion within twelve months from the estimated date of completion of the construction of the new facilities, the Maximum Company Investment, as calculated above, shall be discounted to present value at the projected date of the completion of Company installed facilities using the Company's most recent Commission-approved fair rate of return.

(4) The sum of the discounted Maximum Company Investment for units to be installed more than twelve months after construction of Company facilities and the Maximum Company Investment for units scheduled for completion within twelve months of the estimated date of completion of construction of Company facilities shall equal the total Maximum Company Investment for the extension.

4. UPGRADE/EXTENSION OF FACILITIES (Cont'd)

The Developer/Builder shall contribute to the cost of extending facilities, an amount equal to the difference between the total cost of construction of facilities less the Maximum Company Investment (as calculated above).

Income taxes, if any, paid with respect to the Contribution will be recorded in a deferred account and such taxes, less the income tax effect of depreciation received with respect to the property constructed with the Contribution, will be included in the Company's rate base in subsequent rate case proceedings.

In the event that the Developer/Builder does not achieve the projected annual completion rate, the Maximum Company Investment and the amount to be contributed will be recalculated, in the same manner stated above, based upon actual units completed. If the recalculated amount to be contributed is greater than the previously calculated amount to be contributed, the Developer/Builder will be required to pay such difference to the Company; provided, however, that no amount will be required to be paid if the recalculated amount to be contributed exceeds the Company's actual cost of construction less the recalculated Maximum Company Investment.

C1. Developer/Builder Commercial or Industrial

Whenever the Developer/Builder of a commercial or industrial property eligible for service makes a written application for service to the Company, and the Company has authority to render service to the property to be developed, the Company shall extend its system to serve said property, provided that, if the cost to extend the facilities exceeds the Maximum Company Investment, as calculated below, the Developer/Builder shall have entered into an agreement to contribute to the cost of extending facilities.

The Maximum Company Investment for extensions involving a Developer/Builder shall be calculated as follows:

(1) The Developer/Builder shall provide a reasonable schedule of customer attachments and projected additional annual revenues from volumes to be transported by or purchased from the Company and consumed by the attaching customers;

(2) The Maximum Company Investment shall be calculated (as provided in Section 3) separately based on the historical and projected additional annual revenues from volumes to be transported by or purchased from the Company and consumed by the attaching customers:

(a) within twelve months from the date of the estimated completion of construction of the new facilities; and

(b) during each successive twelve month period following the date of the estimated completion of construction of the new facilities.

4. UPGRADE/EXTENSION OF FACILITIES (Cont'd)

The Developer/Builder shall contribute to the cost of extending facilities, an amount equal to the difference between the total cost of construction of facilities less the Maximum Company Investment (as calculated above).

Income taxes, if any, paid with respect to the Contribution will be recorded in a deferred account and such taxes, less the income tax effect of depreciation received with respect to the property constructed with the Contribution, will be included in the Company's rate base in subsequent rate case proceedings.

In the event that the Developer/Builder does not achieve the projected annual completion rate, the Maximum Company Investment and the amount to be contributed will be recalculated, in the same manner stated above, based upon actual additional annual revenues from volumes transported by or purchased from the Company and consumed by the attaching customers during the 60-month period following completion of the extension and the projected additional annual revenues from volumes to be transported by or purchased from the Company and consumed by the customers attached as of the last day of such 60-month period. If the recalculated amount to be contributed is greater than the previously calculated amount to be contributed, the Developer/Builder will be required to pay such difference to the Company; provided, however, that no amount will be required to be paid if the recalculated amount to be contributed exceeds the Company's actual cost of construction less the recalculated Maximum Company Investment.

D. Upgrade

The Company's investment for the upgrade of facilities shall be subject to the formula described in Rule No. 3. An upgrade is required when the customer needs dictate increasing, decreasing or otherwise changing the current service line, main line or meter size for the increased, decreased or otherwise changed volume or pressure requirements or when the customer requests installation of an excess flow valve or natural gas related equipment or facilities not otherwise required by regulation and the Company has deemed such installation appropriate. (C)

E. Advance Payment and Construction

Construction of any extension or installation of excess flow valves or natural gas related equipment or facilities not otherwise required by regulation will not be undertaken until the amount of the applicant's contribution has been paid to the Company by the applicant. In the case of an excess flow valve or natural gas related equipment or facilities not otherwise required by regulation, the amount of the applicant's contribution will be determined based upon the Company's cost to install such equipment. The actual construction of the extension shall be scheduled at the Company's discretion. (C)

4. UPGRADE/EXTENSION OF FACILITIES (Cont'd)

F. Refunds of Customer Investment

Any customer attaching to a facility extended/upgraded within five (5) years of completion thereof will be required to contribute to the cost of the extension/upgrade in accordance with Rules 3 and 4. In the event a new customer attaches to an extension/upgrade of the Company's facilities paid for by a customer or a developer/builder, within five (5) years of the date of completion thereof, a pro rata refund will be made to customers or developer/builder who were charged for such extension. In the alternative, the customer or builder/developer and Distribution may mutually agree in writing that the refund, if any, shall equal the Company's Maximum Company Investment for the attaching customer less the Company's actual attachment cost of construction. An annual review of such extensions is made on the anniversary date of completion thereof, during said five (5) years, and any refunds due are made at that time except for extensions for a developer/builder of commercial or industrial property which shall be reviewed at the end of year five (5) and any refunds due will be made at that time. No refunds will be paid for attachments occurring more than five (5) years after the completion date and in no case will the aggregate amount of refunds to a customer or developer/builder exceed the amount which the customer or developer/builder paid for the mainline extension/upgrade.

↑

↓

5. MAINTENANCE OF FACILITIES

After initial installation of facilities has been made, pursuant to Rule Nos. 3 and 4, above, all facilities including mains, customer service lines (i.e., the portion of the service line from the outlet of the Company's service stop cock to the inlet of the meter) and Company service lines (i.e., the portion of the service line from the gas main to and including the curb box and service stop cock), shall be maintained, replaced or renewed, as required, at the expense of the Company.

5A. SPECIAL UTILITY SERVICES

The provisions of Rules 3 and 4 do not apply to applications for special utility service. "Special utility service" shall include (a) a request for utility service when the applicant has an installed alternative fuel capability, including service from a natural gas well; (b) a request for utility service when the applicant is already receiving natural gas service from another Pennsylvania public utility; (c) a request for utility service from an applicant located in an area in which another natural gas utility is authorized to serve the applicant; (d) a request for utility service by an applicant who was the owner or ratepayer of record for the premises at the time the Company last provided service to the premises; (e) any request for service by an applicant who, in the Company's view, is unlikely to remain on the Company's system for a sufficient period of time to justify the extension. Applications for special utility service shall be resolved on a case-by-case basis through negotiations between the applicant and the company.

RULES AND REGULATIONS APPLYING TO ALL TERRITORIES SERVED (Cont'd)

6. METERS

Gas delivered to customers from services attached to distribution lines shall be measured by meters to be furnished, installed and owned by the Company.

If, at any time after the installation of a meter, conditions are changed so that its location becomes unsuitable, the Company shall have the right to move the meter to a suitable place at the expense of the customer or property owner.

The cost of changes in location of meters made at the request of the property owner shall be borne by the owner. The customer shall not tamper with the meter and shall permit no one except employees of the Company to connect or disconnect the meter.

The customer shall be responsible to the Company for any injury to, or loss of, any meter arising out of or caused by the customer's negligence or carelessness, or that of his servants, employees, members of his household, or any person upon his premises under or by his consent, or sufferance. The customer shall at once notify the Company of any injury to, or any cessation in registration of, the meter as soon as it comes to his knowledge.

The Company, in its sole discretion, may install, together with its meter, an automated meter reading device ("AMD"), which can communicate automatically data from the meter to the Company by use of the telephone system. Customer shall provide the Company a suitable location for installation of an AMD, and the customer shall permit the Company to connect the AMD to the customer's existing telephone inside wiring. The customer shall not be required to install or modify telephone inside wiring or to subscribe to public utility telephone service in order to receive service from the Company.

The Company shall provide at least 72 hours' notice of the installation of an AMD at the customer's premises. The Company will not install an AMD at a customer's premises unless the AMD is designed to relinquish control of the customer's telephone line when the customer's telephone equipment is activated. If an AMD installed by the Company fails to relinquish control of a customer's telephone line when the customer's telephone equipment is activated, then such AMD will be replaced or repaired by the Company at the Company's expense. The Company will not install any AMD capable of transmitting voice communications unless specific permission is obtained from the Commission prior to installation.

If a Customer of the Company is billed by a telephone public utility specific charges for usage of telephone service (toll charges or local message unit charges) or charges for maintenance services that were caused by the Company's installation or use of AMD's, then the Company will reimburse the Customer for such charges.

7. CUSTOMER'S PIPING AND EQUIPMENT

Prior to the installation of house piping by the customer in new or altered premises, inquiry shall be made of the Company to determine the requirements, sizes of pipe, quality and other specifications.

House lines, piping, connections and appliances are subject to inspection by the Company and no gas will be delivered unless all conditions are satisfactory.

The Company gives no warranty, expressed or implied, as to the adequacy or safety of any structure, equipment, piping, appliance or device owned, installed, leased or maintained by or for the customer or the owner of the premises served.

8. ACCESS TO PREMISES

The authorized agents of the Company shall, at all reasonable times, have free access to any premises supplied with gas or to which a service connection has been made, for the purpose of reading, inspecting, repairing or removing meters, piping, or other appliances therein belonging to the Company and of inspecting the piping and appliances belonging to the customer.

Every industrial customer shall permit the Company, during business hours and upon reasonable notice, to inspect the customer's facilities so that the Company may determine whether facilities have been installed which would enable the customer to obtain volumes of gas without using the Company's system ("Bypass Facilities"). If a customer refuses to permit the Company to inspect the customer's facilities, it shall be presumed that Bypass Facilities have been installed.

9. INTERRUPTION OF SERVICE

In accordance with the Public Utility Code, the Company will provide service which shall be reasonably continuous and without unreasonable interruptions or delay. The Company shall not be liable, in any amount, for damages, direct or consequential, where service meets requirements of the Public Utility Code. This limitation of liability, however, shall not apply to Company conduct which is found to be willful, wanton or reckless. If the Company shall know, in advance, of an expected interruption of service, the Company will take all reasonable steps, such as personal contact, phone contact or the use of mass media, to notify affected customers of the cause and expected duration of the interruption.

10. LEAKS

The responsibility for detecting leaks or defects in piping between the Company's service connection and the point of consumption shall be upon the customer. The customer shall give immediate notice to the Company of inadequate, irregular or failing gas supply, leakage, abnormally high or low pressures, or any dangerous conditions.

Should any leak or defect be discovered in the mains, service connections, customer's service line, piping, or appliances, the Company shall have the right to shut off the supply of gas until satisfactory repairs have been made.

11. REFUSAL OR TERMINATION OF SERVICE

The Company may decline to serve an applicant (1) until he has complied with state and municipal regulations governing gas service and the approved Rules and Regulations of the Company contained in this Tariff and any supplement thereto, (2) if the Company does not have adequate facilities to render the service desired or if rendering such service would affect unfavorably service to other customers, (3) if in the Company's judgment, the applicant's installation of piping or gas equipment is regarded as hazardous or of such character that satisfactory service cannot be given, (4) if an extension of street main is required beyond length warranted by anticipated revenues, and the customer refuses to pay the charges required by Rule 3 of this Tariff, (5) until all amounts due for regulated service or amounts purchased from a Natural Gas Supplier (NGS) through the Company's Purchase of Receivables Program (POR) pursuant to Rate Schedule SATC Section F ("Lesser Of" calculation) at a previous location have been paid or covered by a payment agreement (unless the amount owed is more than four years after the date of the final bill, in which case service cannot be refused), (6) or where the service proposed is from a gathering, production or transmission pipeline (see Rule 25). (C)

The Company may terminate service for nonpayment of a billing or billings for regulated services or NGS provided natural gas supply charges purchased through the Company's POR Program pursuant to Rate Schedule SATC Section F ("Lesser Of" calculation), and such termination of service shall be in accordance with general regulations of the Pennsylvania Public Utility Commission applicable thereto and in accordance with the Pennsylvania Public Utility Code. (C)

The Company may not threaten termination of service for nonpayment of unregulated Natural Gas Supplier charges incurred by the customer from qualified Suppliers under Rate Schedule SATS if the Company did not purchase the receivables from the Supplier. (C)

12. RECONNECTION OF SERVICE

When the supply of gas to any customer is turned off due to the customer's failure to pay for regulated service or NGS provided natural gas supply charges purchased through the POR Program pursuant to Rate Schedule SATC Section F ("Lesser Of" calculation), for any other infraction of these Rules and Regulations or at the customer's request, and if there has been no change in ownership or occupancy of the premises served, the supply of gas will not be turned on until the customer or applicant has paid a reconnection fee of \$69.00. The Company will reconnect a residential customer or applicant's gas service in accordance with the general regulations of the Pennsylvania Public Utility Commission applicable thereto and in accordance with the Pennsylvania Public Utility Code. Company may determine liability for outstanding balance for residential gas service based upon the methods set forth in 52 Pa. Code §56.191 and Company records. (C)

If the supply of gas was turned off due to a non-residential customer's failure to pay for regulated service or NGS provided natural gas supply charges purchased through the POR Program pursuant to Rate Schedule SATC Section F ("Lesser Of" calculation) and if the former customer reapplies for service or if a court, district justice or administrative agency has determined that the applicant is legally obligated to pay for the service previously furnished, the supply of gas will not be turned on until the non-residential customer or applicant has paid all outstanding bills for service. (C)

The reconnection of service cannot be denied for the nonpayment of Natural Gas Supplier charges billed to the customer for services rendered by Rate Schedule SATS Suppliers if the Company did not purchase the receivables from the Supplier.

13. DISCONTINUANCE NOTICE BY CUSTOMER

Any customer who is about to vacate any premise supplied with gas, or who for any reason wishes to have service discontinued, shall give at least seven days' notice to the utility specifying the date on which it is desired that service be discontinued. The customer who fails to give proper notice shall be liable for all gas which passes through the meter, until: the account is terminated; another party occupies the premises and agrees to assume responsibility for gas service; or, the customer notifies the Company or the Company learns that he has or will vacate the premises, in which case he shall be responsible for gas used for the period, not to exceed seven days, before the company is able to discontinue service.

14. GAS DELIVERED UNDER HIGH PRESSURE

The rates contained in this tariff are based upon gas delivered under conditions generally applicable to low pressure service (four ounce base). Bills for gas metered under high pressure will be computed upon the volume as indicated by the meter registration increased to the equivalent volume at standard pressure.

15. BILLING

Bills will be rendered and will be payable once each month. The Company may read any meter once each month but ordinarily it will read meters of domestic and commercial customers once each two months.

RULES AND REGULATIONS APPLYING TO ALL TERRITORIES SERVED (Cont'd)

15. BILLING (Cont'd)

As to any customer whose meter is read once each two months, the consumption for the first month of each bimonthly meter reading period shall be determined by calculation on the basis of the customer's previous usage adjusted for weather conditions; and the consumption for the second month of each bimonthly meter period shall be determined by subtracting the first month's calculated consumption from the total actual consumption for the bimonthly period as shown by the meter. The bill for each month shall be the result of applying to the consumption, determined as aforesaid, the applicable rates and charges contained in this tariff.

Under 52 Pa Code § 56.222 the Company requested and was granted a waiver from 52 Pa. Code § 56.12(2) (i) - (ii) by the Commission. In accordance with this waiver, the Company will only accept customer supplied readings by telephone or through the Company's Internet website when such readings are: (1) reasonable based on historical usage information; and, (2) received by the Company within the proper billing window 3 business days prior to the bill being rendered. Acceptable customer readings will be used to compute a bill that otherwise would have been determined by calculation.

If the meter reader in any month is unable to gain access to the premises for the purpose of reading the meter, a calculated bill will be rendered and adjustments, if any, will be made by the Company when the meter is read.

In those instances where the Company's agent or representative is unable to gain access to the customer's premises during the regular scheduled working hours to obtain a meter reading, the number of calculated readings shall be limited to six consecutive months, and the customer's service, thereafter, is subject to termination, after due notice.

The late payment date specified on the monthly bill is not less than fifteen days from date the bill is mailed except that, for service under, or billed in conjunction with, residential rate schedules, the late payment date is not less than twenty days from the date the bill is mailed.

At the time the Company receives a notice to transfer service from one customer to another, the Company will provide customers with the option to either have the Company read the meter or to have the disconnecting and reconnecting customer read the meter. The Company will read the meter if the two customer readings are significantly different. The Company will inform the customers that if they elect the customer meter reading and the customer fails to provide the Company with an acceptable reading in a timely manner, the Company may estimate the final meter reading.

RULES AND REGULATIONS APPLYING TO ALL TERRITORIES SERVED (Cont'd)

15. BILLING (Cont'd)

The Company will make reasonable efforts to obtain actual meter readings: (a) when the Company has insufficient data to estimate the Customer's usage; (b) when disconnect and reconnect orders are executed on different days; and (c) when the customer, at least seven days prior to the disconnect order date, specifically requests that the meter be read. The Company reserves the right to estimate a Customer's usage for a final bill whenever the Company is unable to gain access to its meter on the disconnect order date. The Company will accept meter readings from customers for final bills if the customer reading is provided in a timely manner and if, upon review, the Company finds the customer reading to be reasonable and consistent with prior usage levels. Notwithstanding the foregoing, the Company may not discontinue service unless in compliance with the Rules, Regulations or Orders of the Pennsylvania Public Utility Commission pertaining thereto and in effect at the time of such discontinuation.

16. PENALTY CHARGES

If the customer fails to pay his gas bill by the late payment date, a penalty will be charged. Payments received by mail will be considered paid on the date of the postmark.

Where a customer receives natural gas supply service from a qualified Supplier under Rate Schedule SATS but is not participating in the Company POR program, late payment charges will be applied to the Supplier charges only if the customer has agreed to pay Supplier late payment charges. Otherwise, late payment charges will be based on the distribution charges of the Company and natural gas supply charges of either the Company or Supplier. (C) (C) (C) (C)

The penalty charged to all customers shall be 1.50% on the full unpaid and overdue balance.

17. BILLING PERIOD

Bills will be mailed monthly to residential customers for service furnished during the preceding meter-reading period at least twenty (20) days prior to the expiration of the late payment date as shown on the bill.

Bills will be mailed monthly to Commercial, Public Authority, Industrial and Large Industrial customers for service furnished during the preceding meter reading period at least fifteen (15) days prior to the expiration of the late payment date as shown on the bill.

18. BALANCED BILLING PLAN

The company has available a budget payment plan for Residential, Commercial, and Public Authority customers. The budget payment plan is available for all qualifying Company regulated services and for services provided to the customer by qualified Suppliers under Rate Schedule SATS where the Company provides billing service for the Supplier. At the request of any Residential, Commercial or Public Authority customer who uses gas as the primary source for space heating and who satisfies the company's credit standards, monthly payments for such customers may be made as follows:

Monthly payments shall be based on an amount equivalent to 1/12th of the customer's estimated annual bill rounded to the next higher dollar amount.

If a debit balance has accrued as of the 12th cycle month of this plan, the customer may either incorporate it all in the 12th cycle month's payment or at the company's discretion, spread all or part of the debit in equal monthly installments over the next cycle year. If the credit balance is accrued, the customer shall have the option of either receiving a cash refund, having it applied against the current bill, or having it used to reduce the monthly installments in the next cycle year. Absent an indication from the customer of his preference, the debit or credit will be applied to the first monthly installment in the ensuing year.

19. SEASONAL SERVICE

Service to Residential, Commercial, Public Authority, and Industrial premises occupied seasonally will be supplied at the rates and minimum charges of the applicable rate schedule.

20. SUPPLYING OF GAS SUPPLIES TO OTHER CUSTOMERS

No branch, valve or fixture which would permit gas to be withdrawn without registering on the meter shall be connected to a customer service line (i.e., the portion of the service line from the outlet of the Company's service stop cock to the inlet of the meter).

No extension of facilities, including the customer service line and facilities connected thereto and extending into a customer's premises, may be used to provide gas service at any additional or different premises. As used herein, a premises is defined as a single building; or the several buildings of a housing development under one ownership within a single parcel of land not intersected by a public highway or city street; or the several buildings of a religious, charitable, educational, or benevolent corporation if used exclusively for such purposes, if situated on adjoining properties even if intersected by a public highway or city street; or an industrial plant if situated on adjoining properties even though intersected by a public highway or a city street.

21. CONJUNCTIVE BILLING

The Company's rates are based upon gas supply through a single delivery point, as measured by one meter. Separate supply for the same customer at other points of delivery or through more than one meter shall be billed separately. However, the Company may, when engineering or operational conditions warrant, or to improve service, install two or more meters on the

21. CONJUNCTIVE BILLING (Cont'd)

same premises to service a single customer, in which event the consumption registered by such meters may be consolidated and the rates under which service is taken applied to the total consumption. The term "same premises" means a single building; or the several buildings under one ownership within a single parcel of land not intersected by a public highway or city street; provided, however, that the Company, in its sole discretion, may permit conjunctive billing at premises not conforming to the above definition of "same premises" if it is reasonably necessary to do so to meet competition from another supplier of energy, including gas.

An established conjunctive billing arrangement shall be permitted to continue so long as the customer remains at the premises presently served. The conjunctive billing arrangement shall neither be expanded to the customer's newly-acquired premises, nor transferred in whole or in part to different premises, nor continued at the same premises for different customers, unless, in the Company's sole discretion, it is reasonable to expand, transfer or continue the conjunctive billing arrangement.

22. ADJUSTMENT OF BILLS FOR METER ERROR

Charges to customers will be adjusted for fast, slow and nonregistering meters, as per Section 59.22 of the regulations of the Pennsylvania Public Utility Commission for Gas Service, 52 Pa. Code Paragraph 59.22.

23. METER TEST ON REQUEST OF CUSTOMER

Meters which are not due for periodic tests will be tested for accuracy as per Section 59.21 of the regulations of the Pennsylvania Public Utility Commission for Gas Service, 52 Pa. Code Paragraph 59.21, upon written request by the customer and payment to the Company of a deposit in the amount specified by said regulations.

24. RULES FOR SECURING DEPOSITS

The Company may require customers to provide deposits for services. The Company may not deny the customer regulated services based on the customer's failure to provide deposits for unregulated services.

Deposits may be required from customers taking service for a period of less than thirty days in an amount equal to the estimated bill for such temporary period.

Deposits may be required from Commercial or Industrial customers but shall not exceed the amount equal to the sum of amounts computed by applying the applicable sales rate schedule to the volumes of gas transported by or purchased from the Company, and consumed by the customer during the two, of the most recent twelve months of greatest usage by the Customer. In lieu of actual experience, the determination will be based on an estimate considering all relevant information and data.

Deposits may be required from Residential customers in accordance with the Pennsylvania Public utility Code and the Rules and Regulations of the Pennsylvania Public Utility Commission. (C)

24. RULES FOR SECURING DEPOSITS (Cont'd)

Security, in the form of a cash deposit, letter of credit, surety bond, or third-party guarantee, will be required from the applicants for Non-residential service unless: A) the premises to which gas service is to be supplied is a branch of, or additional facility operated by, financially responsible, enterprise which will be the ratepayer of record with respect to gas bills incurred at the premises; or, B) in the case of a premises not covered by "A" above, the Company determines, through relevant Company records covering past direct dealings with the applicant over a period of at least one year, that a deposit is not necessary. Security, in the form of a cash deposit, letter of credit, surety bond, or third-party guarantee, will be required from existing Non-residential customers where the Company determines that the customer's credit standing warrants concern as to its continuing ability to pay. In evaluating a customer's credit standing, the Company will take into account certain factors, including, but not limited to, the following: i) average monthly consumption; ii) average monthly bill; iii) payment history during the immediately preceding twelve month period; iv) customer's general credit standing as evaluated by any available applicable credit rating indices or rating services; v) customer's payment history and credit standing with other lenders or providers of utility and other services.

Until returned or credited, interest will accrue on Residential deposits at the rate of interest as determined by the Secretary of Revenue for interest on the underpayment of tax under Section 806 of the Act of April 19, 1929 (P.L.343, No. 176), known as The Fiscal Code. Interest accrued on Residential deposits will either be applied, together with the deposit, to any outstanding balance for service or will be paid at the time the deposit is returned. Interest will be paid on non-residential deposits at the rate of six percent (6%) per annum without deductions for any taxes thereon. Upon non-residential deposits held for more than a year, the Company shall pay to the patron, at the end of the calendar year, the interest accrued thereon. (C)

25. CUSTOMERS SERVED THROUGH SERVICE CONNECTIONS ATTACHED TO FACILITIES OTHER THAN DISTRIBUTION SYSTEM LINES

Service from a line outside the Company's low pressure and medium pressure distribution systems will not be furnished unless such line is at that time being operated in a manner which will permit gas to be served to the applicant without interference with its operation. The furnishing of such service will be with the understanding that the use or manner of use of the Company's line from which gas is to be supplied is not permanent and that such service is subject to temporary or absolute change or discontinuance at the sole discretion of the Company which may at any time remove, repair or change the use or manner of operating said line after having first canceled the service contract by thirty days' written notice to the customer.

25. CUSTOMERS SERVED THROUGH SERVICE CONNECTIONS ATTACHED TO FACILITIES
OTHER THAN DISTRIBUTION SYSTEM LINES (Cont'd)

The customer assumes sole responsibility, financially and otherwise for obtaining alternative sources of fuel in the event that customer's service is interrupted or discontinued permanently or temporarily, as described in the preceding paragraph.

The Company has the right to cancel the service contract for any such reason or in accordance with any other published rule or regulation of the Company, and, during the term of the contract, the Company shall not be liable for any deficiency in the supply of gas caused by the use of compressing stations, breakage of lines or other causes or for any claim for damages on account of any matters set forth in this paragraph.

All materials used in connecting the meter and regulators from the outlet of the Company's service stop cock to the outlet of the meter, and including the box or structure housing the meter and regulators, shall be furnished and installed by the Company at the expense of the customer. The meter and regulators shall belong to the Company and will be installed as near to the Company's lines as is practicable.

NFGDC 2022 Base Rate Case
Responses to Section 53.53 - IV-B - Rate Structure - Gas Utilities
Delivered on October 28, 2022

IV-B-1

Request:

Provide a Cost of Service Study showing the rate of return under the present and proposed tariffs for all customer classifications. The study should include a summary of the allocated measures of value, operating revenues, operating expenses and net return for each of the customer classifications at original cost and at the 5-year trended original cost.

a. (Reserved)

Response:

Please refer to Schedule 5 in National Fuel Exhibit D – Cost of Service Study.

Prepared by or under the supervision of: John D. Taylor

Responses to Section 53.53 - IV-B - Rate Structure - Gas Utilities
Delivered on October 28, 2022

IV-B-2

Request:

Provide a statement of testimony describing the complete methodology of the Cost of Service Study.

Response:

Please refer to National Fuel Exhibit D – Cost of Service Study and the Direct Testimony of John D. Taylor Statement No. 19.

Prepared by or under the supervision of: John D. Taylor

Responses to Section 53.53 - IV-B - Rate Structure - Gas Utilities
Delivered on October 28, 2022

IV-B-4

Request:

Provide an exhibit for each customer classification showing the following data for the test year and the four previous years:

- a. The maximum coincident peak day demand.
- b. The maximum coincident 3-day peak day demand.
- c. The average monthly consumption in MCF during the Primary Heating Season (November-March).
- d. The average monthly consumption in MCF during the Non-heating season (April-October).
- e. The average daily consumption in MCF for each 12-month period.

Response:

Please see Attachment IV-B-4. Responses to a & b can be found on page 2, the response to c can be found on page 3, the response to d can be found on page 4 and 5, and the response to e can be found on page 5.

IV-B-5

Request:

Submit a Bill Frequency Analysis for each rate. The analysis should include the rate schedule and block interval, the number of bills at each interval, the cumulative number of bills at each interval, the Mcf or therms at each interval, the cumulative Mcf or therms at each interval, the accumulation of Mcf or therms passing through each interval, and the revenue at each interval for both the present rate and the proposed rates. The Analysis should show only those revenues collected from the basic tariff.

Response:

Please refer to Attachment IV-B-5.

Prepared by or under the supervision of: John D. Taylor

Supplement No. 246 to
Gas - Pa. P.U.C. No. 9
Second Revised Page No. 35H
Canceling First Revised Page No. 35H

RULES AND REGULATIONS APPLYING TO ALL TERRITORIES SERVED (Cont')

for the ADDQ. Additionally, if an Imbalance Holder's FSIV is less than 1,000 Mcf, it will be assigned to the Market Pricing Tier. If the Imbalance Holder does not qualify for the Market Pricing Tier under either of these safe harbors, then the Imbalance Holder's FSIV will be used to determine imbalance pricing.

The Imbalance Holder will be cashed out at the tiers, beginning at the tiers furthest from the Market Pricing Tier until the imbalance volumes within all the tiers are reduced to zero. The Market Pricing Tier will be cashed out after all other tiers have been cashed out.

Cash Out Sales and Cash Out Purchases will be reflected on the next bill issued by the Company to the Imbalance Holder following the conclusion of trading sessions.

31. CHANGES OF RULES AND REGULATIONS

The Company reserves the right to modify, alter or amend the foregoing Rules and Regulations and to make such further and other rules and regulations as experience may suggest or the Company may deem necessary or convenient in the conduct of its business provided, however, that such modifications, alterations, or amendments shall not become effective unless and until included in this tariff.

32. RENEWABLE NATURAL GAS

Renewable Natural Gas or RNG is Pipeline compatible gaseous fuel derived from biogenic or other renewable sources that has lower lifecycle CO₂e emissions than geological natural gas. Examples include pipeline compatible gas derived from wastewater treatment plants, landfill gas, anaerobic digestion gas, power to gas from renewable electricity or syngas.

The operating procedures applicable to RNG are provided in the Company's Operational Procedures Manual. Parties wishing to produce RNG for delivery into Distribution's system, i.e. RNG Operators, are required to execute an RNG Interconnect Agreement as a condition of access.

RNG produced and delivered into the Company's system must meet the Company's RNG Quality Standards, as specified in the RNG Interconnect Agreement, as well as the gas quality standards specified in Rule 28 of this tariff.

33. DATA SECURITY AGREEMENT

As a condition of access to customer information via publicly available Company business systems, including but not limited to web portals, the Company will require marketers, suppliers, and agents requesting such access to sign a Data Security Agreement and require that the parties carry and maintain Cybersecurity insurance in an amount no less than \$2,000,000 per incident. A standard form Data Security Agreement will be provided in the Company's Operational Procedures Manual.

Such requirement shall not apply to customers with usage less than 5,000 mcf per year that seek to access their own customer account information. Further, the Company may accept Cybersecurity insurance provided under another agreement, provided that such agreement is substantially identical in form and effect as the standard form Data Security Agreement.

RATE SCHEDULE MMNGS
MONTHLY METERED NATURAL GAS SUPPLIER SERVICE (Cont.)

In order to validate a claim of Force Majeure, the MMNGS Supplier must have a firm, non-interruptible service with the affected pipeline that is covered by the Force Majeure event and must be willing to present such agreements to the Company.

Volumes not delivered pursuant to this Special Provision must be made up by MMNGS Supplier as soon as possible at a delivery rate to be established by the Company. Any curtailed volumes which are not made-up within thirty (30) days will be sold to MMNGS Supplier at a rate of \$10.00 per Mcf.

M. Title to Gas

Supplier warrants that, at the time of delivery of gas to the Company's City Gate, Supplier or Customer shall have good title to deliver all volumes made available.

N. Control and Possession

After Supplier delivers gas or causes gas to be delivered to the Company, the Company shall be deemed to be in control and possession of the gas until it is redelivered to the Customer at Customer's meter.

O. 24 Hour Availability

Supplier shall include on the MMNGS Service Agreement a phone number by which Supplier can be reached on a twenty-four (24) hour basis.

P. Data Security Agreement

Marketers, suppliers, and agents shall execute a Data Security Agreement pursuant to Tariff Rule 33. (C)

SMALL AGGREGATION TRANSPORTATION SUPPLIER SERVICE (Cont.)

2. When the customer's dispute has been filed within the first two billing periods since the customer should reasonably have known of a change of Suppliers and the dispute investigation establishes that the change occurred without the customer's consent, the customer shall not be responsible for any Supplier charges rendered during that period. If the customer has made payments during this period, the Supplier responsible for initiating the change of supplier shall issue a complete refund within 30 days of the close of the dispute. The refund or credit provision applies only to the natural gas supply charges.

3. A customer who has had a Supplier changed without having consented to that change shall be switched back to the original Supplier for no additional fee. Any charges involved in the switch back to the prior Supplier shall be the responsibility of the Supplier that initiated the change without the customer's consent.

4. Should a customer file an informal complaint with the Commission alleging that the customer's Supplier was changed without the customer's consent, the Bureau of Consumer Services will issue an informal decision that includes a determination of customer liability for any Supplier bills or administrative charges that might otherwise apply, rendered since the change of the Supplier.

5. The provisions of this section do not apply in instances when the customer's service is discontinued by the Supplier and subsequently provided by the Company because no other Supplier is willing to provide service to the customer.

6. Company and Suppliers shall preserve all records relating to unauthorized change of Supplier disputes for a period of three years from the date the customers filed the dispute. These records shall be made available to the Commission or its staff upon request.

W. Data Security Agreement

Marketers, suppliers, and agents shall execute a Data Security Agreement pursuant to Tariff Rule 33. (C)

RULES AND REGULATIONS APPLYING TO ALL TERRITORIES SERVED (Cont') □

for the ADDQ. Additionally, if an Imbalance Holder's FSIV is less than 1,000 Mcf, it will be assigned to the Market Pricing Tier. If the Imbalance Holder does not qualify for the Market Pricing Tier under either of these safe harbors, then the Imbalance Holder's FSIV will be used to determine imbalance pricing.

The Imbalance Holder will be cashed out at the tiers, beginning at the tiers furthest from the Market Pricing Tier until the imbalance volumes within all the tiers are reduced to zero. The Market Pricing Tier will be cashed out after all other tiers have been cashed out.

Cash Out Sales and Cash Out Purchases will be reflected on the next bill issued by the Company to the Imbalance Holder following the conclusion of trading sessions.

31. CHANGES OF RULES AND REGULATIONS

The Company reserves the right to modify, alter or amend the foregoing Rules and Regulations and to make such further and other rules and regulations as experience may suggest or the Company may deem necessary or convenient in the conduct of its business provided, however, that such modifications, alterations, or amendments shall not become effective unless and until included in this tariff.

32. RENEWABLE NATURAL GAS

Renewable Natural Gas or RNG is Pipeline compatible gaseous fuel derived from biogenic or other renewable sources that has lower lifecycle CO₂e emissions than geological natural gas. Examples include pipeline compatible gas derived from wastewater treatment plants, landfill gas, anaerobic digestion gas, power to gas from renewable electricity or syngas.

The operating procedures applicable to RNG are provided in the Company's Operational Procedures Manual. Parties wishing to produce RNG for delivery into Distribution's system, i.e. RNG Operators, are required to execute an RNG Interconnect Agreement as a condition of access.

RNG produced and delivered into the Company's system must meet the Company's RNG Quality Standards, as specified in the RNG Interconnect Agreement, as well as the gas quality standards specified in Rule 28 of this tariff.

33. DATA SECURITY AGREEMENT

As a condition of access to customer information via publicly available Company business systems, including but not limited to web portals, the Company will require marketers, suppliers, and agents requesting such access to sign a Data Security Agreement and require that the parties carry and maintain Cybersecurity insurance in an amount no less than \$2,000,000 per incident. A standard form Data Security Agreement will be provided in the Company's Operational Procedures Manual. | (C) |

Such requirement shall not apply to customers with usage less than 5,000 mcf per year that seek to access their own customer account information. Further, the Company may accept Cybersecurity insurance provided under another agreement, provided that such agreement is substantially identical in form and effect as the standard form Data Security Agreement.

Request:

Supply an exhibit showing the gas deliveries to each customer class for the most recent 24-month period. The exhibit should identify the source of the gas, such as “purchased” (pipeline), “production” (includes purchases from local producers), “storage withdrawal,” “propane/air,” and “unaccounted for.”

Response:

Please see Attachment IV-B-14.

COST OF SERVICE

National Fuel Gas Distribution Corporation
PA Division

Standard Data Request

Cost of Service

Question No. COS-01:

Please explain the Company's policy with regard to when customer advances and contributions in aid of construction must be made.

Response:

The Company's policy on customer advances is found on Page 16B of Pa. P.U.C. No. 9 (included in this filing under National Fuel Gas Exhibit F – Current Tariff). The tariff language states that "construction of any extension or installation of excess flow valves or natural gas related equipment or facilities not otherwise required by regulation will not be undertaken until the amount of the applicant's contribution has been paid to the Company by the applicant. In the case of an excess flow valve or natural gas related equipment or facilities not otherwise required by regulation, the amount of the applicant's contribution will be determined based upon the Company's cost to install such equipment. The actual construction of the extension shall be scheduled at the Company's discretion."

Prepared by or under the supervision of: Jeremy R. Barber

National Fuel Gas Distribution Corporation
PA Division

Standard Data Request

Cost of Service

Question No. COS-02:

Please provide a detailed explanation describing how contributions in aid of construction and customer advances are reflected in the Company's cost of service study.

Response:

The cost and plant information provided in the cost of service study is based on the Company costs and investments net of any customer contributions in aid of construction and customer advances.

Standard Data Request

Cost of Service

Question No. COS-08:

Please provide the Company's rate design models and cost of service study on an IBM PC-compatible computer disk in Lotus 1-2-3-or Quattro format. If the models consist of more than one file, please include information on all files on the disk and what they contain. If not available in Lotus 1-2-3 or Quattro format, please provide in ASCII format.

Response:

Please see Exhibit D (Cost of Service Study - Fully Projected Future Test Year) and Attachment COS-8_Rate Design provided in electronic format on USB flash drive.

Standard Data Request
Cost of Service

Question No. COS-09:

Please provide a copy of the Company's current customer extension policy. Provide a representative sample of the analyses conducted by the Company when deciding whether service to a new customer qualifies under the Company's customer extension policy.

Response:

The Company's current customer extension policy is found on Pages 10 through 17 of Pa. P.U.C. No. 9 (included in this filing as part of National Fuel Gas Exhibit F – Current Tariff and as Attachment SDR-COS-09). The tariff language describes the methodology for evaluating whether service to a new customer qualifies under the policy. The Company's new services application ("PFI") calculates projected annual revenues and determines the justified company investment based on the factors outlined in the tariff. Attachment SDR-COS-09 includes screenshots from PFI for a residential and non-residential example.

NATIONAL FUEL GAS
DISTRIBUTION CORPORATION

Supplement No. 67 to
Gas - Pa. P.U.C. No. 9
Third Revised Page No. 10
Canceling First and Second Page No. 10

RULES AND REGULATIONS APPLYING TO ALL TERRITORIES SERVED

1. RULES AND REGULATIONS

The customer's application for service, the Pennsylvania Public Utility Code and the rules and regulations promulgated by the Pennsylvania Public Utility Commission, as amended from time to time, and the rules and regulations contained herein are a part of the contract with each Customer, and each Customer agrees to be bound thereby.

2. APPLICATIONS FOR SERVICE

The Company may require any applicant for service to sign an application. Regardless of the manner in which an application is made, the acceptance of such application by the Company shall result in a contract service governed by Rule 1.

3. DETERMINATION OF COMPANY INVESTMENT FOR UPGRADE/EXTENSION OF FACILITIES

A. Maximum Company Investment Level

The Company investment for upgrade/extension of facilities for a firm gas customer shall be limited to an amount determined as follows:

$$\text{Maximum Company Investment} = \frac{\text{Additional Annual Revenues} \times \text{Justified Company Investment per Dollar of Additional Annual Revenue}}{\text{Dollar of Additional Annual Revenue}}$$

B. Determination of Additional Annual Revenues

The Additional Annual Revenues are calculated as follows:

(1) The Company will estimate the customer's projected firm annual volumes as follows:

(a) Residential

For guideline purposes, the Company shall use annual gas consumption figures for gas space heating and for various gas appliances as shown below (These figures are based on current insulation standards as well as 92% efficient furnaces):

(C)

(C) Indicates Change

RULES AND REGULATIONS APPLYING TO ALL TERRITORIES SERVED (Cont'd)

3. DETERMINATION OF COMPANY INVESTMENT FOR UPGRADE/EXTENSION OF FACILITIES
(Cont'd)

Gas Space Heating:

Single Family Home - [(square footage x .029) - 5.4] Mcf
Apartment/Condominium - [(square footage x .024) + 3.14] Mcf
Manufactured Home - [(square footage x .0267) + 6.98] Mcf

Gas Appliances:

Gas Water Heater - 20.4 Mcf

Gas Dryer - 3.6 Mcf

Gas Range - 7.6 Mcf

Other Gas Appliances - Determined by the Company on a case-by-case basis.

(b) Commercial or Public Authority: Industrial

The Company shall estimate projected firm annual volumes on a case-by-case basis.

(2) This annual volume is then distributed into 12 monthly amounts based on an average distribution in the appropriate revenue classification. (Alternatively, the customer's annual usage estimate may be distributed according to his own historic or projected monthly load profile pursuant to the Company's review and approval.)

(3) The appropriate rate schedule is applied to each monthly volume, and the results are added to produce annual gross revenues.

(4) For each monthly volume the costs shall be determined for the portion of monthly gross revenues for recovery of purchased gas costs pursuant to applicable provisions of Rider A to this tariff and the applicable rate schedule.

The portion of monthly gross revenues for recovery of Purchased Gas Costs and Transition Costs for each month shall be added together to produce annual revenues for recovery of Purchased Gas Costs and Transition Costs.

(5) The amount calculated under item (4) above, shall be subtracted from the amount calculated under item (3) above.

(6) Additional annual revenues resulting from the upgrade/extension shall be determined by reducing the annual revenues for recovery of non-gas costs as calculated in (5) above, by the customer's currently generated annual revenues for recovery of non-gas costs, if any, as determined by the Company.

3. DETERMINATION OF COMPANY INVESTMENT FOR UPGRADE/EXTENSION OF FACILITIES
(Cont'd)

C. Determination of Justified Company Investment Per Dollar of
Additional Annual Revenue

(1) Residential

The Justified Company Investment Per Dollar of Additional Annual Revenue for residential customers is \$4.58. (D)

(2) Commercial and Public Authority; Industrial

The Justified Company Investment Per Dollar of Additional Annual Revenue for commercial, public authority or industrial customers shall be selected from the table below based upon the projected term of use by the customer of the new or upgraded facilities.

<u>Projected Term of Use of New/Upgraded Facilities (Years)</u>	<u>Justified Company Investment Per Dollar of Additional Annual Revenue</u>
1	\$.47
2	.91
3	1.30
4	1.66
5	1.99
6	2.29
7	2.57
8	2.82
9	3.05
10	3.26
Greater than 10	4.58

Because the term of use has a substantial effect on the determination of the Justified Company Investment Per Dollar of Additional Annual Revenue, the Company may require a letter of intent from commercial, public authority and industrial customers projecting the term of use of the new or upgraded extension of facilities being requested.

The Company reserves the right to require a guaranteed revenue contract if the customer projects a term of use of the new or upgraded facilities in excess of 10 years or if the customer does not demonstrate that the customer's term of use is reasonable.

(D) Indicates Decrease

3. DETERMINATION OF COMPANY INVESTMENT FOR UPGRADE/EXTENSION OF FACILITIES
(Cont'd)

Additionally, the Company reserves the right to require a guaranteed revenue contract from a commercial, public authority or industrial customer if any of the following conditions exist:

(1) The investment is for a dual fuel or partially dual fueled facility;

(2) The Company determines that a customer's financial status does not demonstrate that the customer will be able to pay bills for the projected term of use of the facilities; or

(3) The actual investment by the Company is greater than \$50,000.

(3) Recomputation

The Company may recompute, modify, alter or amend the foregoing Justified Company Investment Per Dollar of Additional Annual Revenue amounts as the Company may deem necessary or convenient in the conduct of its business, provided, however, that such recomputation, modification, alteration or amendment shall not become effective unless and until included in this tariff.

(C)

D. Application of Maximum Company Investment

The Maximum Company Investment as determined above shall be applied, first, to the installed meter cost, if any, and then will be applied towards any mainline and/or service line extension, service connection, and/or the upgrade of any of the Company's facilities to accommodate increased volumes of sales or transportation. However, if the Maximum Company Investment is less than the installed meter cost, Company will provide and install the meter at no cost to the Customer.

(C) Indicates Change

Issued: January 13, 2004

Effective: January 15, 2004

RULES AND REGULATIONS APPLYING TO ALL TERRITORIES SERVED (Cont'd)

4. UPGRADE/EXTENSION OF FACILITIES

A. Residential

Whenever the owner or occupant of any property eligible for service as a residential customer makes a written application for service to the Company, and the Company has authority to render service to said applicant, the Company shall extend its facilities so as to serve said property or new residential development, provided that the applicant shall first have executed an agreement to pay to the company the rate charged under the appropriate service classification and to contribute to the cost of extending facilities, an amount equal to the difference between the total cost of construction of facilities less the Company's Maximum Investment (as calculated in Rule No. 3, above).

Income taxes, if any, paid with respect to the Contribution will be recorded in a deferred account and such taxes, less the income tax effect of depreciation received with respect to the property constructed with the Contribution, will be included in the Company's rate base in subsequent rate case proceedings.

B. Commercial or Public Authority; Industrial

Whenever the owner or occupant of any property eligible for service as a Commercial or Public Authority customer, or as an Industrial customer, makes a written application for service to the Company, and the Company has authority to render service to said applicant, the Company shall extend its system so as to serve said property, provided said applicant shall first have executed an agreement to pay to the Company the rates charged under the appropriate service classification and to contribute to the cost of extending facilities, an amount equal to the difference between the total cost of construction of facilities less the Company's Maximum Investment (as calculated in Rule No. 3, above).

Income taxes, if any, paid with respect to the Contribution will be recorded in a deferred account and such taxes, less the income tax effect of depreciation received with respect to the property constructed with the Contribution, will be included in the Company's rate base in subsequent rate case proceedings.

The Company's Maximum Investment for Commercial or Public Authority and Industrial customers shall equal the Maximum Company Investment as calculated in Rule No. 3 above; provided, however, that, in the event that the Company reasonably believes that the Company's installation of facilities will be completed substantially in advance of date that the Customer's use will equal projected annual volumes used to calculate the Maximum Company Investment as calculated in Rule No. 3 above, the Company may discount the Maximum Company

Investment as calculated in Rule No. 3 above to present value based upon the Company's most recent Commission-approved fair rate of return. (C)

C. Developer/Builder - Residential

Whenever the Developer/Builder of a residential property eligible for service makes a written application for service to the Company, and the Company has authority to render service to the property to be developed, the Company shall extend its system to serve said property, provided that, if the cost to extend the facilities exceeds the Maximum Company Investment, as calculated below, the Developer/Builder shall have entered into an agreement to contribute to the cost of extending facilities. (C)

The Maximum Company Investment for extensions involving a Developer/Builder shall be calculated as follows:

(1) The Developer/Builder shall provide a reasonable schedule of unit completion within the property to be developed;

(2) The Maximum Company Investment shall be calculated (as provided in Section 3) separately based on the number of units scheduled to be completed:

(a) within twelve months from the date of the estimated completion of construction of the new facilities; and

(b) during each successive twelve month period following the date of the estimated completion of construction of the new facilities.

(3) For all units not scheduled for completion within twelve months from the estimated date of completion of the construction of the new facilities, the Maximum Company Investment, as calculated above, shall be discounted to present value at the projected date of the completion of Company installed facilities using the Company's most recent Commission-approved fair rate of return.

(4) The sum of the discounted Maximum Company Investment for units to be installed more than twelve months after construction of Company facilities and the Maximum Company Investment for units scheduled for completion within twelve months of the estimated date of completion of construction of Company facilities shall equal the total Maximum Company Investment for the extension.

(C) Indicates Change

RULES AND REGULATIONS APPLYING TO ALL TERRITORIES SERVED (Cont'd)

4. UPGRADE/EXTENSION OF FACILITIES (Cont'd)

The Developer/Builder shall contribute to the cost of extending facilities, an amount equal to the difference between the total cost of construction of facilities less the Maximum Company Investment (as calculated above).

Income taxes, if any, paid with respect to the Contribution will be recorded in a deferred account and such taxes, less the income tax effect of depreciation received with respect to the property constructed with the Contribution, will be included in the Company's rate base in subsequent rate case proceedings.

In the event that the Developer/Builder does not achieve the projected annual completion rate, the Maximum Company Investment and the amount to be contributed will be recalculated, in the same manner stated above, based upon actual units completed. If the recalculated amount to be contributed is greater than the previously calculated amount to be contributed, the Developer/Builder will be required to pay such difference to the Company; provided, however, that no amount will be required to be paid if the recalculated amount to be contributed exceeds the Company's actual cost of construction less the recalculated Maximum Company Investment.

C1. Developer/Builder Commercial or Industrial

Whenever the Developer/Builder of a commercial or industrial property eligible for service makes a written application for service to the Company, and the Company has authority to render service to the property to be developed, the Company shall extend its system to serve said property, provided that, if the cost to extend the facilities exceeds the Maximum Company Investment, as calculated below, the Developer/Builder shall have entered into an agreement to contribute to the cost of extending facilities.

The Maximum Company Investment for extensions involving a Developer/Builder shall be calculated as follows:

(1) The Developer/Builder shall provide a reasonable schedule of customer attachments and projected additional annual revenues from volumes to be transported by or purchased from the Company and consumed by the attaching customers;

(2) The Maximum Company Investment shall be calculated (as provided in Section 3) separately based on the historical and projected additional annual revenues from volumes to be transported by or purchased from the Company and consumed by the attaching customers:

(a) within twelve months from the date of the estimated completion of construction of the new facilities; and

(b) during each successive twelve month period following the date of the estimated completion of construction of the new facilities.

RULES AND REGULATIONS APPLYING TO ALL TERRITORIES SERVED (Cont'd)

4. UPGRADE/EXTENSION OF FACILITIES (Cont'd)

The Developer/Builder shall contribute to the cost of extending facilities, an amount equal to the difference between the total cost of construction of facilities less the Maximum Company Investment (as calculated above).

Income taxes, if any, paid with respect to the Contribution will be recorded in a deferred account and such taxes, less the income tax effect of depreciation received with respect to the property constructed with the Contribution, will be included in the Company's rate base in subsequent rate case proceedings.

In the event that the Developer/Builder does not achieve the projected annual completion rate, the Maximum Company Investment and the amount to be contributed will be recalculated, in the same manner stated above, based upon actual additional annual revenues from volumes transported by or purchased from the Company and consumed by the attaching customers during the 60-month period following completion of the extension and the projected additional annual revenues from volumes to be transported by or purchased from the Company and consumed by the customers attached as of the last day of such 60-month period. If the recalculated amount to be contributed is greater than the previously calculated amount to be contributed, the Developer/Builder will be required to pay such difference to the Company; provided, however, that no amount will be required to be paid if the recalculated amount to be contributed exceeds the Company's actual cost of construction less the recalculated Maximum Company Investment.

D. Upgrade

The Company's investment for the upgrade of facilities shall be subject to the formula described in Rule No. 3. An upgrade is required when the customer needs dictate increasing, decreasing or otherwise changing the current service line, main line or meter size for the increased, decreased or otherwise changed volume or pressure requirements or when the customer requests installation of an excess flow valve or natural gas related equipment or facilities not otherwise required by regulation and the Company has deemed such installation appropriate. (C)

E. Advance Payment and Construction

Construction of any extension or installation of excess flow valves or natural gas related equipment or facilities not otherwise required by regulation will not be undertaken until the amount of the applicant's contribution has been paid to the Company by the applicant. In the case of an excess flow valve or natural gas related equipment or facilities not otherwise required by regulation, the amount of the applicant's contribution will be determined based upon the Company's cost to install such equipment. The actual construction of the extension shall be scheduled at the Company's discretion. (C)

F. Refunds of Customer Investment

Any customer attaching to a facility extended/upgraded within five (5) years of completion thereof will be required to contribute to the cost of the extension/upgrade in accordance with Rules 3 and 4. In the event a new customer attaches to an extension/upgrade of the Company's facilities paid for by a customer or a developer/builder, within five (5) years of the date of completion thereof, a pro rata refund will be made to customers or developer/builder who were charged for such extension. In the alternative, the customer or builder/developer and Distribution may mutually agree in writing that the refund, if any, shall equal the Company's Maximum Company Investment for the attaching customer less the Company's actual attachment cost of construction. An annual review of such extensions is made on the anniversary date of completion thereof, during said five (5) years, and any refunds due are made at that time except for extensions for a developer/builder of commercial or industrial property which shall be reviewed at the end of year five (5) and any refunds due will be made at that time. No refunds will be paid for attachments occurring more than five (5) years after the completion date and in no case will the aggregate amount of refunds to a customer or developer/builder exceed the amount which the customer or developer/builder paid for the mainline extension/upgrade.

┌
(C)
└

5. MAINTENANCE OF FACILITIES

After initial installation of facilities has been made, pursuant to Rule Nos. 3 and 4, above, all facilities including mains, customer service lines (i.e., the portion of the service line from the outlet of the Company's service stop cock to the inlet of the meter) and Company service lines (i.e. the portion of the service line from the gas main to and including the curb box and service stop cock), shall be maintained, replaced or renewed, as required, at the expense of the Company.

5A. SPECIAL UTILITY SERVICES

The provisions of Rules 3 and 4 do not apply to applications for special utility service. "Special utility service" shall include (a) a request for utility service when the applicant has an installed alternative fuel capability, including service from a natural gas well; (b) a request for utility service when the applicant is already receiving natural gas service from another Pennsylvania public utility; (c) a request for utility service from an applicant located in an area in which another natural gas utility is authorized to serve the applicant; (d) a request for utility service by an applicant who was the owner or ratepayer of record for the premises at the time the Company last provided service to the premises; (e) any request for service by an applicant who, in the Company's view, is unlikely to remain on the Company's system for a sufficient period of time to justify the extension. Applications for special utility service shall be resolved on a case-by-case basis through negotiations between the applicant and the company.

National Fuel Gas Distribution Corporation
PA Division

Standard Data Request

Cost of Service

Question No. COS-10:

Please provide a detailed supply and requirement schedule for the Company's three most recent annual peak days and for design day. The schedules should include deliveries by source and requirements by rate schedule. Identify sources and requirements for transportation customers separately. Also include the Company's daily sendout sheet for each peak day and applicable weather data.

Response:

This information is CONFIDENTIAL. The Company is providing CONFIDENTIAL SDR-COS-10 (Pages 2 through 6 of this response) in a separately sealed envelope that is marked "CONFIDENTIAL AND PROPRIETARY". The Company hereby requests that the content of such envelope be placed in the Commission's NON-PUBLIC FOLDERS, and that any employee of the Commission that may have access to such material be directed to maintain its confidentiality. National Fuel will provide copies of such CONFIDENTIAL materials to parties that execute an appropriate Stipulated Protective Agreement or pursuant to a Protective Order issued in this proceeding.

Prepared by or under the supervision of Gregory D. Harts.
Attached as Page 2 please find a supply and requirement schedule for the three most recent annual peak days for National Fuel Gas Distribution Corporation, Pennsylvania Division. The deliveries to the Company include upstream receipts and other sources. The requirements are segregated into sales and transportation service. Pages 3 through 5 are the daily sendout sheets for the most recent three peak days. Page 6 is the requirements schedule by class for the Company's 2022-2023 design day.

Prepared by or under the supervision of Gregory D. Harts

Standard Data Request

Cost of Service

Question No. COS-11:

Please provide copies of the Company's daily sendout sheets for November through March of the most recent heating season.

Response:

See attached for the Company's November 1, 2021 – March 31, 2022 daily sendout sheets. Please note pages 2-152 are CONFIDENTIAL. The Company is providing pages 2-152 in a separately sealed envelope that is marked "CONFIDENTIAL AND PROPRIETARY." The Company hereby requests that the content of such envelop be placed in the Commission's NON-PUBLIC FOLDERS, and that any employee of the Commission that may have access to such material be directed to maintain its confidentiality. National Fuel will provide copies of such CONFIDENTIAL materials to parties that execute an appropriate Stipulated Protective Agreement or pursuant to a Protective Order issued in this proceeding.

Question No. COS-12:

Please provide a copy of the load duration curve used by the Company for capacity planning purposes. Please also identify the numerical data points shown for each day on the curve.

Response:

Please see the attached Load duration curve for the winter 2021 through 2022 with requirements based on a 15% colder than normal winter.

The abbreviations referenced in pages 2 through 4:

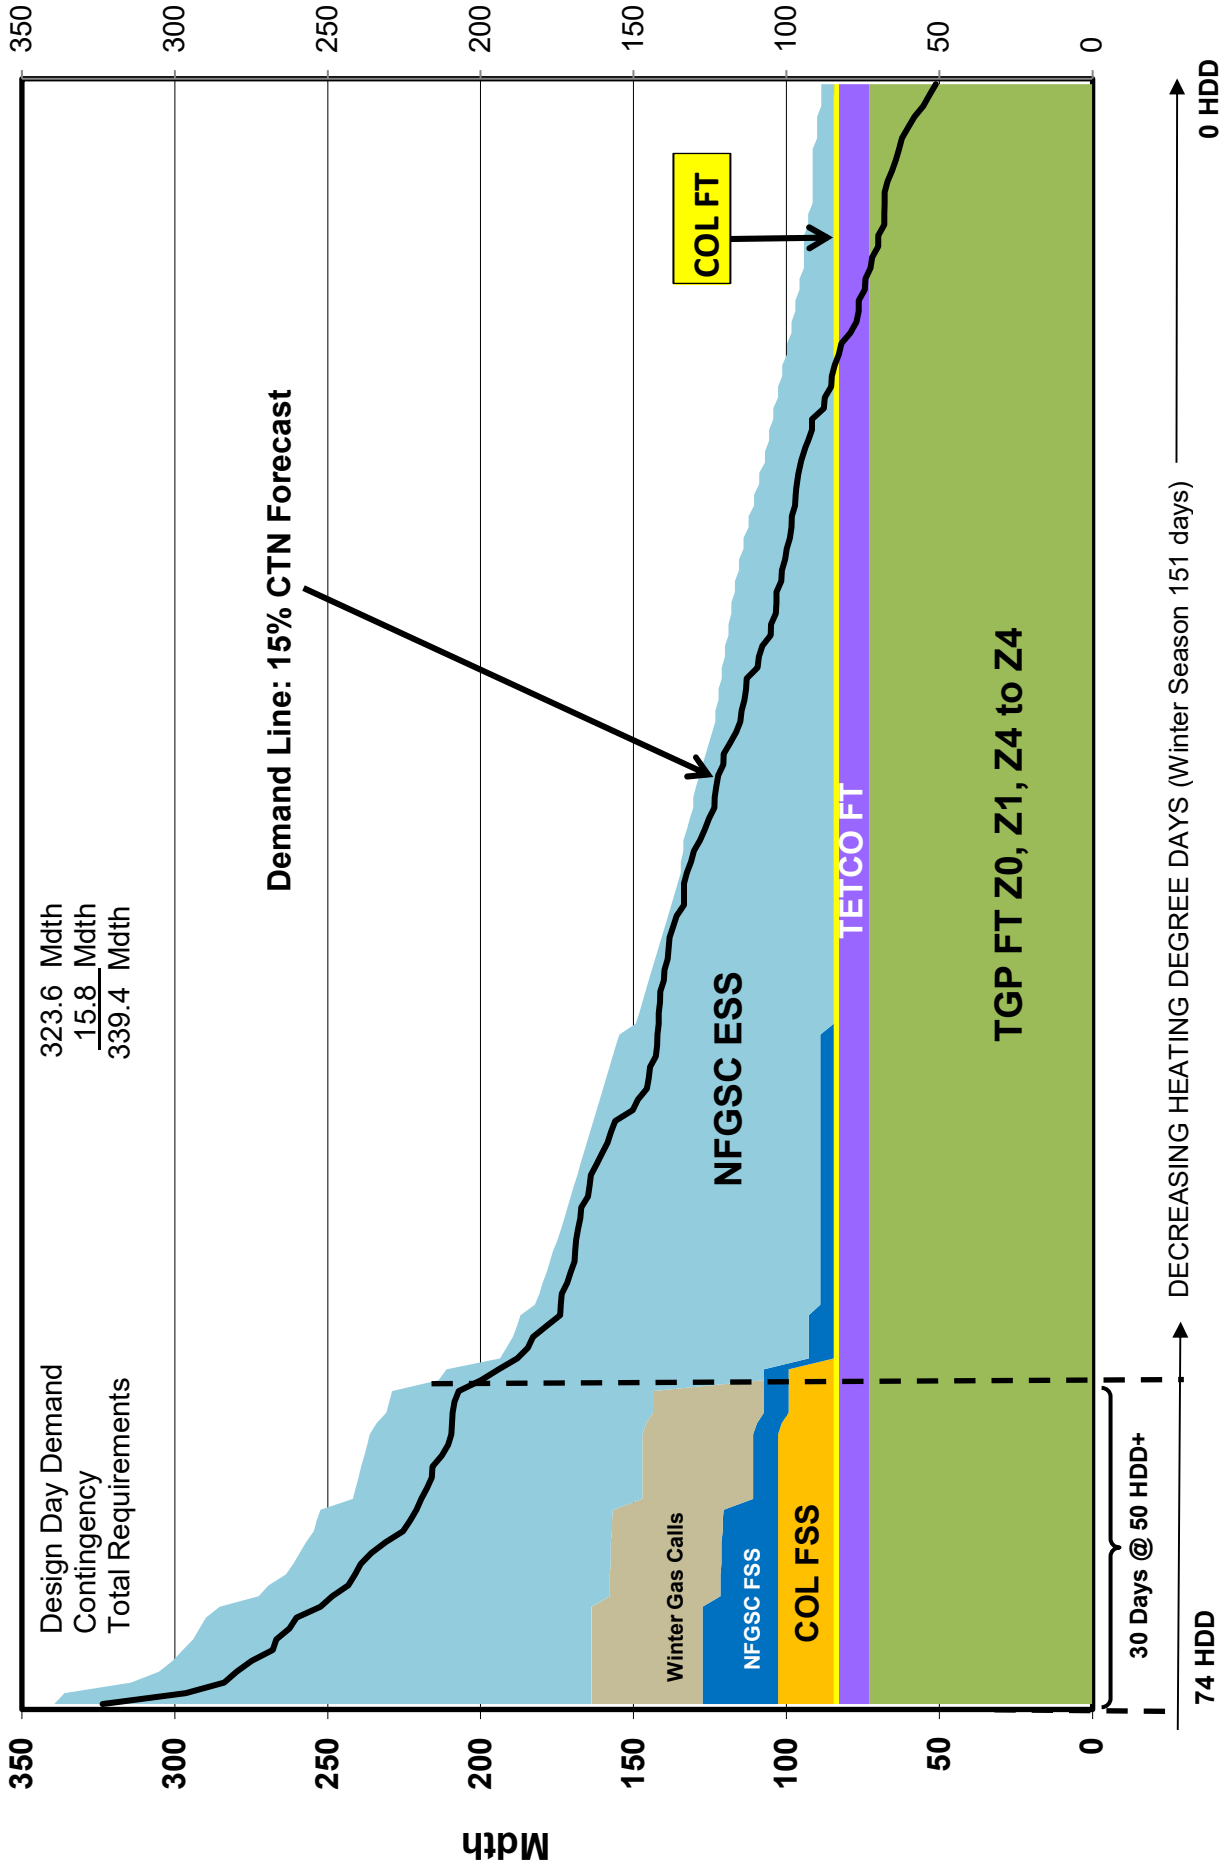

Columbia Gas Transmission, LLC – “COL”

Texas Eastern Transmission, LP – “TETCO”

National Fuel Gas Supply Corporation – “NFGSC”

Tennessee Gas Pipeline Company – “TGP”

National Fuel Gas Distribution Corporation - Pennsylvania 2021-2022 Load Duration Curve

Question No. COS-13:

Please provide the following for the Company's ten largest transportation customers during peak month of the most recent heating season:

- a. Actual consumption;
- b. Volume delivered to the Company on their behalf, if applicable;
- c. Daily nomination.

Response:

Please see attachment SDR-COS-13(a) and SDR-COS-13(b).

Prepared by or under the supervision of Gregory D. Harts.

Standard Data Request

Cost of Service

Question No. COS-14:

Please provide a summary identifying the salient features of each of the following. Salient features include contract party, effective term and applicable contract quantities (daily, annual, seasonal, etc.).

- a. All firm transportation agreements by type greater than one month in length. Indicate whether the capacity is available at the Company's citygate to meet design day requirements or is upstream capacity. Identify the downstream pipeline for each upstream arrangement.
- b. All firm storage, gathering and exchange agreements. Indicate if each agreement provides design day capacity at the citygate or requires separate transportation (identify) service to effectuate delivery. Include on-system storage and peak shaving facilities used by the Company and identify all ratcheting provisions applicable to the Company's contractual and on-system storage arrangements.

Response:

Please see attached pages 2-5 for a list and salient features of NFGDC's firm transportation, storage agreements and winter gas calls which meet the design day requirements for winter 2021-2022.

- a.) National Fuel Gas Distribution Company ("the Company") utilizes a unique delivery system that integrates all of its pipeline network with National Fuel Gas Supply Corporation's ("NFGSC") transmission system. the Company maintains contracts for firm transportation and storage capacity on NFGSC and on pipelines upstream of NFGSC that include Columbia Gas Transmission, Inc. ("Columbia"), Tennessee Gas Pipeline ("TGP") and Texas Eastern Transmission LP ("TETCO"), to meet the gas supply requirements of its firm sales and transportation customers.
- b.) The Company does not own or operate on-system storage or peak shaving facilities. Pages 3 through 5 provide ratchet information related to the NFGDC's off-system storage contracts with Columbia and NFGSC.

Standard Data Request

Cost of Service

Question No. COS-15:

For the most recent annual period available, please identify the applicable monthly volumes and revenues under each rate schedule which were:

- a. Sold under a negotiated or market-based rate.
- b. Transported under a negotiated or market-based rate.
- c. Transported at full margin transportation rates.

Response:

Please see Attachment SDR-COS-15.

National Fuel Gas Distribution Corporation
PA Division

Standard Data Request

Cost of Service

Question No. COS-16:

Please provide the following for each curtailment during the last three years:

- a. Dates of curtailment.
- b. Type of curtailment (firm service, interruptible service, both).
- c. Whether curtailment was related to amount of capacity on the Company's system, other capacity or supply related.
- d. Rate schedule that curtailed volumes would have been billed under.
- e. Curtailed volumes by rate schedule.
- f. Actual volumes moved by rate schedule.

Response:

The Company has had no curtailments of firm service during the last three years.

Prepared by or under the supervision of Gregory D. Harts.

National Fuel Gas Distribution Corporation
PA Division

Standard Data Request

Cost of Service

Question No. COS-17:

Please identify the Company's design day planning criteria and the probability of design day occurrence. Include any available documentation supporting the Company's claimed probability of occurrence.

Response:

Please see 1307F (Docket Nbr R-2022-303235) Exhibit 15 and the testimony of Janine Ward for National Fuel Gas Company's Peak Day planning criteria and the probability of design day occurrence.

Prepared by or under the supervision of Gregory D. Harts.

National Fuel Gas Distribution Corporation
PA Division

Standard Data Request

Cost of Service

Question No. COS-19:

Please provide workpapers showing the development of each allocation factor reflected in the Company's cost of service study. Include a description of each allocation factor, all calculations performed to develop the allocators and all supporting documentation, studies or other information relied upon to determine the allocators.

Response:

Please refer to National Fuel Exhibit D – Cost of Service Study for a description and development of each allocation factor. Please refer to Attachment COS-19 for the supporting workpapers provided on disk.

National Fuel Gas Distribution Corporation
PA Division

Standard Data Request

Cost of Service

Question No. COS-20:

Please provide all workpapers, calculations and supporting documentation for the functionalization and classification performed for the Company's cost of service study.

Response:

Please refer to the response to COS-08.

National Fuel Gas Distribution Corporation
PA Division

Standard Data Request

Cost of Service

Question No. COS-21:

If not provided elsewhere, please provide a detailed proof of revenues at both present and proposed rates.

Response:

See National Fuel Gas Exhibit E – Proof of Revenue.

SUPPLEMENTAL DATA REQUESTS
RATE OF RETURN

National Fuel Gas Distribution Corporation PA Division
Standard Data Request

Rate of Return

Question No. GAS-ROR-001:

Please supply copies of the following documents for the Company and, if applicable, its parent:

- a. Most recent Annual Report to shareholders (including any statistical supplements);
- b. Most recent SEC Form 10K;
- c. All SEC Form 10Q reports issued within last year.

Response:

- a. Annual reports are available at the following link:
<https://investor.nationalfuelgas.com/financials/annual-reports/default.aspx>
- b. All SEC filings including the 10-K are archived at the following link:
<https://investor.nationalfuelgas.com/financials/sec-filings/default.aspx>
- c. All SEC filings including the 10-Q are archived at the following link:
<https://investor.nationalfuelgas.com/financials/sec-filings/default.aspx>

Question No. GAS-ROR-003:

Please provide the bond rating history for the Company and, if applicable, its parent from the major credit rating agencies for the last five years.

Response:

The credit rating is held by the parent, the Company is not individually rated.

The following security ratings of the Parent are for long-term debt at September 30:

	FY 2017	FY 2018	FY 2019	FY 2020	FY 2021
Standard & Poors	BBB	BBB	BBB	BBB-	BBB-
Moody's	Baa3	Baa3	Baa3	Baa3	Baa3
Fitch	BBB	BBB	BBB	BBB	BBB

The following security ratings of the Parent are for commercial paper at September 30:

	FY 2017	FY 2018	FY 2019	FY 2020	FY 2021
Standard & Poors	A-2	A-2	A-2	A-3	A-3
Moody's	P-3	P-3	P-3	P-3	P-3
Fitch	F-2	F-2	F-2	F-2	F-2

Question No. GAS-ROR-004:

Please provide copies of all bond rating reports relating to the Company and, if applicable, its parent for the past two years.

Response:

Information related to the bond rating report National Fuel Gas Company is CONFIDENTIAL AND PROPRIETARY. The Company is providing CONFIDENTIAL Attachment ROR-004 in a separately sealed envelope that is marked "CONFIDENTIAL AND PROPRIETARY." The Company hereby requests that the content of such envelop be placed in the Commission's NON-PUBLIC FOLDERS, and that any employee of the Commission that may have access to such material be directed to maintain its confidentiality. National Fuel will provide copies of such CONFIDENTIAL materials to parties that execute an appropriate Stipulated Protective Agreement or pursuant to a Protective Order issued in this proceeding.

Question No. GAS-ROR-013:

Please provide the latest year-by-year financial projections for the Company for the next five years. Also, please indicate the date these projections were prepared; whether approved by management; and whether the projections have been submitted to bond rating agencies.

Response:

Information related to the five-year forecast is CONFIDENTIAL. The Company is providing CONFIDENTIAL Attachment ROR-013 in a separately sealed envelope that is marked "CONFIDENTIAL AND PROPRIETARY". The Company hereby requests that the content of such envelope be placed in the Commission's NON-PUBLIC FOLDERS, and that any employee of the Commission that may have access to such material be directed to maintain its confidentiality. National Fuel will provide copies of such CONFIDENTIAL materials to parties that execute an appropriate Stipulated Protective Agreement or pursuant to a Protective Order issued in this proceeding.

See CONFIDENTIAL attached five-year forecast for the Company. These projections were approved by management on September 16, 2022 at the quarterly Board of Directors meeting, with certain modifications. The modifications made were necessary for ratemaking purposes and include financing updates, truing up to the current interest rate environment, and the removal of certain rate making mechanisms at New York Distribution that have yet to be finalized.

These figures were not submitted for bond rating agency review.

Question No. GAS-ROR-015:

Please identify the Company's and, if applicable, its parent's capital structure targets (percentages of capital types). Provide the complete basis for the capital structure targets.

Response:

The Company and its Parent target capital structures that provides the mix of capital that accounts for the risk of the underlying business and provides for an adequate return to investors.

For the Company, the capital structure targets typically align with comparable natural gas distribution companies. Please refer to the direct Testimony of Paul Moul, Statement No. 10 for further detail.

Question No. GAS-ROR-017:

If applicable, please provide the currently authorized returns on equity for each of the parent's utility subsidiaries of the same industry type as the Company. In each case identify the approximate date when the current return on equity was approved by the state commission.

Response:

National Fuel Gas Distribution Corporation (“NFGDC”), the utility subsidiary of National Fuel Gas Company, has operations in the states of New York and Pennsylvania. The operations of NFGDC are subject to the jurisdictions of the Pennsylvania Public Utility Commission (“PAPUC”) and New York Public Service Commission (“NYPSC”).

Question No. GAS-ROR-018:

Has the Utility reacquired or repurchased any debt within the last five years? If so, provide a summary of each gain or loss on reacquired debt, the date on which the utility commenced amortization of such a gain or loss, the regulatory commission decision addressing the treatment of such gain or loss on reacquired debt, if any, on interest expense.

Response:

National Fuel Gas Distribution Corporation ("the Company") repurchased debt in 2017 and 2018.

On October 18, 2017, the Company repurchased \$100,000,000 of 6.69% notes for \$102,424,175, plus accrued interest. The call premium (loss) of (\$2,424,175) was recorded in the "Unamortized Loss on Reacquired Debt" account.

On September 7, 2018, the Company repurchased \$125,000,000 of 8.93% notes for \$129,811,922, plus accrued interest. The call premium (loss) of (\$4,811,922) was recorded in the "Unamortized Loss on Reacquired Debt" account.

The treatment of the above call premiums (loss) is in accordance with General Instruction 17 of the FERC Uniform System of Accounts.

		2,580 (Average)					(E)/(F)				

For column C, select two lowest consecutive values (base months), can be row 10 & row 21
 For column E, the two lowest consecutive months highlighted in C are equal zero, all else is a formula

Note:
 Normal Degree Days Based on NOAA 2006-2020 (5,771 Degree Days).
 "Base Mcf/Acct" calculated over a 2 month time period.
 Control Degree Days used in Normalization calculation.
 Summary Degree Days based on the Average of 21 Controls.
 "Normal Mcf/Acct" = "Normalized MCF" divided by "Accounts".
 Number of Accounts has been adjusted for Initial/Final Bills.
 Number of Accounts has been adjusted for Converting Customers.

National Fuel Gas Distribution Corporation
PA Division

Standard Data Request

Revenue Requirement

Question No. RR-08:

Please provide a complete copy of the computer output generated by the Company's statistical analysis package for all residential, commercial, public authority and industrial econometric models of gas demand estimated by the Company, but not presented in the filing.

Response:

The Company did not analyze any econometric variables that were not utilized in the gas demand estimate.

Prepared by or under the supervision of Gregory D. Harts.

National Fuel Gas Distribution Corporation
PA Division

Standard Data Request

Revenue Requirement

Question No. RR-09:

Identify the historical data source(s) for each dependent and independent variable utilized to develop the econometric models of gas demands for each forecasted customer group.

Response:

The variables noted below were utilized for the development of the forecasted normalized consumption and customer growth trends.

- (1) Monthly Consumption – The monthly consumption is a dependent variable in the gas forecast model. These consumptions are expressed in use per customer which are developed from the reported monthly sales and customer accounts.
- (2) Monthly Accounts – The number of accounts is an independent variable. The reported end of month customer accounts are used in conjunction with the monthly consumption to develop a customer usage per account.
- (3) Monthly Heating Degree Days – The actual monthly Heating Degree Days (“HDD”) is an independent variable. The HDD are calculated based on a 65-degree Fahrenheit temperature base using the daily average temperature of a Gas Day and then summed by month to arrive at the Monthly Heating Degree Days. Each Gas Day is based upon the North American Standards Board definition of a Gas Day which encompasses the 24-hour period from 10:00 a.m. to 10:00 a.m. The recording location for temperature weather data used to calculate HDD for NFG is Erie, PA (Station: ERIE INTL AP, PA US USW00014860).
- (4) Weighted Time Trend – Weighted Time Trend is an independent variable. This variable captures trends in customer usage which include both known and unknown factors such as structural conservation related to more efficient building envelop construction, regular cycle appliance change-outs to more efficient units, upgrades to more efficient units, installation of energy conservation measures such as set-back thermostats and manual consumer behavior changes such as lowering thermostat settings in response to higher energy prices. This variable is weighted based on industry knowledge in order to capture trend impacts during the forecasted

periods. This variable is used within the Residential Transportation, Commercial Transportation, and Residential Retail groups.

- (5) Large Volume Customer Consumption – Large Volume customer consumptions are an independent variable. These consumptions are used to create an annual consumption profile for the majority of the highest users within the Industrial Transportation group. These profiles are used to spread consumption on a monthly basis, based on annual consumption estimates provided by customers. This spread is not used in instances where Large Volume customers provide monthly projections.

Prepared by or under the supervision of Gregory D. Harts.

National Fuel Gas Distribution Corporation
PA Division

Standard Data Request

Revenue Requirement

Question No. RR-10:

Identify the source(s) and supporting documentation for the FTY value of each independent variable which required forecasting in the Company's gas demand models.

Response:

The variables noted below were utilized for the development of the forecasted normalized consumption and customer growth trends. A list of the

- (1) Monthly Customers – Monthly customer counts utilized are produced by a Market Planning forecast through the Fully Projected Future Test Year. Attachment SDR-RR-11 provides the supporting data.
- (2) Monthly Heating Degree Days – Normal Monthly Heating Degree Days (“HDD”) are utilized for forecasting. National Fuel Gas Company utilizes a 15-year Normal HDD which is based on officially recorded daily temperatures (on a Gas ay basis) over the period of January 1, 2006 to December 31, 2020. The actual system HDD is calculated using temperature as identified in SDR-RR-9. Please see the Direct Testimony of Gregory D. Harts, National Fuel Statement No. 8, National Fuel Exhibit GDH-2 for HDD values.
- (3) Weighted Time Trend – The Weighted Time Trend variable is a projection of the future gas prices based on the March 11, 2022 publication of the “Blue Chip Economic Indicators®”. This variable is weighted based on industry knowledge in order to capture trend impacts during the forecasted periods. This variable is used within the Residential Transportation, Commercial Transportation, and Residential Retail groups.
- (4) Large Volume Customer Survey – A survey of the highest users within the Industrial Transportation group is completed to best determine their projected usage during the FTY and beyond. These customers provide monthly or annual usage, depending on their capabilities. For customers that only provide annual usage, the customer profile detailed in RR-9-(5) is used to create a monthly consumption forecast.

Prepared by or under the supervision of Gregory D. Harts.

Standard Data Request

Revenue Requirement

Question No. RR-11:

Please provide in hard copy and on a computer diskette in Lotus 1-2-3, QuattroPro or other spreadsheet format, the dependent and independent variable databases relied upon to produce the Company's gas demand models. For variables based on averages, include the observations which comprise the average (e.g., gas prices).

Response:

The variables associated with the heating degree days used to produce the Company's gas demand models have been detailed in NFG Exhibit GDH-2.

For Gas Price variables relied upon to produce the Company gas demand model and for regression results, please see exhibit SDR-RR-11 which has been provided on a compact disc in electronic format.

Prepared by or under the supervision of Gregory D. Harts.

Question No. RR-13:

For each customer receiving service at less than the maximum applicable tariff rate, please provide:

- a. Actual consumption for the two most recent calendar years;
- b. Actual consumption for the HTY and the most recent twelve month period for which data is available;
- c. The currently applicable rate;
- d. An explanation for the rate discount.

Response:

Information related to customer-specific usage and rate information is CONFIDENTIAL. The Company is providing CONFIDENTIAL SDR-RR-13 (Pages 2 through 51 of this response) in a separately sealed envelope that is marked "CONFIDENTIAL AND PROPRIETARY". The Company hereby requests that the content of such envelope be placed in the Commission's NON-PUBLIC FOLDERS, and that any employee of the Commission that may have access to such material be directed to maintain its confidentiality. National Fuel will provide copies of such CONFIDENTIAL materials to parties that execute an appropriate Stipulated Protective Agreement or pursuant to a Protective Order issued in this proceeding.

Question No. RR-15:

Please provide a variance or other similar report comparing actual and budgeted construction expenditures at the conclusion of each budget period for the past three years and as of the most recent date available.

Response:

Fiscal 2019	Budget	Actual
Production Plant	170,000	82,000
Transmission Plant	5,950,000	5,218,000
Distribution Plant	19,725,000	30,478,000*
General Plant	3,725,000	3,619,000
Total Plant	29,570,000	39,397,000

*Variance due to cross fiscal year spending and customer pre-payment on new customer pipeline project. The customer pre-payment was applied to Fiscal 2018 and a majority of the project spending occurred in Fiscal 2019.

Fiscal 2020	Budget	Actual
Production Plant	150,000	162,000
Transmission Plant	5,185,000	4,494,000
Distribution Plant	21,940,000	23,127,000
General Plant	5,767,000	5,201,000
Total Plant	33,042,000	32,984,000

Fiscal 2021	Budget	Actual
Production Plant	150,000	113,000
Transmission Plant	5,592,000	5,999,000
Distribution Plant	21,325,000	23,252,000
General Plant	5,984,000	5,348,000

Standard Data Request

Revenue Requirement

Question No. RR-20:

Please state whether the future test year budgeted labor includes any increases or decreases in the number of employees during the future test year. If increases have been budgeted, please state whether the future test year includes budgeted positions which have not been filled.

Response:

To determine the fully projected future test year labor compliment, the Company first started with the actual headcount as of 6/30/22 which was 411 employees. The Company then utilized the approved budgeted headcount of 435 employees for fiscal year 2023 (October 2022 – September 2023). Below is a breakdown of the 24 open positions:

- 12 Union Hourly Field Employees
- 11 Non-Union Hourly Call Center Representatives
- 1 Supervisory Engineer

As described in RR-21, the company has developed a methodology to account for the fact that we have historically operated at less than 100% of budgeted headcount. As such, and as detailed in RR-21, the future test year labor compliment was reduced by 1 supervisor & 10 hourly (call center) positions to arrive at a headcount level of 424 employees for the fully projected future test year.

National Fuel Gas Distribution Corporation
PA Division

Standard Data Request

Revenue Requirement

Question No. RR-21:

Please explain how the Company has treated routine or normal position vacancies which occur as a result of terminations or retirements in its budgeted labor projections.

Response:

As part of the Company's annual budget process, each department submits a proposed headcount which incorporates the number of individuals necessary to effectively operate the division. As it is understood that there will be some level of terminations and retirements that occur, the company has developed a labor adjustment which reduces the budgeted labor amount to account for these dynamics. The adjustment considers that staffing levels will not be at 100% as presented in the annual budgets and makes an adjustment on the wage rate assumed for the new hires who are replacing employees who are projected to retire. Details of the adjustment calculation can be found on pg.2 of this response. These adjustment amounts are included in the calculation of the fully projected future test year labor budget.

Question No. RR-22:

Please provide the most recent insurance premiums for each type of insurance coverage (i.e., employee benefit and those purchased by the Company) reflected in the Company's filing. If available, please provide estimated premiums for the subsequent calendar year.

Response:

Group Life Insurance

Term Insurance Rate = \$0.085 / \$1,000

AD&D Insurance Rate = \$0.020 / \$1,000

Health Insurance (Self Insured)

Estimated claims paid per employee per month in the first year rates will be in effect equals \$1,114.46 plus administrative fee per employee per month of \$71.81 to produce a total cost per employee per month of \$1,186.27

Carved Out Pharmacy Benefit

Estimated claims paid per employee per month in the first year rates will be in effect equals \$223.62 plus administrative fee per employee per month of \$1.24 to produce a total cost per employee per month of \$224.86.

Question No. RR-28:

Please provide the percentage wage rate increases granted by the Company by date and employee category for the three most recent calendar years and the current year to date.

Response:

See attached Important Changes pages from the last three annual reports filed with the PAPUC by the Company.

IMPORTANT CHANGES DURING YEAR

Hereunder give particulars concerning the matters indicated below. Make the statements explicit and precise, and number them in accordance with the inquiries. Each inquiry must be answered. However, if the word "None" states the fact, it may be used in answering any inquiry.

1. Changes in, and additions to franchise rights; describing (a) the actual consideration given therefor, and (b) from whom acquired. If acquired without the payment of any consideration, state that fact.
2. Acquisition of other companies, reorganization, merger or consolidation with other companies: give names of companies involved, particulars concerning the transactions, and references to Commission authorization, if any.
3. Purchase or sale of substantial operating units, such as generating stations, transmission lines or distribution lines, specifying items, parties, effective dates and also reference to Commission authorization, if any.
4. Important leaseholds (other than leaseholds for natural gas lands) acquired, given, assigned, or surrendered, giving effective dates, lengths of terms, names of parties, rents, Commission authorization, if any, and other conditions.
5. Important extensions of system, giving location, new territory covered by distribution systems, and dates of beginning operations. Give, also, the number of new customers of each class, and for each class of customers the estimated annual revenues.
6. Estimated increase or decrease in annual revenues due to important rate changes, and the approximate extent to which such increase or decrease is reflected in revenues for the reporting year.
7. Important wage scale changes, showing dates of changes, effect on operating expenses for the year, and estimated annual effect of such wage scale changes on operating expenses.
8. Obligations incurred or assumed by respondent as guarantor for the performance by another of any agreement for the performance by another of any agreement or obligation, excluding ordinary commercial paper maturing on demand or not later than one year after date of issue, and giving Commission authorization, if any.
9. Changes in articles of incorporation or amendments to charter: explain the nature and purpose of such changes or amendments.
10. Other important changes not elsewhere provided for.

Inquiries 1 - 5: None

- 6 In compliance with the September 15, 2021 and February 24, 2022 Commission Orders in Docket No. R-2021-3027406, a base rate reduction of \$7.7 million was implemented effective October 1, 2021 in order to stop collecting Other Post-Employment Benefit (OPEB) expenses from customers. In addition, a \$25 million refund in the form of a one-time bill credit was passed back to customers in October 2021 and a \$29 million refund in the form of a 5-year surcredit began on October 1, 2021. Both refunds represent the pass back of an OPEB regulatory liability.
- 7 On January 3, 2021, approximately 96 Pennsylvania Division non-union hourly employees received an average 2.95% wage increase.

On January 1, 2021, approximately 95 Pennsylvania Division supervisory employees received an average 3.22% salary increase.

On April 11, 2021, approximately 5 union employees in Local 2154P I.B.E.W. received an average 2.00% wage increase, and approximately 95 union employees in Local 2154PS I.B.E.W. received an average 2.00% wage increase.

On May 2, 2021, approximately 9 union employees in N.C.F.O./S.E.I.U. Chapter 22 received an average 2.00% wage increase, and approximately 81 union employees in N.C.F.O./S.E.I.U. Chapter 22S received an average 2.00% wage increase.

Inquiries 8 - 10: None

9. Changes in articles of incorporation or amendments to charter: explain the nature and purpose of such changes or amendments.
10. Other important changes not elsewhere provided for.

Inquiries 1 - 5: None

- 6 In compliance with the May 17, 2018 Commission Orders in Docket Nos. M-2018-2641242 and R-2018-3000527, Pennsylvania Distribution booked an estimated refund provision of \$3.5 million during Calendar 2020 to implement the effects of the 2017 Tax Cuts & Jobs Act (TCJA). Through a negative surcharge, the Company refunded \$5.2 million to customers during the calendar year.
- 7 On December 28, 2019 approximately 95 Pennsylvania Division non-union hourly employees received an average 2.75% wage increase.

On January 1, 2020, approximately 89 Pennsylvania Division supervisory employees received an average 3.24% salary increase.

On April 12, 2020, approximately 4 union employees in Local 2154P I.B.E.W. received an average 2.00% wage increase and approximately 88 union employees in Local 2154PS I.B.E.W. received an average 2.41% wage increase.

On May 3, 2020, approximately 11 union employees in N.C.F.O/S.E.I.U Chapter 22 received an average 2.00% wage increase and approximately 80 union employees in N.C.F.O/S.E.I.U Chapter 22S received an average 2.65% wage increase.

Inquiries 8 - 10: None

Inquiries 1 - 5: None

- 6 In compliance with the May 17, 2018 Commission Orders in Docket Nos. M-2018-2641242 and R-2018-3000527, Pennsylvania Distribution booked an estimated refund provision of \$6.5 million during Calendar 2019 to implement the effects of the 2017 Tax Cuts & Jobs Act (TCJA). Through a negative surcharge, the Company refunded \$5.9 million to customers during the calendar year.
- 7 On December 29, 2018, approximately 100 Pennsylvania Division non-union hourly employees received an average 2.90% wage increase.

On January 1, 2019, approximately 89 Pennsylvania Division supervisory employees received an average 3.36% salary increase.

On April 14, 2019, approximately 6 union employees in Local 2154P I.B.E.W. received an average 2.00% wage increase and approximately 79 union employees in Local 2154PS I.B.E.W. received an average 2.38% wage increase.

On April 28, 2019, approximately 14 union employees in N.C.F.O./S.E.I.U Chapter 22 received an average 2.00% wage increase and approximately 67 union employees in N.C.F.O./S.E.I.U Chapter 22S received an average 2.50% wage increase.

Inquiries 8 - 10: None

National Fuel Gas Distribution Corporation
PA Division

Standard Data Request

Revenue Requirement

Question No. RR-29:

Please provide an analysis (description, dates and amounts) of any gains or losses on utility property sold for the lesser of the last three years or since the Company's last rate case or anticipated during the FTY. Explain how such amounts have been treated for ratemaking purposes.

Response:

The company has not sold any major property in the last 3 years.

The normal process for handling gains or losses on the sale of utility property is to credit Gas Plant in Service (Account 101) and debit the Reserve (Account 108) plus the cost of the removal, salvage value, and any proceeds. The gain or loss is then included in the annual depreciation calculation.

Over the past three years, proceeds on sales of vehicles averaged \$200,000 each year. For ratemaking purposes, these proceeds are treated as net salvage.

Question No. RR-30:

Please provide the level of each of the following which is included in the Company's cost of service by separate type and/or payee, which are incurred directly by the Company or are allocated or billed to the Company by affiliates or its parent company.

- a. Fines and penalties;
- b. Contributions and donations;
- c. Membership dues;
- d. Lobbying expense;
- e. Employee activity costs (e.g., picnics, parties, awards);
- f. Investor relations expenses

Response:

- a. No amounts for fines and penalties are included in the Company's cost of service.
- b. No amounts for contributions and donations are included in the Company's cost of service.
- c. Please refer to Exhibit 53.53.III.A.27 for a detailed listing of the Company's membership dues paid for the twelve months ended June 30, 2022
- d. No amounts for lobbying expense are included in the Company's cost of service.

Question No. RR-31:

Please provide a description and the purpose for membership for each organization listed in the previous response.

Response:

Industry Organizations:

Through membership in various industry organizations, National Fuel Gas is part of a network of industry professionals whose purpose is to share information regarding all aspects of the industry, provide educational services, provide joint research and development opportunities, and develop strategies to encourage growth of the industry as a whole.

American Gas Association \$136,872.00

National industry association with the purpose stated above.

Energy Association of Pennsylvania 46,968.04

State industry association with the purpose stated above.

North American Energy Standards Board 4,000.00

Serves as an industry forum for the development and promotion for standards promoting a seamless marketplace for wholesale and retail natural gas and electricity in North America.

Coalition for Renewable Natural Gas 2,700.00

Provides public policy advocacy and education for the renewable gas industry in North America.

Edison Electric Institute 1,690.15

National industry association with the purpose stated above.

Pennsylvania Independent Oil & Gas Association 665.00

Member-driven association that monitors issues concerning the oil and natural gas industry.

Independent Oil & Gas Association of New York 577.50

Member-driven association that monitors issues concerning the oil and natural gas industry.

Civic and Community Organizations:

As a member of the communities in which we provide service, National Fuel participates in various Civic and Community organizations to help with the economic development of those communities.

Erie Regional Chamber & Growth Partnership 13,750.00
Synchronizes the region's top business leadership with political and economic development leadership in the creation and implementation of a targeted and progressive economic development agenda.

Pennsylvania Chamber of Business & Industry 5,643.50
Membership organization of business in Pennsylvania that promotes a healthy business climate and improves the competitiveness of the state's business.

Pennsylvania Northwest Development Corp. 2,812.50
Organization providing economic development function in cooperation with existing development groups and local governments throughout Mercer County, Pennsylvania.

Chambers of Commerce (various locations) 2,550.00
Local civic organizations dedicated to promoting and improving the business climate in their localities.

Hershey Country Club 1,877.00
Country club located in Hershey, PA.

Common Ground Alliance 1,250.00
Dedicated to preventing damage to underground utility infrastructure and protecting those who live and work near these assets through the shared responsibility of its stakeholders.

Erie Club 1,055.00
Social club located in Erie, PA.

Rotary Club of Erie 700.00
Community service organization services the Erie, PA area.

Apartment Association of Northwestern PA 650.00
Association in Northwestern Pennsylvania that promotes residential rental industry in the area.

Erie Philharmonic 550.00
Professional orchestra located in Erie, PA

Pittsburgh Region Clean Cities 500.00
Advances the energy, economic, and environmental security of the United States by supporting local actions to reduce petroleum use in transportation.

Trade, Technical, and Professional Organizations

National Fuel Gas participates in trade, technical, or professional organizations through company memberships or by supporting employees who belong to these organizations.

American Institute of Chemical Engineers 1,875.00

Professional organization for chemical engineers providing information and discussion on chemical engineering processes and methods.

Manufacturer & Business Association 612.75

Assists members by providing information and services towards pursuing business and community interests.

Mercer County Builders Association 599.88

Offers tips and resources to assists members in their selections of builders, remodelers, or building products and services providers.

Institute of Internal Auditors 582.69

Advocates, provides educational conferences, and develops standards, guidance, and certifications for the internal audit profession.

Erie County Bar Association 540.00

Professional legal organization.

IMPORTANT IRS REQUIRED NOTICE

Dues payments, contributions or gifts to the American Gas Association are not tax deductible as charitable contributions for federal income tax purposes. However, they may be deductible as ordinary and necessary business expenses subject to restrictions imposed as a result of AGA's lobbying activities as defined by the Budget Reconciliation Act of 1993. AGA estimates that the nondeductible portion of your 2022 dues -- the portion that is allocable to lobbying is 5.1%.

**AMERICAN GAS ASSOCIATION
2022 DUES RULES**

U.S. Energy Utilities

1. AGA Dues for U.S. Energy Utility members are based on the average of 2018, 2019 and 2020 gas operating income* and the following income blocks and rates:

Block 1	First	\$ 10,000,000	1.0468%
Block 2	Next	\$ 7,500,000	.6710%
Block 3	Next	\$ 20,000,000	.4481%
Block 4	Next	\$ 40,000,000	.3200%
Block 5	Next	\$ 80,000,000	.2550%
Block 6	Over	\$ 157,500,000	.1500%

In applying the above formula, the maximum annual increase for any company equals 3.80%, and the maximum decrease equals 3.80%.

2. For companies that merge or are acquired whose dues would have decreased, the dues of the resulting company will equal the combined dues of the merging companies immediately prior to the merger for 4 years with no dues increases for increased operating income. After 4 years, the company's dues will be assessed via the formula structure, and any reduction in dues will be phased-in over a 4-year period or until the phased-in amount equals the formula dues, whichever comes first.
3. If necessary, the Board may approve the redistribution of any remaining AGA budget deficit to the members based on each company's share of total dues revenue.
4. For distribution companies with less than 75,000 meters, the maximum distribution company dues are equal to \$0.90/meter**. When dues are capped at \$0.90/meter, the maximum annual increase/decrease provision does not apply.
5. No company, whose consolidated or subsidiary meets the eligibility standards of a U.S. Energy Utility company, will be allowed to join a different AGA membership class. All regulated U.S. gas distribution subsidiaries of a parent organization must be included in the dues calculations.
6. Minimum Gas Company 2022 dues are \$2,135.

*Gas operating income is defined as Line 11, Schedule II of the Uniform Statistical Report.

**Meters are defined as Line 17 (total), Schedule XX of the Uniform Statistical Report.

Please contact Terri Oliva, Chief Financial Officer at (202) 824-7092 regarding any questions about the invoice or rules.

Vision, Mission and Values

Vision

Provide America with essential life-sustaining energy

Mission

Develop and advocate for informed, innovative, and durable policy that fulfills our nation's energy needs, environmental aspirations and economic potential. Provide state-of-the art solutions for AGA members to safely and securely deliver reliable and affordable natural gas and advanced fuels to homes and businesses across the nation.

Values

Safety

Fully commit to advancing initiatives that continuously improve the safety of our industry, our systems, our customers and our employees.

Innovation

Imagine and invest in the potential energy and environmental solutions for the future.

Integrity

Embrace and embody the highest levels of ethics, accountability, and civility while vigorously representing the interests of our industry.

Trust

Be the credible source that provides fact-based analysis and recommendations on behalf of the gas utilities industry.

Inclusion

Provide an open and welcoming environment for our members and employees to encourage deliberate debate of opinions. Strive for a workforce that represents the diversity of our members and our country.

Compassion

Demonstrate a commitment to serve our communities.

The Company is providing Attachments for RR-38 in a separately sealed envelope marked "CONFIDENTIAL AND PROPRIETARY".

National Fuel Gas Distribution Corporation
PA Division

Standard Data Request

Revenue Requirement

Question No. RR-39:

Please reconcile the historical and future test year SFAS No. 106 expense levels with the amount identified in the actuarial report.

Response:

Refer to Page 75 of the response to SDR-RR-38. Appendix A NPPBC [Net Periodic Postretirement Benefit Cost] for fiscal year ended September 30, 2021 shows SFAS 106 income of (\$4,120,288). The Company is not requesting recovery for OPEBs (SFAS No. 106). This is consistent with the Company's filing in Docket Nos. R-2021 3027406 and C-2021 3028654, which reduced base rates.

National Fuel Gas Distribution Corporation
PA Division

Standard Data Request

Revenue Requirement

Question No. RR-40:

Please identify the actual or projected amounts contributed to SFAS No. 106 funds for the historic and future test years. Identify the actual or projected dates and amounts of the contributions.

Response:

In conjunction with the Company's filing in Docket Nos R-2021-3027406 and C-2021-3028654, the Company recognized zero recovery of OPEB costs, and, as a result, ceased any funding. The last time the Company funded OPEBs (which was within the historic test year) was when it funded \$747,758 to its grantor trust on August 13, 2021, which was prior to the filing. Per the aforementioned filing, the Company will be passing back \$54 million in grantor trust assets over a five-year period starting in 2021. The Company is not requesting any OPEB cost recovery in these proceedings.

National Fuel Gas Distribution Corporation
PA Division

Standard Data Request

Revenue Requirement

Question No. RR-41:

Please explain the funding options or plans which are being used for SFAS No. 106 costs. Identify the portion of the costs which are eligible for tax preferred funding.

Response:

The Company historically contributed to Voluntary Employees' Beneficiary Association ("VEBA") trusts (a collectively bargained trust and a non-collectively bargained trust) and a 401(h) account, which part of the Company's Master Retirement Trust, to pay for other post-employment benefits (OPEBs). Funding to the collectively bargained VEBA trust and the 401(h) was eligible for a full tax deduction (i.e., tax preferred funding). Funding to the non-collectively bargained VEBA trust was eligible for a tax deduction subject IRS rules and limitations. Also, the Company previously contributed towards a grantor trust, which is not tax preferred funding (i.e., the Company did not receive a tax deduction for funding). However, it should be noted that the Company is not seeking recovery of SFAS No. 106 costs nor is it planning on additional funding in this rate case due to OPEBs being more than fully funded.

National Fuel Gas Distribution Corporation
PA Division

Standard Data Request

Revenue Requirement

Question No. RR-42:

Is the Company studying and/or anticipating any changes to its postretirement benefits offered to employees as a result of SFAS No. 106 or for other reasons? If yes, please provide such study and/or explain the anticipated change.

Response:

While the Company is always evaluating its benefit offerings, there are no changes that would result in any additional SFAS 106 costs for which the Company is seeking rate recovery in this rate case. The Company is seeking no recovery of SFAS No. 106 costs in this rate case.

National Fuel Gas Distribution Corporation
PA Division

Standard Data Request

Revenue Requirement

Question No. RR-43:

Please state whether the Company has included expenses related to SFAS No. 112 in its test year claim. If so, please provide complete details and include a copy of the actuarial study.

Response:

The Company has not included expenses related to SFAS No. 112 in the test year claim.

\$2.42550/mcf - NY rate

To: S. Payne

From: D. Koch

Date: May 7, 2021

Re:

The storage rates in effect for the 3rd Quarter of FY21 are derived as follows:

	(\$/Mcf)
	(a)
Demand	\$2.1321
Commodity	<u>\$2.5467</u>
Total	<u><u>\$4.6788</u></u>

Notes:

(1) Storage Rates are derived at Delivered Volume to NFGDC with 6 months actuals and 6 months of projected values.

From: D. Koch

Date: August 11, 2021

Re:

The storage rates in effect for the 4th Quarter of FY21 are derived as follows:

	(\$/Mcf)
	(a)
Demand	\$1.9752
Commodity	<u>\$2.7139</u>
Total	<u><u>\$4.6891</u></u>

Notes:

(1) Storage Rates are derived at Delivered Volume to NFGDC with 9 months actuals and 3 months of projected values.

\$3.55120/mcf - NY rate

9/10/21

To: S. Payne

From: D. Koch

Date: August 11, 2021

Re:

The storage rates in effect for the 4th Quarter of FY21 are derived as follows:

	(\$/Mcf) (a)
Demand	\$1.9752
Commodity	<u>\$2.7139</u>
Total	<u><u>\$4.6891</u></u>

Notes:

(1) Storage Rates are derived at Delivered Volume to NFGDC with 9 months actuals and 3 months of projected values.

$$\frac{\$8,263,193}{1,705,087 \text{ mcf}} = \$4.84620/\text{mcf} - \text{NY rate}$$

To: J. Tracy
From: D. Koch
Date: November 3, 2021
Re:

The storage rates in effect for the 1st Quarter of FY22 are derived as follows:

	(\$/Mcf)	
	(a)	
Demand	\$2.0829	
Commodity	<u>\$4.3883</u>	updated for October 2021
Total	<u>\$6.4712</u>	

Notes:

(1) Storage Rates are derived at Delivered Volume to NFGDC with 12 months of projected values.

 \$3.18939/mcf - NY rate

To: J. Tracy
From: D. Koch
Date: November 3, 2021
Re:

The storage rates in effect for the 1st Quarter of FY22 are derived as follows:

	(\$/Mcf)	
	(a)	
Demand	\$2.0829	
Commodity	<u>\$4.3883</u>	updated for October 2021
Total	<u>\$6.4712</u>	

Notes:

(1) Storage Rates are derived at Delivered Volume to NFGDC with 12 months of projected values.

\$3.18857/mcf - NY rate

To: J. Tracy
From: D. Koch
Date: November 3, 2021
Re:

The storage rates in effect for the 1st Quarter of FY22 are derived as follows:

	(\$/Mcf)	
	(a)	
Demand	\$2.0829	
Commodity	<u>\$4.3883</u>	updated for October 2021
Total	<u>\$6.4712</u>	

Notes:

(1) Storage Rates are derived at Delivered Volume to NFGDC with 12 months of projected values.

\$335,903
 / 105,346 mcf
 \$3.18857/mcf - NY rate

To: J. Tracy
From: D. Koch
Date: February 8, 2022
Re:

The storage rates in effect for the 2nd Quarter of FY22 are derived as follows:

	(\$/Mcf) (a)	
Demand	\$1.7298	
Commodity	<u>\$3.4335</u>	see schedules tab - S7 & S8
Total	<u>\$5.1633</u>	

Notes:

(1) Storage Rates are derived at Delivered Volume to NFGDC with 9 months of projected values and 3 months of actuals.

$$\frac{\$66,593}{20,885 \text{ mcf}} = \$3.18857/\text{mcf} - \text{NY rate}$$

To: J. Tracy
From: D. Koch
Date: February 8, 2022
Re:

The storage rates in effect for the 2nd Quarter of FY22 are derived as follows:

	(\$/Mcf) (a)	
Demand	\$1.7298	
Commodity	<u>\$3.4335</u>	see schedules tab - S7 & S8
Total	<u>\$5.1633</u>	

Notes:

(1) Storage Rates are derived at Delivered Volume to NFGDC with 9 months of projected values and 3 months of actuals.

\$119,230
/ 37,393 mcf
\$3.18857/mcf - NY rate

To: J. Tracy
From: D. Koch
Date: February 8, 2022
Re:

The storage rates in effect for the 2nd Quarter of FY22 are derived as follows:

	(\$/Mcf) (a)	
Demand	\$1.7298	
Commodity	<u>\$3.4335</u>	see schedules tab - S7 & S8
Total	<u>\$5.1633</u>	

Notes:

(1) Storage Rates are derived at Delivered Volume to NFGDC with 9 months of projected values and 3 months of actuals.

\$4,397,876
/ 800,662 mcf
\$5.49280/mcf - NY rate

To: J. Tracy
From: D. Koch
Date: May 3, 2022
Re:

The storage rates in effect for the 3rd Quarter of FY22 are derived as follows:

	(\$/Mcf) (a)	
Demand	\$1.9702	See cells S7 & S8 on the "schedules" tab
Commodity	<u>\$5.6536</u>	
Total	<u>\$7.6238</u>	

Notes:

(1) Storage Rates are derived at Delivered Volume to NFGDC with 6 months of projected values and 6 months of actuals.

Re:

The storage rates in effect for the 3rd Quarter of FY22 are derived as follows:

	(\$/Mcf) (a)	
Demand	\$1.9702	See cells S7 & S8 on the "schedules" tab
Commodity	<u>\$5.6536</u>	
Total	<u><u>\$7.6238</u></u>	

Notes:

(1) Storage Rates are derived at Delivered Volume to NFGDC with 6 months of projected values and 6 months of actuals.

Totals		\$37,600,014	\$39,062,758	\$1,462,745	3.7%

Cost elements with variances in excess of 10% for the TME 6/30/22 are described below:

- Utilities - Higher data (telephone) & electric expense due to more tablets used, and higher cell phone expenses
- Gas Purchases – Variance due to increased gas quality and meter maintenance for producers
- Equipment Purchases – Variance due to decreases in maintenance fees
- Advertising-Sales - Timing of various advertising campaigns which were budgeted for earlier in FY22 but now expected to hit in Q4 FY22 (July-Sept 2022)
- Research/Development – Lower spending due to the pandemic
- Revenue Income - Volume of reconnections in excess of budget which was lowered due to pandemic
- Injuries & Damages – Brown Avenue settlement in July 2021.
- Postage – Minor variance due to increase in postage rates in Jan 2022
- Information Services – Lower labor due to vacant positions coupled with lower fringe loading and timing delays in contractor utilization and software purchases.
- Clearing Budget Item – Delay on the start of a WAN transformation project which will now begin in FY23
- Environmental – Minor variance due to higher environmental permits and costs

Question No. RR-47:

Please provide the most recent actual number of eligible participants in each of the employee medical and dental plans reflected in the Company's filing.

Response:

As of 6/2022:

Eligible Employees:

- Health Insurance: 412 employees
- Pharmacy Prescription Drug Benefits administered by CVS Caremark: 213
- Dental: 407

Participating employees:

- Health Insurance: 343 employees
- Pharmacy Prescription Drug Benefits administered by CVS Caremark: 185
- Dental: 325

Note: With the exception of 4 Part-Time Non-Union Employees, all employees have the option to elect prescription coverage through either their Health Insurance Plan or the Pharmacy Prescription Drug Benefits administered by CVS Caremark. Eligibility depends on their employee type/union classification.

Revenue Requirement

Question No. RR-53:

Please describe each budgeted or planned cost savings program to be implemented during the historic or future year. Please identify the cost of implementing the program and the anticipated annual savings.

Response:

As evidenced by the low level of adjustments, outside of inflation, between the historic test year and the future test year, the Company is currently focused on maintaining consistent service which requires a continued investment in employees, technology, and benefits. While no direct cost saving plans are to be implemented in the fully projected future test year, the company is instead focused on retaining internal talent and navigating the current dynamics of rising inflation and longer lead times to continue to provide low-cost service to our ratepayers.

Question No. RR-55:

Please provide a copy of the corporate federal tax returns and supporting schedules for the preceding three years and, if applicable, a copy of the calculation workpapers for the Company's consolidated tax savings adjustment.

Response:

The Company is included as part of a consolidated federal income tax return. Since the complete federal tax return is a voluminous document, only CONFIDENTIAL excerpts from the preceding three years' returns are provided. Please see attached excerpts. The complete CONFIDENTIAL tax returns will be made available to appropriate parties upon request.

The calculation of a consolidated tax savings adjustment is also provided as Page 2 of this response.

**National Fuel Gas Distribution Corporation
Pennsylvania Division**

Statement No. 1

**Direct Testimony of
Brian M. Welsch**

Topics Addressed: **Rate Filing Overview**
 Key Drivers of Rate Relief
 Management Effectiveness and Performance
 Introduction of Witnesses

Dated: October 28, 2022

1 **I. INTRODUCTION AND QUALIFICATIONS**

2 **Q. Please state your name and business address.**

3 A. My name is Brian M. Welsch. My business address is 6363 Main Street, Williamsville,
4 NY 14421.

5
6 **Q. By whom and in what capacity are you employed?**

7 A. I am employed by National Fuel Gas Distribution Corporation (“NFGDC”) as an
8 Assistant Vice President.

9
10 **Q. Please briefly describe your responsibilities in that capacity.**

11 A. As Assistant Vice President, I am responsible for overseeing and managing the Rates and
12 Regulatory Affairs department. The Rates and Regulatory Affairs department is
13 responsible for the areas of sales and revenue forecasting, tariff administration and
14 compliance, Pennsylvania Section 1307(f) purchased gas cost (“PGC”) filings, base rate
15 case filings, and a broad range of regulatory reporting and compliance activities for
16 NFGDC Pennsylvania (“National Fuel” or “Company”) and New York (“National Fuel –
17 NY”) divisions.

18
19 **Q. Please provide your educational background.**

20 A. I received a Bachelor of Business Administration degree from Loyola University of
21 Chicago in May 2004 with a concentration in Accounting. In May 2005, I received a
22 Master of Science in Accountancy degree from the University of Notre Dame.

23

1 **Q. Please provide your professional experience.**

2 A. In July 2005, I joined Deloitte & Touche, LLP, in Chicago, IL as an Assurance and
3 Advisory Services Associate primarily serving natural gas utility audit clients in the
4 Midwest U.S. In July 2007, I joined KPMG, LLP, in Buffalo, NY as a Senior Audit
5 Associate. I joined NFGDC in November 2008 as a Financial Auditor in the Audit
6 Services Department. Over my career at NFGDC, I have held several financial and
7 accounting focused roles in different areas of the organization. After three years in Audit
8 Services, I worked a Financial Analyst in the Finance department from 2012 to 2014,
9 served as the Director of Investor Relations from 2014 until 2018, worked as a Senior
10 Manager in the Accounting department from 2018 to 2020, and was promoted to
11 Assistant General Manager of the Rates and Regulatory Affairs department in February
12 2020. In October 2021, I was promoted to Assistant Vice President of NFGDC with
13 primary responsibilities over the Rates and Regulatory Affairs department. I have been a
14 Certified Public Accountant since 2006.

15
16 **Q. Have you previously testified in other proceedings before the Pennsylvania Public
17 Utility Commission (“PAPUC” or the “Commission”) or any other state or federal
18 agency?**

19 A. I have not previously testified in any proceedings before the PAPUC or any other state of
20 federal agency.

21
22
23

1 **Q. Please provide a brief overview of NFGDC’s utility business operations.**

2 A. NFGDC owns and operates local natural gas distribution systems serving approximately
3 214,000 customers and 541,000 customers in its northwest Pennsylvania and western
4 New York service territories, respectively. National Fuel maintains headquarters and a
5 customer service call center in Erie, Pennsylvania, and operates 4,850 miles of main and
6 transmission natural gas pipelines and 12 service centers across northwest Pennsylvania.
7 For the calendar year ended December 31, 2021, the Company’s total normalized
8 throughput was approximately 50 billion cubic feet (Bcf), with residential, commercial &
9 public authority, and industrial customer classes making up 42%, 22% and 36%,
10 respectively, of the annual load. Nearly all its 197,000 residential customers use natural
11 gas for space heating purposes.

12
13 **Q. Discuss National Fuel’s relationship with its parent, National Fuel Gas Company,
14 and affiliated subsidiaries.**

15 A. NFGDC is a wholly owned subsidiary of National Fuel Gas Company (“NFG”). NFG is a
16 publicly traded holding company headquartered in Williamsville, New York, that owns
17 and operates businesses across the natural gas value chain from the well-head to the
18 customer’s burner tip. The following is a summary of each affiliated company owned by
19 NFG and a brief description of their relationship with National Fuel.

- 20 • National Fuel Gas Supply Corporation (“NFG Supply”) and Empire Pipeline, Inc.
21 (“Empire”) own and operate interstate natural gas pipeline and storage assets in
22 Pennsylvania and New York that are regulated by the Federal Energy Regulatory
23 Commission (“FERC”). National Fuel is a customer of NFG Supply and Empire,

1 contracting for firm transportation and storage services that deliver Appalachian
2 natural gas supplies at direct interconnects with the Company's system.

- 3 • National Fuel Gas Midstream Company, LLC ("NFG Midstream") builds and
4 operates natural gas gathering and processing assets for Seneca and third-party
5 Appalachian producers in Pennsylvania. National Fuel does not have a customer
6 relationship with NFG Midstream.
- 7 • Seneca Resources Company, LLC ("Seneca") holds the rights to 1.2 million net
8 acres in Pennsylvania, where it develops and produces approximately 1 billion
9 cubic feet per day of natural gas from the Marcellus and Utica shales. National
10 Fuel does not contract to purchase any of Seneca's gas production.

11 12 **II. PURPOSE OF TESTIMONY**

13 **Q. Please describe the purpose of your testimony.**

14 A. My testimony addresses several items. First, I present an overview of the rate filing,
15 including a summary of why the Company is seeking rate relief, a review of customer bill
16 impacts, and an explanation for why the Company's proposed rate increase is just and
17 reasonable. Second, I present in further detail the key drivers of the Company's need for
18 rate relief at this time. Third, I discuss and present evidence of National Fuel's
19 outstanding management performance and propose how it should be recognized in this
20 case. Finally, I introduce the witnesses who are providing direct testimony on behalf of
21 the Company in this rate filing.

1 **Q. Are you sponsoring any exhibits or filing requirements in this proceeding?**

2 Yes. I am sponsoring National Fuel Exhibit BMW-1.

3

4 **III. OVERVIEW OF RATE FILING**

5 **Q. Please summarize the relief that National Fuel is requesting through this rate filing.**

6 A. National Fuel is seeking an increase in its annual base rate operating revenues of \$28.1
7 million, or 9.2% on a total revenue basis with a proposed effective date of December 27,
8 2022. The base rate increase requested in this filing utilizes a fully projected future test
9 year ending July 31, 2024 (“FPFTY”). The Company is also proposing, among other
10 things, to implement a Weather Normalization Adjustment (“WNA”) mechanism to
11 protect ratepayers and the Company from volatility in weather, and a new energy
12 efficiency pilot program that would recover an additional \$1.2 million from residential
13 customers annually in a separate rider.

14

15 **Q. When was the last time National Fuel sought a base rate increase?**

16 A. National Fuel’s last base rate filing was in 2006, with new rates effective January 1,
17 2007.

18

19 **Q. How does National Fuel’s proposed revenue increase compare to the Company’s
20 revenues in 2007?**

21 A. The \$28.1 million increase in delivery revenues proposed in the FPFTY represents just a
22 1.3% annualized increase (i.e., compound annual growth rate) over the delivery revenues
23 realized in 2007, well below historic and current rates of inflation. Total revenues in the

1 FPFTY, which includes purchase gas costs, are actually lower than the total revenues
2 recognized in 2007 due to the decline in natural gas prices.

3
4 **Q. How has National Fuel been able to avoid filing for a base rate increase for the last**
5 **15 years?**

6 A. Even though the Company has steadily increased rate base through the continued
7 investment in the safety and reliability of its system and maintained quality customer
8 service, National Fuel has been able to avoid increasing its delivery rates since 2007 due
9 to a persistent focus on controlling costs, efficient operation of the business, and prudent
10 management of retirement benefit programs. In fact, the Company *reduced* annual base
11 delivery rates in 2021 by \$7.7 million and implemented credits to return more than \$54
12 million to ratepayers because it no longer needs to recover costs and retain previously
13 collected funds for its other post-retirement benefit programs (“OPEBs”).

14
15 **Q. Why is National Fuel seeking a rate increase at this time?**

16 A. For more than 15 years, National Fuel has successfully been able to operate a safe and
17 reliable system, provide high-quality customer service, and earn a reasonable rate of
18 return. More recently, the Company has experienced the effects of significant cost
19 inflation that is driving continued increases in labor expenses and other operating costs.
20 Additionally, the Company is accelerating its infrastructure replacement and system
21 modernization investments to enhance safety and reliability and reduce emissions. As a
22 result of these cost increases and the inflationary pressures impacting the U.S. economy,
23 along with persistent declines in customer usage due to warming weather trends, National

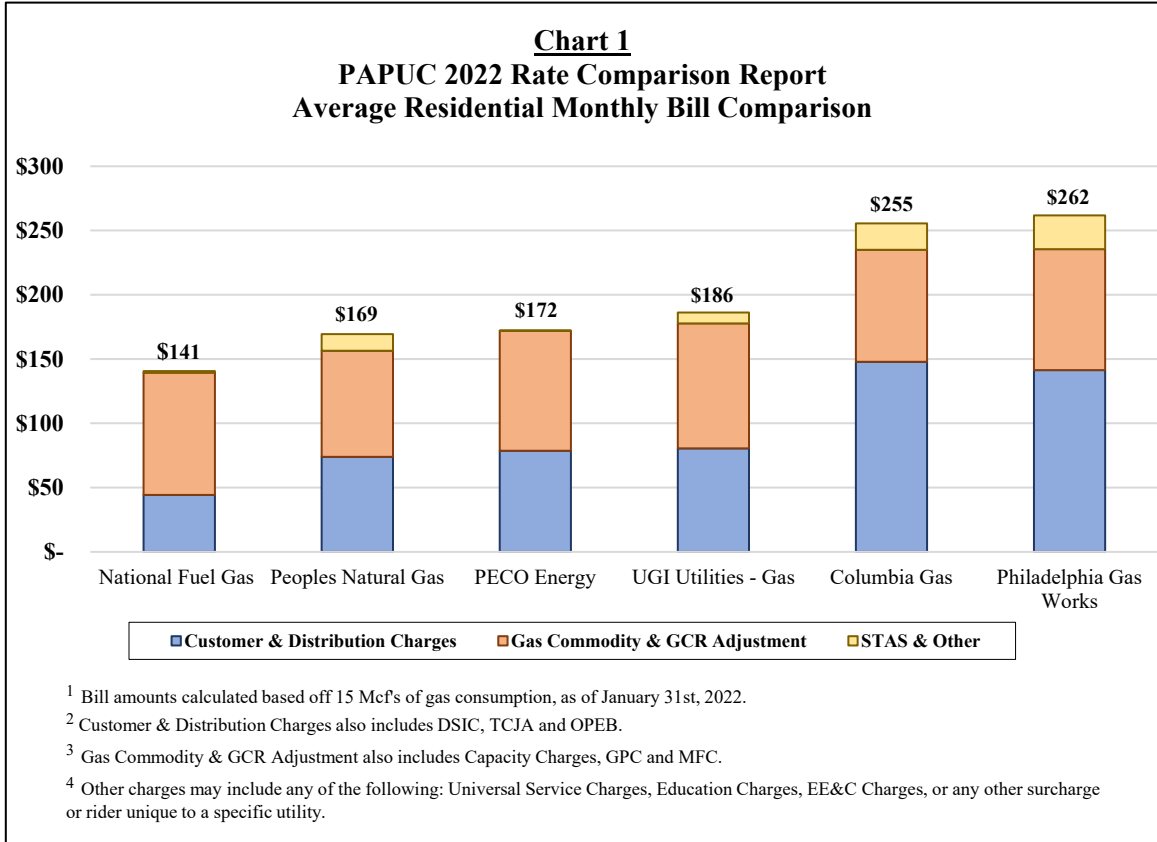

1 Fuel's current rates do not provide it with a reasonable opportunity to earn a fair rate of
2 return its cost of capital.

3
4 **Q. Explain why National Fuel's current rates are insufficient to support its current and
5 planned operations.**

6 A. As reflected in National Fuel Exhibit A (FPFTY) Schedule A-1, the Company's
7 operations are projected to produce an overall return on rate base of 4.17%, and a return
8 on common equity of 3.26%, during the FPFTY. As explained by National Fuel witness
9 Mr. Paul Moul (National Fuel Statement No. 10), these levels of returns are not adequate
10 based on an analysis of applicable financial market data and the risks confronted by the
11 Company and are well below the rates of return generally afforded to public utilities.
12 Unless National Fuel receives the requested rate relief, the Company's returns will
13 continue to erode and jeopardize its ability to attract the capital needed to make the
14 reasonable and necessary investments in gas infrastructure and the human resources that
15 are necessary to maintain and enhance the provision of safe and reliable natural gas
16 service to its customers.

17
18 **Q. How do National Fuel's current rates compare to other gas utilities in
19 Pennsylvania?**

20 A. A comparison of residential heating bills in Chart 1 below from the PAPUC 2022 Rate
21 Comparison Report issued in April 2022 illustrates that National Fuel has the lowest total
22 monthly bills and the lowest customer and distribution charges in the Commonwealth
23 amongst large gas utilities.

2

3

4

5

6

7

8

9

On a total bill basis, National Fuel’s average monthly bill for residential heating customers using 15 Mcf per month was \$140.58, which is \$56.98 lower than the group average of \$197.56. Looking at only the delivery charge portion of the bill (customer and distribution charges, including impact of TCJA and OPEB surcredits), the average National Fuel residential heating customer using 15 Mcf per month currently pays just \$44.32 per month, which is \$50.48 lower than the group average of \$94.80 and \$29.59 lower than the next lowest gas utility.

10

11

12

The PAPUC 2022 Rate Comparison Report also found that National Fuel’s small commercial, medium commercial, large commercial, and industrial customers on average currently pay the lowest natural gas bills in the Commonwealth. Additionally, a review of

1 2020 residential natural gas sales price data from the U.S. Energy Information
 2 Administration (“EIA”) found that National Fuel has the lowest rates in Pennsylvania and
 3 the third lowest rates in the Northeast U.S.

4
 5 **Q. Has National Fuel evaluated the impact of its proposed rate increase on average**
 6 **customer bills?**

7 A. Yes. As presented in Table 1A below, the Company has evaluated the impact of its
 8 proposed rate increase on the average monthly bill of residential heating and commercial
 9 heating customers. The residential heating customer impact includes the proposed energy
 10 efficiency pilot program rider.

Table 1A - AVERAGE MONTHLY BILL IMPACT

Customer Class	Average Usage per Month	Current Rates	Proposed Rates	(\$) Increase	(%) Increase
Residential	84 ccf	\$99.93	\$109.67	\$9.74	9.7%
<i>Commercial / Public Authority</i>					
SCPA <250	100 ccf	\$110.32	\$120.87	\$10.55	9.6%
SCPA >250	431 ccf	\$334.28	\$358.03	\$23.75	7.1%
LCPA	361 Mcf	\$1,047.97	\$1,151.78	\$103.81	9.9%

11
 12 At current rates, which includes the \$7.7 million total reduction in base rates and
 13 approximate \$5 million in annual OPEB surcredits implemented on October 1, 2021, the
 14 Company’s proposed new rates will increase residential heating customer bills by 9.7%.
 15 If the Company had not voluntarily reduced base rates in 2021 for OPEB cost recovery to
 16 help customers facing impacts from the COVID-19 pandemic, the Company’s proposed

1 new rates would have increased residential heating customer bills by just 5.2%. The
 2 average monthly bill impacts, excluding the 2021 OPEB rate reductions, are summarized
 3 in Table 1B below.

Table 1B - AVERAGE MONTHLY BILL IMPACT (EXCLUDING 2021 OPEB RATE REDUCTION)

	<u>Average Usage per Month</u>	<u>Pro-Forma Current Rates</u>	<u>Proposed Rates</u>	<u>(\$) Increase</u>	<u>(%) Increase</u>
Residential	84 ccf	\$104.26	\$109.67	\$5.41	5.2%
<i>Commercial / Public Authority</i>					
SCPA <250	100 ccf	\$113.82	\$120.87	\$7.04	6.2%
SCPA >250	431 ccf	\$343.24	\$358.03	\$14.80	4.3%
LCPA	361 Mcf	\$1,110.69	\$1,151.78	\$41.09	3.7%

4
 5 National Fuel Exhibit BMW-1 provides additional detail on the projected bill
 6 impacts, on a total bill and total bill excluding purchased gas cost basis, for all of the
 7 Company’s tariff customer classes.

8
 9 **Q. Why is it relevant to present the average bill increase excluding the impact of the
 10 base rate reduction for OPEB costs implemented in 2021?**

11 A. If the Company had not voluntarily implemented the OPEB base rate reduction in 2021,
 12 the Company’s proposed rate increase in this rate filing would have been approximately
 13 \$7.7 million lower. The \$7.7 million base rate reduction to stop the recovery of OPEB
 14 expenses authorized in the Company’s last base rate case, along with the return of \$54
 15 million in funds previously collected from ratepayers that are no longer needed to cover
 16 future OPEB benefits, would have normally been addressed in this base rate proceeding.
 17 However, given the funded status of the Company’s OPEB liability and lower actuarial

1 costs, National Fuel recognized an opportunity reduce its delivery rates and provide all
2 customers with immediate bill relief during the COVID-19 pandemic.

3
4 **Q. Why are the projected customer bill increases fair and reasonable?**

5 A. The average customer bill impacts set forth in Table 1 above are fair and reasonable for
6 several reasons.

- 7 • First, the increase in delivery rates support the Company’s ability to provide safe
8 and reliable gas distribution service for its customers, including critical
9 investments to replace aging gas infrastructure and modernize the Company’s
10 facilities. The additional revenues are also necessary to address inflationary
11 pressures on the Company’s operating expenses and lower customer usage trends,
12 both of which have been outside of the Company’s control.
- 13 • Second, National Fuel has not proposed an increase in its delivery rates since
14 2007. We note that all the other large natural gas utilities in the Commonwealth
15 have filed requests for one or more base rate increases since that time. As
16 demonstrated in Chart 2 below, the Company’s average annual delivery charges
17 normalized for weather have *decreased* from \$446 per customer in 2007 to \$388
18 per customer in 2022. Had the Company’s delivery rates kept pace with inflation
19 since 2007, as measured by the U.S. Bureau of Labor Statistics’ Consumer Price
20 Index (“CPI”), the average residential customer would be paying \$634 annually.

1
2
3
4
5

- Third, even with this increase, National Fuel’s residential heating customers will continue to have the lowest average total bill and lowest average delivery charges in the Commonwealth, as demonstrated in the Chart 3 below.

2

- Finally, National Fuel's total residential bill, inclusive of gas supply charges, are less than they were in 2007 due to lower natural gas supply costs. Going forward, I expect that National Fuel's customers will continue to benefit from their proximity and access to low-cost natural gas supplies being produced in the Appalachian region.

8

9

IV. RATE RELIEF DRIVERS

10 **Q. What are the key drivers of the Company's need for rate relief?**

11 A. The Company's need for rate relief is largely being driven by the following three items:

1. Increasing investment in rate base, which is expected to grow as the Company accelerates its leak-prone pipeline replacement and system modernization activities to ensure and enhance the safety of its distribution system.

14

1 eliminated over 207 miles of leak-prone bare steel and wrought iron mains. The
 2 Company's distribution system does not have any cast iron pipe. At its current pace of
 3 replacing approximately 41 miles per year, National Fuel would be able remove the
 4 remaining leak-prone pipelines on its system in 22 years.

5
 6 **Q Does the Company plan to accelerate the replacement and modernization of its**
 7 **aging gas infrastructure and system?**

8 A. Yes. The Company believes its necessary to accelerate its replacement activity to further
 9 enhance and maintain the safety and reliably of its aging delivery system, and better align
 10 the Company's pace of replacement with other utilities in Pennsylvania. As
 11 demonstrated in Table 2 below, the Company plans to steadily increase the number of
 12 miles of leak-prone main and transmission lines that it will replace over the next 5 years,
 13 which will result in higher capital expenditures and investment in net plant.

TABLE 2 - NATIONAL FUEL FIVE YEAR LEAK PRONE PIPE REPLACEMENT PLAN

LPP Reduction (Miles)⁽¹⁾	<u>2023</u>	<u>2024</u>	<u>2025</u>	<u>2026</u>	<u>2027</u>
Distribution Mains (< 124 psig)	44	45	46	47	50
Transmission & High Pressure (> 124 psig)	4	7	7	7	7
Total LLP Reduction	48	52	53	54	57
	<u>2023</u>	<u>2024</u>	<u>2025</u>	<u>2026</u>	<u>2027</u>
Capital Expenditures (Million \$'s)⁽²⁾					
Annual Budget	\$34.1	\$37.9	\$38.7	\$39.1	\$45.8

(1) LPP Reduction mileage is on a calendar year basis (twelve-months ended December 31st).

(2) Capital Expenditures are on a fiscal year basis (twelve-months ended September 30th).

14

15

1 The acceleration of the Company’s replacement program is expected to put the
 2 Company on track to eliminate leak-prone bare steel and wrought iron pipelines by 2039,
 3 a pace of replacement that will be 5 years ahead of its current pace and is more consistent
 4 with most Pennsylvania utilities as demonstrated in Table 3 below.

TABLE 3 - PAPUC LONG-TERM INFRASTRUCTURE IMPROVEMENT PLANS

<u>Gas Utility</u>	<u>LTIIIP Filing Date</u>	<u>Replacement Schedule</u>
National Fuel Gas	September 2022	All at-risk pipe by 2039
PECO Energy	August 2022	All at-risk pipe by 2035
Peoples Natural Gas	October 2020	All at-risk pipe by 2034
UGI Utilities	August 2019	Cast iron by 2027; Bare steel by 2038
Columbia Gas	May 2017	Cast iron and bare steel by 2029

5
 6
 7 **Q. Does the Company have a Long-term Infrastructure Improvement Plan (“LTIIIP”)?**

8 A. Yes. The Company filed its first LTIIIP with the PAPUC on September 2, 2022 at docket
 9 number P-2022-3034957.

10 **Q. What is the impact of the Company’s plans to accelerate the replacement and**
 11 **modernization of infrastructure on the projected investment in net plant for the**
 12 **FPFTY?**

13 A. As National Fuel increases the capital expenditures needed to accelerate the miles
 14 replaced under the Company’s leak-prone pipe replacement program, the Company’s
 15 investment in net plant in-service at the end of the Company’s FPFTY is projected to be
 16 \$496 million, a \$56 million increase from the net plant in-service at the end of the HTY.

1 Company witness Mark C. Shaefer’s direct testimony in National Fuel Statement No. 9
2 provides additional details about the Company’s capital expenditure forecast and
3 budgeting process.

4 **2. Operating Cost Inflation**

6 **Q. Present and discuss the trends in the Company’s levels of operating expenses since
7 its last rate case in 2007.**

8 A As presented in the graph below, until recently the Company has generally experienced
9 declining levels of operations and maintenance (“O&M”) expense due mainly to the
10 impact of the wave in employee retirements in the early part of the last decade (where the
11 Company was able to replace retiring employees at a lower cost), as well as lower bad
12 debt expense, prudent management of employee retirement benefits, realization of
13 operational efficiencies, and a focus on cost containment. Over the past 5 years,
14 however, the Company has seen fewer retirements and as a result, began to see the
15 declining trends in O&M expense start to reverse. For the FY ended September 30, 2021,
16 the Company had O&M expenses of \$64.2 million, which is only a \$0.6 million, or 1%,
17 increase over the Company’s O&M expense in 2007. By comparison, the consumer price
18 index had a more than 30% increase over that same period.

Q. Discuss the nature and magnitude of the recent and expected increases in the Company’s operating costs.

A. Like most businesses today, National Fuel has been impacted generally by the inflationary pressures that currently challenge our economy, and in particular, by a challenging labor market that has caused the Company to recently implement significant increases in wages and salaries to retain employees and remain competitive. For the twelve months ended (“TME”) June 30, 2022 (i.e., the HTY), the Company’s normalized O&M expenses were \$61.0 million, which removed the OPEB expenses that were eliminated on October 1, 2021. Adjusting for these OPEB expenses that were included in the FY21 O&M expense, the Company's normalized O&M expenses have increased \$4.3 million, or 7%, in less than a year.

A majority of the increase has been due to higher labor and benefits costs across all aspects of National Fuel’s workforce. Company witness Ms. Valerie Hawthorn

1 discusses the recent compensation measures implemented by the Company in her direct
2 testimony (National Fuel Statement No. 4), including the following significant items:

- 3 • In April and May 2022, the Company renewed its contracts with employees
4 represented by both of its collective bargaining units and agreed to an average
5 increase of 12% and 21% in hourly labor rates, respectively, to remain
6 competitive with market conditions.
- 7 • In May 2022, the Company implemented a 7% average wage adjustment for 102
8 non-union hourly employees at a total annual cost of \$323,000, to remain
9 competitive with market conditions.
- 10 • In April 2022, with the goal of enhancing employee retention, the Company
11 provided upward salary adjustments to 65% of its non-executive supervisory
12 employees at a total annual cost of \$679,400 to better align compensation levels
13 with market benchmarking data and remain competitive with market conditions.
- 14 • In October 2022, the Company implemented an incentive-based Annual Cash
15 Bonus Program, which is intended to provide salaried supervisory employees with
16 an element of compensation not currently offered by National Fuel that is
17 prevalent in the market, and an incentive for employees to work toward the
18 achievement of the Company's business goals and objectives. The total annual
19 cost to the Company in the future test ending June 30, 2023 ("FTY") and the
20 FPFTY is expected to be \$1.0 million and \$1.1 million, respectively.

21 In addition to rising labor and benefits costs, the Company is anticipating
22 inflationary pressures to increase the cost of the materials and services it purchases. The
23 rate of inflation projected for the FPFTY is projected to be 4.36%. The Company is also

1 incurring higher O&M costs related to information technology upgrades and a focus on
 2 cybersecurity measures. In total, the Company projects O&M expense to be
 3 approximately \$71.3 million in the FPFTY, a \$10.3 million increase from the normalized
 4 O&M expense in the HTY.

3. Weather Impacts on Usage

7 **Q. How has customer usage changed since the Company’s last rate case in 2007?**

8 A. The Company’s residential and commercial usage has been significantly impacted by
 9 warmer winters in the Company’s service territory. As noted in Table 4 below, the actual
 10 heating degree days reported by the National Oceanic and Atmospheric Administration
 11 (“NOAA”) for Erie, PA over the last six fiscal years have been warmer than the normal
 12 heating degree days referenced in our last rate case in 2007. The trend of warmer winters
 13 and extreme volatility in heating degree days from year to year has had a significant
 14 impact on the Company’s throughput and revenues.

TABLE 4 - NOAA HEATING DEGREE DAYS - ERIE, PA

TME	Heating Degree Days	Colder / (Warmer) than 2007 ¹
Dec 2007	6,243	Normal ²
Sep 2016	5,187	(17%)
Sep 2017	5,152	(17%)
Sep 2018	5,983	(4%)
Sep 2019	5,943	(5%)
Sep 2020	5,406	(13%)
Sep 2021	5,240	(16%)
FPFTY ³	5,771	(8%)

⁽¹⁾ Percentages represent difference between actual experienced HDD vs. normal HDD used to establish rates in 2007.

⁽²⁾ Normal weather established in 2007 based on 30-year average normal HDD.

⁽³⁾ Twelve months ended July 31st, 2024. HDD are based on 15-year average (2006 - 2020).

Q. How does the Company address the impact of warmer and volatile weather trends on customer usage in this rate filing?

A. The Company is proposing to take two steps to consider and mitigate the adverse impact of warmer weather trends on customer usage:

- First, the Company modified its volumetric forecasting approach to use a 15-year average of heating degree day data published by NOAA as observed at the Erie, Pennsylvania International Airport from 2006 to 2020. Historically, the Company had used a 30-year average for forecasting purposes. However, as recent winters have trended significantly warmer than normal, the Company believes that a 15-year average of annual heating degree days is more indicative of a normal winter in the Company’s service territory. This is consistent with other gas utilities in Pennsylvania. Company witness Gregory D. Harts provides additional details in his direct testimony (National Fuel Statement No. 13).
- Second, the Company is proposing to implement a Weather Normalization Adjustment (“WNA”) mechanism to help insulate the Company’s delivery revenues when actual weather is warmer than normal and protect customers from higher bills when actual weather is colder than normal. Company witness Mr. John D. Taylor will testify in his direct testimony (National Fuel Statement No. 19) to the details of the Company’s WNA mechanism proposal, benefits to ratepayers, and why the mechanism is fair and reasonable for the Company.

1 **Q. Does the Company have experience in implementing a WNA mechanism in its New**
2 **York Division?**

3 A. Yes. The Company has successfully administered a WNA mechanism in its New York
4 Division since 1989. The Company's WNA mechanism proposal in this rate filing is
5 generally consistent with the WNA mechanisms used by other Pennsylvania utilities and
6 similar to the methodology currently used in its New York Division, which will limit
7 programming risk and costs in its customer billing system.

8

9 **V. MANAGEMENT EFFECTIVENESS AND PERFORMANCE**

10 **Q. Why is the Company's record on management effectiveness and performance**
11 **relevant to this rate filing?**

12 A. As I will demonstrate in my testimony to follow, National Fuel has an exceptional record
13 on management effectiveness and performance that provides significant value to our
14 customers in the provision of safe, reliable, and affordable natural gas utility service, and
15 supports why the Company's proposed rate increase is just and reasonable.

16

17 **Q. Identify the key areas where National Fuel's management effectiveness and**
18 **performance record excels and provides added value for customers.**

19 A. I will discuss the following key areas related to National Fuel's management
20 effectiveness and performance:

- 21 • Safety Culture
- 22 • Quality Customer Service
- 23 • Affordability and Operational Efficiencies

- 1 • Universal Services and Customer Payment Assistance
- 2 • Environmental Stewardship
- 3 • Diversity and Inclusion
- 4 • Community Engagement and Impact on Local Economies

5 NFG’s 2021 Corporate Responsibility report provides additional data and disclosure
6 related to the topics identified above. The report is publicly available on National Fuel’s
7 website at <https://www.nationalfuel.com/corporate/our-guiding-principles/>.

8
9 **Q. Discuss the initiatives and performance related to National Fuel’s Safety Culture.**

10 A. National Fuel’s highest priority is safety. As the Company recognizes in its Guiding
11 Principles, “We value all of our customers, employees and communities, and work
12 diligently to establish a culture of safety that is embraced throughout the entire
13 organization.” To that end, National Fuel has a long-standing culture of safety that
14 encourages continuous improvement of our safety performance, with demonstrated
15 success in the following areas:

16 **Gas System Modernization & Integrity:** Since 1990, National Fuel has made
17 significant progress in the modernization of its system and the replacement of leak-prone
18 pipe, with particular emphasis on removing cast iron mains. Today, the Company has no
19 cast iron mains in its Pennsylvania service territory. Going forward, as noted previously
20 in my testimony, the Company plans to accelerate its pipeline replacement program so
21 that all remaining bare steel and wrought-iron mains and transmission lines will be
22 removed by 2039.

1 The Company continues to be focused on finding and repairing the number of
2 leaks on its system. The number of outstanding leaks at year end and the number of leaks
3 discovered during the year continues to trend lower. As shown in Chart 5 below, the
4 number of leaks outstanding at the end of FY21 was reduced by more than 50%. The
5 Company’s goal is to have a working leak backlog by 2025.

6
7 Damage prevention is also a priority for National Fuel. The Company dedicates
8 significant resources to educate and train contractors, customers, and the public on the
9 importance of damage prevention and safe excavation practices and ensure that the
10 Company’s facilities are properly marked before excavation begins. As shown in Chart 6
11 below, the Company’s damages have improved significantly over the past 5 years.

1

2

Customer Safety: National Fuel continues to educate and build awareness with its customers, so they know what to do if they smell gas in their homes. We also work with local first responders to provide the appropriate gas emergency training. When emergencies occur, the Company places a high priority on having a rapid response and conducting a thorough investigation once we arrive onsite. As shown in Chart 7 below, the Company’s average emergency response time is less than 45 minutes more than 99% of the time, which is exceptional given the rural nature of National Fuel’s service territory.

3

4

5

6

7

8

9

10

1 **Employee Safety:** With safety as our core guiding principle, it is imperative that every
2 employee and contractor return home safely each day. To that end, National Fuel has
3 implemented training and education initiatives, including its “Safe 4 the Right Reasons”
4 safety culture program, to promote safe behaviors at every job site. The Company’s
5 safety focus has yielded tremendous results. In 2021, NFG’s consolidated operations
6 reported the lowest Occupational Safety and Health Administration (“OSHA”)
7 Recordable Incident Rate and OSHA Days Away, Restricted or Transferred Rate in its
8 history.

9
10 Company witness Mr. Jason Scouten’s direct testimony (National Fuel Statement No. 16)
11 provides additional detail on the National Fuel’s safety culture and our efforts to improve
12 our safety performance across the Company.

13
14 **Q. Discuss the initiatives and management’s performance related to National Fuel’s**
15 **Quality Customer Service.**

16 A. National Fuel strives to deliver quality service that our customers expect and deserve. As
17 a result of this customer driven approach, National Fuel continues to achieve high levels
18 of customer satisfaction and rate favorably relative to its natural gas utility peers in
19 Pennsylvania. Based on the Company’s internal surveys of residential and commercial
20 customers presented in Chart 8 below, National Fuel has consistently achieved
21 satisfaction levels above 90% over the last 3 FYs.

1
2
3
4
5
6
7
8
9

Information published in the Commission’s 2021 Customer Service Performance Report in September 2022 also support the quality of National Fuel’s customer service. In 2021, National Fuel scored at or above the Pennsylvania state average for natural gas distribution companies in a majority of the report’s satisfaction survey categories, including highest in satisfaction with ease of reaching the Company and highest overall satisfaction with a natural gas distribution company contact, as demonstrated in Chart 9 below:

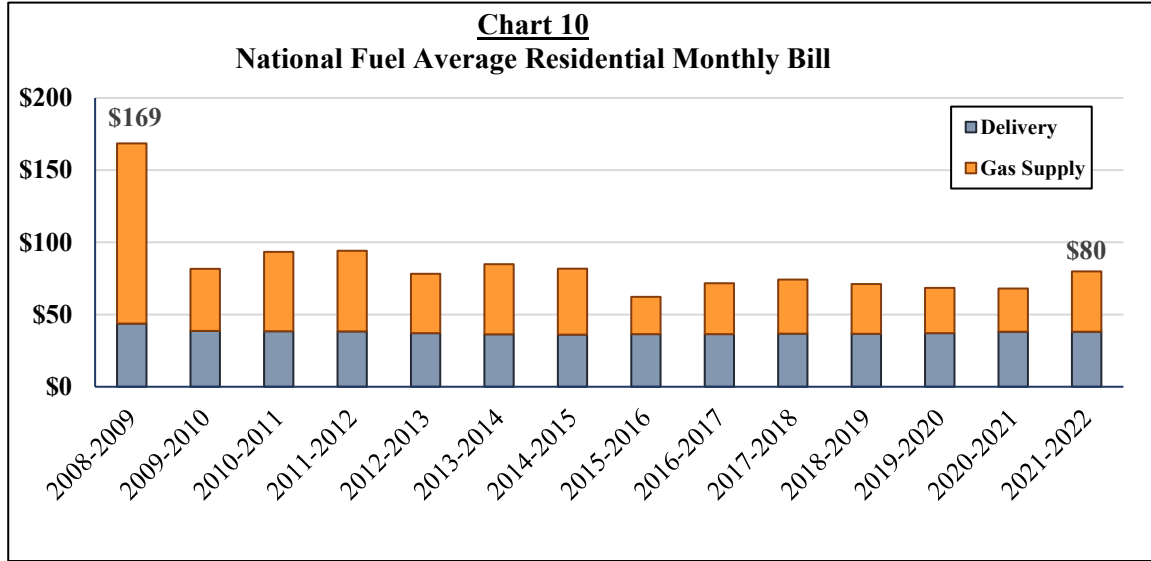

1 One of the primary reasons for the Company's strong performance is that it
2 operates its own dedicated call center located in Erie, Pennsylvania; the Company does
3 not employ an automated voice system to handle customer service calls. As a result,
4 customers receive prompt attention and service from a National Fuel employee that lives
5 in, and is familiar with, the service territory, which has helped lead to a positive
6 experience for our customers and limit the number of customer complaints. The
7 Commission's last Utility Consumer Activities Report and Evaluation report published in
8 December 2020 found that National Fuel's residential customer justified complaint rates
9 were lower than the Pennsylvania state average for major natural gas distribution
10 companies during the years of 2017, 2018 and 2019.

11
12 **Q. Discuss the initiatives and management's performance related to National Fuel's**
13 **Affordability and Operational Efficiencies.**

14 A. As I presented earlier in my testimony, National Fuel currently has the lowest total bills
15 and delivery rates in the Commonwealth amongst large natural gas utilities. Additionally,
16 according to the most recent data reported by the EIA for calendar 2020, the Company's
17 Pennsylvania residential customers enjoy the third lowest rates in the northeast U.S. As
18 shown in Chart 10 below, National Fuel's customers have benefited from consistently
19 low delivery rates for more than a decade while benefiting from access to the cheap
20 natural gas supplies produced in Pennsylvania. Even with the proposed rate increase, the
21 Company anticipates that it will continue to lead its Pennsylvania natural gas peers in
22 affordability.

1

2

3

4

5

6

7

8

9

10

11

12

13

14

15

16

National Fuel’s focus on cost control, productivity, and ability to optimize operational efficiencies is a major driver of the Company’s ability to keep its delivery rates low. As Company witness Mr. Anthony Formato presents in his direct testimony (National Fuel Statement No. 3), the Company is able to efficiently utilize shared back-office departments, such as Accounting and Finance, Human Resources, Purchasing and Procurement, and Engineering, with employees that provide services and spread costs across multiple affiliated companies. The Company can also deploy and utilize field employees more efficiently, leveraging its overlapping operational footprint with NFG Supply to share resources to meet day to day needs of maintaining our infrastructure and serving our customers.

As a result of the synergies created by NFG’s integrated structure, the Company is able to operate the business at a much lower cost than if it was a standalone utility. As demonstrated in Chart 11 below, National Fuel has the lowest rate base per customer in the Commonwealth.

Chart 11
Rate Base per Customer

¹ Peer customer amounts sourced from the 2021 PAPUC Annual Reports.

² Peer rate base sourced from 2021 Q4 Quarterly Earnings Report submissions. For utilities in base rate proceedings during the period, rate base was sourced from company exhibits provided in its rate proceeding.

1
2 National Fuel also has lower O&M expense per customer than most gas utilities
3 in Pennsylvania, as shown in Chart 12 below. National Fuel's O&M expense per
4 customer below does not factor in the reduction in OPEB expense implemented in
5 October 2021.

Chart 12
O&M per Customer

¹ Peer customer amounts sourced from the 2021 PAPUC Annual Reports.

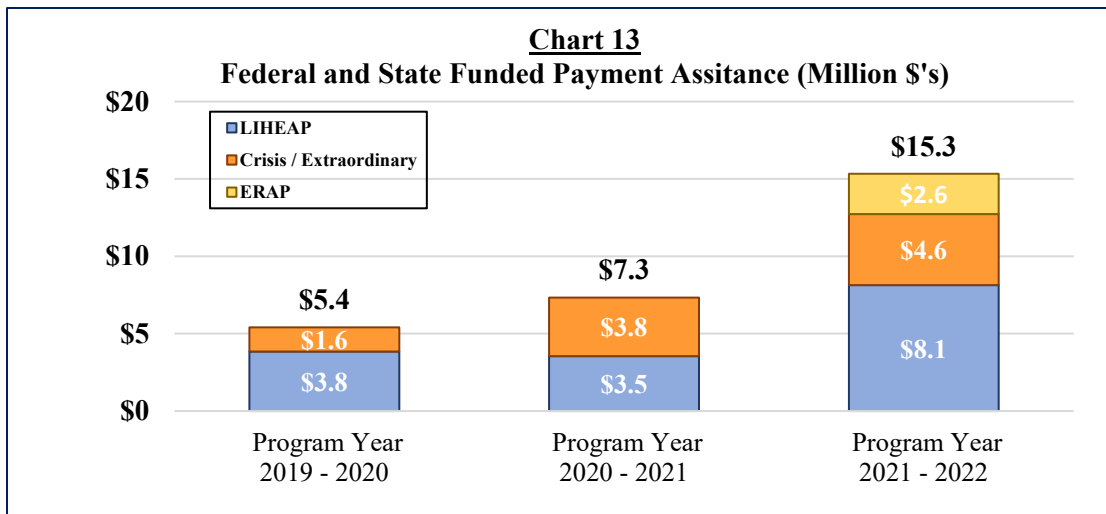

² Peer O&M sourced from 2021 Q4 Quarterly Earnings Report submissions. For utilities in base rate proceedings during the period, O&M was sourced from company exhibits provided in its rate proceeding.

³ People's Natural Gas could not be included due to no comparable data being available.

1 **Q. Discuss the initiatives and management’s performance related to National Fuel’s**
2 **Customer Assistance Programs.**

3 A. National Fuel continues to be attentive to meeting the needs of its low-income customers
4 through its customer assistance programs. In her direct testimony (National Fuel
5 Statement No. 17), Company witness Ms. Elma Bico explains the Company’s Low-
6 Income Residential Assistance (LIRA) program, Low-Income Usage Reduction Program
7 (LIURP), as well as the Company’s diligent efforts to connect its low-income and
8 payment troubled customers with all available forms of assistance (e.g., LIHEAP). The
9 Company’s efforts were particularly important during the COVID-19 pandemic when a
10 number of federal and state programs made funding available for customers that were
11 adversely impacted financially by the pandemic and carrying large arrearage balances. As
12 demonstrated in Chart 13 below, the amount of LIHEAP and pandemic-related payment
13 assistance received by National Fuel customers nearly tripled in the 2021-2022 program
14 year from levels in the 2019-2020 program year.

1 **Q. Discuss the initiatives and management’s performance related to National Fuel’s**
2 **Environmental Stewardship.**

3 A. One of National Fuel’s six guiding principles is Environmental Stewardship, which
4 reflects the Company’s understanding of the vital role that it plays in upholding standards
5 of environmental protection. As a result, the Company is focused on limiting its
6 environmental footprint and, in particular, reducing greenhouse gas emissions. In 2021,
7 NFGDC announced greenhouse gas emissions reduction goals, targeting to reduce its
8 EPA Subpart W emissions, which is primarily methane, 75% by 2030 and 90% by 2050
9 when compared to 1990 levels. In addition to these targets, NFGDC and NFG’s other
10 businesses announced targets to reduce methane intensity and total greenhouse gas
11 emissions by 2030 using 2020 as a baseline. National Fuel recognizes that limiting
12 methane emissions is a critical issue for the natural gas industry and one that must be
13 addressed to ensure that customers across the Commonwealth can continue to realize the
14 benefits of natural gas as a cheap and reliable energy source.

15 As demonstrated in the Chart 14 below, the Company has already made
16 significant progress on its methane targets. Through 2020, NFGDC has reduced its EPA
17 Subpart W emissions by 64% compared to 1990 levels, driven largely by the Company’s
18 systematic leak-prone pipe replacement program. The Company’s plans to accelerate its
19 leak-prone pipeline replacement program will have the dual benefit of enhancing safety
20 and system integrity while continuing to reduce leaks and methane emissions from
21 National Fuel’s delivery system.

9
10
11
12
13

National Fuel is also committed to helping its customers reduce their own GHG emissions by encouraging customers to conserve and use natural gas more efficiency. To that end, the Company is proposing in this rate filing to implement a three-year Energy Efficiency (“EE”) pilot program that incentivizes residential customers to install high efficiency appliances for space and water heating. In his direct testimony (National Fuel Statement No. 18), Company witness Mr. Erik Solomon provides details of the EE pilot program, including costs and benefits to ratepayers, anticipated program participation, and projected savings and GHG emissions reductions. National Fuel is projecting the EE pilot program to cost approximately \$1.25 million per year, which will be recovered through a separate reconcilable rider from residential customers only.

1 **Q. Discuss the initiatives and management’s performance related to National Fuel’s**
2 **Diversity and Inclusion.**

3 A. National Fuel is committed to hiring and developing qualified individuals who can
4 enhance and contribute to the diversity of our workforce and reflect the communities that
5 we serve. As a result, National Fuel developed and instituted a number of initiatives
6 aimed at creating a more diverse and inclusive organization. These initiatives include the
7 creation of the Company’s first Director of Diversity and Inclusion, and the roll-out of
8 diversity and inclusion training across the organization. In 2022, the Company created
9 and launched four different employee resource groups, which are voluntary, employee-
10 led groups made up of individuals who work together based on common interest,
11 backgrounds and/or demographic factors to strengthen our culture of inclusion.

12 In an effort to maintain transparency and accountability on our progress, National
13 Fuel tracks and reports diversity indicators, including workforce and vendor diversity, in
14 its annual Corporate Responsibility Report. Additionally, in 2021, the Company adopted
15 specific diversity and inclusion goals for each executive officer and included
16 achievement of the goals as part of the Company’s at-risk executive incentive
17 compensation plan.

18
19 **Q. Discuss the initiatives and management’s performance related to National Fuel’s**
20 **Community Engagement and Impact on Local Economies.**

21 A. In 2021, NFG, the National Fuel Gas Company Foundation (“Foundation”), and our
22 employees supported the communities where we live and work by donating more than
23 \$1.8 million. The Foundation’s Employee Charitable Giving program aligns a large

1 portion of National Fuel’s charitable support with the wishes and generosity of our
2 employees. Through this gift program, the Foundation matches employee donations
3 dollar for dollar up to \$750 a year to the employee chosen nonprofits. In addition, the
4 Company’s “Faces of Fuel” volunteer program provides opportunities for employees to
5 volunteer and participate in philanthropic efforts in our local communities.

6 In addition to philanthropic endeavors, National Fuel, and NFG as a whole
7 continues to have a significant impact on the local economies of the communities we
8 serve. A large majority of NFG’s operations and economic activity occur in
9 Pennsylvania. Seneca is currently the 7th largest producer of natural gas in the
10 Commonwealth. Meanwhile, for more than a decade, NFG Midstream has built new
11 gathering systems to move new production to the interstate pipeline system and NFG
12 Supply and Empire have expanded their own interstate pipeline systems to provide an
13 outlet for low-cost natural gas production to reach demand centers, including utility
14 customers in Pennsylvania and the Northeast U.S. Over the last 10 years, the subsidiaries
15 of NFG, including National Fuel’s Pennsylvania Division, have collectively invested
16 approximately \$7 billion across the value chain to develop and expand the natural gas
17 industry, with most of the dollars spent in Pennsylvania supporting local jobs and
18 economies, providing state and local taxes and impact fees, and supplying an inexpensive
19 and reliable source of energy for families and businesses across the Commonwealth.

1 **Q. How does the Company propose that its exceptional management effectiveness and**
2 **performance record be considered in this rate filing.**

3 A. As my testimony demonstrates above, National Fuel is a leader and sets the bar in many
4 of the areas and metrics that indicate exceptional management effectiveness and
5 performance. National Fuel’s management effectiveness and performance provides
6 significant value to its customers and the communities we serve, namely through the
7 provision of safe and reliable natural gas service with quality customer care at the most
8 affordable rates in the Commonwealth. As a result, the Company is requesting in this rate
9 filing that an additional 25 basis points be included in the recommended rate of return on
10 common equity to reflect the value of National Fuel’s management effectiveness and
11 performance record. Mr. Paul Moul, the Company’s rate of return expert, includes and
12 provides further discussion on the 25-basis point adjustment in his direct testimony
13 (National Fuel Statement No. 10).

14
15 **VI. INTRODUCTION OF COMPANY WITNESSES**

16 **Q. Please identify and introduce the other witnesses providing direct testimony on**
17 **behalf of National Fuel in this proceeding and the subject matter of their testimony.**

18 A. In addition to my testimony, the following witnesses are providing testimony in support
19 of the Company’s rate request:

20
21 **Donald N. Koch** (National Fuel Statement No. 2) is a Rate Analyst III in National Fuel’s
22 Rates and Regulatory Affairs department. Mr. Koch will present the Company’s revenue
23 requirement model supporting the Company’s proposed rate increase (National Fuel

1 Exhibit A (Fully Projected)). Mr. Koch also sponsors the revenue requirement models for
2 the HTY and FTY periods.

3
4 **Anthony T. Formato** (National Fuel Statement No. 3) is a Manager of Finance at
5 National Fuel. Mr. Formato will provide testimony related to the O&M expense
6 projections included in the Company's proposed revenue requirement, with the exception
7 of employee benefits. Mr. Formato will explain in his testimony the inflationary
8 pressures that the Company has experienced with labor and other operating costs, which
9 is expected to persist through the FPFTY. Mr. Formato will also explain the Company's
10 O&M budgeting process and detail the adjustments made to O&M expense for the HTY,
11 FTY, and FPFTY periods.

12
13 **Valerie L. Hawthorn** (National Fuel Statement No. 4) is the General Manager of Human
14 Resources for National Fuel. Ms. Hawthorn's testimony will discuss National Fuel's
15 staffing and compensation programs, including initiatives designed to address employee
16 recruitment and retention challenges, and remain competitive with the current job market.
17 Ms. Hawthorn will note that these initiatives, which are critical to maintain a safe system
18 and quality customer service, have and are projected to result in higher labor costs for the
19 Company.

20
21 **Michael P. Weidner** (National Fuel Statement No. 5) is the Assistant General Manager
22 of Human Resources for National Fuel. Mr. Weidner's testimony will discuss the nature

1 and costs of the Company’s employee benefits package, including costs relating to
2 retirement and medical benefits anticipated in the FPFTY.

3
4 **Tracy L. Wesoloski** (National Fuel Statement No. 6) is an Assistant Manager in National
5 Fuel’s Rates and Regulatory Affairs department. Ms. Wesoloski’s testimony will discuss
6 and sponsor the schedules supporting the Company’s projected net plant balances and
7 rate base for the HTY, FTY, and FPFTY. Ms. Wesoloski will also support the
8 Company’s cash working capital requirement included in rate base employing a lead-lag
9 study on the Company’s revenues and expenses.

10
11 **Karen Lynn Metzger** (National Fuel Statement No. 7) is an Assistant Manager in
12 National Fuel’s Accounting department. Ms. Metzger’s testimony will discuss the
13 Company’s accounting process and sponsor exhibits and requirements that support the
14 financial results for the HTY.

15
16 **John J. Spanos** (National Fuel Statement No. 8) is President of the firm of Gannett
17 Fleming Valuation and Rate Consultants, LLC (“Gannett Fleming”). Mr. Spanos
18 developed and supports National Fuel’s claim for annual depreciation expense, the
19 accumulated depreciation reserve, and the recovery of negative net salvage. His studies
20 are presented in National Fuel Exhibit C (HTY), National Fuel Exhibit C (FTY), and
21 National Fuel Exhibit C (FPFTY).

1 **Mark C. Schaefer** (National Fuel Statement No. 9) is an Assistant General Manager in
2 National Fuel’s Engineering department. Mr. Schaefer’s testimony supports the
3 Company’s capital budgeting process and the projected capital additions to utility plant
4 during the FTY and FPFTY periods. Mr. Schaefer will discuss the Company’s LPP
5 Systematic Replacement Program and plans to accelerate its replacement activities over
6 the next 5 years. Finally, Mr. Schaefer will outline the Company’s efforts to reduce leaks
7 across the system, which has resulted in gas safety and environmental benefits.

8
9 **Paul R. Moul** (National Fuel Statement No. 10) is the Managing Consultant of P. Moul
10 & Associates. Mr. Moul presents expert testimony supporting the Company’s claimed
11 capital structure, cost of common equity and overall rate of return, as well as
12 supplementing Ms. Buffington’s testimony on cost of debt in National Fuel Statement
13 No. 11). Schedules and workpapers supporting Mr. Moul’s findings are presented in
14 National Fuel Exhibit B (Rate of Return).

15
16 **Shannon M. Buffington** (National Fuel Statement No. 11) is a Manager in National
17 Fuel’s Finance department. Ms. Buffington’s testimony discusses the Company’s
18 approach to financing, reviews the financial information provided to Mr. Moul that
19 supports the Company’s claimed capital structure, and presents information that supports
20 the Company’s claimed cost of debt.

21
22 **James A. Rizzo** (National Fuel Statement No. 12) is in the role of Vice President
23 responsible for National Fuel’s Tax, Purchasing and Accounts Payable Departments. Mr.

1 Rizzo's testimony supports the Company's claims for federal and state income tax
2 expense and the accumulated deferred income taxes included as an offset to rate base in
3 the HTY, FTY and FPFTY periods. Mr. Rizzo's testimony also explains the tax
4 adjustments included in the aforementioned periods.

5
6 **Gregory D. Harts** (National Fuel Statement No. 13) is a Rate Analyst III in National
7 Fuel's Rates and Regulatory Affairs department. Mr. Harts's testimony discusses the
8 Company's volumetric demand forecasting process and provides schedules that support
9 the Company's customer count and retail and transportation throughput forecast for the
10 FTY and FPFTY periods.

11
12 **Jeremy R. Barber** (National Fuel Statement No. 14) is an Assistant Manager in National
13 Fuel's Rates and Regulatory Affairs Department. Mr. Barber's testimony and exhibits
14 support the development of the revenue forecast at current and proposed rates for the
15 FTY and FPFTY periods, as well as the normalized revenues at current and proposed
16 rates for the HTY period.

17
18 **Janine M. Ward** (National Fuel Statement No. 15) is a Senior Manager in the
19 Company's Rates and Regulatory Affairs department. Ms. Ward's testimony explains and
20 supports significant revisions to the Company's tariff.

21
22 **Jason Scouten** (National Fuel Statement No. 16) is the Superintendent of National Fuel's
23 Pennsylvania Operations department. Mr. Scouten's testimony will provide an overview

1 of National Fuel's natural gas distribution system in Pennsylvania, discuss the
2 Company's operations and construction activities, and support the Company's numerous
3 programs and initiatives aimed at promoting and enhancing customer and employee
4 safety, damage prevention, emergency response, leak management, service reliability.

5
6 **Elma Bico** (National Fuel Statement No. 17) is a Manager in National Fuel's Consumer
7 Business department. Ms. Bico's testimony will discuss the Company's customer
8 assistance activities and initiatives, including those related to Universal Services
9 Programs.

10
11 **Erik M. Solomon** (National Fuel Statement No. 18) is the Area Manager of National
12 Fuel's Energy Services department. Mr. Solomon's testimony supports the Company's
13 proposals to implement the EE pilot program and a Gas Expansion pilot. Mr. Solomon
14 will also discuss the Company's competitive position, including by-pass threats, and the
15 Company's research, development and demonstration activities.

16
17 **John D. Taylor** (National Fuel Statement No. 19) is the Managing Partner of Atrium
18 Economics LLC. Mr. Taylor's testimony supports the development and provides the
19 results of the cost of service study that allocates the Company's gas distribution costs to
20 its rate classes, class revenue increase apportionment, and proposed rate design.

21 Additionally, Mr. Taylor's testimony supports the Company's proposal to implement a
22 WNA mechanism.

23

1 Q. Does this conclude your direct testimony at this time?

2 A. Yes.

NATIONAL FUEL STATEMENT NO. 2

DONALD N. KOCH

**BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION**

Docket No. R-2022-3035730

**National Fuel Gas Distribution Corporation
Pennsylvania Division**

Statement No. 2

**Direct Testimony of
Donald N. Koch**

**Topics Addressed: Revenue Requirement
 Operating Revenues and Expenses
 Tariff Riders**

Dated: October 28, 2022

1 **I. INTRODUCTION AND QUALIFICATIONS**

2 **Q. Please state your name and business address.**

3 A. My name is Donald N. Koch. My business address is 6363 Main Street, Williamsville,
4 NY 14421.

5
6 **Q. By whom and in what capacity are you employed?**

7 A. I am employed by National Fuel Gas Distribution Corporation (“National Fuel” or the
8 “Company”) as a Rate Analyst III in the Rates and Regulatory Affairs Department.

9
10 **Q. Please provide your educational background.**

11 A. I received a Bachelor of Science Degree in Business Administration from SUNY
12 Geneseo in May 2004. I received a Masters of Business Administration with a
13 specialization in Accounting/Finance from St. Bonaventure University in December
14 2009.

15
16 **Q. Please provide your professional experience.**

17 A. Prior to joining National Fuel, I worked in banking for 11 years at M&T Bank
18 specializing in various compliance and financial roles. In June 2015, I was hired by the
19 Company as a Rate Analyst II in the Rates and Regulatory Affairs Department. In
20 February 2020, I was promoted to my current position of Rate Analyst III.

1 **Q. Have you previously testified in other proceedings before the Pennsylvania Public**
2 **Utility Commission (“PAPUC” or the “Commission”) or any other state or federal**
3 **agency?**

4 A. Yes, I have testified before this Commission on behalf of National Fuel in numerous
5 Section 1307(f) Purchased Gas Cost (“PGC”) proceedings. I also have testified in the
6 Other Post Employment Benefit (“OPEB”) refund case (Docket R-2021-3027406). I
7 have testified before the New York State Public Service Commission (“NYPSC”) on
8 behalf of National Fuel’s New York Division in a Base Rate Case proceeding (Docket
9 16-G-0257). My testimony in that case before the NYPSC covered net plant and rate
10 base.

11
12 **II. PURPOSE OF TESTIMONY**

13 **Q. Please describe the purpose of your testimony.**

14 A. The purpose of my testimony is to present the Company’s proposed revenue requirement
15 based on the twelve months (ending July 31, 2024) of operating costs and revenues, as
16 adjusted. First, I provide an overview of the Company’s primary accounting exhibits for
17 the historic test year ended June 30, 2022 (“HTY”), the future test year ending June 30,
18 2023 (“FTY”), and the fully projected future test year ending July 31, 2024 (“FPFTY”).
19 Second, I describe the Company’s ratemaking presentation for the FPFTY and certain
20 *pro forma* adjustments. Finally, I discuss certain proposed or modified tariff rate riders.

21
22 **Q. Are you sponsoring any exhibits or filing requirements in this proceeding?**

1 I am sponsoring National Fuel Exhibit A (FPFTY), National Fuel Exhibit A (FTY), and
2 National Fuel Exhibit A (HTY). National Fuel Exhibit A is further supported by
3 additional Company witnesses, which include:

- 4 • Anthony Formato (National Fuel Statement No. 3), addressing operating
5 and maintenance (“O&M”) expenses;
- 6 • Tracy Wesoloski (National Fuel Statement No. 6), addressing the
7 Company’s rate base;
- 8 • Paul R. Moul (National Fuel Statement No. 10), addressing fair rate of
9 return;
- 10 • James A. Rizzo (National Fuel Statement No. 12), addressing taxes; and
11 • Jeremy R. Barber (National Fuel Statement No. 14), addressing operating
12 revenues.

13 I am also sponsoring National Fuel Exhibit DNK-1 (Rider Calculations) and
14 National Fuel Exhibit DNK-2 (Inflation Adjustment).

15
16 **III. OVERVIEW OF PRIMARY ACCOUNTING EXHIBIT**

17 **Q. Please describe the primary accounting exhibits used to support National Fuel’s**
18 **claims in this proceeding.**

19 A. National Fuel Exhibit A (FPFTY) demonstrates the Company’s revenue requirement for
20 the FPFTY ending July 31, 2024. National Fuel Exhibit A includes primary accounting
21 exhibits, rate base claims, O&M expenses, taxes and *pro forma* adjustments. National
22 Fuel Exhibit A (FTY) provides the same information, for the FTY ending June 30, 2023.
23 National Fuel Exhibit A (HTY) provides the per book information for the HTY ending
24 June 30, 2022, with ratemaking and certain *pro forma* adjustments.

25
26 **Q. Please further describe the primary accounting exhibits used to support National**
27 **Fuel’s claims in this proceeding.**

1 A. National Fuel Exhibit A for all test periods is separated into several sections. Section A
2 provides the income statement, or measure of value at present rates and at proposed rates,
3 which includes the proposed revenue requirement. Section B includes basic accounting
4 exhibits, rate of return, and cost of debt exhibits. Section C includes exhibits that provide
5 for net plant in service, rate base, and various exhibits utilized by the Company in its lead
6 lag study. Section D details *pro forma* revenue and expense adjustments including rate
7 making tax calculations. National Fuel Exhibit A is intended to aid in compliance with
8 all Commission filing requirement regulations.

9

10 **Q. How was the data sourced for the National Fuel Exhibit A primary accounting**
11 **exhibits?**

12 A. The HTY per book data was sourced from the books and records of the Company.
13 Annualizations or ratemaking adjustments were then applied to the per book data. For
14 the projected periods of the FTY and FPFTY, Company witnesses prepared various
15 analyses and projections based upon Company budgets, ratemaking adjustments, and
16 other Company specific practices. Please refer to the index of Direct Testimony for a
17 listing of specific Company witnesses and areas of expertise covered. Descriptions and
18 further detail can be found in the Direct Testimony of each witness.

19

20 **IV. REVENUE REQUIREMENT FOR THE FULLY PROJECTED FUTURE TEST**

21 **YEAR**

22 **Q. How was the revenue requirement for the FPFTY established?**

1 A. The summary level revenue requirement is presented on Schedule A-1, column 4 within
2 National Fuel Exhibit A (FPFTY). Column 3, Lines 1 – 9 summarize total rate base.
3 Column 3, Lines 10 – 19 summarize operating revenues. Finally, column 3, lines 20 – 27
4 present the requested revenue increase.

5
6 **Q. What is the overall requested revenue increase?**

7 A. Revenue Requirement is the total allowable revenues—the sum of current revenues and
8 the increase. The overall requested revenue increase is \$28.1 million. This amount
9 represents a 24.4% increase on delivery revenues and an 9.2% increase on total revenues,
10 exclusive of Rider I, OPEB surcredit. Additionally, the requested revenue requirement is
11 the Company’s first requested delivery increase since 2006.

12
13 **Q. How were revenues at present rates determined?**

14 A. Revenue calculations were prepared by or under the supervision of Jeremy R. Barber.
15 Please refer to the direct testimony of Jeremy R. Barber, National Fuel Statement No. 14
16 for a discussion of revenue forecast and calculations.

17
18 **Q. Please describe the O&M expense claims presented.**

19 A. O&M expense projections were prepared by or under the supervision of Anthony
20 Formato. Please refer to the direct testimony of Anthony Formato, National Fuel
21 Statement No. 3 for a discussion of O&M expense projections and calculations.

22
23 **Q. Does the Company budget O&M expense by FERC account?**

1 A. No. The Company does not budget O&M expenses by FERC account. The Company
2 budgets by budget item, or cost element.

3

4 **Q. Did the Company present O&M Expense by FERC account in National Fuel**
5 **Exhibit A?**

6 A. Yes. The Company presented O&M Expense in National Fuel Exhibit A by FERC
7 account for all three test periods. The Company used historic data as a basis for
8 allocation to FERC accounts for the FTY and FPFTY periods by developing a percentage
9 of each FERC account contained in each cost element. That percentage was then applied
10 to the projected amount for each cost element to derive a FERC account balance.

11

12 **Q. How were the Company's rate base items determined?**

13 A. Rate base projections were prepared by or under the supervision of Tracy Wesoloski.
14 Please refer to the direct testimony of Tracy Wesoloski, National Fuel Statement No. 6
15 for a complete discussion on rate base projections and calculations.

16

17 **Q. Please summarize the adjustments shown in Schedule D of National Fuel Exhibit A.**

18 A. Schedule D of National Fuel Exhibit A consists of the following schedules:

- 19
- 20 • Schedule D-1: Summary of Revenues and Expenses with proposed revenue increase.
 - 21 • Schedule D-2: Summary of Pro Forma Revenues and Expenses with proposed revenue increase.
 - 22 • Schedule D-3: Summary of Pro Forma Adjustments
 - 23 • Schedule D-4: N/A to FPFTY
 - 24 • Schedule D-5: Revenue Summary
 - 25 • Schedule D-6: Rate Case Expense
 - 26 • Schedule D-7: Uncollectible Expense
 - 27

- 1 • Schedule D-8: Depreciation Expense
- 2 • Schedule D-9: OTAX Summary
- 3 • Schedule D-10: Payroll Tax Adjustment
- 4 • Schedule D-11: Income Tax Calculation
- 5 • Schedule D-12: Tax Depreciation
- 6 • Schedule D-13: Gross Revenue Conversion Factor
- 7 • Schedule D-14: Kaylor Gas Regulatory Asset 3 Year Amortization

8

9

V. TARIFF RATE RIDERS

10 **Q. Is the Company proposing any new Tariff Rate Riders in this proceeding?**

11 A. Yes. The Company is proposing two new Tariff Rate Riders in this proceeding. A
12 Weather Normalization Adjustment (“WNA”) and Energy Efficiency (“EE”) pilot
13 program Rider.

14

15 **Q. What is the purpose of the WNA rider?**

16 A. The WNA rider is designed to stabilize distribution revenue from weather variability.
17 For a full discussion of the WNA, please refer to the Direct Testimony of John Taylor,
18 National Fuel Statement No. 19.

19

20 **Q. What is the purpose of the EE rider?**

21 A. The Company is proposing in this proceeding an EE pilot program. The EE rider is
22 designed to collect costs associated with this program. For more information on the EE
23 pilot program, please refer to the Direct Testimony of Erik Solomon, National Fuel
24 Statement No. 18 and National Fuel Exhibit DNK-1, Schedule 2 for projected rate
25 calculation applicable to the Residential customer class.

26

1 **Q. Is the Company proposing to modify or reset any current rate mechanisms or**
2 **riders?**

3 A. Yes. The Company is presenting changes to its State Tax Adjustment Surcharge
4 (“STAS”), Gas Procurement Charge (“GPC”), Merchant Function Uncollectable
5 Percentage (“MFC %”) and LIRA – Rider F. Additional Tariff changes and rate changes
6 will be further discussed in the Direct Testimony of Janine Ward, National Fuel
7 Statement No. 15.

8

9 **Q. What is the purpose of the STAS?**

10 A. The purpose of the STAS is to capture any state tax rate changes that affect tax expenses
11 compared to revenues being collected from customers.

12

13 **Q. What changes is the Company proposing to the STAS?**

14 A. The Company is resetting the STAS to 0.00% to reflect the level of state taxes included
15 in the FPFTY. The Company is also proposing to remove gas cost revenues from the
16 calculation of the STAS.

17

18 **Q. Why is the Company proposing to remove gas costs from the STAS calculation?**

19 A. The Company is not aware of any other gas utilities utilizing gas cost revenues in the
20 calculation of their STAS. Gas costs are a pass-through cost item and not subject to the
21 type of revenue-related taxes intended for the STAS mechanism. Including gas cost
22 revenues in the calculation is unduly burdensome as it requires the Company to

1 recompute the STAS on a quarterly basis with its PGC filings. This is in addition to the
2 annual filing and any time a tax rate changes, filing requirement.

3
4 **Q. What is the purpose of the GPC?**

5 A. The GPC recovers costs associated with gas procurement that were unbundled from base
6 rates.

7
8 **Q. What is the Company proposing in regard to the GPC?**

9 A. The Company can only update the GPC in a base rate proceeding. Therefore, the
10 Company has completed an analysis to update the GPC rate. The Company proposes to
11 update the GPC rate to \$0.1149/Mcf. Please refer to National Fuel Exhibit DNK-1,
12 Schedule 1 for the supporting calculation example.

13
14 **Q. What is the purpose of the MFC %?**

15 A. The purpose of the MFC % is the fixed percentage of gas costs that are expected to be
16 uncollectible.

17
18 **Q. What is the Company proposing in regard to the MFC %?**

19 A. The Company is proposing to update the MFC Uncollectible % to 2.6879% for
20 Residential and to 0.5097% for Non-Residential classes. Please refer to National Fuel
21 Exhibit DNK-1, Schedule 3 for further detail.

22
23 **Q. What is the purpose of Rider F – LIRA?**

1 A. The purpose of Rider F – LIRA is to collect costs associated with the Company’s current
2 low-income residential assistance program (“LIRA”).

3

4 **Q. What is the Company proposing in regard to Rider F – LIRA?**

5 A. Currently there is a portion of LIRA costs embedded in base rates for arrearage
6 forgiveness and administrative program costs. The Company proposes to remove these
7 program elements from base rates and collect all universal service costs through Rider F.
8 The amount in Rider F would be set at the projected twelve-month ending total ending
9 September 30.

10

11 **Q. Has the Company adjusted its revenue requirement to reflect the expenses
12 associated with these Rider F Components?**

13 A. Yes. The Company has reduced the revenue requirement in the amount of \$379,127 to
14 Uncollectible Expense to account for arrearage forgiveness amounts associated with
15 LIRA customers. In addition, \$26,551 has also been removed to account for various
16 LIRA administrative program costs. These amounts will be included in the current Rider
17 F rate calculation. Please refer to National Fuel Exhibit ATF-2 for supporting O&M
18 detail.

19

20 **Q. Are there any additional adjustments to the revenue requirement for any expenses
21 associated the LIRA discount program?**

22 A. Yes, in the FPFTY, \$347,000 has been included in the cost element of Outside Services
23 to account for the prorated amount of IT contractors assisting with the implementation of

1 the Company's transition from the LIRA discount program to a percentage of income-
2 based program. Please refer to National Fuel Exhibit ATF-2 for supporting O&M detail.

3

4 **Q. Does this conclude your direct testimony at this time?**

5 A. Yes.

NATIONAL FUEL STATEMENT NO. 3

ANTHONY T. FORMATO

**BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION**

Docket No. R-2022-3035730

**National Fuel Gas Distribution Corporation
Pennsylvania Division**

Statement No. 3

Direct Testimony of Anthony Formato

Topics Addressed: O&M Expense & Budget Process

Dated: October 28, 2022

1 **I. INTRODUCTION AND QUALIFICATIONS**

2 **Q. Please state your name and business address.**

3 A. My name is Anthony Formato. My business address is 6363 Main Street, Williamsville,
4 NY 14421.

5
6 **Q. By whom and in what capacity are you employed?**

7 A. I am employed by National Fuel Gas Distribution Corporation (“NFGDC”) as a Manager
8 of Finance. NFGDC is a wholly owned subsidiary of National Fuel Gas Company
9 (“NFG”).

10
11 **Q. Please provide your educational background.**

12 A. I received an undergraduate degree in Finance and Business Management from Canisius
13 College in 2008. Additionally, I received a Master in Business Administration from the
14 University at Buffalo in 2013.

15
16 **Q. Please provide your professional experience.**

17 A. I started my professional career with NFGDC in 2008 in the Finance department as a
18 member of the Cash Management team which provides the day-to-day treasury functions
19 for NFG. From 2012-2013, I worked in the Internal Audit department as a staff Auditor
20 where I was responsible for controls testing as well as Operational audits. I then moved
21 over to become an Officer Manager in Operations in 2014 at our Mineral Springs
22 servicecenter in Buffalo, NY, where I was responsible for the New York dispatch
23 function, off-hours emergency calls & the New York Operations clerical staff. In 2017, I

1 moved back to the Finance department as an analyst and have held various positions
2 within Finance over the last 6 years, including my present role as Finance Manager with
3 responsibility for the Financial Forecast and O&M Budget functions.

4
5 **Q. Have you previously testified in other proceedings before the Pennsylvania Public**
6 **Utility Commission (“PAPUC” or the “Commission”) or any other state or federal**
7 **agency?**

8 A. I have not previously testified in any proceedings before the PAPUC or any other state or
9 federal agency.

10
11 **II. PURPOSE OF TESTIMONY**

12 **Q. Please describe the purpose of your testimony.**

13 A. I am providing testimony to support the revenue requirement proposed by NFGDC’s PA
14 Division (“National Fuel” or the “Company”) in this proceeding. My testimony is
15 specific to operations and maintenance (“O&M”) expense, with the exception of
16 employee benefits, which are covered in the Direct Testimony of Mike Weidner
17 (National Fuel Statement No. 5). Additionally, I will explain the Company’s current
18 O&M budgeting process and detail the adjustments made to O&M expense for the
19 historic test year ended June 30, 2022 (“HTY”), future test year ending June 30, 2023
20 (“FTY”), and the fully projected future test year ending July 31, 2024 (“FPFTY”).

21
22 **Q. Are you sponsoring any exhibits or filing requirements in this proceeding?**

1 A. I am sponsoring National Fuel Exhibits ATF-1 through ATF-4 as well Revenue
2 Requirements number 20, 21, 44, 46 and 52. In addition, I am responding to various
3 Regulation Filing Requirement and standard data requests.
4

5 **III. O&M BUDGET PROCESS**

6 **Q. Please explain National Fuel’s O&M budget process?**

7 A. O&M Budgets are prepared based on the Company’s fiscal year (“FY”) of October
8 through September using a zero-based budgeting approach. Each department reviews its
9 business needs for the upcoming year across each of the major budget items (cost
10 elements) to determine exact needs. These budgets are developed in the Spring, presented
11 to the Senior Management team in the Summer, and then finalized before the start of the
12 next FY in October. Between the budget presentations and the start of the FY, Senior
13 Management and department staff hold subsequent discussions, as necessary, to review
14 more details and supporting analyses around requested budget amounts and proposed
15 initiatives. The Senior Management team then communicates any requested
16 modifications to the proposed budgets, such that departments can make any necessary
17 revisions and finalize their budget in advance of the start of the FY. Once the FY begins,
18 monthly variance meetings are held with the same Senior Management team to review
19 monthly performance of budget to actuals. On a quarterly basis, departments are required
20 to submit any expected known and measurable changes to the budgeted amounts for the
21 remainder of the fiscal year.
22

23 **Q. How is the budget information used in the requested revenue increase?**

1 A. Actual performance from the HTY was reviewed in conjunction with the 2023 FY
2 budgeted amounts. This review was used to guide the creation of the O&M forecast for
3 the FTY as well as the FPFTY.
4

5 **IV. O&M METHODOLOGY & ADJUSTMENTS: LABOR**

6 **Q. Explain the methodology used in National Fuel Exhibit ATF-4 which was used to**
7 **develop the labor forecast?**

8 A. As shown in National Fuel Exhibit ATF-4, Schedule 1, the labor forecast is made up of
9 labor from the Company (National Fuel Exhibit ATF-4, Schedule 2), NFGDC's NY
10 Division ("National Fuel – NY") (National Fuel Exhibit ATF-4, Schedule 3), as well as
11 labor from other Subsidiaries (National Fuel Exhibit ATF-4, Schedule 4), which is
12 primarily from National Fuel Gas Supply Corporation. The Company utilizes a number
13 of shared services departments such as Accounting, Finance, Human Resources and
14 Information Services which charge expenses to each NFG subsidiary in accordance with
15 the Company's accounting policies. Procedures are in place to direct charge subsidiaries
16 where appropriate and also utilize a Commission sanctioned allocation methodology to
17 distribute shared common expenses to each subsidiary. This shared service approach
18 allows for the Company to operate with a lower overall headcount thus reducing the cost
19 burden to ratepayers. For each component of labor, current wages were annualized to
20 normalize the HTY amount. In the case of Union employees, contractual increases
21 specified in their negotiated contracts were added to calculate the projected labor expense
22 for the FTY and FPFTY. For non-union hourly and part-time employees, a 3% annual
23 increase was assumed which aligns with the historic average increase for this group. For

1 supervisory and executive employees, a 6% annual increase was assumed. This increase
2 is supported by the Direct Testimony of Valerie Hawthorn (National Fuel Statement No.
3 4), who describes the Company's current commitment to retaining and rewarding existing
4 employees in the current labor market. In addition to annual increases, this figure also is
5 designed to capture promotions which will occur throughout the FTY & FPFTY.
6

7 **Q. What is the O&M % used in National Fuel Exhibit ATF-4?**

8 A. An O&M % of 73.67% is used for the applicable labor on National Fuel Exhibit ATF-4,
9 Schedule 2 (PAD Labor). Please refer to Regulation Filing Requirement 53.53.III-A-44
10 for supporting documentation on the percentage. There is no O&M percentage used on
11 the labor forecast for the borrowed labor from National Fuel - NY or the borrowed labor
12 from other subsidiaries, as the starting point for these forecasts is already a net O&M
13 figure.
14

15 **Q. Is there incremental headcount assumed in the labor forecast for the FTY or**
16 **FPFTY?**

17 A. The 13 incremental hourly employees included in the FTY and FPFTY are discussed in
18 RR-20 and RR-21 are shown in National Fuel Exhibit ATF-4, Schedule 2 (PAD Labor).
19 In the HTY, due to the competitiveness of the labor market, the Company was operating
20 below our full complement, particularly in the Consumer Business and Operations areas.
21 As stated in RR-21, only 13 of the 24 open positions are included in the labor forecast as
22 the Company factors in natural turnover and employment lag into the labor forecast.
23 There are no incremental positions assumed for the labor borrowed from the National

1 Fuel - NY (National Fuel Exhibit ATF-4, Schedule 3), or from other subsidiaries
2 (National Fuel Exhibit ATF-4, Schedule 4). As discussed later in this testimony, there
3 are ten incremental Information Technology positions which are included in the FTY and
4 FPPTY. The cost to the Company is shown in the Information Services line rather than
5 in Labor due to the way Information Technology expenses are recorded and then
6 allocated to the various subsidiaries.

7
8 **Q. Are there any retirements included in the labor forecast for the FTY or FPPTY?**

9 A. As shown in RR-21, eight retirements are forecasted. While it is assumed for the FTY
10 and FPPTY that all 8 of these positions are filled, a downward adjustment to labor is
11 shown in National Fuel Exhibit ATF-4, Schedule 2 to account for the fact that the
12 replacements will be hired at a lower starting salary.

13
14 **Q. What is included in the “Payroll not subject to wage increases” line shown on
15 National Fuel Exhibit ATF-4, Schedule 2?**

16 A. This line item includes components of payroll such as shift differential, meter reader &
17 damage prevention incentives, tuition reimbursement, healthcare opt-outs, lump sum
18 payouts, and car allowances. The value for this line item was held constant from the
19 actual TME June 30, 2022 value for the FTY and FPPTY labor forecast.

20
21 **Q. What is the “Variable Compensation” line shown on National Fuel Exhibit ATF-4,
22 Schedule 2 represent?**

1 A. This line item represents the net O&M portion applicable to National Fuel of the Annual
2 Cash Bonus Program referred to in the Direct Testimony of Valerie Hawthorn (National
3 Fuel Statement No. 4). It includes the net O&M portion for the Company's employees as
4 well as the applicable borrowed amounts from National Fuel - NY and other subsidiaries.
5 Due to the implementation date of this program, which was approved in October 2022,
6 this program does not have any costs in the HTY, but is included in the FTY & FPFTY.

7

8 **V. O&M METHODOLOGY & ADJUSTMENTS: UNCOLLECTIBLES**

9 **Q. Please explain the Company's write-off process.**

10 A. The Company will write off an account typically 12 months after the due date of the final
11 bill, which is generated once a customer's account is terminated for non-payment
12 (collections). Residential collection season runs each year from April to November,
13 during which time field service representatives attempt to obtain payment or terminate
14 service for non-payment. There is also a small amount of non-collection related write-
15 offs, for matters such as bankruptcies and customer disputes which do not follow the 12-
16 month cycle and are written-off sooner.

17

18 **Q. Since the onset of the COVID-19 Pandemic, how have write-offs been impacted?**

19 A. The Company has experienced lower levels of write offs in the HTY and the preceding
20 year due to the COVID-19 Pandemic and the associated Emergency Order issued by the
21 Commission in March 2020 which prohibited regulated utilities from terminating service.
22 The lack of terminations drastically reduced the issuance of final bills. Without accounts

1 receiving final bills, they are not incorporated into the normal write-off cycle described.
2 As a result, there has been a dearth of write-offs.

3
4 **Q. Historically, what approach has been utilized to determine the Uncollectibles**
5 **Expense for a given year?**

6 A. Historically, the Company has used an annual average write-off factor from the prior
7 three years. This factor would be applied to the current year revenue forecast to arrive at
8 the estimated Uncollectible Expense for the year.

9
10 **Q. Has the Company had to make any changes to its Uncollectible Expense accrual**
11 **methodology since the COVID-19 Pandemic?**

12 A. Yes, due to the suppressed level of write-offs that have followed the pandemic, the
13 Company has looked back to different time periods to assess the adequacy of what it is
14 reserving against. Instead of using a simple average of the write-off factor from the prior
15 three years, the Company has instead looked to the past and used a write-off factor from
16 prior three-year periods which better aligns with the current macroeconomic environment
17 driven by rising inflation and higher commodity prices.

18
19 **Q. Please explain the methodology used to calculate the uncollectible expense for the**
20 **FTY and the FPFTY.**

21 A. To better capture the pre-COVID write-off activity level, the Company used write-off
22 data from the TME June 30, 2018, 2019 and 2020 coupled with gross revenue data for the
23 TME June 30, 2017, 2018 and 2019 to establish a baseline, pre-COVID, write-off factor.

1 Actual write-offs are compared to revenue from the prior year due to the natural lag that
2 exists in the Company's write-off process, as discussed earlier. This factor was then
3 applied to the forecasted revenue amounts for the FTY and the FPFTY. In each case, the
4 Low-Income Residential Assistance ("LIRA") arrearage forgiveness amount was
5 excluded, as we are proposing that LIRA-related expenses are captured in Rider F rather
6 than in base rates. Refer to National Fuel Exhibit ATF-2, Schedule 6 (FTY) and National
7 Fuel Exhibit ATF-3, Schedule 1 (FPFTY) for the actual calculations.

8
9 **VI. O&M METHODOLOGY & ADJUSTMENTS: OTHER ADJUSTMENTS**

10 **Q. Describe the current environment in the Information Services department?**

11 A. Due to increased cyber threats, Transportation Security Administration ("TSA")
12 compliance requirements, and impending cyber related regulations, it is paramount that
13 we further harden National Fuel's defense in depth strategy for systems both on premise
14 and in the cloud. While maintaining our current National Fuel Information Security
15 program, we continue to mature the program in areas such as: Vendor Risk Management,
16 Denial of Service attack protections, Email Security, Data Loss Prevention, increased log
17 monitoring, enhanced risk assessment tools for web solutions and improved system
18 recovery tools. National Fuel is increasing the occurrence of third-party reviews to
19 evaluate our cyber program, program maturity, and to perform varied risk assessments.
20 With the increased responsibilities and scope of our Information Security Program,
21 additional resources are required to effectively manage and maintain the program. In
22 addition, the new TSA Security Directives have forced our industry and organization to

1 implement new monitoring tools and preventative tasks around Operational Technology
2 that has forced National Fuel to add multiple new employees to remain compliant.

3
4 **Q. What is included in the Information Services line item?**

5 A. This line item includes the cost of internal Information Services labor and other expenses
6 incurred in the operation of the Information Services department including software,
7 software maintenance, database storage, cybersecurity, hardware, consulting services and
8 telecommunications. Information Services charges are accumulated in clearing accounts
9 and, on a monthly basis, are distributed to the appropriate business unit based on the
10 nature of the work.

11
12 **Q. Explain the methodology used to develop the Information Services adjustment that
13 is shown in National Fuel Exhibit ATF-2, Schedule 3.**

14 A. Specific initiatives that were included in the Information Services budget for the 2023 FY
15 that are in excess of the HTY were listed on the schedule. These items include increased
16 third-party help desk costs, cybersecurity, network infrastructure and an Enterprise
17 Resource Planning modernization initiative. The gross amount of these costs is included
18 on the schedule. From there, the Pennsylvania information technology (“IT”) ratio
19 shown in Regulation Filing Requirement 53.53.III.A.44 was applied to calculate the
20 Company’s portion of these shared expenses. A second adjustment is shown on the
21 schedule for approved incremental internal labor positions to accommodate the growing
22 demands on the Information Services department. The Company’s portion of the future
23 test year labor was calculated and compared to the HTY labor amount to calculate the

1 adjustment. The final adjustment on the schedule accounts for the remainder of the
2 Information Services expense which was inflated at 4.36%. Refer to National Fuel
3 Exhibit DNK-2 (Inflation Calculation) for the support of the inflation rate used. These
4 three adjustments were totaled and then added to the HTY expense amount in order to
5 project the total Information Service line-item expense for the FTY. The FTY value was
6 then inflated at 4.73% to arrive at the FPFTY value as shown in National Fuel Exhibit
7 ATF-1, Schedule 1.

8
9 **Q. What type of items are incorporated into the Transportation budget item?**

10 A. This line item represents the costs of operating and maintaining the Company's fleet of
11 vehicles and construction equipment. Charges include vehicle depreciation, maintenance
12 and fuel costs.

13
14 **Q. Why should Transportation expense incorporate an adjustment other than a typical
15 inflationary increase?**

16 A. Gasoline, diesel and vehicle repair costs have continued to rise throughout the HTY such
17 that the per books expense for the last 6 months of the HTY were 18% higher than the
18 expense for the first six months of the historic test year.

19
20 **Q. Explain the methodology used to develop the Transportation adjustment that is
21 shown in National Fuel Exhibit ATF-2, Schedule 2.**

22 A. The Company's transportation expense from April 2022 – June 2022 was averaged and
23 then annualized in order to capture the current fuel and maintenance costs that are a part

1 of this line item. Additional net O&M transportation (vehicle cost) was added for the 12
2 new union hourly positions. These two adjustments were added together and then
3 inflated at 4.36% to arrive at the FTY value for transportation. The FTY value was then
4 inflated to arrive at the FPFTY value as shown in National Fuel Exhibit ATF-1, Schedule
5 1.

6
7 **Q. Explain the methodology used to develop the Outside Services adjustment that is**
8 **shown in National Fuel Exhibit ATF-2, Schedule 5.**

9 A. It is anticipated that specific costs within the Operations and Consumer Business
10 departments will be in excess of the HTY amounts. These specific costs are detailed on
11 the schedule, while the remainder of the TME 6/30/22 costs, exclusive of LIRA third
12 party administration costs, are inflated at 4.36% to arrive at the FTY value for Outside
13 Services. The FTY value was then inflated to arrive at the FPFTY value as shown in
14 National Fuel Exhibit ATF-1, Schedule 1.

15
16 **Q. How are rate case expenses presented in the O&M exhibits?**

17 A. Projected total rate case O&M expense is shown in National Fuel Exhibit ATF-2,
18 Schedule 4. These costs are normalized over 3 years such that 1/3 of the projected rate
19 case expense is included in the O&M projection for the FTY and the FPFTY. A three-
20 year time period was chosen as the Company currently projects that a new rate case will
21 be needed at that time in order to keep up with inflation, rising interest costs and capital
22 investment that aligns with the Company's recently filed Long-Term Infrastructure
23 Improvement Plan.

Q. Explain why LIRA related costs were removed from O&M.

A. As stated in the Direct Testimony of Donald Koch (Statement 2), the Company is proposing to recover LIRA related costs through Rider F rather than as part of base rates. As such, LIRA related components were removed from O&M, the largest of which being uncollectible expense, as shown in National Fuel Exhibit ATF-2, Schedule 7. The Company is including the annualized programming costs for the proposed LIRA PIP (i.e., “percentage of income plan”) Conversion as part of O&M expense.

Q. Explain the remaining adjustments shown in National Fuel Exhibit ATF-1, Schedule 1.

A. In addition to the specific adjustments mentioned in the above testimony, the following adjustments were made:

- Re-classification of Merchant Function Charge Uncollectible Expense of \$136,563 from Accounting Adjustments & Accruals to Uncollectibles for the TME 6/30/22;
- Inclusion of \$125,000 for gas expansion programs in the FTY and FPFTY as supported by the Direct Testimony of Erik Solomon (Statement 18); and
- In National Fuel Exhibit ATF-1, for the budget items without a specific adjustment schedule shown within National Fuel Exhibit ATF-2, base inflation was applied at 4.36% on an annual basis to arrive at the values for the FTY. The FTY values was then inflated at 4.73% to arrive at the FPFTY values. The Accounting Adjustments & Accruals line, which represents the Low-Income

1 Usage Reduction Program (\$1,300,000) and Gas Technology Institute(\$526,466),
2 was the one exception as the TME 6/30/22 expense was held flat for the FTY and
3 FPFTY.

4

5 **Q. Does this conclude your direct testimony at this time?**

6 **A. Yes.**

NATIONAL FUEL STATEMENT NO. 4

VALERIE L. HAWTHORN

**BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION**

Docket No. R-2022-3035730

**National Fuel Gas Distribution Corporation
Pennsylvania Division**

Statement No. 4

Direct Testimony of Valerie L. Hawthorn

Topics Addressed: Labor Market and Employee Retention

Dated: October 28, 2022

1 **I. INTRODUCTION AND QUALIFICATIONS**

2 **Q. Please state your name and business address.**

3 A. My name is Valerie L. Hawthorn. My business address is 6363 Main Street,
4 Williamsville, NY 14421.

5
6 **Q. By whom and in what capacity are you employed?**

7 A. I am employed by National Fuel Gas Distribution Corporation (“NFGDC”) as the
8 General Manager of Human Resources.

9
10 **Q. Please provide your educational background.**

11 A. I possess a Master of Business Administration degree and a Bachelor of Science in
12 Business Administration degree, both from the State University of New York at Buffalo.

13
14 **Q. Please provide your professional experience.**

15 A. I began my employment with NFGDC in January 2005, as an Intern in the Human
16 Resources department. Upon completion of this internship, I joined the Human
17 Resources department in a fulltime capacity as an HR Specialist in July 2005, focusing
18 on recruitment and employment. Over the last seventeen years, I’ve assumed roles of
19 increasing responsibility in the Human Resources department, including becoming the
20 Manager of Employment in 2013. Since February 2022, I have held the role of General
21 Manager of Human Resources. In my current capacity, I am responsible for the
22 employment, benefits and payroll functions for active employees and retirees of NFGDC
23 and affiliates.

1 **Q. Have you previously testified in other proceedings before the Pennsylvania Public**
2 **Utility Commission (“PAPUC” or the “Commission”) or any other state or federal**
3 **agency?**

4 A. I have not testified before the PAPUC. I have provided testimony before the New York
5 State Public Service Commission (Case 16-G-0257).

6

7 **II. PURPOSE OF TESTIMONY**

8 **Q. Please describe the purpose of your testimony.**

9 A. The purpose of my testimony is to discuss staffing, recruitment and retention related to
10 NFGDC’s Pennsylvania Division (“National Fuel” or “Company”).

11

12 **Q. Are you sponsoring any exhibits or filing requirements in this proceeding?**

13 A. Yes, CONFIDENTIAL National Fuel Exhibit VLH-1 (Annual Cash Bonus Program).

14

15 **III. EMPLOYEE RECRUITMENT AND RETENTION**

16 **Q. What is the current employee count for National Fuel?**

17 A. As of June 30, 2022, National Fuel’s employed 411 employees. These employees are
18 geographically spread among 15 different locations within our northwestern
19 Pennsylvania service territory.

20

21 **Q. Are there any additional employees who contribute to National Fuel’s operations?**

22 A. National Fuel receives loaned labor from its affiliates when economically efficient and
23 feasible to do so. For example, I provide Human Resources services to National Fuel

1 even though I am an employee of NFGDC New York Division (“National Fuel – NY”)
2 and am located at corporate headquarters in Williamsville, NY. This allows National
3 Fuel to benefit from the purchasing power of a larger corporate entity when negotiating
4 benefit plan costs and also provides operating efficiencies with respect to recruitment,
5 payroll and employee relations. This model of loaned labor eliminates the need for
6 duplicate functions to be performed by separate administrative support functions like
7 Human Resources, Information Technology, Accounting and Finance. National Fuel
8 additionally derives benefits from the operational synergies provided by shared service
9 departments that National Fuel – NY and other subsidiaries provide. Controls are in
10 place surrounding direct charging to and from these other subsidiaries as explained in
11 Anthony Formato’s direct testimony (National Fuel Statement No. 3).

12
13 **Q. How do you define your employee population?**

14 A. National Fuel employs two groups of Fair Labor Standards Act (“FLSA”) non-exempt
15 employees: those who are members of a collective bargaining unit (“hourly”) and those
16 who are not affiliated with a collective bargaining unit (“non-union hourly”).

17 Additionally, National Fuel employs two groups of FLSA exempt employees: salaried,
18 non-executives (“salaried”) and salaried executives (“executives”). See table below for
19 employee counts within these groups.

Employee Type	Employee Count (6/30/22)	Employee Count (FPFTY)
Hourly	203	215
Non-Union Hourly	99	100
Salaried	107	107

Executive	2	2
TOTAL	411	424

1

2 **Q. What bargaining units are represented within National Fuel?**

3 A. Approximately 49% of the employees (over 67% of the FLSA non-exempt workforce)
 4 within National Fuel are represented by a bargaining unit. Those employees are
 5 represented by either the International Brotherhood of Electrical Workers, Local 2154-P
 6 also known as “IBEW” or the National Conference of Fireman and Oiler’s, Chapter 22
 7 also known as “F&O”.

8

9 **Q. What is the average length of service for your employee population?**

10 A. Across all employee categories, the average length of service within National Fuel is 8.84
 11 years. The executive group possesses the longest tenure, with an average of nearly 35
 12 years of service. See table below for average length of service across each employee
 13 group.

Employee Type	Average Years of Service (as of 6/30/22)
Hourly	6.91
Non-Union Hourly	9.38
Salaried	11.53
Executive	34.86
TOTAL	8.84

14

15 **Q. Are there different benefit offerings for these various employee groups?**

1 A. Yes. Benefit offerings for the various employee groups are established based on the
2 negotiation of labor contracts (where applicable) along with the Company’s need to
3 remain cost efficient yet competitive in the labor market. Certain benefit programs have
4 also evolved over the years, most notably the elimination of the defined benefit pension
5 plan for new hires in 2003. As of June 30, 2022, only 9% of employees at National Fuel
6 were eligible for the defined benefit pension plan.

7
8 **Q. Does National Fuel hire often?**

9 A. Yes. As demonstrated by the average years of service previously identified, recruiting
10 new hires to National Fuel is an important part of the Human Resources department’s
11 responsibilities. We must attract and retain talent through competitive compensation,
12 competitive benefits, and a desirable work environment because attracting and retaining
13 qualified employees remains critical to National Fuel’s continued ability to provide safe,
14 efficient and cost-effective service to ratepayers. As of June 30, 2022, National Fuel had
15 24 open positions actively being recruited for.

16
17 **Q. What recruiting challenges does National Fuel face?**

18 A. Unprecedented labor market pressures have made retention and recruitment more
19 challenging. Throughout and following the COVID-19 pandemic, National Fuel was not
20 immune to the dramatic shift in the labor market, which resulted in what has been
21 deemed by many as the “The Great Resignation”. Employee attitudes towards work,
22 including expectations for flexibility from their employers, have begun to emerge and
23 National Fuel must continue to be responsive to these workforce demands. Historically

1 low unemployment rates, opportunities to perform remote or hybrid work at other
2 employers, and extraordinary inflationary pressures resulting in increased compensation
3 offers from competitors have resulted in lengthy recruitment processes. Finding talent
4 has never been more challenging and each open position presents its own set of obstacles,
5 whether because the role is in a remote geographic territory where labor is more difficult
6 to find or because a high demand skillset like Engineering is now being recruited for
7 nationwide remote work opportunities.

8
9 **Q. What has National Fuel done to address these recruiting challenges?**

10 A. The recruiting team has continued to work with community organizations to bring
11 awareness to available job opportunities at the Company. Direct contact with
12 community-based organizations that may provide referrals for job openings and
13 continued activity with college programs within the Company's geographic footprint
14 remain important to the recruiting process. Additionally, the recruiting team has started
15 to analyze the feasibility of developing a program to train high school students on the
16 skills required for call center operations. In Operations, the Utility Laborer position was
17 developed to allow current Meter Readers to progress to a more financially lucrative
18 position within National Fuel, while also being provided with a solid foundation of
19 training towards the responsibilities required for the next role available in the bidding
20 process. National Fuel continues to offer college internship opportunities, where feasible,
21 and the Human Resources department has partnered with employees to participate in
22 events at colleges and in the community. National Fuel must continue to invest in these

1 programs and partnerships to ensure we can continue to attract a qualified and diverse
2 group of individuals to the variety of employment opportunities available.

3
4 **Q. What additional attraction challenges does National Fuel face?**

5 A. Providing a competitive compensation and benefits package and ensuring this package
6 meets the desires and demands of the labor market continues to be an ongoing area of
7 emphasis for National Fuel. A competitive compensation and benefits package is critical
8 to attracting and retaining the most qualified individuals. The elimination of the defined
9 benefit pension plan for new hires since 2003 has required National Fuel to continuously
10 evaluate the competitiveness of our overall compensation and benefits package offered to
11 various employee groups to be sure we offer benefits comparable to other companies.
12 The attraction of working for a traditional utility company has seemed to evolve with
13 time, with far fewer prospective candidates citing stability alone as an attraction
14 incentive. Human Resources must design, continually reassess, and offer competitive
15 compensation and benefits packages to incent individuals to consider National Fuel as an
16 employer and to be certain we offer benefits comparable to other companies. Continuing
17 to provide a competitive compensation and benefits package throughout their
18 employment with National Fuel is equally as critical in retaining top talent and ensuring
19 continued transfer of knowledge, stability within our workforce and the opportunity for
20 individuals to grow their expertise within the organization, especially since the majority
21 of our workforce possesses less than 10 years of experience. As previously mentioned,
22 the changing nature of remote work has also meant that National Fuel is competing for
23 prospective talent on a national level. National Fuel competes for talent against

1 companies within the energy industry as well as outside of the energy industry and
2 offering competitive compensation and benefits at the start and throughout an employee's
3 career is required to engage and retain top talent.

4
5 **Q. Has National Fuel experienced a change to employee complement?**

6 A. Over the last decade, National Fuel's headcount has shifted for a variety of reasons.
7 First, there is a time gap in replacing individuals who retired from National Fuel as well
8 as replacing those who exited for other reasons. A retiree who possessed many years of
9 experience is not easily replaced with someone from the external labor market. When
10 employees leave National Fuel, finding replacements is an ongoing challenge as
11 described in the earlier portion of my testimony. Since an overwhelming majority of
12 employees are no longer part of the defined benefit pension plan, traditional notice
13 periods of 90 days or longer are no longer customary. The challenges surrounding
14 succession planning increase when an employee departure may only include a few
15 weeks' advance notice. The recruitment time gap to replace someone far surpasses the
16 amount of time we can generally count on having before someone departs National Fuel.
17 Additionally, managing through the learning curve for a new employee can contribute to
18 the need for increased headcount. For example, National Fuel has to facilitate regular,
19 multi-week, new hire training programs for Customer Service Representatives. These
20 classes require an intensive investment of resources in order to properly train, prepare and
21 then monitor the work of the new hires. Attrition can also lead to needing to have more
22 employees trained in various areas so there are no holes in the coverage needed to be
23 provided. While it is important to have more employees cross trained and prepared to

1 cover various areas, it is equally important to retain individuals already trained to perform
2 the work that needs to be done. We must continue to place emphasis on rewarding and
3 retaining our existing workforce. It is also important to recognize how work that is
4 performed at National Fuel evolves over time. For example, in addition to ensuring
5 compliance and quality customer service during customer calls, Customer Service
6 Representatives are expected to offer customers information on low-income programs,
7 budget programs and other assistance options. These important outreach initiatives,
8 which are expected of the Customer Service Representatives, extend call times with
9 customers, meaning less calls can be handled by that Customer Service Representative
10 during a shift.

11
12 **Q. How have the various factors impacted employment costs at National Fuel?**

13 A. The recruitment process has evolved as the job market becomes more complex to
14 navigate. Recruiters need to spend additional time finding talent that is oftentimes scarce
15 and then screening enough candidates to ensure viable options remain to the completion
16 of the pre-employment process. Recruiters and hiring managers then have to invest more
17 time conducting interviews during the screening process to identify the most qualified
18 individuals since oftentimes a job will need to be re-posted and the entire process has to
19 start over. Additional costs are incurred when advertising for job postings on various
20 recruiting sites and potentially through staffing agencies who charge a placement fee
21 upon placement of the successful candidate. Starting salary expectations have continued
22 to increase, both for inexperienced and experienced talent. There are additional costs
23 associated with the training time incurred by supervisors and management in order to

1 ensure that new employees understand how to perform their function upon initial
2 onboarding as well as to regularly monitor and train new employees as they progress on
3 the learning curve to their new role. As discussed in a previous question, there is also a
4 cost element associated with the time spent by current employees and supervisors to
5 backfill for positions vacated through employee turnover with relatively short notice
6 periods upon resignation.

7
8 **Q. How does National Fuel monitor employee engagement?**

9 A. All employees are encouraged to share their feedback regarding job satisfaction
10 informally with their managers or with the Human Resources department directly. There
11 are also numerous formal channels in which feedback from salaried employees can be
12 communicated. Those include annual performance appraisals, annual career
13 conversations with executives, new hire evaluations sent by the Human Resources
14 department at 6/12/18 months of service or through employee engagement surveys that
15 are conducted periodically.

16
17 **Q. How is National Fuel addressing retention as a measure of engagement?**

18 A. National Fuel must offer competitive compensation and benefits in order to retain our
19 current workforce. If we fail to remain competitive in these areas, we will continue to
20 experience attrition which results in additional pressure on the current workforce and
21 inevitably decreases the amount of experience possessed by our remaining workforce.
22 Absent providing retention tools like competitive compensation and benefits being
23 offered by competitors, employees will resign, making it very difficult to manage
24 replacement rates and the workload burden that will fall to the staff that remains. It is

1 critical to invest in the staff we have and be able to attract individuals to the vacancies
2 currently available so that we can prevent burnout for employees and provide a
3 productive work environment that encourages retention.
4

5 **Q. What terms of compensation and benefits resulted from collective bargaining?**

6 A. Negotiations with “IBEW” recently took place for the employees represented by that
7 collective bargaining unit. The resulting contract, which went into effect on April 13,
8 2022, included an average increase of 12% to hourly labor rates, when all job categories
9 are combined. Additionally, negotiations resulted in an enhanced employer match to the
10 401(k) and an enhanced vacation time schedule. The terms of this labor contract are in
11 effect through April 13, 2026. Negotiations with “F&O” also recently took place for the
12 employees represented by that collective bargaining unit. The resulting contract, which
13 went into effect on May 1, 2022, included an average increase of 21% to hourly labor
14 rates, when all job categories are combined. Additionally, negotiations resulted in an
15 enhanced employer match to the 401(k) and an enhanced vacation time schedule. The
16 terms of this labor contract are in effect through April 30, 2026.
17

18 **Q. What rewards are used to remain competitive for non-union hourly talent?**

19 A. Approximately 24% of National Fuel’s employee complement is comprised of
20 individuals performing administrative roles, in a non-union hourly capacity. These
21 individuals staff the customer response center (i.e., call center) as well as provide
22 administrative support services throughout various departments within National Fuel.
23 The Company must provide competitive wages and benefits in order to attract and retain

1 these critical employees and in order to remain on par with the wages and benefits
2 offered by organized labor. In May 2022, a wage adjustment for 102 non-union hourly
3 employees, at an annual cost of \$323,600, along with an enhancement to vacation time
4 was implemented. The average wage increase for impacted employees was 7%. The
5 Human Resources Department considered the differential in wage rates for administrative
6 employees covered by a collective bargaining agreement in a different jurisdiction in
7 order to identify a more appropriate wage rate for the non-union hourly employee group.
8 Following this market adjustment for the non-union hourly employee group, annual
9 salary increases must remain competitive in order to attract and retain the best talent. In
10 response to increasing labor market demands for increased employee flexibility, many
11 non-union hourly employees are now provided the opportunity to work a hybrid work
12 schedule in which remote work is allowed for a portion of their workweek.

13
14 **Q. What rewards are used to remain competitive for salaried (non-executive) talent?**

15 A. National Fuel must offer compensation and benefits comparable to competitors in order
16 to remain competitive in the labor market and to promote attraction and retention.
17 “National Fuel – NY” engaged the services of an external consultant, Willis Towers
18 Watson, to provide benchmarking data for salaried positions across National Fuel’s
19 affiliates. The confidential results provided by the external consultant in conjunction
20 with further analysis conducted by the Human Resources department, resulted in 65% of
21 the Company’s salaried workforce requiring an upward adjustment of annual base pay
22 totaling \$679,500, a 7.1% increase to payroll, so that they came within a competitive
23 range of the market data. The average increase for impacted employees was 11%. These

1 salary adjustments were made in April 2022. Following this market adjustment for the
2 salaried employee group, a 4.5% annual base salary increase budget is projected in order
3 to remain competitive. This is consistent with salary budget survey responses which are
4 reported by individual organizations and consolidated by compensation specialists like
5 WorldatWork and Culpepper.

6
7 **Q. Were any components of a competitive compensation program identified as**
8 **missing from National Fuel's total rewards package?**

9 A. Yes. Based on the benchmarking analysis provided by Willis Towers Watson along with
10 data from compensation surveys in which National Fuel participates and compares itself,
11 incentive (variable) compensation was notably absent from National Fuel's salaried
12 compensation package. Information from numerous exit interviews indicate competitors
13 to whom we are losing talent offer incentive-based compensation in addition to base
14 salary compensation. Additionally, incentive-based compensation is a tool to motivate
15 and reward employees to perform their best, which serves the best interests of Company
16 stakeholders.

17
18 **Q. Has an incentive-based compensation program been implemented by National Fuel?**

19 A. Yes. Effective October 1, 2022, National Fuel established an Annual Cash Bonus
20 Program. This Annual Cash Bonus Program is intended to provide greater incentive to
21 the Company's salaried employees to work toward the achievement of the Company's
22 business goals and objectives and enable the Company to attract, retain and motivate
23 valuable employees. National Fuel's Annual Cash Bonus Program is described in

1 CONFIDENTIAL National Fuel Exhibit VLH-1. The first full-year Annual Cash Bonus
2 payment will be paid for FY23 performance after September 30, 2023. However, to have
3 a more immediate impact on bringing total compensation within a market competitive
4 range, the Company determined it necessary to award an initial bonus payment to
5 National Fuel's salaried employees as a first step towards this Annual Cash Bonus
6 Program.

7
8 **Q. What impact does this incentive-based compensation program have in the FTY?**

9 A. On October 31, 2022, during the FTY, 107 National Fuel salaried employees will receive
10 a pro-rated cash bonus in response to competitive and inflationary pressures and National
11 Fuel's FY22 performance. As such, National Fuel accrued an O&M expense of \$536,000
12 in September 2022 (the end of the Company's FY) for these cash bonuses and portions of
13 cash bonuses paid to employees of affiliates who provide services to National Fuel. This
14 October 2022 bonus payment is not equivalent to a full annualized payout. Rather, it is a
15 smaller amount as an initial step, in advance of the formal annual program. As noted in
16 National Fuel Exhibit ATF-4 Schedule 2 (pg1), the full-year expense projected to be
17 incurred and recorded in the Company's FTY is \$1,045,377, roughly double the initial,
18 pro-rated payment.

19
20 **Q. What is the expected cost of the incentive-based compensation program in the**
21 **FPFTY?**

22 A. Beginning with the first full-year Annual Cash Bonus payment for FY23 performance,

1 the incentive-based compensation will be paid only if certain shared organizational goals
2 are achieved during the FY. At the beginning of each FY, specific goals will be defined,
3 and are focused on metrics that provide customer benefits. The goals established for
4 FY23 include customer service/satisfaction rates, operational safety measures, methane
5 emissions reductions, employee safety (injury) rates and diversity and inclusion
6 initiatives. In order to calculate the bonus payment, employee base salaries will be
7 multiplied by the eligibility percentage for their grade level (level of experience or
8 responsibility) in the organization. As noted in National Fuel Exhibit ATF-4 Schedule 2
9 (pg2), the projected O&M expense for National Fuel for the FPFTY, which would be
10 representative of a full annualized payout is \$1,108,000 (including portions of cash
11 bonuses paid to employees of affiliates who provide services to National Fuel).

12
13 **Q. Are there other benefits or rewards utilized in the attraction or retention of salaried**
14 **employees?**

15 A. In addition to base salaries, stock-based compensation, in the form of time-vested
16 restricted stock, is provided as a retention tool to certain non-executives. These shares
17 vest over three equal annual installments as service is provided to National Fuel. This
18 benefit is used as part of the overall compensation package to retain high-caliber salaried
19 employees while encouraging their investment in National Fuel, as it promotes recipients
20 to remain employees over the vesting period. Given the increasing operational
21 complexities and regulatory requirements experienced by utilities and energy companies
22 and the expanded efforts to modernize pipeline and distribution systems, a competitive
23 compensation package encouraging retention and longevity, including time-vested

1 restricted stock, is critical to the continued success of National Fuel and aligns with the
2 interests of all stakeholders (including ratepayers, local communities, employees, retirees,
3 and shareholders). Finally, in response to significant employee demand as well as to
4 address the needs of the external labor market National Fuel allows for hybrid work
5 schedules, where possible. This desire for flexibility is in high demand from current
6 employees as well as those in the external labor market. National Fuel must continue to
7 adapt to the needs and demands of employees – especially in the fiercely competitive
8 recruitment market we are experiencing.

9
10 **Q. What rewards are used to remain competitive for executive talent?**

11 A. Given the increasing operational complexities and regulatory requirements experienced
12 by utilities and energy companies and the expanded efforts to modernize pipeline and
13 distribution systems, it is critical for National Fuel to remain competitive in its
14 compensation package provided to executives in order to retain quality and experience
15 among the executive workforce for the benefit of all its stakeholders (including
16 ratepayers, the local communities, employees, retirees, and shareholders). To that end,
17 National Fuel’s named executive pay practices are subject to an extensive review and
18 approval process as outlined in National Fuel Gas Company’s (“NFG”) proxy statement.
19 For officers not identified in the proxy, the review and approval process is similarly
20 extensive. To assist in the effort, NFG’s Compensation Committee retains the services of
21 Korn Ferry Group, a nationally recognized firm that performs compensation analyses and
22 reviews for companies in the energy and other business sectors. Key findings of the most
23 recent national compensation data indicate that total compensation (base salary, annual

1 and long-term incentives) for National Fuel's executives is at or below the median when
2 compared with nationwide utility and general industry executives. The long-term
3 incentives are provided via stock-based compensation, which awards performance shares
4 linked to long-term performance from both total shareholder return, total return on capital
5 and emission reduction targets as measured over a three-year period in comparison to
6 peer companies. Another form of long-term incentive is the award of time vested
7 restricted stock, which vest over three equal annual installments as service is provided to
8 National Fuel. These forms of stock-based compensation encourage long term
9 perspective and performance from the management of National Fuel and encourages
10 significant, personal investment. The financial success, as measured by long-term total
11 shareholder return and long-term total return on capital of NFG (including National Fuel)
12 is achieved through continued focus and commitment on numerous factors, which include
13 efficiently investing in rate base, prudently operating the business, and providing safe,
14 reliable, and affordable service to its customers. As a result, the utilization of
15 performance shares to reward this focus and commitment is appropriate as it aligns with
16 the interests of the ratepayers. Since time vested restricted stock vests in equal
17 installments over a three-year period, it encourages recipients to remain employees over
18 the vesting period. Given the aforementioned complexities of the energy and utility
19 industries, retention and longevity of the executive workforce is vital to all stakeholders,
20 including ratepayers, so the utilization of time vested restricted stock is appropriate as it
21 aligns with the interests of the ratepayers. The amounts related to these long-term
22 incentive stock-based compensation awards are disclosed at National Fuel Exhibit MPW-
23 1 Schedule 2 Pages 13 and 14.

1 Q. Does this conclude your direct testimony at this time?

2 A. Yes.

NATIONAL FUEL EXHIBIT VLH-1

CONFIDENTIAL

NO PUBLIC VERSION

NATIONAL FUEL STATEMENT NO. 5

MICHAEL P. WEIDNER

**BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION**

Docket No. R-2022-3035730

**National Fuel Gas Distribution Corporation
Pennsylvania Division**

Statement No. 5

Direct Testimony of Michael P. Weidner

**Topics Addressed: Benefits
 Including Retirement (Pension and OPEB)**

Dated: October 28, 2022

1 **I. INTRODUCTION AND QUALIFICATIONS**

2 **Q. Please state your name and business address.**

3 A. My name is Michael P. Weidner. My business address is 6363 Main Street,
4 Williamsville, NY 14421.

5
6 **Q. By whom and in what capacity are you employed?**

7 A. I am employed by National Fuel Gas Distribution Corporation (herein referred to as
8 “NFGDC”) in the position of Assistant General Manager within the Human Resources
9 Department.

10
11 **Q. Please provide your educational background.**

12 A. I graduated from the St. Bonaventure University, in May 1998 with a Master of Business
13 Administration Degree and Bachelor of Business Administration Degree, concentrating
14 in Accounting and Finance.

15
16 **Q. Please provide your professional experience.**

17 A. In September 1998, I joined Ernst & Young, LLP, as a Staff Accountant, I was promoted
18 to Senior Accountant in 2000. I have been a Certified Public Accountant since December
19 1999. I began my employment with NFGDC in October 2000 in the Audit Services
20 department. In July 2005, I transferred to the Financial Accounting Department where I
21 became Manager in September 2013. In February 2018, I was promoted to my current
22 position.

1 **Q. Have you previously testified in other proceedings before the Pennsylvania Public**
2 **Utility Commission (“PAPUC” or the “Commission”) or any other state or federal**
3 **agency?**

4 A. Yes, I have testified before the PAPUC (National Fuel Gas Distribution Corporation
5 Supplement No. 228 to Tariff Gas – Pa.P.U.C. No. 9 – Docket Nos. R-2021-3027406 and
6 C-2021-3028654) and the New York State Public Service Commission (Case 16-G-
7 0257).

8

9 **II. PURPOSE OF TESTIMONY**

10 **Q. Please describe the purpose of your testimony.**

11 A. The purpose of my testimony is to discuss the costs related to NFGDC’s employee
12 benefits package.

13

14 **Q. Are you sponsoring any exhibits or filing requirements in this proceeding?**

15 A. I am sponsoring National Fuel Exhibit MPW-1, Schedules 1 and 2. I am also responding
16 to various Standard Data Requests.

17

18 **III. EMPLOYEE BENEFITS EXPENSE**

19 **Q. Please describe National Fuel Exhibit MPW-1 Schedule 1 (Benefits) and Schedule 2**
20 **(Benefits) - Pages 1-16.**

21 A. The Exhibit and Schedules show the adjustment to the Operation and Maintenance
22 (“O&M”) Expense of the NFGDC Pennsylvania Division (“National Fuel” or the
23 Company”) for employee benefits. National Fuel Exhibit MPW-1, Schedule 1 Pages 1-2

1 summarizes these adjustments. I will describe the adjustments in further detail on Pages
2 1-16.

3
4 **A. RETIREMENT RELATED BENEFITS**

5 **Q. Are there any retirement related benefits in the exhibits?**

6 A. Yes, NFGDC's parent company National Fuel Gas Company ("NFG") has Defined
7 Benefit Pension and Other Post-Employment Benefits ("OPEBs"), which were closed to
8 new participants in 2003. NFG also has Tax Deferred Savings Plans (i.e., 401(k)), and
9 contributions to Retirement Savings Accounts ("RSA"), which are accounts set up within
10 the Tax Deferred Savings Plans ("TDSP") for those employees that were hired after
11 Defined Benefit Pensions were no longer offered to new entrants. See table below for the
12 number of the Company's participants in the Defined Benefit Pensions, TDSPs, RSAs,
13 and OPEBs.

	Defined Benefit Pensions	Tax Deferred Savings Plans	RSAs (Within Tax Deferred Saving Plans)	OPEBs
Normalized Number of Eligible Active Participants - 2022	37	382	367	36
Normalized Number of Inactive Participants - 2022	516	72	36	431
Total Number of Participants	553	454	403	467

14
15 NFG and the Company have made strides in minimizing retirement related costs, and
16 these resulted in a lower O&M expense for employee benefits. Specifically, NFG
17 (including the Company) has prudently managed the assets set aside for Defined Benefit

1 Pensions and OPEBs, the assets, and has taken steps to control costs. These steps have
2 led to an overall significantly reduced requested rate recovery since the Company's last
3 base rate case in Pennsylvania (PUC Docket No. R-00061493).

4
5 **Q. Are any applicable costs associated with these retirement benefits included in any**
6 **exhibits?**

7 A. Yes, these costs are covered in National Fuel Exhibit MPW-1 (Benefits) Schedule 2 -
8 Pages 5-6 (401(k)), Pages 9-10 (Annuity (i.e., Defined Benefit Pension)), and Pages 11-
9 12 (RSA).

10
11 **Q. Please explain the adjustment to National Fuel Exhibit MPW-1, Schedule 2**
12 **(Benefits) - Pages 9 - 10.**

13 A. This section adjusts the Company's O&M expense for the cost of the Defined Benefit
14 Pensions (i.e., annuity benefits), which are based on the level of contributions made
15 during the fiscal year. For the historic test year ended June 30, 2022 ("HTY"), based on
16 the fiscal year allocation contributions and a 73.67% factor used to determine the
17 amounts to be expense (herein referred to as "Factor A"), the normalized defined benefit
18 pension expense was \$1,202,605. Based on the projected level of contributions and
19 Factor A the forecasted expense during the fully projected future test year ending July 31,
20 2024 ("FPFTY"), is expected to increase to \$2,252,542. The FPFTY amount is projected
21 to be \$1,055,416 higher than the expense recorded on the general ledger for the HTY, and
22 \$1,049,937 higher than the normalized June 2022 expense.

23

1 **Q. What OPEBs do NFG and the Company currently provide?**

2 A. OPEBs refers to benefits provided to retirees other than pensions. The Company
3 currently provides medical coverage for substantially all employees hired prior to January
4 1, 2003, and to a few union employees hired prior to November 1, 2003. The Company
5 also provides prescription drug coverage and life insurance benefits.

6

7 **Q. Aside from prudent asset management, have NFG and the Company taken any**
8 **steps to control future OPEB costs?**

9 A. Yes. In January 2003, NFG and the Company implemented a change to the eligibility
10 criteria for OPEBs, whereby non-union employees hired after on or after January 1, 2003,
11 and union employees hired on or after November 1, 2003, are no longer eligible for any
12 retiree medical, prescription drug or life insurance benefits. These actions were purely a
13 cost savings measure. As a result of this cost savings measure and prudent management
14 of the assets set-aside for OPEBs, the Company was in a position to reduce rate recovery
15 of OPEBs to zero in conjunction with its Supplement No. 228 and Supplement No. 239 to
16 Tariff Gas – Pa.P.U.C. No. 9 filing (PUC Docket Nos. R-2021-3027406 and C-2021-
17 3028654). In addition, in that filing the Company set forth a plan to pass back \$54.0
18 million to the ratepayers from 2021-2026 using grantor trust assets, which would further
19 reduce its regulatory liability, which is discussed later in my testimony.

20

21 **Q. What is the Company’s requested OPEB recovery?**

22 A. Consistent with the Supplement No. 228 and Supplement No. 239 to Tariff Gas –
23 Pa.P.U.C. No. 9 filing (PUC Docket Nos. R-2021-3027406 and C-2021-3028654),

1 National Fuel is requesting no OPEB recovery and the Company will continue to pass
2 back the grantor trust funds as noted in the filing as a further reduction to the regulatory
3 liability. Also, in conjunction with the aforementioned filing, the Company recorded
4 \$21.4 million of negative OPEB expense on its general ledger as it reduced its OPEB rate
5 recovery to zero (the vast majority of this was an adjustment to the previously established
6 regulatory liability as outlined in the filing). Consistent with the filing, the Company is
7 continuing to set its OPEB rate recovery at zero, so an adjustment of \$21.4 million was
8 made to accomplish this.

9
10 **Q. Does the Company have a remaining OPEB regulatory liability?**

11 A. Yes, as of June 2022 the Company has a remaining OPEB regulatory liability of \$69.6
12 million. After the completion of the aforementioned scheduled pass back of grantor trust
13 assets referenced in the Supplement No. 228 and Supplement No. 239 to Tariff Gas –
14 Pa.P.U.C. No. 9 filing (PUC Docket Nos. R-2021-3027406 and C-2021-3028654), the
15 remaining OPEB regulatory liability will be \$44.8 million.

16
17 **Q. Does the Company have funds set aside to cover this liability?**

18 A. The Company has VEBA trusts and a 401(h) account. As of September 2021, the end of
19 the Company's most recently audited fiscal year, the value of the assets in the VEBA
20 trust and 401(h) account in excess of OPEB liability owed to the retirees was \$46.3
21 million, which exceeds the regulatory liability of \$44.8 million, which is expected to
22 remain after the scheduled pass back of grantor trust assets. However, interest rates (used
23 to calculate the OPEB liability) and investment performance (which would impact the

1 value of the VEBA trust and 401(h) account) will change resulting in subsequent changes
2 to amount of the excess assets, and unlike the aforementioned grantor trust assets, these
3 assets can currently only be used to pay benefits to retirees and related administrative
4 costs, so they are not available to ratepayers to cover the regulatory liability.

5
6 **Q. Is the Company preparing to address the remaining regulatory liability at this time?**

7 A. Not at this time. As noted above the Company is still paying OPEB claims benefits (and
8 related administrative costs) from the VEBA trust and 401(h) account and these assets are
9 not available for any other purpose.

10
11 **Q. Outside of prudent management of assets set aside for Defined Benefit Pensions, has
12 NFG and the Company taken any steps to control future Pension costs?**

13 A. As discussed above, NFG and the Company closed participation to Defined Benefit
14 Pensions to new participants in 2003. Employees who were already eligible for Defined
15 Benefit Pensions continue to accrue pension benefits, while employees hired after that
16 were offered employer contributions in a RSAs, which was set up as an additional benefit
17 within the 401(k) plans (employees eligible for the Defined Benefit Pensions do not have
18 this RSA benefit within the 401(k) plans). Eligible RSA employees who have provided
19 less than six years of service are given an employer contribution equal to 3% of their base
20 salary or wages to the RSA, while employees who have more service are given an
21 employer contribution of 4% of their base salary and wages to the RSA.

22

1 **Q. Please explain the adjustment to National Fuel Exhibit MPW-1, Schedule 2**
2 **(Benefits) - Pages 11 - 12.**

3 A. This section adjusts the Company's O&M expense for the cost of the RSA benefit. I
4 calculated the Company's weighted average RSA contribution percentage and multiplied
5 it by the compensation subject to RSA across the different labor groups. The increase in
6 compensation is then projected across these labor classifications out to FPFTY, and the
7 current weighted average RSA contribution percentage is applied to calculate the
8 projected RSA Company contribution of \$944,194. This amount was multiplied by
9 Factor A to calculate the amount charged to O&M expense of \$695,588. This amount is
10 \$175,931 greater than the expense recorded on the general ledger for HTY, and \$87,297
11 greater than the normalized June 2022 expense. I further note that the Page 11-12
12 Workpaper associated with this exhibit provides a breakdown of the compensation
13 subject to employer RSA contribution along with the RSA contributions across the union,
14 non-union and salaried employee labor groups and across the projection periods.

15
16 **Q. Please explain the adjustment to 401(K) Expense on National Fuel Exhibit MPW-1,**
17 **Schedule 2 (Benefits) - Pages 5 - 6.**

18 A. This section adjusts the Company's O&M expense for the FPFTY for the cost of the
19 401(k) Plan. The projected 401(k) expense was determined using the participants who
20 are currently contributing to the 401(k), since only those would receive the employer
21 match, across all labor classifications to determine the compensation subject to 401(k)
22 employer match and the weighted average employer match percentage. The increase in
23 compensation is then projected across these labor classifications through the FPFTY and

1 the current weighted average employer match percentage is applied to calculate the
2 projected 401(k) employee match of \$1,001,252. This was multiplied by Factor A to
3 calculate the amount charged O&M expense of \$737,622 for the FPPTY. This amount is
4 \$108,994 greater than the expense recorded on the general ledger for the HTY, and
5 \$43,430 greater than the normalized June 2022 expense. I further note that the Page 5-6
6 Workpaper associated with this exhibit provides a breakdown of the compensation
7 subject to employer matching contribution along with the matching contributions across
8 the union, non-union and salaried employee labor groups and across the projection
9 periods.

10
11 **B. NON-RETIREMENT RELATED BENEFITS**

12 **Q. Are there any non-retirement related benefits in any of your exhibits?**

13 A. Yes, the Company offers Group Life Insurance, Hospitalization (i.e., medical and
14 prescription drug coverage), Dental, Stock-Based Compensation, and other miscellaneous
15 benefits. These costs are covered in National fuel Exhibit MPW-1, Schedule 2 (Benefits)
16 - Pages 1-2 (Group Life), Pages 3-4 (Hospitalization), Pages 7-8 (Dental), and Pages 13-
17 14 (Stock-Based Compensation). In addition, as the Company borrows time from other
18 affiliated subsidiaries, their benefits are charged to the Company in proportion to the time
19 borrowed, which is discussed in National Fuel Exhibit MPW-1, Schedule 2 (Benefits) -
20 Page 15-16. It should be noted that since Stock-Based Compensation is an integral part
21 of employee retention (including executive); the Company's claim for this expense is
22 discussed in the direct testimony of Valerie Hawthorn (National Fuel Statement No. 4).

23

1 **Q. Please explain the adjustment to Group Life Insurance on National Fuel Exhibit**
2 **MPW-1, Schedule 2 (Benefits) - Pages 1 - 2.**

3 A. The Company provides Term Life Insurance and Accident, Dismemberment and
4 Disability (“AD&D”) Insurance for its management and union employees. The Term
5 Life Insurance rate is \$0.085 / \$1,000. This rate is effective through December 31, 2024.
6 Management employees’ coverage is 2 times their salary and non-management non
7 supplemental employees’ coverage is \$50,000 per person. Supplemental employees’
8 coverage is \$25,000 per person. The AD&D Insurance Rate is \$0.02 / \$1,000 and is
9 based on the same calculation described above. However, not everyone who receives
10 term insurance receives AD&D. National Fuel also carries a blanket travel plan for which
11 the premium is \$109 per month.

12 The total gross monthly and annual costs of these three plans are \$2,429 per
13 month or \$29,144 annually. In addition, the Company projects that it will hire thirteen
14 more employees prior to the FPFTY, which would have the impact of increasing the
15 annual cost of these three plans to \$31,484 during the FPFTY. Multiplying the total
16 gross annual amount of the three plans by Factor A, results in \$23,194 of O&M expense
17 for the plans during the FPFTY. The Officer Life Insurance O&M expense of \$42,826
18 during the FPFTY is then added for a total Group Life Insurance amount to O&M
19 expense of \$66,020 during the FPFTY. This amount is \$3,977 greater than the expense
20 recorded on the general ledger for the HTY, and \$1,724 greater than the normalized
21 expense as of June 2022.

22

1 **Q. Please explain the adjustment to Hospitalization Expense on National Fuel Exhibit**
2 **MPW-1, Schedule 2 (Benefits) - Pages 3 - 4.**

3 A. This adjustment is for hospitalization expense. Hospitalization expense includes three
4 components: (1) health insurance, (2) a Company provided wellness program, and (3)
5 prescription drug coverage. I will discuss each of these components in turn.

6

7 **Q. Please explain how you adjusted the Company's claim for Hospitalization Expense**
8 **for the cost of health insurance.**

9 A. To adjust the cost of the self-insurance of health benefits for the FPFTY, I started with
10 the cost of claims not including administrative fees paid per employee per month for the
11 HTY (i.e., \$951.50). This amount is a good predictor of the increase in claims paid from
12 the FPFTY. Then, based on the actual level of increases experienced from the HTY
13 versus the 12 months ended June 2021, I increased the level of claims paid for the HTY
14 by 7.87% to reach an FTY amount of \$1,026.38 per employee per month. I then applied
15 this annualized 7.87% (plus the 0.66% to take account the link month of July) increase to
16 the FTY amount to produce an expected level of claims paid per employee per month of
17 \$1,114.46 for the FPFTY. I then add administrative cost of \$71.81 per employee per
18 month from Highmark BCBS to produce a total cost of \$1,186.27 per employee per
19 month.

20 This amount was then multiplied by the number of participating active employees
21 projected for the FPFTY to calculate the monthly amount of \$422,311. This amount is
22 multiplied by 12 for a total of \$5,067,734 during the FPFTY.

23

1 **Q. Please explain how you adjusted the Company's claim for Hospitalization Expense**
2 **for the costs of the Wellness Program.**

3 A. The Wellness Program had an actual expense \$1,130 during the HTY. I then increased
4 the actual expense incurred during the HTY by an annualized inflation rate of 4.36% to
5 determine the FTY amount, and then increase the FTY amount by the same annualized
6 inflation rate (plus 0.36% for the link month of July) to calculate a monthly amount of
7 \$1,235 for the twelve months ended July 2024. The annualized inflation rate was
8 estimated by using Blue Chip Economic Indicators' September 2022 GDP Chained Price
9 Index for the future 2022, 2023 and 2024 quarters which is noted in National Fuel Exhibit
10 DNK-2.

11
12 **Q. Please explain how you adjusted the Company's claim for Hospitalization Expense**
13 **for the costs of prescription drug coverage.**

14 A. The Caremark CVS Carved-Out Pharmacy Prescription Drug Benefit rate per employee
15 was increased similar to the health insurance rate per employee. I started with the actual
16 level of claims paid without administration fees per employee for of the HTY (i.e.,
17 \$228.69). This amount will be a good predictor of the increase in claims paid for the
18 FPFTY. Then, based on the actual level of increases (or in this case decreases)
19 experienced from the HTY versus the 12 months ended June 2021, I decreased the level
20 of claims paid for the HTY by 1.07% to reach an FTY amount of \$226.24 per employee
21 per month. I then applied this 1.07% decrease (plus a -0.09% decrease to account for the
22 link month of July) to the FTY amount to produce an expected level of claims paid per
23 employee per month of \$223.62 for the FPFTY. I then added \$1.24 per employee per

1 month of administrative costs from Caremark CVS to produce a total cost of \$224.86 per
2 employee per month during the FPFTY.

3 This was then multiplied by the number of participating employees projected for
4 the FPFTY to calculate the monthly amount of \$44,523. This amount is multiplied by 12
5 for a total of \$534,275 during the FPFTY.

6
7 **Q. What is the total annual cost of the Company's health insurance, Well Program,
8 and prescription drug coverage benefits?**

9 A. The total projected annual cost for these health care programs is \$5,603,244. The total
10 projected annualized supervisory and weekly contributions towards Hospitalization were
11 subtracted to arrive at a total cost of \$4,437,672. This was multiplied by Factor A to
12 calculate the amount to be charged to O&M expense of \$3,269,233 for the FPFTY. This
13 amount is \$349,861 greater than the expense recorded on the general ledger for the HTY,
14 and \$513,281 greater than the normalized June 2022 expense.

15
16 **Q. Please explain the adjustment on National Fuel Exhibit MPW-1, Schedule 2
17 (Benefits) - Page 7 - 8.**

18 A. This part of the exhibit shows the calculation of the adjustment of the Dental Expense
19 Benefit provided by NFGDC. The calculation starts with actual gross amount of dental
20 benefits expense incurred during the HTY of \$182,783. I then decreased this amount by
21 the annualized of level of employee contributions of \$40,560, which produced net dental
22 costs of \$142,223 during the HTY. This amount was increased by the aforementioned
23 annualized inflation rate of 4.36%, to calculate an FTY amount that was then increased

1 by this annualized inflation rate again (plus 0.36% for the link month of July) to produce
2 a total cost of \$155,454 for the FPPTY. I then multiplied this amount by Factor A to
3 determine the of the O&M expense associated with the Dental Expense Benefit of
4 \$114,523 for the FPPTY. This amount is \$15,452 higher than the expense recorded on
5 the general ledger for the HTY, and \$9,748 greater than the normalized June 2022
6 expense.

7
8 **Q. Please explain the adjustment to National Fuel Exhibit MPW-1, Schedule 2**
9 **(Benefits) - Pages 15 - 16.**

10 A. This part of the exhibit calculates the adjustment for benefit charges associated with labor
11 charged from NFGDC's New York Division ("National Fuel-NY") and Other NFG
12 Subsidiaries to the amount being claimed for the FPPTY. I started with the per book HTY
13 numbers for benefit charges associated with labor charged from National Fuel - NY and
14 Other Subsidiaries of \$181,592 and \$311,519, respectively. These amounts were
15 increased by an annualized 4.36% for projected inflation which results in a total cost of
16 \$189,513 and \$325,109 for benefits associated with labor charged from National Fuel -
17 NY and Other Subsidiaries, respectively, for the FTY. I then increased the FTY amounts
18 by the same annualized inflation factor again (plus 0.36% for the link month of July),
19 which results in a total cost of \$198,486 and \$340,501 for benefits associated with labor
20 charged from National Fuel - NY and Other Subsidiaries, respectively, for the FPPTY.
21 This amount is \$16,894 and \$28,982 greater than benefit charges recorded from National
22 Fuel - NY and Other Subsidiaries, respectively, for the HTY, which were also assumed to
23 be the normalized June 2022 expense.

1 Q. Does this conclude your direct testimony at this time?

2 A. Yes.

NATIONAL FUEL STATEMENT NO. 6

TRACY L. WESOLOSKI

**BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION**

Docket No. R-2022-3035730

**National Fuel Gas Distribution Corporation
Pennsylvania Division**

Statement No. 6

**Direct Testimony of
Tracy L. Wesoloski**

Topics Addressed: **Rate Base**
 Working Capital
 Lead/ Lag Study
 Net Plant

Dated: October 28, 2022

1 **I. INTRODUCTION AND QUALIFICATIONS**

2 **Q. Please state your name and business address.**

3 A. My name is Tracy L. Wesoloski. My business address is 6363 Main Street,
4 Williamsville, NY 14421.

5
6 **Q. By whom and in what capacity are you employed?**

7 A. I am employed as an Assistant Manager in the Rates & Regulatory Affairs department of
8 National Fuel Gas Distribution Corporation (“NFGDC). My primary responsibilities
9 include the oversight of regulatory audits, Accounting, and reporting on behalf of the
10 NFGDC’s New York and Pennsylvania Divisions. NFGDC’s Pennsylvania Division is
11 hereinafter referred to as “National Fuel” or the “Company.”

12
13 **Q. Please provide your educational background.**

14 A. In 2003, I graduated from Canisius College with a Bachelor of Science degree in Finance
15 and Economics. In 2010, I received a Master of Business Administration degree from the
16 State University of New York at Buffalo.

17
18 **Q. Please provide your professional experience.**

19 A. From 2003 to 2004, I worked as a Financial Analyst and Cash Manager at the Park
20 Associates. In late 2004, I began my employment with the Company in the Finance
21 Department as an Accountant I. In 2008, I was promoted to the position of Accountant
22 II. In 2011, I was promoted to General Accountant I. In 2015, I was promoted to Senior

1 Financial Analyst. In 2022, I transferred to the Rates & Regulatory Affairs department as
2 an Assistant Manager.

3
4 **Q. Have you previously testified in other proceedings before the Pennsylvania Public**
5 **Utility Commission (“PAPUC” or the “Commission”) or any other state or federal**
6 **agency?**

7 A. No.

8
9 **II. PURPOSE OF TESTIMONY**

10 **Q. Please describe the purpose of your testimony.**

11 A. I will address: (1) the development of working capital, lead/ lag study, actual and
12 projected plant balances, and Rate Base for the historic test year ended June 30, 2022
13 (“HTY”), future test year ending June 30, 2023 (“FTY”), and fully projected future test
14 year ending July 31, 2024 (“FPFTY”).

15
16 **Q. Are you sponsoring any exhibits in this proceeding?**

17 Yes, I am sponsoring Exhibit A, Schedules C1, C-2, C-3, C-4, C-5, C-7, and C-8 for the
18 HTY, FTY, and the FPFTY.

19
20 **III. ACCOUNTING AND HISTORIC COSTS**

21 **Q. Do the continuing property records of the Company reflect the original cost value of**
22 **property?**

1 A. Yes. NFGDC’s plant in service, retirements, additions, and any book adjustments have
2 been recorded per Generally Accepted Accounting Principles (“GAAP”) and Uniform
3 System of Accounts requirements by original cost value. These are recorded by division
4 – New York & Pennsylvania.

5
6 **Q. What process does the Company follow to assure that property reflected in its plant
7 accounts is in service?**

8 A. Once a project is completed, National Fuel’s capital project manager will document the
9 in-service date in addition to the asset retirement units that were either installed or
10 removed. This report is submitted to the plant accounting area within the Company’s
11 Engineering department. A plant accountant will place the project in-service in the
12 Company’s financial software, using such provided information. Only after the project is
13 in-service will the identified retirement units be permitted by the software to be unitized
14 from the project by an authorized user within the plant accounting or Geographic
15 Information System Mapping groups. The unitization process automatically generates
16 the accounting entries to move the costs on the project to the appropriate National Fuel
17 plant property accounts. These entries are subject to review by authorized individuals
18 and further review by internal and external auditors.

19
20 **IV. FULLY PROJECTED FUTURE TEST YEAR RATE BASE**

21 **Q. With reference to National Fuel’s Exhibit A (FPFTY), Schedule C-1, please discuss
22 how the Company’s specific Rate Base items are determined.**

1 A. National Fuel’s Rate Base calculation is presented in Exhibit A, schedule C-1. This
2 schedule summarizes the Rate Base values for each test year. Column 1 shows the
3 schedule reference information for each component in Rate Base. Columns 3 and 5
4 shows the amounts of each Rate Base component. Our Rate Base is comprised of utility
5 plant less accumulated depreciation, plus our working capital, gas inventory, materials
6 and supplies, less accumulated deferred income taxes and customer deposits. National
7 Fuel’s total Rate Base is \$456.8 million for the FPFTY.

8

9 **1. Utility Plant in Service**

10 **Q. Please describe the adjustments to total plant included on Exhibit A (HTY),**
11 **Schedule C-2.**

12 A. On page 3 of Schedule C-2, \$4.2 million was added to the Company’s plant in service to
13 account for Construction Work in Progress completed (CCNC – Construction Completed
14 Not Classified). These projects are complete and are in service, but for bookkeeping
15 purposes, they had not been transferred to “in service” by the end of the HTY. An
16 additional \$69,266 was also added to plant in service for projects that were unitized at the
17 end of the HTY, but costs were distributed to assets at the beginning of the FTY. The
18 total of the 2 adjustments equals \$4.2 million and is shown in Schedule C-2, Page 3,
19 Column 3.

20

21 **Q. Please describe what is represented in Exhibit A, Schedule C-2.**

22 A. The Company’s claim for utility plant in service is represented in Exhibit A, Schedule C-
23 2. The total amount of plant is reflected on page 2 column 2, \$781.2 million for FPFTY.

1 Utility plant allows the Company to provide gas service in a safe and reliable manner to
2 its customers.

3
4 **Q. Where are plant in service additions shown in the Company’s accounting exhibits?**

5 A. Plant in service additions during the FPFTY are shown in Exhibit A, Schedule C-2, Page
6 6 and 7. A historic capital spending allocation was formulated by calculating the average
7 capital expenditures by month for fiscal years (“FY”) 2019, 2020, and 2021. Then, each
8 month’s allocation was applied to our capital budget expenditures for each of our future
9 test years.

10
11 **Q. Where are plant retirements shown?**

12 A. Retirements are in Exhibit A (FPFTY), Schedule C-2, Page 8 and 9. The total amount of
13 additions and retirements were determined for FY 2019, 2020, and 2021. A percentage
14 was then calculated to determine the relationship of retirements to additions as a
15 percentage and by fiscal year. That relationship percentage was then applied to the
16 capital budget forecast to determine the percentage of retirements that will occur for that
17 particular fiscal year. A monthly spread was also calculated to determine the percentage
18 of retirements that occurs per month, based on the 2021 fiscal year. That monthly spread
19 was then applied to the amount determined for the retirements as noted previously.

20
21
22 **Q. Please explain how National Fuel determined its Rate Base value for utility plant in**
23 **service.**

1 A. The Company’s claim for utility plant in service is the total sum of the closing plant
2 balances as of June 30, 2022, and capital budget additions, less plant retirements for the
3 years ending June 30, 2023, and July 31, 2024. National Fuel uses an allocation
4 methodology to project monthly additions for plant in service for the future test years.
5 Monthly historic spending allocations are calculated and then applied to the capital
6 budget to determine monthly spending for the future test years. Mark C. Schaefer’s direct
7 testimony (National Fuel Statement No. 9) discusses the capital budget process.

8

9 **2. Accumulated Depreciation**

10 **Q. Please explain how the Company determined its Rate Base deduction for**
11 **accumulated depreciation.**

12 A. Please refer to the Company’s Exhibit A (FPFTY), Schedule C-3, the
13 tables included in the Depreciation Study sponsored by John Spanos from Gannett
14 Fleming, and the direct testimony of John Spanos, National Fuel Statement No. 8.

15

16 **Q. Please describe the Company’s Accumulated Depreciation claim.**

17 A. Please refer to the company’s Exhibit A, schedule C-3, the
18 tables included in the Depreciation Study sponsored by John Spanos from Gannett
19 Fleming, and the direct testimony of John Spanos, National Fuel Statement No. 8.
20 Schedule C-3 shows accumulated provision for depreciation by FERC account. The
21 FPFTY is for \$285.3 million and is shown on page 2 in schedule C-3.

22

23 **3. Cash Working Capital**

1 **Q. Please explain how the Company determined its Rate Base value for cash working**
2 **capital (“CWC”).**

3 A. CWC is the capital requirement calculated between (1) the lag in the receipt of revenue
4 for rendering service and (2) the lag in the payment of cash expenses incurred to provide
5 such service to National Fuel’s customers. The detailed calculations can be found in
6 Schedule C-4 of Exhibit A.

7
8 **Q. Where is the Working Capital Rate Base value summarized?**

9 A. The CWC is summarized in Exhibit A, Schedule C-1 and Schedule C-4, Page 1. The
10 other elements of the working capital claim are listed on this page, along with their
11 corresponding references.

12
13 **Q. Please describe the Revenue lag calculations shown on Exhibit A (HTY), Schedule**
14 **C-4, pages 3-5.**

15 A. First, the Company’s gross accounts receivable balances were recorded by month for 3
16 time periods: the 12 months ended (“TME”) June 30, 2018, the TME June 30, 2019, and
17 the TME June 30, 2020. These balances can be found in Exhibit A (HTY), Schedule C-4,
18 Pages 3 - 5, Column 2. Next, all sales per month were recorded for the same three time
19 periods. The sales figures can be found in Exhibit A (HTY), Schedule C-4, Pages 3 - 5,
20 Column 3. The average accounts receivable balances were calculated using the 13
21 months provided for each of the three periods. This calculation is shown in Schedule C-
22 4, Pages 3 - 5, Column 2, Line 17. The accounts receivable turnover ratio was
23 determined by dividing total sales for each period, shown in Column 4, Line 19 on the

1 same Schedule C-4 pages, by the average accounts receivable balance. In Schedule C-4,
2 Pages 3 - 5, Column 5, Line 20, the collection lag day factor was calculated by dividing
3 365 days by the A/R turnover ratio. The service lag was calculated by dividing 365
4 days/12 months *0.5. The meter read lag factor of 1 plus the collection lag and the
5 service lag, gives a total revenue lag day of 58.65 for TME June 2020, 68.06 for TME
6 June 2019, and 81.39 for TME June 2018. The average of those three time periods is
7 69.37 days.

8
9 **Q. Why was a 3-year average of the TME June 2018, June 2019 and June 2020 time**
10 **periods used to determine the revenue lag?**

11 A. Since our HTY occurred during the Covid-19 pandemic, an average of these three prior
12 year time periods shows a more accurate representation of our regular business
13 operation's revenue lags. Our HTY includes many infrequent occurrences, i.e.,
14 Supplement Nos. 228, 232, and 239 to Tariff Gas-PUC No. 9 for Other Postemployment
15 Benefits, the Emergency Rental Assistance Program, extraordinary Low Income Home
16 Energy Assistance Program and Crisis Grants, etc. These occurrences skew our revenue
17 lag, therefore not showing a true representation of our normal business practices in our
18 revenue lag calculations.

19
20 **Q. What is shown in Exhibit A (HTY), Schedule C-4, Pages 6 - 10?**

21 A. These exhibits show the expense lag calculations for payroll (net labor), purchased gas
22 costs ("PGC") and all other operations and maintenance ("O&M") expenses. Also
23 included are calculations for interest payments, tax payments and prepaid expenses. All

1 of these components are used in the working capital calculations, which is summarized in
2 total on Exhibit A, Schedule C-4, Page 1.

3
4 **Q. How was the mid-point of the service period calculated?**

5 A. The mid-point of service for other O&M expenses and gas purchases is the difference
6 between the date of payment and invoice date.

7
8 **Q. How are the payroll expense lag days for the CWC claim calculated?**

9 A. National Fuel's employees are paid weekly or bi-monthly, depending on the pay group
10 (i.e., supervisory, hourly, clerical, etc.). The payroll lag is calculated by subtracting the
11 mid-point of the pay period from the pay date. The weighted averages are then calculated
12 by pay group and added together. The lag days are calculated by dividing the weighted
13 average by the total amount of net labor costs. Payroll lag is 10.77 days and is found on
14 Schedule C-4, Column 5, Line 5 (HTY).

15
16 **Q. How were the lag days associated with the Purchased Gas Costs shown on Exhibit A
17 (HTY), Schedule C-4, Page 7, Column 5, Line 74 calculated?**

18 A. The supplier and pipeline invoices were gathered for the HTY. The day's lag in Column
19 3 was calculated by subtracting the mid-point from the date the invoices were paid. The
20 weighted average was then calculated by multiplying the amount of the invoices by the
21 calculated day's lag. All weighted averages and total amount of invoices paid were
22 totaled. The weighted average final day's lag was calculated by taking the sum of all

1 weighted averages in Column 5 and dividing it by the total of gas purchased in Column 4,
2 Line 73. The final day's lag was 39.87 days.

3
4 **Q. How were the Other O&M Expense lag days, shown on Exhibit A (HTY), Schedule**
5 **C-4, Page 6, Column 5, Line 21 calculated?**

6 A. The O&M expenses are shown per month for the HTY in Column 2. Each month's lag
7 days was calculated by subtracting the mid-point from the date invoices were paid, shown
8 in Column 3. The weighted average was calculated by multiplying the amount of the
9 invoices by that month's lag days, shown in Column 4. The sum of the weighted
10 averages divided by the total amount of invoices paid equals the O&M expense lag days.
11 The O&M expense lag days is 45.37 days, shown in Column 5, Line 21. Please also refer
12 to the direct testimony of Anthony Formato, National Fuel Statement No. 3, for a detailed
13 discussion of the Company's claimed O&M expenses.

14
15 **Q. Please explain how the interest payment amounts included on Exhibit A, Schedule**
16 **C-4 were determined.**

17 A. The Rate Base for each test year, multiplied by the long-term debt ratio, multiplied by the
18 embedded cost of long-term debt will give the total interest expense. This is shown in
19 Column 4, Line 4. The daily amount is then calculated on Line 5. The difference
20 between the Revenue Lag days and the days to mid-point of the interest payments made
21 is shown on Line 8. The total interest for working capital is the lag days multiplied by
22 the daily interest, shown on page 3 of Schedule C-4, Column 4, Line 9 (FTY and FPFTY)
23 and page 8 of Schedule C-4, Column 4, Line 9 (HTY).

1 **Q. How was the tax payment lag for the working capital requirement, shown on**
2 **Exhibit A, Schedule C-4 determined?**

3 A. The taxes that were used in the tax payment lag calculations were Federal income, State
4 income, Pennsylvania property, and Public Utility Realty Tax Act (“PURTA”) taxes and
5 are shown in Exhibit A, Schedule C-4. The anticipated taxes for the FPFTY are also
6 shown in Schedule C-4, Page 4. Each tax type was calculated separately for their lag
7 calculation. The result of each tax type is shown in this schedule on Column 10.

8
9 **Q. How was the working capital allowance for prepaid expenses, shown on Exhibit A**
10 **(FPFTY) Schedule C-4 derived?**

11 A. A 13-month average of the actual prepaid balances was inflated using a rate of 9.30% for
12 the FPFTY. Please refer to Exhibit DNK-2 for derivation of these rates. The Company’s
13 claim for prepaid expenses is shown in Schedule C-4, Page 5 (FPFTY).

14
15 **Q. What is the total amount of the Company’s working capital claim?**

16 A. The total working capital for the FPFTY is \$23.8 million. This amount is represented on
17 the summary page on Schedule C-4, Page 1 in Exhibit A.

18

19 **4. Gas Storage Inventory**

20 **Q. Please explain how the Rate Base value for Gas Storage Inventory was determined.**

21 A. The Company’s gas storage inventory is included in the rate base claim the same as
22 materials and supplies, as they are considered a physical asset. National Fuel purchases
23 storage gas throughout the year to use primarily during the winter heating season. The

1 storage inventory represents gas volumes stored underground. The Company pays for
2 storage inventory monthly. National Fuel uses a forecast to calculate injections and
3 withdrawals based on most recent gas cost updates. The Company's Gas Inventory
4 amount is shown in Exhibit A, Schedule C-5 for each test year. The calculation is a
5 modified 12-month average. Half of the first and last month is averaged with the
6 remaining middle months. The FPFTY modified average gas inventory balance is \$9.8
7 million.

8

9 **5. Accumulated Deferred Income Taxes**

10 **Q. Please explain how the Rate Base value for Accumulated Deferred Income Taxes**
11 **("ADIT") was calculated.**

12 A. The Company's claim for ADIT is set forth in Exhibit A, Schedule C-6 (FPFTY).
13 Company witness Mr. Jim Rizzo provides a detailed explanation of this calculation in his
14 direct testimony (National Fuel Statement No. 12).

15

16 **6. Customer Deposits**

17 **Q. Please explain how the Company calculated the Rate Base value for customer**
18 **deposits, shown in Exhibit A, Schedule C-7.**

19 A. National Fuel's claim for customer deposits is used to offset the need to provide further
20 capital. Customer deposits is found on Schedule C-7. The FPFTY average monthly
21 balance was inflated by 9.30%.

22

23 **Q. What is the rate base offset for customer deposits?**

1 A. The company's claim for customer deposits for the FPFTY is \$3.4 million. These
2 amounts can be found on Schedule C-7 of Exhibit A.

3

4 **7. Materials and Supplies Inventory**

5 **Q. What is the rate base claim for materials and supplies inventory?**

6 A. The actual book balances for materials and supplies were recorded. An average monthly
7 balance was then calculated and inflated at 9.30% for the FPFTY. The average monthly
8 balance at July 31, 2024 is projected to be \$1.2 million. This is shown on Exhibit A
9 (FPFTY), Schedule C-8.

10

11 **Q. Does this conclude your direct testimony at this time?**

12 A. Yes.

NATIONAL FUEL STATEMENT NO. 7

KAREN L. METZGER

**BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION**

Docket No. R-2022-3035730

**National Fuel Gas Distribution Corporation
Pennsylvania Division**

Statement No. 7

**Direct Testimony of
Karen Lynn Metzger**

Topics Addressed: Balance Sheet and Historic O&M Expense

Dated: October 28, 2022

1 **I. INTRODUCTION AND QUALIFICATIONS**

2 **Q. Please state your name and business address.**

3 A. My name is Karen Lynn Metzger. My business address is 6363 Main Street,
4 Williamsville, NY 14421.

5
6 **Q. By whom and in what capacity are you employed?**

7 A. I am employed by National Fuel Gas Distribution Corporation (“NFGDC”) as an
8 Assistant Manager in the Accounting Department.

9
10 **Q. Please provide your educational background.**

11 A. I graduated from Providence College in 1994 with a Bachelor of Science in Accounting.

12
13 **Q. Please provide your professional experience.**

14 A. My full educational background and work experience are set forth in the attached
15 National Fuel Exhibit KLM-1.

16
17 **Q. Have you previously testified in other proceedings before the Pennsylvania Public
18 Utility Commission (“PAPUC” or the “Commission”) or any other state or federal
19 agency?**

20 A. No.

1 **II. PURPOSE OF TESTIMONY**

2 **Q. Please describe the purpose of your testimony.**

3 A. I am providing testimony on behalf of NFGDC’s Pennsylvania Division (“National
4 Fuel” or “Company”) in support of its rate case accounting methodology.
5

6 **Q. Are you sponsoring any exhibits or filing requirements in this proceeding?**

7 A. Yes, I am sponsoring National Fuel Exhibit KLM-1.
8

9 **Q. Would additional explanation be helpful concerning any of these exhibits?**

10 A. Concerning the balance sheet exhibits, it should be noted that the balances presented
11 reflect the combined financial position of NFGDC’s New York and Pennsylvania
12 jurisdictions. Wherever possible, we have reported the results of National Fuel only. Each
13 exhibit lists the source and scope of the information it presents.
14

15 **III. ACCOUNTING PROCESS AND HISTORIC COSTS**

16 **Q. How are the accounting records of National Fuel maintained?**

17 A. The accounting records of National Fuel are kept in accordance with generally accepted
18 accounting principles and the Federal Energy Regulatory Commission’s Uniform System
19 of Accounts as required under the provisions of 52 Pa. Code §59.42.
20

21 **Q. Are the books and records of National Fuel subject to audit?**

22 A. Yes, the books and records of National Fuel are audited by its internal auditors. In
23 addition, National Fuel’s books and records are included in Company-wide audits

1 performed by National Fuel's external auditor, PriceWaterhouseCoopers. The Company's
2 books and records are further subject to audit by the PAPUC.

3

4 **Q. Does this conclude your direct testimony at this time?**

5 A. Yes.

K. Lynn Metzger

Assistant Manager – Accounting

Work Experience

February 2022 – Current	Assistant Manager – Accounting National Fuel Gas Distribution Corporation – Williamsville, NY
May 2019 – February 2022	Senior Accountant – Accounting National Fuel Gas Distribution Corporation – Williamsville, NY

NATIONAL FUEL STATEMENT NO. 8

JOHN J. SPANOS

**BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION**

Pennsylvania Public Utility)	
Commission)	
)	
)	
v.)	Docket No. R-2022-3035730
)	
)	
National Fuel Gas Distribution)	
Corporation – Pennsylvania Division)	
)	

**DIRECT TESTIMONY OF
JOHN J. SPANOS
ON BEHALF OF
NATIONAL FUEL GAS DISTRIBUTION CORPORATION**

October 28, 2022

1 **Q. Please state your name and address.**

2 A. John J. Spanos. My business address is 207 Senate Avenue, Camp Hill,
3 Pennsylvania.

4 **Q. With what firm are you associated and in what capacity?**

5 A. I am associated with the firm of Gannett Fleming Valuation and Rate Consultants,
6 LLC (Gannett Fleming) as President.

7 **Q. How long have you been associated with Gannett Fleming?**

8 A. I have been associated with the firm since June 1986.

9 **Q. What is your educational background?**

10 A. I have Bachelor of Science degrees in Industrial Management and Mathematics
11 from Carnegie-Mellon University and a Master of Business Administration from
12 York College of Pennsylvania.

13 **Q. Are you a member of any professional societies?**

14 A. Yes. I am a member and past President of the Society of Depreciation
15 Professionals. I am also a member of the American Gas Association/Edison
16 Electric Institute Industry Accounting Committee.

17 **Q. Have you taken the certification examination for depreciation
18 professionals?**

19 A. Yes, I passed the certification examination of the Society of Depreciation
20 Professionals in September 1997 and was recertified in August 2003, February
21 2008, January 2013 and February 2018.

22 **Q. Will you outline your experience in the field of depreciation?**

1 A. I have over 36 years of depreciation experience which includes expert testimony in
2 more than 400 cases before approximately 41 regulatory commissions, including
3 this Commission. These cases have included depreciation studies in the electric,
4 gas, water, wastewater and pipeline industries. In addition to cases where I have
5 submitted testimony, I have also supervised over 700 other depreciation or
6 valuation assignments. Please refer to Appendix A for my qualifications statement,
7 which includes further information with respect to my work history, case
8 experience, and leadership in the Society of Depreciation Professionals.

9 **Q. What is the purpose of your testimony?**

10 A. My testimony is in support of the depreciation studies conducted under my
11 direction and supervision for the gas plant of National Fuel Gas Distribution
12 Corporation. (“National Fuel” or the “Company”).

13 **Q. Have you prepared exhibits presenting the results of your studies?**

14 A. Yes. National Fuel Exhibit C - Historic presents the results of the depreciation
15 study as of June 30, 2022. National Fuel Exhibit C - Future presents the results of
16 the depreciation study as of June 30, 2023. National Fuel Exhibit C – Fully
17 Projected presents the results of the depreciation study as of July 31, 2024. In
18 addition, I am responsible for the responses to the following filing requirements
19 pertaining to depreciation under Section 53.53(a)(1) of the Commission’s
20 regulations: 3, 4, 5, 6, 7 and 17.

21 **Q. Please describe Exhibit Nos. C-Historic, C-Future and C-Fully**
22 **Projected.**

1 A. Exhibit No. C-Historic, titled "2022 Depreciation Study - Calculated Annual
2 Depreciation Accruals Related to Gas Plant as of June 30, 2022," includes the
3 results of the depreciation study as related to the original cost as of June 30, 2022.
4 The report also includes the detailed depreciation calculations. Exhibit No. C-
5 Future, titled "2023 Depreciation Study - Calculated Annual Depreciation Accruals
6 Related to Gas Plant as of June 30, 2023," includes the results of the depreciation
7 study as related to the estimated original cost as of June 30, 2023. The report also
8 includes explanatory text, statistics related to the estimation of service life, and the
9 detailed depreciation calculations. Exhibit No. C-Fully Projected, titled "2024
10 Depreciation Study – Calculated Annual Depreciation Accruals Related to Gas
11 Plant as of July 31, 2024," includes the results of the depreciation study as related
12 to the estimated original cost as of July 31, 2024.

13 **Q. What were the purposes of your depreciation studies?**

14 A. The purposes of the depreciation studies were to estimate the annual depreciation
15 accruals related to gas plant in service for ratemaking purposes and, using
16 Commission-approved procedures, to estimate the Company's book reserve at
17 June 30, 2023, and July 31, 2024.

18 **Q. Is the Company's claim for annual depreciation in the current**
19 **proceeding based on the same methods of depreciation as were used in**
20 **its most recent Annual Depreciation Report including service life study**
21 **filed in May 2018?**

22 A. Yes, it is. For most plant accounts, the current claim for annual depreciation is
23 based on the straight line remaining life method of depreciation, which has been
24 used for over twenty-five years. For Accounts 391.1, 391.2, 391.3, 394 and 397, the

1 claim is based on the straight line remaining life method of amortization. The
2 accounts have a large number of units, but small asset values representing
3 approximately 2 percent of the depreciable plant. The assets represent items
4 located in office buildings, service centers, garages and warehouses. Given the
5 difficulty in maintaining accounting records for these numerous assets and high
6 cost for periodic inventories, retirements are recorded when a vintage is fully
7 amortized, rather than as the units are removed from service. All units are retired
8 when the age of the vintage reaches the amortization period. The annual
9 amortization is based on amortization accounting which distributes the
10 unrecovered cost of fixed capital assets over the remaining amortization period
11 selected for each account.

12 **Q. What group procedure is being used in this proceeding for depreciable**
13 **accounts?**

14 A. The average service life procedure is used in the current proceeding for plant
15 installed prior to 1982 and the equal life group procedure for 1982 and subsequent
16 vintages. This calculation has been used in the same manner as the Company's
17 most recent annual depreciation reports.

18 **Q. Is the Company's claim for accrued depreciation in the current**
19 **proceeding made on the same basis as has been used for over twenty-**
20 **five years?**

21 A. Yes. The current claim for accrued depreciation is the book reserve brought
22 forward from the book reserve approved by the Commission in the last proceeding.

23 **Q. How was the book reserve used in the calculation of annual**
24 **depreciation?**

1 A. The book reserve by account was allocated to vintages to determine original cost
2 less accrued depreciation by vintage. The total annual accrual is the sum of the
3 results of dividing the original costs less accrued depreciation by the vintage
4 composite remaining lives.

5 **Q. How was the book reserve as of June 30, 2023, estimated?**

6 A. The book reserve as of June 30, 2023, by account, was projected by adding
7 estimated accruals, gross salvage and the amortization of net salvage, and
8 subtracting estimated retirements and cost of removal from the book reserve as of
9 June 30, 2022. Annual accruals were estimated using the annual accruals
10 calculated as of June 30, 2022. For most accounts, gross salvage and cost of
11 removal were estimated by (1) expressing actual gross salvage and cost of removal
12 as a percent of retirements by account, for the most recent five-year period, and
13 (2) applying those percents to the projected retirements by account. For the
14 purpose of calculating the annual accruals, the projected book reserve by account
15 was allocated to vintages based on calculated accrued depreciation as of June 30,
16 2023.

17 **Q. Was the book reserve as of July 31, 2024, estimated using the same**
18 **methodology?**

19 A. Yes.

20 **Q. Has a service life study of the Company's gas utility property been**
21 **performed?**

22 A. Yes. The most recent service life study was performed as of December 2017. The
23 service life study is the basis for the service lives I used to calculate annual accruals.

1 **Q. Briefly outline the procedure used in performing the service life study.**

2 A. The service life study consisted of assembling and compiling historical data from
3 the records related to the gas utility plant of the Company; statistically analyzing
4 such data to obtain historical trends of survivor characteristics; obtaining
5 supplementary information from management and operating personnel
6 concerning Company practices and plans as they relate to plant operations; and
7 interpreting the above data to form judgments of service life characteristics.

8 Iowa type survivor curves were used to describe the estimated survivor
9 characteristics of the mass property groups. Individual service lives were used for
10 major individual units of plant, such as distribution buildings housing offices and
11 shops. The life span concept was recognized by coordinating the lives of associated
12 plant installed in subsequent years with the probable retirement date defined by
13 the life estimated for the major unit.

14 **Q. What statistical data were employed in the historical analyses
15 performed for the purpose of estimating service life characteristics?**

16 A. The data consisted of the entries made to record retirements and other
17 transactions related to the gas plant during the period 1960-2017. These entries
18 were classified by depreciable group, type of transaction, the year in which the
19 transaction took place, and the year in which the plant was installed. Types of
20 transactions included in the data were plant additions, retirements, transfers, and
21 balances. In the presentation of service life statistics, only the significant exposure
22 points that were utilized in determining survivor curves were plotted. This process
23 is utilized to show my judgment in service life determinations.

1 **Q. What was the source of these data?**

2 A. They were assembled from Company records related to its gas plant in service.

3 **Q. Were the methods used in the service life study the same as those used**
4 **in other depreciation studies for gas utility plant presented before this**
5 **Commission?**

6 A. Yes. The methods are the same ones that have been presented previously for
7 National Fuel Gas Distribution Corporation and for other gas companies before
8 the Pennsylvania Public Utility Commission and that have been accepted by the
9 Commission in its past orders concerning gas utilities.

10 **Q. What approach did you use to estimate the lives of significant**
11 **structures such as office buildings and service centers?**

12 A. I used the life span technique to estimate the lives of significant structures. In this
13 technique, the survivor characteristics of the structures are described by the use of
14 interim survivor curves and estimated probable retirement dates. The interim
15 survivor curve describes the rate of retirement related to the replacement of
16 elements of the structure such as plumbing, heating, doors, windows, roofs, etc.
17 that occur during the life of the facility. The probable retirement date provides the
18 rate of final retirement for each year of installation for the structure by truncating
19 the interim survivor curve for each installation year at its attained age at the date
20 of probable retirement. The use of interim survivor curves truncated at the date of
21 probable retirement provides a consistent method for estimating the lives of the
22 several years of installation inasmuch as concurrent retirement of all years of
23 installation will occur when the structure is retired.

1 **Q. Has your firm used this approach in other proceedings before this**
2 **Commission?**

3 A. Yes, we have used the life span technique on many occasions before the
4 Pennsylvania Public Utility Commission.

5 **Q. What are the bases for the probable retirement years that you have**
6 **estimated for each structure?**

7 A. The bases for the estimates of probable retirement years are life spans for each
8 structure that are based on judgment and incorporate consideration of the age, use,
9 size, nature of construction, management outlook and typical life spans
10 experienced and used by other gas utilities for similar structures. Most of the life
11 spans result in probable retirement dates that are many years in the future. As a
12 result, the retirement of these structures is not yet subject to specific management
13 plans. Such plans would be premature. At the appropriate time, studies of the
14 economics of rehabilitation and continued use or retirement of the structure will
15 be analyzed, and the results incorporated in the estimation of the structure's life
16 span.

17 **Q. Are the factors considered in your estimates of service life presented**
18 **in Exhibit No. C-Future?**

19 A. Yes. A discussion of the factors considered in the estimation of service lives is
20 presented by account on pages III-2 through III-7 of Exhibit No. C-Future.

21 **Q. Were there any material changes to life characteristics as a result of**
22 **this rate proceeding?**

1 A. No. There was no material change in the life estimate for plant accounts or
2 subaccounts in this rate proceeding. All life estimates were based on the recent
3 annual depreciation report and the service life study that was conducted.

4 **Q. Please outline the contents of Exhibit No. C-Future.**

5 A. Exhibit No. C-Future is presented in eight parts. Part I, Introduction, sets forth
6 the scope and basis of the study. Part II, Estimation of Survivor Curves, includes
7 a description of the Iowa Curves and the formulation of the retirement rate
8 method. Part III, Service Life Considerations, and Part IV, Calculation of Annual
9 and Accrued Depreciation, include a description of the judgment utilized for life
10 parameters and the explanation of depreciation procedures.

11 Part V, Results of Study, presents a description of the results and summaries
12 of the depreciation calculations. Part VI, Service Life Statistics, presents the
13 graphs and tables which relate to the service life study. Part VII, Detailed
14 Depreciation Calculations, sets forth the detailed depreciation calculations by
15 account. Part VIII, Experienced and Estimated Net Salvage, presents the cost of
16 removal and gross salvage by account for the years 2018 through 2022.

17 Table 1, pages V-4 and V-5, presents the estimated survivor curve, the original
18 cost as of June 30, 2023, and the book reserve and calculated annual depreciation
19 for each account or subaccount of gas plant. Table 2 on page V-6 presents the
20 bringforward to June 30, 2023, of the book depreciation reserve as of June 30,
21 2022. Table 3 on page V-7 sets forth the calculation of the annual accruals used in
22 the bringforward. Table 4, page V-8, presents the experienced and estimated net
23 salvage during the five-year period, 2018 through 2022.

1 The section beginning on page VI-1 presents the results of the retirement rate
2 analyses prepared as the historical bases for the service life estimates. The section
3 beginning on page VII-1 presents the depreciation calculations related to original
4 cost. The tabulation on pages VII-3 through VII-6 presents the cumulative
5 depreciated original cost by year installed. The tabulations on pages VII-8 through
6 VII-71 present the calculation of annual depreciation by vintage by account for
7 each depreciable group of utility plant.

8 **Q. Please outline the contents of Exhibit No. C-Fully Projected.**

9 A. Exhibit No. C-Fully Projected includes a description of the results, summaries of
10 the depreciation calculations, and the detailed depreciation calculations as of July
11 31, 2024. The descriptions and explanations presented in Exhibit No. C-Future
12 are also applicable to the depreciation calculations presented in Exhibit No. C-
13 Fully Projected. The graphs and tables related to service life presented in Exhibit
14 No. C-Future also support the service life estimates used in Exhibit No. C-Fully
15 Projected inasmuch as the estimates are the same for both test years. The
16 summary tables and detailed depreciation calculations as of July 31, 2024 are
17 organized and presented in the same manner as those as of June 30, 2023.

18 **Q. Please outline the contents of Exhibit No. C-Historic.**

19 A. Exhibit No. C-Historic includes a description of the results, summaries of the
20 depreciation calculations, and the detailed depreciation calculations as of June 30,
21 2022. The descriptions and explanations presented in Exhibit No. C-Future are
22 also applicable to the depreciation calculations presented in Exhibit No. C-
23 Historic. The graphs and tables related to service life presented in Exhibit No. C-

1 Future also support the service life estimates used in Exhibit No. C-Historic,
2 inasmuch as the estimates are the same for both test years. The summary tables
3 and detailed depreciation calculations as of June 30, 2022, are organized and
4 presented in the same manner as those as of June 30, 2023.

5 **Q. Please use an example to illustrate the manner in which the study is**
6 **presented in Exhibit Nos. C-Historic, C-Future and C-Fully Projected.**

7 A. I will use Account 376.1, Mains – Excluding Cathodic Protection, as my example,
8 inasmuch as it is the largest depreciable group and represents 44 percent of the
9 original cost of depreciable gas plant as of June 30, 2023.

10 The retirement rate method was used to analyze the survivor characteristics
11 of this group. The life tables for the 1960-2017 and 1983-2017 experience bands
12 are presented on pages VI-42 through VI-49 of Exhibit No. C-Future. The life
13 tables, or original survivor curve, are plotted along with the estimated smooth
14 survivor curve, the 69-L1.5, on page VI-41.

15 The calculations of the annual depreciation related to the original cost as of
16 June 30, 2022, of gas plant are presented by type main on pages II-44 through II-
17 47 of Exhibit No. C-Historic. The calculation is based on the 69-L1.5 survivor
18 curve, the attained age, and the allocated book reserve. The calculations as of June
19 30, 2023, are presented by type main on pages VII-44 through VII-47 of Exhibit
20 No. C-Future and are based in part on the bringforward of the book reserve. Also,
21 the calculations as of July 31, 2024 are presented by type main on pages II-46
22 through II-49 of Exhibit No. C-Fully Projected and are based in part on the
23 bringforward of the book reserve. The tabulations in Exhibit Nos. C-Historic, C-

1 Future and C-Fully Projected set forth the installation year, the original cost,
2 calculated accrued depreciation, allocated book reserve, future accruals, remaining
3 life and annual accrual. The totals are brought forward to Table 1 on page I-3 in
4 Exhibit No. C-Historic, page V-4 in Exhibit No. C-Future and on page I-3 in Exhibit
5 No. C-Fully Projected.

6 **Q. In what manner is net salvage incorporated in the depreciation**
7 **calculations?**

8 A. As stated on page IV-9 of Exhibit No. C-Future, no adjustment for net salvage was
9 made to the calculated annual depreciation amounts. The total calculated annual
10 depreciation set forth on page I-5 of Exhibit No. C-Historic, page V-8 of Exhibit
11 No. C-Future and on page I-7 of Exhibit No. C-Fully Projected should include an
12 addition for the amortization of negative net salvage in accordance with the
13 practice of this Commission. The amortization is based on experience during the
14 period 2017 through 2021 for the calculation as of June 30, 2022, and on
15 experience during the period 2018 through June 30, 2022, plus estimates for the
16 last six months of 2022 for the calculation as of June 30, 2023.

17 The amortization for the July 31, 2024 calculation is based on experience
18 during the period 2019 through June 30, 2022, plus estimates for the period July
19 2022 through September 2023. The amounts of the five-year amortizations are
20 calculated in Table 2 on page I-5 of Exhibit No. C-Historic, in Table 4 on page V-8
21 of Exhibit No. C-Future and in Table 4 on page I-7 of Exhibit No. C-Fully Projected.

22 **Q. Have you provided a monthly bringforward to July 31, 2024, of the**
23 **plant and book depreciation reserve as of June 30, 2023**

1 A. Yes, Exhibit Nos. JJS-01 and JJS-02 at the end of this testimony provide the
2 monthly detail of the plant in service, book depreciation reserve and the calculated
3 depreciation. These exhibits agree with the fully projected future test year plant
4 and reserve balances as shown on Exhibit No. C-Fully Projected, Table 1 on pages
5 I-3 and I-4.

6 **Q. Does this complete your testimony at this time?**

7 A. Yes, it does.

Appendix A

JOHN SPANOS

DEPRECIATION EXPERIENCE

Q. Please state your name.

A. My name is John J. Spanos.

Q. What is your educational background?

A. I have Bachelor of Science degrees in Industrial Management and Mathematics from Carnegie-Mellon University and a Master of Business Administration from York College.

Q. Do you belong to any professional societies?

A. Yes. I am a member and past President of the Society of Depreciation Professionals and a member of the American Gas Association/Edison Electric Institute Industry Accounting Committee.

Q. Do you hold any special certification as a depreciation expert?

A. Yes. The Society of Depreciation Professionals has established national standards for depreciation professionals. The Society administers an examination to become certified in this field. I passed the certification exam in September 1997 and was recertified in August 2003, February 2008, January 2013 and February 2018.

Q. Please outline your experience in the field of depreciation.

A. In June 1986, I was employed by Gannett Fleming Valuation and Rate Consultants, Inc. as a Depreciation Analyst. During the period from June 1986 through December 1995, I helped prepare numerous depreciation and original cost studies for utility companies in various industries. I helped perform depreciation studies for the following telephone companies: United Telephone of Pennsylvania, United Telephone of New Jersey, and Anchorage Telephone Utility. I helped perform depreciation studies for the following companies in

the railroad industry: Union Pacific Railroad, Burlington Northern Railroad, and Wisconsin Central Transportation Corporation.

I helped perform depreciation studies for the following organizations in the electric utility industry: Chugach Electric Association, The Cincinnati Gas and Electric Company (CG&E), The Union Light, Heat and Power Company (ULH&P), Northwest Territories Power Corporation, and the City of Calgary - Electric System.

I helped perform depreciation studies for the following pipeline companies: TransCanada Pipelines Limited, Trans Mountain Pipe Line Company Ltd., Interprovincial Pipe Line Inc., Nova Gas Transmission Limited and Lakehead Pipeline Company.

I helped perform depreciation studies for the following gas utility companies: Columbia Gas of Pennsylvania, Columbia Gas of Maryland, The Peoples Natural Gas Company, T. W. Phillips Gas & Oil Company, CG&E, ULH&P, Lawrenceburg Gas Company and Penn Fuel Gas, Inc.

I helped perform depreciation studies for the following water utility companies: Indiana-American Water Company, Consumers Pennsylvania Water Company and The York Water Company; and depreciation and original cost studies for Philadelphia Suburban Water Company and Pennsylvania-American Water Company.

In each of the above studies, I assembled and analyzed historical and simulated data, performed field reviews, developed preliminary estimates of service life and net salvage, calculated annual depreciation, and prepared reports for submission to state public utility commissions or federal regulatory agencies. I performed these studies under the general direction of William M. Stout, P.E.

In January 1996, I was assigned to the position of Supervisor of Depreciation Studies. In July 1999, I was promoted to the position of Manager, Depreciation and

Valuation Studies. In December 2000, I was promoted to the position as Vice-President of Gannett Fleming Valuation and Rate Consultants, Inc., in April 2012, I was promoted to the position as Senior Vice President of the Valuation and Rate Division of Gannett Fleming Inc. (now doing business as Gannett Fleming Valuation and Rate Consultants, LLC) and in January of 2019, I was promoted to my present position of President of Gannett Fleming Valuation and Rate Consultants, LLC. In my current position I am responsible for conducting all depreciation, valuation and original cost studies, including the preparation of final exhibits and responses to data requests for submission to the appropriate regulatory bodies.

Since January 1996, I have conducted depreciation studies similar to those previously listed including assignments for Pennsylvania-American Water Company; Aqua Pennsylvania; Kentucky-American Water Company; Virginia-American Water Company; Indiana-American Water Company; Iowa-American Water Company; New Jersey-American Water Company; Hampton Water Works Company; Omaha Public Power District; Enbridge Pipe Line Company; Inc.; Columbia Gas of Virginia, Inc.; Virginia Natural Gas Company National Fuel Gas Distribution Corporation - New York and Pennsylvania Divisions; The City of Bethlehem - Bureau of Water; The City of Coatesville Authority; The City of Lancaster - Bureau of Water; Peoples Energy Corporation; The York Water Company; Public Service Company of Colorado; Enbridge Pipelines; Enbridge Gas Distribution, Inc.; Reliant Energy-HLP; Massachusetts-American Water Company; St. Louis County Water Company; Missouri-American Water Company; Chugach Electric Association; Alliant Energy; Oklahoma Gas & Electric Company; Nevada Power Company; Dominion Virginia Power; NUI-Virginia Gas Companies; Pacific Gas & Electric Company; PSI Energy; NUI - Elizabethtown Gas Company; Cinergy Corporation – CG&E; Cinergy

Corporation – ULH&P; Columbia Gas of Kentucky; South Carolina Electric & Gas Company; Idaho Power Company; El Paso Electric Company; Aqua North Carolina; Aqua Ohio; Aqua Texas, Inc.; Aqua Illinois, Inc.; Ameren Missouri; Central Hudson Gas & Electric; Centennial Pipeline Company; CenterPoint Energy-Arkansas; CenterPoint Energy – Oklahoma; CenterPoint Energy – Entex; CenterPoint Energy - Louisiana; NSTAR – Boston Edison Company; Westar Energy, Inc.; United Water Pennsylvania; PPL Electric Utilities; PPL Gas Utilities; Wisconsin Power & Light Company; TransAlaska Pipeline; Avista Corporation; Northwest Natural Gas; Allegheny Energy Supply, Inc.; Public Service Company of North Carolina; South Jersey Gas Company; Duquesne Light Company; MidAmerican Energy Company; Laclede Gas; Duke Energy Company; E.ON U.S. Services Inc.; Elkton Gas Services; Anchorage Water and Wastewater Utility; Kansas City Power and Light; Duke Energy North Carolina; Duke Energy South Carolina; Monongahela Power Company; Potomac Edison Company; Duke Energy Ohio Gas; Duke Energy Kentucky; Duke Energy Indiana; Duke Energy Progress; Northern Indiana Public Service Company; Tennessee- American Water Company; Columbia Gas of Maryland; Maryland-American Water Company; Bonneville Power Administration; NSTAR Electric and Gas Company; EPCOR Distribution, Inc.; B. C. Gas Utility, Ltd; Entergy Arkansas; Entergy Texas; Entergy Mississippi; Entergy Louisiana; Entergy Gulf States Louisiana; the Borough of Hanover; Louisville Gas and Electric Company; Kentucky Utilities Company; Madison Gas and Electric; Central Maine Power; PEPCO; PacifiCorp; Minnesota Energy Resource Group; Jersey Central Power & Light Company; Cheyenne Light, Fuel and Power Company; United Water Arkansas; Central Vermont Public Service Corporation; Green Mountain Power; Portland General Electric Company; Atlantic City Electric; Nicor Gas Company; Black Hills Power; Black Hills Colorado Gas; Black Hills Energy Arkansas, Inc.; Black Hills Kansas

Gas; Black Hills Service Company; Black Hills Utility Holdings; Public Service Company of Oklahoma; City of Dubois; Peoples Gas Light and Coke Company; North Shore Gas Company; Connecticut Light and Power; New York State Electric and Gas Corporation; Rochester Gas and Electric Corporation; Greater Missouri Operations; Tennessee Valley Authority; Omaha Public Power District; Indianapolis Power & Light Company; Vermont Gas Systems, Inc.; Metropolitan Edison; Pennsylvania Electric; West Penn Power; Pennsylvania Power; PHI Service Company - Delmarva Power and Light; Atmos Energy Corporation; Citizens Energy Group; PSE&G Company; Berkshire Gas Company; Alabama Gas Corporation; Mid-Atlantic Interstate Transmission, LLC; SUEZ Water; WEC Energy Group; Rocky Mountain Natural Gas, LLC; Illinois-American Water Company; Northern Illinois Gas Company; Public Service of New Hampshire and Newtown Artesian Water Company.

My additional duties include determining final life and salvage estimates, conducting field reviews, presenting recommended depreciation rates to management for its consideration and supporting such rates before regulatory bodies.

Q. Have you submitted testimony to any state utility commission on the subject of utility plant depreciation?

A. Yes. I have submitted testimony to the Pennsylvania Public Utility Commission; the Commonwealth of Kentucky Public Service Commission; the Public Utilities Commission of Ohio; the Nevada Public Utility Commission; the Public Utilities Board of New Jersey; the Missouri Public Service Commission; the Massachusetts Department of Telecommunications and Energy; the Alberta Energy & Utility Board; the Idaho Public Utility Commission; the Louisiana Public Service Commission; the State Corporation Commission of Kansas; the Oklahoma Corporate Commission; the Public Service

Commission of South Carolina; Railroad Commission of Texas – Gas Services Division; the New York Public Service Commission; Illinois Commerce Commission; the Indiana Utility Regulatory Commission; the California Public Utilities Commission; the Federal Energy Regulatory Commission (“FERC”); the Arkansas Public Service Commission; the Public Utility Commission of Texas; Maryland Public Service Commission; Washington Utilities and Transportation Commission; The Tennessee Regulatory Commission; the Regulatory Commission of Alaska; Minnesota Public Utility Commission; Utah Public Service Commission; District of Columbia Public Service Commission; the Mississippi Public Service Commission; Delaware Public Service Commission; Virginia State Corporation Commission; Colorado Public Utility Commission; Oregon Public Utility Commission; South Dakota Public Utilities Commission; Wisconsin Public Service Commission; Wyoming Public Service Commission; the Public Service Commission of West Virginia; Maine Public Utility Commission; Iowa Utility Board; Connecticut Public Utilities Regulatory Authority; New Mexico Public Regulation Commission; Commonwealth of Massachusetts Department of Public Utilities; Rhode Island Public Utilities Commission and the North Carolina Utilities Commission.

Q. Have you had any additional education relating to utility plant depreciation?

A. Yes. I have completed the following courses conducted by Depreciation Programs, Inc.: “Techniques of Life Analysis,” “Techniques of Salvage and Depreciation Analysis,” “Forecasting Life and Salvage,” “Modeling and Life Analysis Using Simulation,” and “Managing a Depreciation Study.” I have also completed the “Introduction to Public Utility Accounting” program conducted by the American Gas Association.

Q. Does this conclude your qualification statement?

A. Yes.

NATIONAL FUEL STATEMENT NO. 9

MARK C. SCHAEFER

**BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION**

Docket No. R-2022-3035730

**National Fuel Gas Distribution Corporation
Pennsylvania Division**

Statement No. 9

Direct Testimony of Mark C. Schaefer

Topics Addressed: Capital Budget

Dated: October 28, 2022

1 **I. INTRODUCTION AND QUALIFICATIONS**

2 **Q. Please state your name and business address.**

3 A. My name is Mark C. Schaefer. My business address is 1100 State Street, Erie
4 Pennsylvania 16501.

5
6 **Q. By whom and in what capacity are you employed?**

7 A. I am employed by National Fuel Gas Distribution Corporation, (“NFGDC”) as an
8 Assistant General Manager with responsibility in the Engineering Services Department.

9
10 **Q. Please provide your educational background.**

11 A. In 1995, I graduated from Oregon State University with a Bachelor of Science degree in
12 Civil Engineering.

13
14 **Q. Please provide your professional experience.**

15 A. I began my career in 1996 working as an Engineering Technician for the City of
16 Hillsboro Engineering Services Department in Hillsboro, Oregon. From 1999 through
17 2003, I worked for WRG Design, a civil engineering consulting firm in Portland, Oregon
18 as a Project Engineer/Project Manager responsible for designing civil engineering related
19 private and public infrastructure improvement projects. In December 2003, I began my
20 career in the gas industry with Northwest Natural, a local natural gas distribution
21 company based in Portland, Oregon, where I was employed as a Project Engineer/Project
22 Manager designing and coordinating multiple gas distribution and transmission capital
23 pipeline and facility improvement projects until December of 2013. In December 2013, I

1 relocated to Erie, Pennsylvania and began employment at NFGDC working as a Senior
2 Engineer in the Engineering Services Department in the Pennsylvania Division
3 (“National Fuel” or “Company”), supervising the Pennsylvania district engineering
4 group. In summer 2018, my role expanded to include supervision of both the
5 Pennsylvania and New York district engineering groups within our Engineering Services
6 Department. In February 2021, I was promoted to Assistant General Manager in which
7 my role again expanded to include supervision and management of our Measurement,
8 Regulation and Odorization (“MRO”) group within our Engineering Services
9 Department. I am also a registered Professional Engineer in the Commonwealth of
10 Pennsylvania.

11
12 **Q. What are your responsibilities in your current position?**

13 A. I am responsible for managing and providing technical support for our district
14 engineering and MRO staff for various gas distribution and transmission pipeline and
15 station facility designs. I am also responsible for managing the annual NFGDC Capital
16 Budget and leak prone pipe (“LPP”) Replacement Program.

17
18 **Q. Have you previously testified in other proceedings before the Pennsylvania Public
19 Utility Commission (“PAPUC” or the “Commission”) or any other state or federal
20 agency?**

21 A. No

22
23 **II. PURPOSE OF TESTIMONY**

1 **Q. Please describe the purpose of your testimony.**

2 A. I will provide testimony in support of the Company’s capital budget and proposed
3 accelerated LPP Replacement Program.

4

5 **III. CAPITAL BUDGET**

6 **Q. Please explain the Company’s capital plant additions related to distribution and
7 transmission plant.**

8 A. The Company plans to increase its capital expenditures related to distribution and
9 transmission plant in the 2023 to 2027 timeframe, with a planned total spending of
10 approximately \$195 million budgeted for replacement of mains, services and
11 measurement and regulation stations over the 5-year period as seen in Table 1 below.

12

13 Table 1: Projected Annual Capital Expenditures Related to Modernization

Fiscal Year	Capital Expenditures
	FY Budget (\$MM)
2023	\$34.1
2024	\$37.9
2025	\$38.7
2026	\$39.1
2027	\$45.8
Total	\$195.6

14

15 This is an increase of approximately 65% in this area over the actual total spending from
16 2017 to 2021 of \$118.9 million as seen in Table 2 below.

17

18 Table 2: Annual Capital Expenditures Related to Modernization

Fiscal Year	Capital Expenditures	
	FY Budget (\$MM)	FY Actual (\$MM)
2017	\$20.0	\$19.8
2018	\$22.2	\$20.5
2019	\$24.1	\$25.2
2020	\$26.4	\$24.8
2021	\$25.7	\$28.7
Total	\$118.4	\$118.9

1

2 **Q. How does the Company’s actual capital spending compare to the budget?**

3 A. As seen on Table 2 above, from 2017 to 2021, the company achieved its budget targets
4 within 0.5%.

5

6 **Q. What types of pipe material are included in the company’s LPP Replacement
7 Program?**

8 A. The Company has included bare steel, wrought iron and historic plastics that have
9 exhibited or may be prone to leakage, in its LPP Replacement Program.

10

11 **Q. Please describe The Company’s LPP Replacement Program**

12 A. The Company has made significant and consistent progress in the effort to replace LPP
13 through our Systematic Replacement Program. This annual program prioritizes pipeline
14 replacements on a system-wide basis using a comprehensive planning process through
15 our Geographic Information System (“GIS”) and Pipeline Replacement Evaluation
16 Program. The Systematic Replacement Program is designed to identify and prioritize
17 LPP replacement projects to reduce risk, control leak rates on LPP and increase the
18 overall system reliability of our distribution system. As seen in Table 3 below, from
19 calendar year end 2016 through 2021, the Company has eliminated 207 miles or 18% of

1 its leak prone bare steel and wrought iron pipelines and 4,581 or 21% of its bare steel
2 services.

3
4 Table 3: Bare Steel and Wrought Iron Mileage & Bare Steel Services (2016-2021)

Bare Steel & Wrought Iron Mileage & Bare Steel Services (2016-2021)		
Year	CY End Mainline Miles	CY End Bare Steel Services
2016	1,183	21,452
2017	1,103 ²	20,441
2018	1,065	19,518
2019	1,028	18,581
2020	978	17,758
2021	935	16,871

5 ² Adjusted for 41,594 miles corrected during 2018 records review; Pipe classified as bare but
6 identified as coated.

7 **Q. Please describe how the Company identifies LPP projects under its Systematic**
8 **Replacement Program.**

9 A. The Systematic Replacement process begins each fall, at the conclusion of the annual
10 leak survey cycle. The Company utilizes GIS to perform a geographic leak analysis to
11 identify areas of concentrated leakage. Our Engineering and Operations management
12 then review areas of higher priority during our semi-annual planning meetings at each
13 operating location. Public safety is of primary importance when considering pipeline
14 replacement projects. During the planning process, we also review areas of system
15 reliability concerns, active corrosion, and customer interruptions as well as potential
16 conflicts with proposed highway and municipal public improvement projects. The result
17 of the Systematic Replacement review includes three types of projects including smaller
18 scope projects typically completed by Company construction crews, mid-sized projects

1 completed by our contractor blanket construction crews and larger individual projects
2 that are also competitively bid to a pool of qualified contractors.

3
4 **IV. SYSTEM RELIABILITY AND SAFETY**

5 **Q. How does the Company incorporate elements of its Distribution Integrity**
6 **Management Program (“DIMP”) Plan and Transmission Integrity Management**
7 **Plan (“TIMP”) into its pipeline replacement and facility program?**

8 A. Many DIMP and TIMP elements and programs are considered during pipeline
9 replacement project planning, including the Company’s Systematic Replacement
10 Program discussed above. Both DIMP and TIMP Plans at the Company have System
11 Reliability Reporting (“SRR”) programs, which are used to identify operational problems
12 on pipelines and metering and regulation stations. They are used specifically to evaluate
13 threats to facilities in the categories of natural force damage (primarily washouts and
14 exposures), equipment failure, other outside force damage, incorrect operation, and other
15 causes. When an abnormal operating condition is discovered, an SRR is issued and
16 tracked until the condition is remediated, often resulting in replacement of the facility.
17 System Reliability Reports are tracked as part of the Company’s DIMP performance
18 measure process and are discussed at yearly spring and fall meetings with appropriate
19 company personnel.

20
21 Additionally, Engineering investigates plastic system leaks and reports of visually
22 unacceptable fusions or non-pullout resistant couplings. Accelerated actions are
23 prescribed based on the likelihood and potential consequences of a future leak.

1 Remediation of fusion leaks and visually unacceptable fusions or non-pullout resistant
2 couplings includes a review of as-built records to determine the number and possible
3 locations of fusions on the project. Aerial photography is reviewed to determine the
4 proximity of buildings. Based on the records review and the number of fusions on the
5 job, additional fusion or coupling inspections or removal of known remaining fusions or
6 couplings may be directed. Based on inspection results, replacement may be required.

7
8 **Q. Please describe the Company's efforts to reduce system leaks**

9 A. Public safety is of primary importance at the Company. As part of its DIMP Program,
10 the Company regularly evaluates and tracks system leak trends to determine if additional
11 mitigation measures should be considered. The Company classifies leaks as Type 1,
12 Type 2 and Type 3 as described in its September 2, 2022, Long Term Infrastructure
13 Improvement Plan ("LTIIIP") filing. Type 1 leaks are hazardous leaks that require an
14 immediate response to protect life and property. As seen in Figure 1 below, Type 1 leaks
15 have decreased by 15% between 2017 and 2021. In addition, Type 2 and Type 3 leaks
16 have decreased by 27% and 33%, respectively between 2017 and 2021. This reduction
17 in reported leaks can be attributed to the Company's pipeline modernization and
18 systematic replacement program efforts during this period.

19

Q. Please discuss the Company’s historical, current, and proposed accelerated main replacement program.

A. As stated previously, from calendar year end 2016 through 2021, the Company has replaced 207 miles or 18% of its leak prone bare steel and wrought iron pipelines and 4,581 or 21% of its bare steel services. It is anticipated that the Company will replace an additional 40 miles of distribution leak prone pipe in 2022 which will result in approximately 789 miles of bare steel and wrought iron pipe remaining in the distribution mainline system and 106 miles of bare steel pipe remaining in the transmission & high-pressure lines. As seen in Table 9 below, to further enhance safety, reduce risk, and increase the overall reliability of its distribution system the Company plans to accelerate its leak prone pipe replacement program between 2023 and 2027.

1
2 Table 4: Leak Prone Pipe Replacement (2022-2027)

Pennsylvania						
Leak Prone Pipe Replacement - 5 year plan						
<u>LPP Reduction</u>	CY 2022	CY 2023	CY 2024	CY 2025	CY 2026	CY 2027
	Miles	Miles	Miles	Miles	Miles	Miles
Distribution < 124 psig	40	44	45	46	47	50
Transmission & High Pressure > 124 psig	0	4	7	7	7	7
Total	40	48	52	53	54	57

3
4
5 As part of this acceleration, the Company plans to increase both distribution and
6 transmission / high pressure leak prone pipe replacement to target retirement of all bare
7 steel and wrought iron pipe by 2039. The Company defines transmission / high pressure
8 main as pipe operating with a maximum operating pressure greater than 124 pounds per
9 square inch gage (“psig”). This pipe consists of approximately 12% of the Company’s
10 LPP and is planned be replaced with cathodic protected coated steel pipe.

11
12 **V. ENVIRONMENTAL**

13 **Q. Please discuss environmental management at the Company.**

14 A. The Company is committed to environmental compliance and stewardship at all levels.
15 The Company has a dedicated environmental management group within its Engineering
16 Services department who work closely with our Project Engineering and Construction
17 Management groups to assure all required environmental permitting, proper design and
18 construction best management practices are followed through on our projects to assure
19 environmental compliance. At the Company we consider environmental management to
20 be the responsibility of all project team members including our engineers, construction
21 and operations management and contractors. The Company prides itself on its history of

1 environmental compliance and long-standing relationships and trust built with the
2 environmental regulatory agencies we work with.

3
4 **Q. Please describe the Company's Methane Emissions Reduction Program**

5 A. The Company has developed its Methane Emissions Reduction Program ("MERP") to
6 help reduce methane emissions associated with the normal operation and maintenance of
7 pipeline facilities. The MERP is used to determine the appropriate best management
8 practice(s) ("BMP") to apply to pipeline and/or station shutdowns to reduce methane
9 emissions. This program is incorporated into the engineering design process to allow
10 adequate time for planning and collaboration with applicable parties to select and execute
11 practicable methods for minimizing methane releases. MERP targets medium and high-
12 pressure pipeline blowdowns with volumes $\geq 5,000$ Standard Cubic Feet ("SCF")
13 (corrected volume) for application of BMP's. Where appropriate, BMP's may be
14 considered for medium and high-pressure pipeline blowdowns for pipeline volumes
15 between 1,000 and 4,999 SCF (corrected volume), however, portable compression
16 equipment or portable flares should not be considered for these projects due to the
17 greenhouse gas emissions associated with powering and transporting this
18 equipment. BMPs included in the MERP are as follows:

- 19 • Pipeline pressure draw down into an adjacent lower pressure system through
20 existing regulator stations.
- 21 • Pipeline pressure draw down into an adjacent lower pressure system through a
22 temporary regulator and relief valve setup.
- 23 • Use of portable compression equipment.

1 • Use of portable flaring equipment where appropriate considering safety and
2 customer relations.

3 • Minimizing pipeline segment blowdown length using existing valves and/or
4 installation of controllable fittings, and squeeze-off of plastic pipe.

5 • Use of hot taps vs. shutdown and cutting in tees.

6 • Coordinating shutdowns for multiple projects/tasks.

7

8 **Q. Does this conclude your direct testimony at this time?**

9 A. Yes, it does, at this time.

1 **INTRODUCTION AND SUMMARY OF RECOMMENDATIONS**

2 **Q. Please state your name, occupation and business address.**

3 A. My name is Paul Ronald Moul. My business address is 251 Hopkins Road,
4 Haddonfield, New Jersey 08033-3062. I am Managing Consultant at the firm P.
5 Moul & Associates, an independent financial and regulatory consulting firm. My
6 educational background, business experience and qualifications are provided in
7 Appendix A, which follows my direct testimony.

8 **Q. What is the purpose of your testimony?**

9 A. My testimony presents evidence, analysis, and a recommendation concerning the
10 appropriate cost of common equity and overall rate of return that the Pennsylvania
11 Public Utility Commission (“PUC” or the “Commission”) should recognize in
12 determining the revenues National Fuel Gas Distribution Corporation (“NFGDC” or
13 the “Company”) will be authorized to realize at the conclusion of this proceeding.
14 My analysis and recommendation are supported by the detailed financial data
15 contained in NFGDC Exhibit B, which is a multi-page document divided into
16 fourteen schedules.

17 **Q. Based upon your analysis, what is your conclusion concerning the appropriate**
18 **rate of return for the Company?**

19 A. My conclusion is that the Company should be afforded an opportunity to earn an
20 8.53% overall rate of return, which includes an 11.20% rate of return on common
21 equity. My 11.20% rate of return on common equity includes recognition of the
22 exemplary performance of the Company’s management and is established using
23 capital market and financial data relied upon by investors when assessing the

DIRECT TESTIMONY OF PAUL R. MOUL

1 relative risk, and hence the cost of capital for the Company. The 11.20% rate of
2 return on common equity is composed of a 10.95% cost of equity determined from
3 the results of my proxy group analysis and 0.25% in recognition of the exemplary
4 performance of the Company's management. My analysis of the Company and its
5 superior performance is based upon the direct testimony of Mr. Brian M. Welsch,
6 the Company's Assistant Vice President, and the direct testimony of other
7 Company witnesses.

8 My overall rate of return recommendation is determined by using the
9 weighted average cost of capital approach. This approach provides a means to
10 apportion the return to each class of investor. The calculation of the weighted
11 average cost of capital requires the selection of appropriate capital structure ratios
12 and a determination of the cost rate for each capital component. The cost of debt in
13 this case was developed by Ms. Shannon M. Buffington, the Company's Manager
14 of Finance. The resulting overall cost of capital when applied to the Company's rate
15 base will provide a level of return that will compensate investors for the use of their
16 capital. My overall cost of capital recommendation is set forth below and is shown
17 on page 1 of Schedule 1.

<u>Type of Capital</u>	<u>Ratios</u>	<u>Cost Rate</u>	<u>Weighted Cost Rate</u>
Debt	45.1%	5.28%	2.38%
Common Equity	<u>54.9%</u>	11.20%	<u>6.15%</u>
Total	<u>100.0%</u>		<u>8.53%</u>

DIRECT TESTIMONY OF PAUL R. MOUL

1 This overall rate of return is applicable to the July 31, 2024 fully projected
2 future test year (“FPFTY”) and the initial period that the Company’s proposed rates
3 will be effective.

4 **Q. What noteworthy factors have influenced your cost of equity analysis?**

5 A. My cost of equity analysis reflects the financial impact of the COVID-19 Pandemic
6 (“Pandemic”) and its aftermath. These events had a significant impact on the stock
7 and bond markets beginning in the February-March 2020 time frame. During this
8 period, we saw abrupt reaction to the Pandemic. These events led to the end of the
9 record-setting, 128-month economic expansion. As we entered a recession in
10 February 2020, extraordinary actions were taken by the Federal Open Market
11 Committee (“FOMC”) to address these disruptions. Over the course of the
12 Pandemic, stock prices rebounded and reached new highs. With renewed economic
13 growth, high inflation has developed to levels not seen in four decades. Indeed, in
14 March 2022, the rate of inflation spiked upward to 8.5% and has remained above
15 8% since then. This is substantially higher than the target rate of 2%, which is the
16 FOMC policy goal. Contributing to “sky high” inflation is pandemic-related supply
17 side issues, strong consumer demand, and tight labor markets. Supply disruptions
18 have also significantly impacted the consumer sector of the economy which
19 developed during the Pandemic. Energy prices have increased as well, with the
20 commodity cost of natural gas moving up substantially. While short-term interest
21 rates were at historically low levels during much of the Pandemic, longer term
22 interest rates began to rise in February 2021 and have continued throughout 2022.
23 Indeed, higher inflation expectations are a contributing factor that points to higher

DIRECT TESTIMONY OF PAUL R. MOUL

1 interest rates. Moreover, the first of several Fed Funds increases was announced on
2 March 16, 2022, with an increase of 0.25%, and an additional 0.50% increase was
3 announced on May 4, 2022. A 50 basis point increase in the Fed Funds rate has not
4 occurred since 2000. Indeed, the Fed Funds rate was increased again with the
5 announcement on June 15, 2022, when a 0.75% increase occurred. Additional
6 increases in the Fed Funds, rate were announced on July 27, 2022 and September
7 21, 2022. This makes three consecutive three-quarter percentage point increases in
8 the Fed Funds rate. These increases were the largest since 1994. The FOMC is
9 projecting that by the end of 2022, the Fed Funds rate will approach 4.50% and
10 rates are expected to remain inflated for several years. I will describe the forecasts
11 of interest rates and the trend later in my testimony.

12 **Q. What background information have you considered in your analysis of**
13 **NFGDC in this proceeding?**

14 A. As part of my analysis, I will look first at qualitative risk factors and then at
15 quantitative factors that impact the Company's cost of equity. The Company is a
16 wholly owned subsidiary of National Fuel Gas Company ("NFG"). The common
17 stock of NFG is traded on the New York Stock Exchange. The Company provides
18 natural gas distribution service to approximately 753,000 customers in western New
19 York state and northwestern Pennsylvania. Of these customers, approximately
20 214,000 are located in Pennsylvania. Throughput to the Company's Pennsylvania
21 gas customers was composed of approximately 40% to residential customers,
22 approximately 20% to commercial customers, and 40% to industrial customers.
23 Approximately 57% of throughput goes to transportation customers. With about

DIRECT TESTIMONY OF PAUL R. MOUL

1 594 large industrial customers (0.3% of total customers), the energy needs of a
2 relatively few customers can have a significant impact on the Company's
3 operations. National Fuel obtains its gas supplies from producers and marketers.
4 Since the restructuring of the gas utility industry in Pennsylvania, National Fuel has
5 been the supplier of last resort for customers that do not obtain their own supply.

6 **Q. How have you determined the cost of common equity in this case?**

7 A. The cost of common equity is established using capital market and financial data
8 relied upon by investors to assess the relative risk, and hence the cost of equity for a
9 natural gas utility such as National Fuel. In this regard, I have considered four well-
10 recognized models. These methods include the Discounted Cash Flow ("DCF")
11 model, the Risk Premium ("RP") analysis, the Capital Asset Pricing Model
12 ("CAPM"), and the Comparable Earnings ("CE") approach. The results of a variety
13 of approaches indicate that the Company's rate of return on common equity is
14 11.20%, including 0.25% in recognition of the Company's exemplary management
15 performance.

16 **Q. In your opinion, what factors should the Commission consider when**
17 **determining the Company's cost of capital in this proceeding?**

18 A. The Commission's rate of return allowance must be set to cover the Company's
19 interest and dividend payments, provide a reasonable level of earnings retention,
20 produce an adequate level of internally generated funds to meet capital
21 requirements, be commensurate with the risk to which the Company's capital is
22 exposed, assure confidence in the financial integrity of the Company, support
23 reasonable credit quality, and allow the Company to raise capital on reasonable

DIRECT TESTIMONY OF PAUL R. MOUL

1 terms. The return that I propose fulfills these established standards of a fair rate of
2 return set forth by the landmark Bluefield and Hope cases.¹ That is to say, my
3 proposed rate of return is commensurate with returns available on investments
4 having corresponding risks.

5 **Q. How have you measured the cost of equity in this case?**

6 A. The models that I used to measure the cost of common equity for the Company
7 were applied with market and financial data developed from a group of companies
8 engaged in the distribution of natural gas. I will refer to these companies as the
9 “Gas Group” throughout my testimony. I began with all of the gas utilities
10 contained in The Value Line Investment Survey, which consists of ten companies.
11 Value Line is an investment advisory service that is a widely used source in public
12 utility rate cases. I eliminated two companies from the Value Line group. UGI
13 Corporation was removed due to its diversified businesses consisting of six
14 reportable segments, including propane, two international LPG segments, natural
15 gas utility, energy services, and electric generation. I also removed South Jersey
16 Industries from the Gas Group because it entered into an agreement to be acquired
17 by a private equity investor. The remaining eight companies in the Gas Group are
18 identified on page 2 of Schedule 3.

¹ Bluefield Water Works & Improvement Co. v. P.S.C. of W. Va., 262 U.S. 679 (1923) and F.P.C. v. Hope Nat. Gas Co., 320 U.S. 591 (1944).

DIRECT TESTIMONY OF PAUL R. MOUL

1 **Q. How have you performed your cost of equity analysis with the market data for**
2 **the Gas Group?**

3 A. I have applied the methods/models for estimating the cost of equity using the
4 average data for the Gas Group. I have not measured separately the cost of equity
5 for the individual companies within the Gas Group, because the determination of
6 the cost of equity for an individual company can be problematic. The use of group
7 average data will reduce the effect of potentially anomalous results for an individual
8 company if a company-by-company approach were utilized.

9 **Q. Please summarize your cost of equity analysis.**

10 A. My cost of equity determination was derived from the results of the
11 methods/models identified above. In general, the use of more than one method
12 provides a superior foundation to arrive at the cost of equity. At any point in time, a
13 single method can provide an incomplete measure of the cost of equity. The
14 specific application of these methods/models will be described later in my
15 testimony. The following table provides a summary of the indicated costs of equity
16 using each of these approaches.

DCF	10.91%
Risk Premium	11.25%
CAPM	14.61%
Comparable Earnings	13.05%

17 From these measures, I recommend a cost of equity of 11.20%. The
18 components of my recommendation are 10.95% as the cost of equity and 0.25% in
19 recognition of the Company's exemplary management performance. My

DIRECT TESTIMONY OF PAUL R. MOUL

1 determination of the cost of equity of 10.95% is quite close to the DCF result noted
2 above, with appropriate weight also given to the Risk Premium indication of the
3 cost of equity. My 11.20% cost of equity recommendation that includes 25 basis
4 points recognition for the exemplary performance of the Company's management
5 falls within the range of 10.91% to 11.25% as revealed by the DCF and Risk
6 Premium results. The Commission's practice has been to recognize management
7 performance through a rate of return increment, as long as the resulting return falls
8 within this range. With the 25 basis points management recognition here, the
9 11.20% return on equity complies with that standard. Mr. Welsch's testimony in
10 National Fuel Statement No. 1 demonstrates that the Company's superior customer
11 service and management effectiveness. To obtain new capital and retain existing
12 capital, the rate of return on common equity must be high enough to satisfy
13 investors' requirements. Along these lines, the Company is accelerating the pace of
14 its leak-prone pipe replacement program to ensure continued system safety and
15 reliability, which will increase capital expenditures and require raising new capital.
16 To attract that new capital, adequate returns are necessary to meet investor
17 requirements. In recognition of its performance, the Company should be granted an
18 opportunity to earn a 11.20% rate of return on common equity.

NATURAL GAS RISK FACTORS

19
20 **Q. What factors currently affect the business risk of natural gas utilities?**

21 A. Gas utilities face risks arising from competition from other energy sources, federal
22 and state regulatory policies, the business cycle, and customer usage patterns.

23 Natural gas utilities have focused increased attention on safety and reliability issues,

DIRECT TESTIMONY OF PAUL R. MOUL

1 energy conservation and efficiency, and the reduction of greenhouse gas emissions.

2 In order to address these issues, natural gas companies are now allocating more of
3 their resources to address aging infrastructure.

4 **Q. Are there other features of the Company's business that should be considered
5 when assessing the Company's risk?**

6 A. Yes. The Company's ten largest volume customers, which account for 9.06 million
7 cubic feet of throughput through September 2021, are engaged in chemical
8 manufacturing, steel/metal fabrication, and other manufacturing businesses.

9 Changes in the business environment can negatively affect these companies, and, in
10 that way, cause material reductions in throughput on the Company's distribution
11 system. This risk is especially apparent in this time of economic uncertainty
12 attributed to inflation, supply-side issues, and global geopolitical situations.

13 Additionally, large volume users, which predominantly use transportation service,
14 may be located close enough to interstate pipelines to take gas directly from those
15 sources and bypass the local distribution company ("LDC") entirely. The Company
16 has identified customers with combined annual throughput of approximately 8.1
17 million cubic feet ("MCF") of gas that have the potential to bypass the Company's
18 distribution system. Because a large part of the Company's distribution revenue
19 recovers fixed costs, which the Company continues to bear even if a customer
20 leaves the system, the loss of 8.1 million MCF of throughput would impose a
21 significant amount of uncompensated fixed costs that NFGDC would not have the
22 opportunity to recover until it could complete another base rate case.

DIRECT TESTIMONY OF PAUL R. MOUL

1 Further, there are five interstate pipelines that traverse the Company's
2 service territory. This situation exposes the Company to bypass for certain large
3 volume customers. Finally, the existence of local gas production provides a bypass
4 threat to the Company, especially with extensive production from the Marcellus
5 Shale and Utica Shale formations.

6 **Q. Does your cost of equity analysis and recommendation take into account the**
7 **Company's revenue decoupling proposal?**

8 A. Yes. Most of the Company's residential customers use natural gas for space
9 heating purposes. Indeed, 87% of residential throughput is to customers with
10 natural gas space heating. This indicates that the energy requirements of a large
11 proportion of the Company's residential customers are significantly influenced by
12 temperature conditions over which the Company has absolutely no control. If
13 weather patterns in the future do not align with rate case test period data, a weather
14 normalization adjustment ("WNA") feature enables a company to adjust its revenue
15 collections to account for those variations. My cost of equity analysis takes into
16 account the Company's WNA mechanism proposal.

17 **Q. Please explain.**

18 A. My analysis reflects the impact of the WNA on investor expectations through the
19 use of market-determined models. All of the companies in my Gas Group have
20 some form of WNA mechanism that is intended to accomplish the same result as
21 the Company's proposal in this case. As a group, the market prices of these
22 companies' common equity reflect the expectations of investors that the companies'
23 revenues are stabilized to some extent by a WNA. Therefore, my analysis reflects

DIRECT TESTIMONY OF PAUL R. MOUL

1 the impacts of decoupling on investor expectations through the use of market-
2 determined models.

3 As such, the market prices of these companies' common stocks reflect the
4 expectations of investors related to a regulatory mechanism that adjusts revenues
5 for conservation, abnormal weather, and other items. The trend in the industry is to
6 stabilize the recovery of fixed costs, which are unaffected by usage. Indeed, there
7 has been a proliferation of these mechanisms in the LDC business. Because the
8 Gas Group that I use to measure the cost of equity has the risk attributes related to
9 the revenue decoupling mechanism "baked in" to their stock prices, the absence of
10 the benefit of the WNA would increase the cost of equity as determined by the
11 models that are applied with the Gas Group data.

12 **Q. Can the Company's construction program affect its risk profile?**

13 A. Yes. The Company must undertake substantial investments to maintain and
14 upgrade existing facilities in its service territory to ensure safe and reliable service
15 to its customers. In particular, the modernization of the Company's infrastructure
16 requires it to invest capital without adding any new customers and without
17 increasing sales to existing customers. In short, infrastructure modernization
18 increases fixed costs without an attendant increase in revenues. The Company has
19 made significant progress with its modernization efforts, however, at year-end
20 2021, there remains 843 miles (or approximately 17%) of the Company's
21 distribution system consisting of wrought iron and bare steel pipe that is not
22 cathodically protected and is, therefore, susceptible to corrosion. These are all
23 considered vulnerable materials that will need to be replaced. Also, 16,871 (or

DIRECT TESTIMONY OF PAUL R. MOUL

1 approximately 9%) of the Company's services were constructed of unprotected
2 steel. The Company projects that its total construction expenditures in
3 Pennsylvania will approximate \$278 million during the period 2022-2027, which
4 represents approximately 63% ($\$278 \text{ million} \div \444 million) of its net utility plant
5 as of December 31, 2021.

6 **Q. Does the availability of DSIC in Pennsylvania affect the Company's cost of**
7 **capital?**

8 A. No. The cost of capital for the Company is not affected by the availability of the
9 DSIC. I say this because most of the proxy group companies (i.e., seven (7) of
10 eight (8) companies) whose data has been used to develop the cost of equity in this
11 proceeding have a DSIC or similar infrastructure rehabilitation mechanisms.
12 Indeed, Atmos Energy, Chesapeake, New Jersey Resources, NiSource, Northwest
13 Natural Gas, Southwest Gas, and Spire make use of a DSIC or similar infrastructure
14 rehabilitation mechanisms. Hence, whatever the benefit of a DSIC, or other
15 regulatory mechanisms, that impact is already reflected in the market evidence of
16 the cost of equity for the proxy group.

17 **Q. How should the Commission respond to the issues facing natural gas utilities in**
18 **general and NFGDC in particular?**

19 A. The Commission should recognize and take into account the increased risk facing
20 natural gas utilities, including NFGDC, and its future capital requirements in
21 determining the cost of equity for the Company. A fair rate of return is key to
22 NFGDC maintaining a financial profile that will provide it with the access to capital
23 necessary to meet its capital needs on reasonable terms.

DIRECT TESTIMONY OF PAUL R. MOUL

FUNDAMENTAL RISK ANALYSIS

1

2 **Q. Is it necessary to conduct a fundamental risk analysis to provide a framework**
3 **for a determination of a utility's cost of equity?**

4 A. Yes, it is. It is necessary to establish a company's relative risk position within its
5 industry through a fundamental analysis of various quantitative and qualitative
6 factors that bear upon investors' assessment of overall risk. The qualitative factors
7 that bear upon Company risk have already been discussed. The quantitative risk
8 analysis follows. The items that influence investors' evaluation of risk and their
9 required returns were described above. For this purpose, I compared the Company
10 to the S&P Public Utilities, an industry-wide proxy consisting of various regulated
11 businesses, and to the Gas Group.

12 **Q. What are the components of the S&P Public Utilities?**

13 A. The S&P Public Utilities is a widely recognized index that is comprised of electric
14 and natural gas companies. These companies are identified on page 3 of Schedule
15 4.

16 **Q. What companies comprise the Gas Group?**

17 A. My Gas Group consists of the following companies: Atmos Energy Corp.,
18 Chesapeake Utilities Corporation, New Jersey Resources Corp., NiSource, Inc.,
19 Northwest Natural Holding Co., ONE Gas, Inc., Southwest Gas Holdings, and
20 Spire, Inc.

21 **Q. Is knowledge of a utility's bond rating an important factor in assessing its risk**
22 **and cost of capital?**

23 A. Yes. Knowledge of a company's credit quality rating is important because the cost

DIRECT TESTIMONY OF PAUL R. MOUL

1 of each type of capital is directly related to the associated risk of the firm. So, while
2 a company's credit quality risk is shown directly by the rating and yield on its
3 bonds, these relative risk assessments also bear upon the cost of equity. This is
4 because a firm's cost of equity is represented by its borrowing cost, plus
5 compensation, to recognize the higher risk of an equity investment compared to
6 debt.

7 **Q. How do the credit quality ratings compare for the Gas Group and the S&P**
8 **Public Utilities?**

9 A. For the Gas Group, the average LT issuer rating is A3 by Moody's Investors
10 Service ("Moody's") and the corporate credit rating ("CCR") is A- by S&P, as
11 displayed on page 2 of Schedule 3. The ratings represented by the LT issuer rating
12 by Moody's and CCR from S&P focuses upon the credit quality of the issuer of the
13 debt rather than upon the debt obligation itself. For the S&P Public Utilities, the
14 average credit quality rating is A3 by Moody's and BBB+ by S&P, as displayed on
15 page 3 of Schedule 4. Many of the financial indicators that I will subsequently
16 discuss are considered during the rating process.

17 **Q. How do the financial data compare for the Company, the Gas Group, and the**
18 **S&P Public Utilities?**

19 A. The broad categories of financial data that I will discuss are shown on Schedules 2,
20 3, and 4. The data cover the five-year period from 2017-2021. I obtained income
21 statement and balance sheet data for NFGDC from the Annual Reports to the
22 Commission. Since no cash flow statements are part of those reports, the internally
23 generated funds ratios that I calculated are from the combined operations (i.e.,

DIRECT TESTIMONY OF PAUL R. MOUL

1 Pennsylvania and New York) of NFGDC. Those data include the results of
2 Pennsylvania operations of the Company. The important categories of relative risk
3 may be summarized as follows:

4 Size. In terms of capitalization, the Company is much smaller than the
5 average size of the Gas Group, and smaller than the average size of the S&P Public
6 Utilities. All other things being equal, a smaller company is riskier than a larger
7 company because a given change in revenue and expense has a proportionately
8 greater impact on a small firm. As I will demonstrate later, the size of a firm can
9 impact its cost of equity. This is the case for the Company and the Gas Group as
10 compared to the S&P Public Utilities.

11 Market Ratios. Market-based financial ratios, such as earnings/price ratios
12 and dividend yields, provide a partial measure of the investor-required cost of
13 equity. If all other factors are equal, investors will require a higher rate of return for
14 companies that exhibit greater risk. That is to say, a firm that investors perceive to
15 have higher risks will experience a lower price per share in relation to expected
16 earnings.²

17 There are no market ratios available for the Company because its stock is
18 owned by National Fuel Gas Company. The five-year average price-earnings (“P-
19 E”) multiple was marginally higher for the Gas Group as compared to the S&P
20 Public Utilities. We can see that the P-E multiple in 2021 declined for the Gas
21 Group more than the S&P Public Utilities. This indicates increasing risk for gas

² For example, two otherwise similarly situated firms each reporting \$1.00 in earnings per share would have different market prices at varying levels of risk (i.e., the firm with a higher level of risk will have a lower share value, while the firm with a lower risk profile will have a higher share value).

DIRECT TESTIMONY OF PAUL R. MOUL

1 companies generally. The five-year average dividend yield was lower for the Gas
2 Group as compared to the S&P Public Utilities. The five-year average market-to-
3 book ratio was slightly lower for the Gas Group as compared to the S&P Public
4 Utilities.

5 Common Equity Ratio. The level of financial risk is measured by the
6 proportion of long-term debt and other senior capital that is contained in a
7 company's capitalization. Financial risk is also analyzed by comparing common
8 equity ratios (the complement of the ratio of debt and other senior capital). A firm
9 with a higher common equity ratio has lower financial risk, while a firm with a
10 lower common equity ratio has higher financial risk. The five-year average
11 common equity ratios, based on permanent capital, were 50.5% for the Gas Group
12 and 41.0% for the S&P Public Utilities. The Company's common equity ratio that I
13 will describe below for ratesetting purposes will be aligned with the Gas Group.

14 Return on Book Equity. Greater variability (i.e., uncertainty) of a firm's
15 earned returns signifies relatively greater levels of risk, as shown by the coefficient
16 of variation (standard deviation ÷ mean) of the rate of return on book common
17 equity. The higher the coefficients of variation, the greater degree of variability.
18 For the five-year period, the coefficients of variation were 0.192 (1.9% ÷ 9.9%) for
19 the NFGDC, 0.106 (1.0% ÷ 9.4%) for the Gas Group, and 0.051 (0.5% ÷ 9.9%) for
20 the S&P Public Utilities. The variability of the Company's rates of return was
21 much higher than the Gas Group and higher than the S&P Public Utilities. High
22 variability signifies higher risk.

DIRECT TESTIMONY OF PAUL R. MOUL

1 Operating Ratios. I have also compared operating ratios (the percentage of
2 revenues consumed by operating expense, depreciation, and taxes other than
3 income).³ The five-year average operating ratios were 81.0% for the Company,
4 82.9% for the Gas Group, and 79.8% for the S&P Public Utilities. The Company's
5 operating ratios were fairly similar to the Gas Group and the S&P Public Utilities.

6 Coverage. The level of fixed charge coverage (i.e., the multiple by which
7 available earnings cover fixed charges, such as interest expense) provides an
8 indication of the earnings protection for creditors. Higher levels of coverage, and
9 hence earnings protection for fixed charges, are usually associated with superior
10 grades of creditworthiness. Excluding Allowance for Funds Used During
11 Construction ("AFUDC"), the five-year average pre-tax interest coverage was 5.79
12 times for the Company, 4.29 times for the Gas Group, and 2.97 times for the S&P
13 Public Utilities. The interest coverages were higher for the Company as compared
14 to the Gas Group, which is reflective of its historically low debt ratio.

15 Quality of Earnings. Measures of earnings quality usually are revealed by
16 the percentage of AFUDC related to income available for common equity, the
17 effective income tax rate, and other cost deferrals. These measures of earnings
18 quality usually influence a firm's internally generated funds because poor quality of
19 earnings would not generate high levels of cash flow. During the Pandemic, there
20 was further pressure on cash flows due to the suspension of collection activities and
21 the moratorium against shut off service due to nonpayment. Quality of earnings has

³ The complement of the operating ratio is the operating margin that provides a measure of profitability. The higher the operating ratio, the lower the operating margin.

DIRECT TESTIMONY OF PAUL R. MOUL

1 not been a significant concern for the Company, the Gas Group, and the S&P Public
2 Utilities.

3 Internally Generated Funds. Internally generated funds (“IGF”) provide an
4 important source of new investment capital for a utility and represent a key measure
5 of credit strength. Historically, the five-year average percentage of IGF to capital
6 expenditures was 86.7% for the Company, 56.9% for the Gas Group, and 66.0% for
7 the S&P Public Utilities.

8 Betas. The financial data that I have been discussing relate primarily to
9 company-specific risks. Market risk for firms with publicly-traded stock is
10 measured by beta coefficients. Beta coefficients attempt to identify systematic risk,
11 i.e., the risk associated with changes in the overall market for common equities.⁴

12 Value Line publishes such a statistical measure of a stock’s relative historical
13 volatility to the rest of the market. A comparison of market risk is shown by the
14 Value Line beta of 0.86 as the average for the Gas Group (see page 2 of Schedule 3)
15 and 0.90 as the average for the S&P Public Utilities (see page 3 of Schedule 4).

16 The systematic risk for the Gas Group as measured by the Value Line beta is fairly
17 similar to the S&P Public Utilities.

18 **Q. Please summarize your risk evaluation.**

19 A. The investment risk of NFGDC parallels that of the Gas Group in certain respects.

⁴ Beta is a relative measure of the historical sensitivity of the stock’s price to overall fluctuations in the New York Stock Exchange Composite Index. The “Beta coefficient” is derived from a regression analysis of the relationship between weekly percentage changes in the price of a stock and weekly percentage changes in the NYSE Index over a period of five years. The betas are adjusted for their long-term tendency to converge toward 1.00. A common stock that has a beta less than 1.0 is considered to have less systematic risk than the market as a whole and would be expected to rise and fall more slowly than the rest of the market. A stock with a beta above 1.0 would have more systematic risk.

DIRECT TESTIMONY OF PAUL R. MOUL

1 NFGDC has lower financial risk as shown by its historically higher common equity
2 ratio, higher interest coverages, and higher IGF to construction. Similar risk
3 factors for NFGDC and the Gas Group are the operating ratios and quality of
4 earnings. Higher risk for NFGDC is shown by its small size and more variable
5 earned returns.

6 **Q. Based on your analysis, does the Gas Group provide a reasonable basis to**
7 **measure the Company's cost of equity for this case?**

8 A. Yes. On balance, the risk factors average out, indicating that the cost of equity for
9 the Gas Group provides a reasonable basis for measuring the Company's cost of
10 equity.

CAPITAL STRUCTURE RATIOS

11
12 **Q. Does Schedule 5 provide the Company's capitalization and capital structure**
13 **ratios?**

14 A. Yes. Schedule 5 presents the Company's capitalization and related capital structure
15 ratios. The June 30, 2022 capitalization corresponds with the end of the HTY in
16 this case. The June 30, 2023 capital structure is estimated at the end of the FTY,
17 and the July 31, 2024 capital structure is estimated at the end of the FPPTY. The
18 Company will incur a long-term debt maturity of \$49 million on March 1, 2023 and
19 will issue \$250 million of new long-term debt in the FPPTY. A projection of
20 retained earnings has been reflected in the FTY and FPPTY.

21 **Q. What capital structure ratios do you recommend be adopted for rate of return**
22 **purposes in this proceeding?**

DIRECT TESTIMONY OF PAUL R. MOUL

1 A. Since ratesetting is prospective, the rate of return should, at a minimum, reflect
2 known or reasonably foreseeable changes which will occur during the course of the
3 FPPTY. As a result, I will adopt the Company's FPPTY capital structure ratios of
4 45.1% debt, and 54.9% common equity at July 31, 2024. These capital structure
5 ratios are the best approximation of the mix of capital the Company will employ to
6 finance its rate base during the period new rates are in effect. And, these ratios fall
7 within the range for the Gas Group, which makes them reasonable.

COST OF EQUITY – GENERAL APPROACH

8
9 **Q. Please describe how you determined the cost of equity for the Company.**

10 A. Although my fundamental financial analysis provides the required framework to
11 establish the risk relationships among NFGDC, the Gas Group, and the S&P Public
12 Utilities, the cost of equity must be measured by standard financial models that I
13 identified above. Differences in risk traits, such as size, business diversification,
14 geographical diversity, regulatory policy, financial leverage, and bond ratings must
15 be considered when analyzing the cost of equity.

16 It is also important to reiterate that no one method or model of the cost of
17 equity can be applied in an isolated manner. Rather, informed judgment must be
18 used to take into consideration the relative risk traits of the firm. It is for this reason
19 that I have used more than one method to measure the Company's cost of equity.
20 As I describe below, each of the methods used to measure the cost of equity
21 contains certain incomplete and/or overly restrictive assumptions and constraints
22 that are not optimal. Therefore, I favor considering the results from a variety of
23 methods. In this regard, I applied each of the methods with data taken from the Gas

DIRECT TESTIMONY OF PAUL R. MOUL

1 Group and arrived at a cost of equity of 11.20% for the Company, which includes
2 an increment for exemplary management performance.

DISCOUNTED CASH FLOW

4 **Q. Please describe the DCF model.**

5 A. The DCF model seeks to explain the value of an asset as the present value of future
6 expected cash flows discounted at the appropriate risk-adjusted rate of return. In its
7 simplest form, the DCF-determined return on common stock consists of a current
8 cash (dividend) yield and future price appreciation (growth) of the investment. The
9 dividend discount equation is the familiar DCF valuation model, which assumes
10 that future dividends are systematically related to one another by a constant growth
11 rate. The DCF formula is derived from the standard valuation model: $P = D/(k-g)$,
12 where P = price, D = dividend, k = the cost of equity, and g = growth in cash flows.
13 By rearranging the terms, we obtain the familiar DCF equation: $k = D/P + g$. All of
14 the terms in the DCF equation represent investors' assessment of expected future
15 cash flows that they will receive in relation to the value that they set for a share of
16 stock (P). The DCF equation is sometimes referred to as the "Gordon" model.⁵ My
17 DCF results are provided on Schedule 1, page 2, for the Gas Group. The DCF
18 return is 10.91% with the leverage adjustment and 9.81% without the leverage
19 adjustment for the Gas Group. The leverage adjustment is discussed more fully
20 below.

⁵ Although the popular application of the DCF model is often attributed to the work of Myron J. Gordon in the mid-1950s, J.B. Williams expounded the DCF model in its present form nearly two decades earlier.

DIRECT TESTIMONY OF PAUL R. MOUL

1 Among the limitations of the model, there is a certain element of circularity
2 in the DCF method when applied in rate cases. This is because investors'
3 expectations for the future depend upon regulatory decisions. In turn, when
4 regulators depend upon the DCF model to set the cost of equity, they rely upon
5 investor expectations that include an assessment of how regulators will decide rate
6 cases. Due to this circularity, the DCF model may not fully reflect the true risk of a
7 utility. Other limitations of the DCF include the constant P-E multiple assertion
8 that does not conform with actual stock market performance. And, indeed, the
9 FERC has moved to using multiple methods for measuring the cost of equity due to
10 the limitations of the DCF.

11 **Q. What is the dividend yield component of a DCF analysis?**

12 A. The dividend yield reveals the portion of investors' cash flow that is generated by
13 the return provided by the dividends an investor receives. It is measured by the
14 dividends per share relative to the price per share. The DCF methodology requires
15 the use of an expected dividend yield to establish the investor-required cost of
16 equity. For the twelve months ended August 2022, the monthly dividend yields are
17 shown on Schedule 6. The month-end prices were adjusted to reflect the buildup of
18 the dividend in the price that has occurred since the last ex-dividend date (i.e., the
19 date by which a shareholder must own the shares to be entitled to the dividend
20 payment – usually about two to three weeks prior to the actual payment).

21 For the twelve months ended August 2022, the average dividend yield was
22 3.15% for the Gas Group based upon a calculation using annualized dividend
23 payments and adjusted month-end stock prices. The dividend yields for the more

DIRECT TESTIMONY OF PAUL R. MOUL

1 recent six-month and three-month periods were 2.96% and 3.00%, respectively.

2 For applying the DCF model, I have used the six-month average dividend yield of
3 2.96% for the Gas Group. The use of this dividend yield will reflect current capital
4 costs while avoiding spot yields. For the purpose of a DCF calculation, the average
5 dividend yield must be adjusted to reflect the prospective nature of the dividend
6 payments, i.e., the higher expected dividends for the future. Recall that the DCF is
7 an expectational model that must reflect investors' anticipated cash flows. I have
8 adjusted the six-month average dividend yield in three different but generally
9 accepted manners and used the average of the three adjusted values as calculated in
10 the lower panel of data presented on Schedule 6.⁶ This adjustment adds ten basis
11 points to the six-month average historical yield, thus producing the 3.06% adjusted
12 dividend yield for the Gas Group.

13 **Q. What factors influence investors' growth expectations?**

14 A. As noted previously, investors are interested principally in the dividend yield and
15 future growth of their investment (i.e., the price per share of the stock). Future
16 growth in earnings per share is the DCF model's primary focus because, under the
17 model's assumption that the P-E multiple remains constant, the price per share of

⁶ These adjustments are the 1/2 growth approach, the discrete approach, and the quarterly approach. Under the 1/2 approach, the procedure to adjust the average dividend yield for the expectation of a dividend increase during the initial investment period will be at a rate of one-half the growth component, which assumes that half of the dividend payments will be at the expected higher rate during the initial investment period. Under the discrete approach, the "g" in the DCF model reflects the discrete growth in the quarterly dividend, which is required for the periodic form of the DCF to properly recognize that dividends are expected to grow on a discrete basis. The quarterly approach takes into account that investors have the opportunity to reinvest quarterly dividend receipts. Recognizing the compounding of the periodic quarterly dividend payments (D_0) results in this third DCF formulation. This DCF equation provides no further recognition of growth in the quarterly dividend. A compounding of the quarterly dividend yield recognizes the necessity for an adjusted dividend yield.

DIRECT TESTIMONY OF PAUL R. MOUL

1 stock will grow at the same rate as earnings per share. A growth rate analysis
2 considers a variety of variables to reach a consensus of prospective growth,
3 including historical data and widely available analysts' forecasts of earnings,
4 dividends, book value, and cash flow (all stated on a per-share basis). A
5 fundamental growth rate analysis is frequently based upon internal growth (" $b \times r$ "),
6 where " r " is the expected rate of return on common equity and " b " is the retention
7 rate (a fraction representing the proportion of earnings not paid out as dividends).
8 To be complete, the internal growth rate should be modified to account for sales of
9 new common stock (external growth), which is represented by the formula $s \times v$,
10 where " s " is the number of new common shares that the firm expects to issue and
11 " v " is the value that accrues to existing shareholders from selling stock at a price
12 above book value. Fundamental growth, which combines internal and external
13 growth, encompasses the factors that cause book value per share to grow over time.

14 Growth also can be expressed in multiple stages. This expression of growth
15 consists of an initial "growth" stage during which a firm enjoys rapidly expanding
16 markets, high profit margins, and abnormally high growth in earnings per share.
17 Thereafter, a firm enters a "transition" stage during which fewer technological
18 advances and increased product saturation begin to reduce the growth rate and
19 profit margins come under pressure. During the "transition" stage, investment
20 opportunities begin to mature, capital requirements decline, and a firm begins to
21 pay out a larger percentage of earnings to shareholders. Finally, the mature or
22 "steady-state" stage is reached when a firm's earnings growth, payout ratio, and
23 return on equity stabilize at levels where they remain for the life of a firm. The

DIRECT TESTIMONY OF PAUL R. MOUL

1 three stages of growth assume a step-down of high initial growth to lower
2 sustainable growth. Even if these three stages of growth can be envisioned for a
3 firm, the third “steady-state” growth stage, which is assumed to remain fixed in
4 perpetuity, represents an unrealistic expectation because the three stages of growth
5 can be repeated. That is to say, the stages can be repeated where growth for a firm
6 ramps up and ramps down in cycles over time. For these reasons, there is no need
7 to analyze growth rates individually for each cycle, but rather to rely upon analysts’
8 growth forecasts that are used by investors when pricing common stocks.

9 **Q. What factor should be considered in the determination of an appropriate**
10 **growth rate?**

11 A. The growth rate used in a DCF calculation should measure investor expectations.
12 Investors consider both company-specific variables and overall market sentiment
13 (i.e., level of inflation rates, interest rates, economic conditions, etc.) when
14 balancing their capital gains expectations with their dividend yield requirements.
15 Investors are not influenced solely by a single set of company-specific variables
16 weighted in a formulaic manner. Therefore, all relevant growth rate indicators
17 should be evaluated using a variety of techniques when formulating a judgment of
18 investor-expected growth.

19 **Q. What data for the Gas Group have you considered in your growth rate**
20 **analysis?**

21 A. I considered the growth in the financial variables shown on Schedules 7 and 8,
22 which reflect historical (Schedule 7) and projected (Schedule 8) rates of growth in
23 earnings per share, dividends per share, book value per share, and cash flow per

DIRECT TESTIMONY OF PAUL R. MOUL

1 share for the Gas Group. While analysts will review all measures of growth, as I
2 have done, earnings per share growth directly influences the expectations of
3 investors for the future performance of utility stocks. Forecasts of earnings growth
4 are required because the DCF model is forward-looking, and, with the constant P-E
5 multiple and constant payout ratio that the DCF model assumes, all other measures
6 of growth will mirror earnings growth. The historical growth rates, which were also
7 reviewed to gain a perspective on the industry, were obtained from the Value Line
8 publication that provides this data. While historical data cannot be ignored, they are
9 much less significant when applying the DCF model than projections of future
10 growth. Investors cannot purchase the past earnings of a utility. To the contrary
11 they are only entitled to future earnings, which are the focus of growth projections.
12 Furthermore, if significant weight is assigned to historical performance, the
13 historical data are double-counted because they are already factored into analysts'
14 forecasts of earnings growth.

15 **Q. Is a five-year investment horizon associated with the analysts' forecasts**
16 **consistent with the traditional DCF model?**

17 A. Yes, it is. Although the constant form of the DCF model assumes an infinite stream
18 of cash flows, investors do not expect to hold an investment indefinitely. Rather
19 than viewing the DCF in the context of an endless stream of growing dividends
20 (e.g., a century of cash flows), the growth in the share value (i.e., capital
21 appreciation, or capital gains yield) is most relevant to investors' total return
22 expectations. Hence, the sale price of a stock can be viewed as a liquidating
23 dividend that can be discounted along with the annual dividend receipts during the

DIRECT TESTIMONY OF PAUL R. MOUL

1 investment-holding period to arrive at the investors' expected return. The growth in
2 the price per share will equal the growth in earnings per share if, as the DCF model
3 assumes, there is no change in the P-E multiple. As such, my company-specific
4 growth analysis, which focuses principally upon five-year forecasts of earnings per
5 share growth, conforms with the type of analysis that influences investors'
6 expectations of their actual total return. Moreover, academic research also focuses
7 on five-year growth rates specifically because market outcomes occurring over that
8 investment horizon are what influence stock prices. Indeed, if investors required
9 forecasts beyond five years in order to properly value common stocks, then it would
10 be reasonable to expect that some investment advisory service would begin
11 publishing that information for individual stocks in order to meet the demands of
12 the marketplace. The absence of such a publication suggests that there is no market
13 for this information because investors do not require forecasts for an infinite series
14 of future data points in order to make informed decisions to purchase and sell
15 stocks.

16 **Q. What are the analysts' forecasts of future growth that you considered?**

17 A. Schedule 8 provides projected earnings per share growth rates taken from analysts'
18 five-year forecasts compiled by IBES/First Call, Zacks, and Value Line. These are
19 all reliable authorities of projected growth that investors use to make buy, sell, and
20 hold decisions. The IBES/First Call and Zacks estimates are obtained from the
21 Internet and are widely available to investors. The growth rates reported by
22 IBES/First Call and Zacks are consensus forecasts taken from a survey of analysts
23 that make growth projections for these companies. Notably, First Call's earnings

DIRECT TESTIMONY OF PAUL R. MOUL

1 forecasts are frequently quoted in the financial press. The Value Line forecasts also
2 are widely available to investors and can be obtained by subscription or free of
3 charge at most public and collegiate libraries. The IBES/First Call and Zacks
4 forecasts are limited to earnings per share growth, while Value Line makes
5 projections of other financial variables. The Value Line forecasts of dividends per
6 share, book value per share, and cash flow per share for the Gas Group are also
7 included on Schedule 8.

8 **Q. What are the projected growth rates published by the sources you discussed?**

9 A. Schedule 8 shows the prospective five-year earnings per share growth rates
10 projected for the Gas Group by IBES/First Call (5.79%), Zacks (5.71%), and Value
11 Line (7.69%).

12 **Q. Are certain growth rate forecasts entitled to greater weight in developing a**
13 **growth rate for use in the DCF model?**

14 A. Yes. While a variety of factors should be examined to reach a reasonable
15 conclusion on the DCF growth rate, growth in earnings per share should receive the
16 greatest emphasis. Growth in earnings per share is the primary determinant of
17 investors' expectations of the total returns they will obtain from stocks because the
18 capital gains yield (i.e., price appreciation) will track earnings growth if the P-E
19 multiple remains constant, as the DCF model assumes. Moreover, earnings per
20 share (derived from net income) are the source of dividend payments and are the
21 primary driver of retention growth and its surrogate, i.e., book value per share
22 growth. As such, under these circumstances, greater emphasis must be placed upon
23 projected earnings per share growth. In fact, Professor Gordon, the foremost

DIRECT TESTIMONY OF PAUL R. MOUL

1 proponent of the use of the DCF model in setting utility rates, concluded that the
2 best measure of growth for use in the DCF model is a forecast of earnings per-share
3 growth.⁷ Consistent with Professor Gordon's findings, projections of earnings per
4 share growth, such as those published by IBES/First Call, Zacks, and Value Line,
5 provide the best indication of investor expectations.

6 **Q. What growth rate do you use in your DCF model?**

7 A. The forecasts shown on Schedule 8 for the Gas Group exhibit a range of average
8 earnings per share growth rates from 5.71% to 7.69%. DCF growth rates should not
9 be established by mathematical formulation, and I have not done so. In my opinion,
10 a growth rate of 6.75% is a reasonable estimate of investor-expected growth for the
11 Gas Group. This value is within the array of analysts' forecasts of five-year
12 earnings per share growth rates. The reasonableness of this growth rate is also
13 supported by the expected continuation of gas utility infrastructure spending.

14 **Q. Are the dividend yield and growth components of the DCF adequate to**
15 **accurately depict the rate of return on common equity when it is used to**
16 **calculate a utility's weighted average overall cost of capital?**

17 A. The components of the DCF model are adequate for that purpose only if the capital
18 structure ratios are measured by the market value of debt and equity. In the case of
19 the Gas Group, average capital structure ratios are 40.89% long-term debt, 0.45%
20 preferred stock, and 58.66% common equity, as shown on Schedule 9. If book

⁷ Gordon, Gordon & Gould, "Choice Among Methods of Estimating Share Yield," The Journal of Portfolio Management (Spring 1989).

DIRECT TESTIMONY OF PAUL R. MOUL

1 values are used to compute the capital structure ratios, then a leverage adjustment is
2 required.

3 **Q. What is a leverage adjustment?**

4 A. If a firm's capitalization, as measured by its stock price, diverges from its
5 capitalization, measured at book value, the potential exists for a financial risk
6 difference. Such a risk difference arises because a market-valued capitalization
7 contains more equity and less debt than a book-value capitalization and, therefore,
8 has less risk than the book-value capitalization. A leverage adjustment properly
9 accounts for the risk differential between market-value and book-value capital
10 structures.

11 **Q. Why is a leverage adjustment necessary?**

12 A. In order to make the DCF results relevant to the capitalization measured at book
13 value (as is done for rate setting purposes), the market-derived cost rate must be
14 adjusted to account for this difference in financial risk. The only perspective that is
15 important to investors is the return that they can realize on the market value of their
16 investment. As I have measured the DCF, the simple yield (D/P) plus growth (g)
17 provides a return applicable strictly to the price (P) that an investor is willing to pay
18 for a share of stock. The need for the leverage adjustment arises when the results of
19 the DCF model (k) are to be applied to a capital structure that is different from the
20 capital structure indicated by the market price (P). From the market perspective, the
21 financial risk of the Gas Group is accurately measured by the capital structure ratios
22 calculated from the market-valued capitalization of a firm. If the ratemaking
23 process utilized the market capitalization ratios, then no additional analysis or

DIRECT TESTIMONY OF PAUL R. MOUL

1 adjustment would be required, and the simple yield (D/P) plus growth (g)
2 components of the DCF would satisfy the financial risk associated with the market
3 value of the equity capitalization. Because the ratemaking process uses ratios
4 calculated from a firm's book value capitalization, further analysis is required to
5 synchronize the financial risk of the book capitalization with the required return on
6 the book value of the firm's equity. This adjustment is developed through precise
7 mathematical calculations, using well-recognized analytical procedures that are
8 widely accepted in the financial literature. To arrive at that return, the rate of return
9 on common equity is the unleveraged cost of capital (or equity return at 100%
10 equity) plus one or more terms reflecting the increase in financial risk resulting
11 from the use of leverage in the capital structure. The calculations presented in the
12 lower panel of data shown on Schedule 9, under the heading "M&M,"⁸ provide a
13 return of 7.94% when applicable to a capital structure with 100% common equity.

14 **Q. Are there specific factors that influence market-to-book ratios that determine**
15 **whether the leverage adjustment should be made?**

16 A. No. The leverage adjustment is not intended, nor was it designed, to address the
17 reasons that stock prices vary from book value. Hence, any observations
18 concerning market prices relative to book value are not on point. The leverage
19 adjustment deals with the issue of financial risk and does not transform the DCF
20 result to a book value return through a market-to-book adjustment. Again, the

⁸ Franco Modigliani and Merton H. Miller, "The Cost of Capital, Corporation Finance, and the Theory of Investments," American Economic Review, June 1958, at 261-97. Franco Modigliani and Merton H. Miller, "Taxes and the Cost of Capital: A Correction," American Economic Review, June 1963, at 433-43.

DIRECT TESTIMONY OF PAUL R. MOUL

1 leverage adjustment that I propose is based on the fundamental financial precept
2 that the cost of equity is equal to the rate of return for an unleveraged firm (i.e.,
3 where the overall rate of return equates to the cost of equity with a capital structure
4 that contains 100% equity) plus the additional return required for introducing debt
5 and/or preferred stock leverage into the capital structure.

6 Further, as noted previously, the relatively high market prices of utility
7 stocks cannot be attributed solely to the notion that these companies are expected to
8 earn a return on the book value of equity that differs from their cost of equity
9 determined from stock market prices. Stock prices above book value are common
10 for utility stocks, and indeed the stock prices of non-regulated companies exceed
11 book values by even greater margins. It is difficult to accept that the vast majority
12 of all firms operating in our economy are generating returns far in excess of their
13 cost of capital. Certainly, in our free-market economy, competition should contain
14 such “excesses” if they actually exist.

15 Finally, the leverage adjustment adds stability to the final DCF cost rate.
16 That is to say, as the market capitalization increases relative to its book value, the
17 leverage adjustment increases while the simple yield (D/P) plus growth (g) result
18 declines. The reverse is also true: when the market capitalization declines, the
19 leverage adjustment also declines as the simple yield (D/P) plus growth (g) result
20 increases.

DIRECT TESTIMONY OF PAUL R. MOUL

1 **Q. Is the leverage adjustment that you propose designed to transform the market**
2 **return into one that is designed to produce a particular market-to-book ratio?**

3 A. No, it is not. What I label a “leverage adjustment” is merely a convenient way of
4 showing the amount that must be added to (or subtracted from) the result of the
5 simple DCF model (i.e., $D/P + g$) when the DCF return applies to a capital structure
6 used for ratemaking that is computed with book-value weighting rather than
7 market-value weighting. Although I specify a separate factor, which I call the
8 leverage adjustment, there is no need to do so other than to identify this factor. If I
9 were to express my return solely in the context of the book value weighting that we
10 use to calculate the weighted average cost of capital and ignore the familiar $D/P + g$
11 expression entirely, then a separate element in the DCF cost of equity determination
12 would not be needed to reflect the differential in financial leverage between a
13 market-value and book-value capitalization. As shown in the bottom panel of data
14 on Schedule 9, the equity return applicable to the book value common equity ratio
15 is equal to 7.94%, which is the return for the Gas Group appropriate for a capital
16 structure with no debt (i.e., a 100% equity ratio) plus 2.89% to compensate
17 investors for the risk of a 51.27% debt ratio and 0.08% for a 1.73% preferred stock
18 ratio. These are the book-value ratios that differ markedly from the market-value
19 based ratios I discussed previously. Under this approach, the parts add up to
20 10.91% ($7.94\% + 2.89\% + 0.08\%$), and there is no need to even address the cost of
21 equity in terms of $D/P + g$. To express this same return in the context of the
22 familiar DCF model, I added the 3.06% dividend yield, the 6.75% growth rate, and
23 1.10% for the leverage adjustment in order to arrive at the same 10.91% ($3.06\% +$

DIRECT TESTIMONY OF PAUL R. MOUL

1 6.75% + 1.10%) return. I know of no means to mathematically solve for the 1.10%
2 leverage adjustment by expressing it in the terms of any particular relationship of
3 market price to book value. The 1.10% adjustment is merely a convenient way to
4 compare the 10.91% return computed using the Modigliani & Miller formulas to the
5 9.81% return generated by the DCF model (i.e., $D_1/P_0 + g$, or the traditional form of
6 the DCF shown on Schedule 1, page 2) based on a market-value capital structure.
7 A 9.81% return assigned to anything other than the market value of equity cannot
8 equate to a reasonable return on book value that has higher financial risk. My point
9 is that when we use a market-determined cost of equity developed from the DCF
10 model, it reflects a level of financial risk that is different (in this case, lower) from
11 the capital structure stated at book value. This process has nothing to do with
12 targeting any particular market-to-book ratio.

13 **Q. Please provide the DCF return based upon your preceding discussion of**
14 **dividend yield, growth, and leverage.**

15 A. As explained previously, I have utilized a six-month average dividend yield (D_1/P_0)
16 adjusted in a forward-looking manner for my DCF calculation. This dividend yield
17 is used in conjunction with the growth rate (g) previously developed. The DCF also
18 includes the leverage modification ($lev.$) required when the book value equity ratio
19 is used in determining the weighted average cost of capital in the ratemaking
20 process rather than the market value equity ratio related to the price of stock. The
21 resulting DCF cost rate is 10.91%, computed as follows:

$$\begin{array}{rcccl} & D_1/P_0 & + & g & + & lev. & = & k \\ 22 & \text{Gas Group} & & 3.06\% & + & 6.75\% & + & 1.10\% & = & 10.91\% \end{array}$$

DIRECT TESTIMONY OF PAUL R. MOUL

1 The DCF result shown above represents the simplified (i.e., Gordon) form
2 of the model that contains a constant-growth assumption. I should reiterate,
3 however, that the DCF-indicated cost rate provides an explanation of the rate of
4 return on common stock market prices without regard to the prospect of a change in
5 the P-E multiple. An assumption that there will be no change in the P-E multiple is
6 not supported by the realities of the equity market because P-E multiples do not
7 remain constant. This is one of the constraints of this model that makes it important
8 to consider the results of other models when determining a company's cost of
9 equity.

RISK PREMIUM ANALYSIS

11 **Q. Please describe your use of the Risk Premium approach to determine the cost**
12 **of equity.**

13 A. With the Risk Premium approach, the cost of equity capital is determined by
14 corporate bond yields plus a premium to account for the fact that common equity is
15 exposed to greater investment risk than debt capital. The result of my Risk
16 Premium study is shown on Schedule 1, page 2. That result is 11.25%.

17 **Q. What long-term public utility debt cost rate did you use in your Risk Premium**
18 **analysis?**

19 A. In my opinion, and as I will explain in more detail further in my testimony, a 5.00%
20 yield represents a reasonable estimate of the prospective yield on long-term, public
21 utility bonds.

DIRECT TESTIMONY OF PAUL R. MOUL

1 **Q. What historical data are shown by the Moody's data?**

2 A. I have analyzed the historical yields on the Moody's index of long-term public
3 utility debt as shown on Schedule 10, page 1. For the twelve months ended August
4 2022, the average monthly yield on Moody's index public utility bonds was 3.89%.
5 For the six- and three-month periods ended August 2022, the yields were 4.58% and
6 4.80%, respectively. During the twelve months ended August 2022, the range of
7 the yields on public utility bonds were 2.96% to 4.86% dependent on credit rating.
8 Page 2 of Schedule 10 shows the long-run spread in yields between A-rated public
9 utility bonds and long-term Treasury bonds. As shown on page 3 of Schedule 10,
10 the yields on A-rated public utility bonds have exceeded those on Treasury bonds
11 by 1.40% on a twelve-month average basis, 1.61% on a six-month average basis,
12 and 1.64% on a three-month average basis. With these data, 1.50% represents a
13 reasonable, albeit conservative, spread for the yield on A-rated public utility bonds
14 over Treasury bonds.

15 **Q. What forecasts of interest rates have you considered in your analysis?**

16 A. I have determined the prospective yield on A-rated public utility debt by using the
17 Blue Chip Financial Forecasts ("Blue Chip") along with the spread in the yields that
18 I describe below. Blue Chip is a reliable authority and contains consensus forecasts
19 of a variety of interest rates compiled from a panel of banking, brokerage, and
20 investment advisory services. In early 1999, Blue Chip stopped publishing
21 forecasts of yields on A-rated public utility bonds because the Federal Reserve
22 deleted these yields from its Statistical Release H.15. To independently project a
23 forecast of the yields on A-rated public utility bonds, I have combined the forecast

DIRECT TESTIMONY OF PAUL R. MOUL

1 yields on long-term Treasury bonds published on September 1, 2022 and a yield
 2 spread of 1.50%, derived from historical data.

3 **Q. How have you used these data to project the yield on A-rated public utility**
 4 **bonds for the purpose of your Risk Premium analyses?**

5 A. Shown below is my calculation of the prospective yield on A-rated public utility
 6 bonds using the building blocks discussed above, i.e., the Blue Chip forecast of
 7 Treasury bond yields and the public utility bond yield spread. For comparative
 8 purposes, I also have shown the Blue Chip forecasts of Aaa-rated and Baa-rated
 9 corporate bonds. These forecasts are:

		Blue Chip Financial Forecasts				
Year	Quarter	Corporate		30-Year	A-rated Public Utility	
		Aaa-rated	Baa-rated	Treasury	Spread	Yield
2022	Third	4.2%	5.3%	3.1%	1.50%	4.60%
2022	Fourth	4.7%	5.7%	3.4%	1.50%	4.90%
2023	First	4.8%	5.9%	3.5%	1.50%	5.00%
2023	Second	4.9%	6.0%	3.6%	1.50%	5.10%
2023	Third	4.8%	6.0%	3.6%	1.50%	5.10%
2023	Fourth	4.8%	6.0%	3.6%	1.50%	5.10%

10 **Q. Are there additional forecasts of interest rates that extend beyond those shown**
 11 **above?**

12 A. Yes. Twice yearly, Blue Chip provides long-term forecasts of interest rates. In its
 13 June 1, 2022 publication Blue Chip published longer-term forecasts of interest rates,
 14 which were reported to be:

		Blue Chip Financial Forecasts		
		Corporate		30-Year
		Averages	Aaa-rated	Baa-rated
		2023-2027	4.9%	5.9%
		2028-2032	5.0%	5.9%

15

DIRECT TESTIMONY OF PAUL R. MOUL

1 The longer-term forecasts by Blue Chip suggest that interest rates will move
2 up from the levels revealed by the near-term forecasts. A 5.00% yield on A-rated
3 public utility bonds represents a reasonable benchmark for measuring the cost of
4 equity in this case. All the data I used to formulate my conclusion as to a
5 prospective yield on A-rated public utility debt are available to investors, who
6 regularly rely upon such data to make investment decisions. Recent FOMC
7 pronouncements have moved the forecasts of interest rates to higher levels.

8 **Q. What equity risk premium have you determined for public utilities?**

9 A. To develop an appropriate equity risk premium, I analyzed the results from 2022
10 SBBI Yearbook, Stocks, Bonds, Bills and Inflation. My investigation reveals that
11 the equity risk premium varies according to the level of interest rates. That is to
12 say, the equity risk premium increases as interest rates decline, and it declines as
13 interest rates increase. This inverse relationship is revealed by the summary data
14 presented below and shown on Schedule 11, page 1.

Common Equity Risk Premiums

Low Interest Rates	6.81%
Average Across All Interest Rates	5.93%
High Interest Rates	5.05%

15
16 Based on my analysis of the historical data, the equity risk premium was
17 6.81% when the marginal cost of long-term government bonds was low (i.e.,
18 2.80%, which was the average yield during periods of low rates). Conversely, when
19 the yield on long-term government bonds was high (i.e., 7.03% on average during
20 periods of high interest rates), the spread narrowed to 5.05%. Over the entire

DIRECT TESTIMONY OF PAUL R. MOUL

1 spectrum of interest rates, the equity risk premium was 5.93% when the average
2 government bond yield was 4.92%. From these data, I have utilized a 6.25% equity
3 risk premium. The equity risk premium of 6.25% is between the premiums
4 associated with low interest rates (i.e., 6.81%) and average for the entire historical
5 period interest rates (i.e., 5.93%).

6 **Q. What common equity cost rate did you determine based on your Risk**
7 **Premium analysis?**

8 A. The cost of equity (i.e., “k”) is represented by the sum of the prospective yield for
9 long-term public utility debt (i.e., “i”) and the equity risk premium (i.e., “RP”). The
10 Risk Premium approach provides a cost of equity of:

$$\begin{array}{rccccccc} & & i & + & RP & = & k \\ & & \text{Gas Group} & & 5.00\% & + & 6.25\% & = & 11.25\% \end{array}$$

11 **CAPITAL ASSET PRICING MODEL**

12 **Q. How is the CAPM used to measure the cost of equity?**

13 A. The CAPM uses the yield on a risk-free interest-bearing obligation plus a rate of
14 return premium that is proportional to the systematic risk of an investment. As
15 shown on page 2 of Schedule 1, the result of the CAPM is 14.61% for the Gas
16 Group with the leverage adjustment. Without the leverage adjustment, the CAPM
17 result is 12.86% (14.61% - (0.18 x 9.70%)) through use of the Value Line beta
18 excluding the leverage adjustment (i.e., 1.04 - 0.86 = 0.18). To compute the cost of
19 equity with the CAPM, three components are necessary: a risk-free rate of return
20 (“Rf”), the beta measure of systematic risk (“β”), and the market risk premium
21 (“Rm-Rf”) derived from the total return on the market of equities reduced by the

DIRECT TESTIMONY OF PAUL R. MOUL

1 risk-free rate of return. The CAPM specifically accounts for differences in
2 systematic risk (i.e., market risk as measured by the beta) between an individual
3 firm or group of firms and the entire market of equities.

4 **Q. What betas have you considered in the CAPM?**

5 A. For my CAPM analysis, I initially considered the Value Line betas. As shown on
6 page 2 of Schedule 3, the average beta is 0.86 for the Gas Group.

7 **Q. Did you use the Value Line betas in the CAPM determined cost of equity?**

8 A. I used the Value Line betas as a foundation for the leverage adjusted betas that I
9 used in the CAPM. The Value Line betas are measured over a five-year period.
10 The betas must be reflective of the financial risk associated with the ratemaking
11 capital structure that is measured at book value. Therefore, Value Line betas cannot
12 be used directly in the CAPM, unless the cost rate developed using those betas is
13 applied to a capital structure measured with market values. Since we used book
14 values in this case, the Value Line betas must be adjusted for the higher financial
15 risk associated with the book value capital structure. To develop a CAPM cost rate
16 applicable to a book-value capital structure, the Value Line (market value) betas
17 have been unleveraged and re-leveraged for the book value common equity ratios
18 using the Hamada formula,⁹ as follows:

$$\beta l = \beta u [1 + (1 - t) D/E + P/E]$$

20 βl = the leveraged beta, βu = the unleveraged beta, t = income tax rate, D =

⁹ Robert S. Hamada, "The Effects of the Firm's Capital Structure on the Systematic Risk of Common Stocks;" The Journal of Finance, Vol. 27, No. 2; Papers and Proceedings of the Thirtieth Annual Meeting of the American Finance Association, New Orleans, Louisiana, Dec. 27-29, 1971. (May 1972), pp. 435-52.

DIRECT TESTIMONY OF PAUL R. MOUL

1 debt ratio, P = preferred stock ratio, and E = common equity ratio. The betas
2 published by Value Line have been calculated with the market price of stock and
3 are related to the market value capitalization. By using the formula shown above
4 and the capital structure ratios measured at market value, the beta would become
5 0.55 for the Gas Group if it employed no leverage and was 100% equity financed.
6 Those calculations are shown on Schedule 9 under the section labeled “Hamada,”
7 who is credited with developing those formulas. With the unleveraged beta as a
8 base, I calculated the leveraged beta of 1.04 for the book value capital structure of
9 the Gas Group.

10 **Q. What risk-free rate have you used in the CAPM?**

11 A. As shown on page 1 of Schedule 12, I provided the historical yields on Treasury
12 notes and bonds. For the twelve months ended August 2022, the average yield on
13 30-year Treasury bonds was 2.49%. For the six- and three-months ended August
14 2022, the yields on 30-year Treasury bonds were 2.96% and 3.16%, respectively.
15 During the twelve months ended August 2022, the range of the yields on 30-year
16 Treasury bonds was 1.85% to 3.25%. The low yields that existed during 2020 can
17 be traced to extraordinary events associated with the Pandemic that jolted the
18 capital markets. I described these events in my prefiled direct testimony previously.
19 A transition to much higher rates is now taking place. A forward-looking
20 assessment of the capital markets is especially relevant now because the Company’s
21 rates will be based on financial conditions in 2024 and beyond. Higher inflation
22 expectations are a contributing factor that points to higher interest rates. Indeed,
23 higher inflation today is revealed by an 8.7% increase in 2023 Social Security

DIRECT TESTIMONY OF PAUL R. MOUL

1 payments announced on October 13, 2022, which is the largest one-year increase in
2 four decades. This is symptomatic of high rates of inflation that are pushing
3 upward the cost of capital.

4 Accommodative policy by the FOMC has ended and higher interest rates
5 have occurred and will continue in the future. The Fed Funds rate is expected to
6 continue to increase from very low levels that existed during the Pandemic. After
7 the FOMC ended its bond-buying program (i.e., quantitative easing) in March 2022,
8 it now plans to run off its \$9 trillion asset portfolio, which will further boost interest
9 rates, particularly those with 10 and 30-year tenors.

10 Higher interest rates clearly point to higher capital costs prospectively, as
11 indicated by recent bond yield changes. The yield on 10-year Treasury bonds
12 moved above the 3% level on May 2, 2022, the first time since late 2018. By
13 September 2022, the yield on 30-year Treasury bonds moved to 3.56%, or an
14 increase of 1.89% (or 113%) since December 2020.

15 As shown on page 2 of Schedule 12, forecasts published by Blue Chip on
16 September 1, 2022 indicate that the yields on long-term Treasury bonds are
17 expected to be in the range of 3.1% to 3.6% during the next six quarters. The
18 longer-term forecasts described previously show that the yields on 30-year Treasury
19 bonds will average 3.8% from 2023 through 2027 and 3.9% from 2028 to 2032.
20 For the reasons explained previously, forecasts of interest rates should be
21 emphasized at this time in selecting the risk-free rate of return in CAPM. Hence, I
22 have used a 3.50% risk-free rate of return for CAPM purposes, which considers the
23 Blue Chip forecasts, and is conservative.

DIRECT TESTIMONY OF PAUL R. MOUL

1 **Q. What market premium have you used in the CAPM?**

2 A. As shown in the lower panel of data presented on Schedule 12, page 2, the market
3 premium is derived from historical data and the forecast returns. For the
4 historically based market premium, I have used the arithmetic mean obtained from
5 the data presented on Schedule 11, page 1. On that schedule, the market return was
6 12.21% on large stocks during periods between the low interest rate environment
7 and the entire long-term average. During those periods, the yield on long-term
8 government bonds was 3.86% ($2.80\% + 4.92\% = 7.72\% \div 2$). Likewise, I carried
9 over to Schedule 12, page 2, the average large common stock returns of 12.21%
10 ($12.09\% + 12.33\% = 24.42\% \div 2$) and the average yield on long-term government
11 bonds of 3.86%. The resulting market premium is 8.35% ($12.21\% - 3.86\%$) based
12 on historical data, as shown on Schedule 12, page 2. As also shown on Schedule
13 12, page 2, I calculated the forecast returns, which show a 14.54% total market
14 return. With this forecast, I calculated a market premium of 11.04% ($14.54\% -$
15 3.50%) using forecast data. The resulting market premium applicable to the CAPM
16 derived from these sources equals 9.70% ($11.04\% + 8.35\% = 19.39\% \div 2$).

17 **Q. Are there adjustments to the CAPM that are necessary to fully reflect the rate**
18 **of return on common equity?**

19 A. Yes. The technical literature supports an adjustment relating to the size of the
20 company or portfolio for which the calculation is performed. As the size of a firm
21 decreases, its risk and required return increases. Moreover, in his discussion of the
22 cost of capital, Professor Eugene F. Brigham has indicated that smaller firms have
23 higher capital costs than otherwise similar larger firms. Also, the Fama/French

DIRECT TESTIMONY OF PAUL R. MOUL

1 study (see “The Cross-Section of Expected Stock Returns”; The Journal of Finance,
2 June 1992) established that the size of a firm helps explain stock returns. In an
3 October 15, 1995 article in Public Utility Fortnightly, entitled “Equity and the
4 Small-Stock Effect,” it was demonstrated that the CAPM could significantly
5 understate the cost of equity according to a company’s size. Indeed, it was
6 demonstrated in the SBBY Yearbook that the returns for stocks in lower deciles (i.e.,
7 smaller stocks) had returns in excess of those shown by the simple CAPM. To
8 recognize this fact, I used the mid-cap adjustment of 1.02%, as revealed on page 3
9 of Schedule 12, for the CAPM calculation. The adjustment here is related to the
10 size of the Gas Group.

11 **Q. What does your CAPM analysis show?**

12 A. Using the 3.50% risk-free rate of return, the leverage adjusted beta of 1.04 for the
13 Gas Group, the 9.70% market premium, and the 1.02% size adjustment, the
14 following result is indicated.

$$R_f + \beta \times (R_m - R_f) + size = k$$

Gas Group 3.50% + 1.04 x (9.70%) + 1.02% = 14.61%

15 COMPARABLE EARNINGS APPROACH

16 **Q. What is the Comparable Earnings approach?**

17 A. The Comparable Earnings approach estimates a fair return on equity by comparing
18 returns realized by non-regulated companies to returns that a public utility with
19 similar risk characteristics would need to realize in order to compete for capital.
20 Because regulation is a substitute for competitively determined prices, the returns
21 realized by non-regulated firms with comparable risks to a public utility provide

DIRECT TESTIMONY OF PAUL R. MOUL

1 useful insight into investor expectations for public utility returns. The firms
2 selected for the Comparable Earnings approach should be companies whose prices
3 are not subject to cost-based price ceilings (i.e., non-regulated firms) so that
4 circularity is avoided.

5 There are two avenues available to implement the Comparable Earnings
6 approach. One method involves the selection of another industry (or industries)
7 with comparable risks to the public utility in question, and the results for all
8 companies within that industry serve as a benchmark. The second approach
9 requires the selection of parameters that represent similar risk traits for the public
10 utility and the comparable risk companies. Using this approach, the business lines
11 of the comparable companies become unimportant. The latter approach is
12 preferable with the further qualification that the comparable risk companies exclude
13 regulated firms in order to avoid the circular reasoning implicit in the use of the
14 achieved earnings/book ratios of other regulated firms. The United States Supreme
15 Court has held that:

16 A public utility is entitled to such rates as will permit it to earn a
17 return on the value of the property which it employs for the
18 convenience of the public equal to that generally being made at the
19 same time and in the same general part of the country on investments
20 in other business undertakings which are attended by corresponding
21 risks and uncertainties. The return should be reasonably sufficient
22 to assure confidence in the financial soundness of the utility and
23 should be adequate, under efficient and economical management, to
24 maintain and support its credit and enable it to raise the money
25 necessary for the proper discharge of its public duties. Bluefield
26 Water Works v. Public Service Commission, 262 U.S. 668 (1923).
27

DIRECT TESTIMONY OF PAUL R. MOUL

1 It is important to identify the returns earned by firms that compete for
2 capital with a public utility. This can be accomplished by analyzing the returns of
3 non-regulated firms that are subject to the competitive forces of the marketplace.

4 **Q. Did you compare the results of your DCF and CAPM analyses to the results**
5 **indicated by a Comparable Earnings approach?**

6 A. Yes. I selected companies from The Value Line Investment Survey for Windows
7 that have six categories of comparability designed to reflect the risk of the Gas
8 Group. These screening criteria were based upon the range as defined by the
9 rankings of the companies in the Gas Group. The items considered were
10 Timeliness Rank, Safety Rank, Financial Strength, Price Stability, Value Line betas,
11 and Technical Rank. The definition for these parameters is provided on Schedule
12 13, page 3. The identities of the companies comprising the Comparable Earnings
13 group and their associated rankings within the ranges are identified on Schedule 13,
14 page 1.

15 I relied upon Value Line data because it provides a comprehensive basis for
16 evaluating the risks of the comparable firms. As to the returns calculated by Value
17 Line for these companies, there is some downward bias in the figures shown on
18 Schedule 13, page 2, because Value Line computes the returns on year-end rather
19 than average book value. If average book values had been employed, the rates of
20 return would have been slightly higher. Nevertheless, these are the returns
21 considered by investors when taking positions in these stocks. Because many of the
22 comparability factors, as well as the published returns, are used by investors in

DIRECT TESTIMONY OF PAUL R. MOUL

1 selecting stocks, and the fact that investors rely on the Value Line service to gauge
2 returns, it is an appropriate database for measuring comparable return opportunities.

3 **Q. What data did you consider in your Comparable Earnings analysis?**

4 A. I used both historical realized returns and forecasted returns for non-utility
5 companies. As noted previously, I have not used returns for utility companies in
6 order to avoid the circularity that arises from using regulatory-influenced returns to
7 determine a regulated return. It is appropriate to consider a relatively long
8 measurement period in the Comparable Earnings approach in order to cover
9 conditions over an entire business cycle. A ten-year period (five historical years
10 and five projected years) is sufficient to cover an average business cycle. Unlike
11 the DCF and CAPM, the results of the Comparable Earnings method can be applied
12 directly to the book value capitalization. In other words, the Comparable Earnings
13 approach does not contain the potential misspecification contained in market
14 models when the market capitalization and book value capitalization diverge
15 significantly. A point of demarcation was chosen to eliminate the results of highly
16 profitable enterprises, which the Bluefield case stated were not the type of returns
17 that a utility was entitled to earn. For this purpose, I used 20% as the point where
18 those returns could be viewed as highly profitable and should be excluded from the
19 Comparable Earnings approach. The average historical rate of return on book
20 common equity was 13.0% using only the returns that were less than 20%, as
21 shown on Schedule 13, page 2. The average forecasted rate of return as published
22 by Value Line is 13.1% also using values less than 20%, as provided on Schedule

DIRECT TESTIMONY OF PAUL R. MOUL

1 13, page 2. Using the average of these data, my Comparable Earnings result is
2 13.05%, as shown on Schedule 1, page 2.

CONCLUSION ON COST OF EQUITY

4 **Q. What is your conclusion regarding the Company's cost of common equity?**

5 A. Based upon the application of a variety of methods and models described
6 previously, it is my opinion that a reasonable rate of return on common equity is
7 11.20% for NFGDC, which includes twenty-five basis points or 0.25% for
8 recognition of the Company's strong management performance. My cost of equity
9 recommendation is within the range of results and should be considered in the
10 context of the Company's risk characteristics relative to the barometer group
11 companies. It is essential that the Commission employ a variety of techniques to
12 measure the Company's cost of equity because of the limitations/infirmities that are
13 inherent in each method. In summary, the Company should be provided an
14 opportunity to realize a 11.20% rate of return on common equity so that it can
15 compete in the capital markets, attain reasonable credit quality, sustain its cash flow
16 in the context of its capital expenditures and receive recognition of the significant
17 accomplishments that management has achieved.

18 **Q. Does this complete your direct testimony?**

19 A. Yes. However, I reserve the right to supplement my testimony, if necessary, and to
20 respond to witnesses presented by other parties.

APPENDIX A TO DIRECT TESTIMONY OF PAUL R. MOUL

**EDUCATIONAL BACKGROUND, BUSINESS EXPERIENCE
AND QUALIFICATIONS**

1
2
3 I was awarded a Bachelor of Science degree in Business Administration by Drexel
4 University in 1971. While at Drexel, I participated in the Cooperative Education Program, which
5 included employment, for one year, with American Water Works Service Company, Inc., as an
6 internal auditor. There, I was involved in the audits of several operating water companies of the
7 American Water Works System and participated in the preparation of annual reports to regulatory
8 agencies and assisted in other general accounting matters.

9 Upon graduation from Drexel University, I was employed by American Water Works
10 Service Company, Inc. in the Eastern Regional Treasury Department, where my duties included
11 preparation of rate case exhibits for submission to regulatory agencies, as well as responsibility
12 for various treasury functions of the thirteen New England operating subsidiaries.

13 In 1973, I joined the Municipal Financial Services Department of Betz Environmental
14 Engineers, a consulting engineering firm, where I specialized in financial studies for municipal
15 water and wastewater systems.

16 In 1974, I joined Associated Utility Services, Inc., now known as AUS Consultants. I held
17 various positions with the Utility Services Group of AUS Consultants, concluding my
18 employment there as a Senior Vice President.

19 In 1994, I formed P. Moul & Associates, an independent financial and regulatory
20 consulting firm. In my capacity as Managing Consultant and for the past forty-one years, I have
21 continuously studied the rate of return requirements for cost of service-regulated firms. In this
22 regard, I have supervised the preparation of rate of return studies, which were employed in
23 connection with my testimony and in the past for other individuals. I have presented direct

APPENDIX A TO DIRECT TESTIMONY OF PAUL R. MOUL

1 testimony on the subject of fair rate of return, evaluated rate of return testimony of other witnesses,
2 and presented rebuttal testimony.

3 My studies and prepared direct testimony have been presented before thirty-seven federal,
4 state and municipal regulatory commissions, consisting of the Federal Energy Regulatory
5 Commission; state public utility commissions in Alabama, Alaska, California, Colorado,
6 Connecticut, Delaware, Florida, Georgia, Hawaii, Illinois, Indiana, Iowa, Kentucky, Louisiana,
7 Maine, Maryland, Massachusetts, Michigan, Minnesota, Missouri, New Hampshire, New Jersey,
8 New York, North Carolina, Ohio, Oklahoma, Pennsylvania, Rhode Island, South Carolina,
9 Tennessee, Texas, Virginia, West Virginia, and Wisconsin; the Philadelphia Gas Commission;
10 and the Texas Commission on Environmental Quality. My testimony has been offered in over
11 300 rate cases involving electric power, natural gas distribution and transmission, resource
12 recovery, solid waste collection and disposal, telephone, wastewater, and water service utility
13 companies. While my testimony has involved principally fair rate of return and financial matters,
14 I have also testified on capital allocations, capital recovery, cash working capital, income taxes,
15 factoring of accounts receivable, and take-or-pay expense recovery. My testimony has been
16 offered on behalf of municipal and investor-owned public utilities and for the staff of a regulatory
17 commission. I have also testified at an Executive Session of the State of New Jersey Commission
18 of Investigation concerning the New Jersey Board of Public Utilities regulation of solid waste
19 collection and disposal.

20 I was a co-author of a verified statement submitted to the Interstate Commerce
21 Commission concerning the 1983 Railroad Cost of Capital (Ex Parte No. 452). I was also co-
22 author of comments submitted to the Federal Energy Regulatory Commission regarding the
23 Generic Determination of Rate of Return on Common Equity for Public Utilities in 1985, 1986
24 and 1987 (Docket Nos. RM85-19-000, RM86-12-000, RM87-35-000 and RM88-25-000).

APPENDIX A TO DIRECT TESTIMONY OF PAUL R. MOUL

1 Further, I have been the consultant to the New York Chapter of the National Association of Water
2 Companies, which represented the water utility group in the Proceeding on Motion of the
3 Commission to Consider Financial Regulatory Policies for New York Utilities (Case 91-M-0509).
4 I have also submitted comments to the Federal Energy Regulatory Commission in its Notice of
5 Proposed Rulemaking (Docket No. RM99-2-000) concerning Regional Transmission
6 Organizations, and on behalf of the Edison Electric Institute in its intervention in the case of
7 Southern California Edison Company (Docket No. ER97-2355-000). Also, I was a member of
8 the panel of participants at the Technical Conference in Docket No. PL07-2 on the Composition
9 of Proxy Groups for Determining Gas and Oil Pipeline Return on Equity.

10 In late 1978, I arranged for the private placement of bonds on behalf of an investor-owned
11 public utility. I have assisted in the preparation of a report to the Delaware Public Service
12 Commission relative to the operations of the Lincoln and Ellendale Electric Company. I was also
13 engaged by the Delaware P.S.C. to review and report on the proposed financing and disposition
14 of certain assets of Sussex Shores Water Company (P.S.C. Docket Nos. 24-79 and 47-79). I was
15 a co-author of a Report on Proposed Mandatory Solid Waste Collection Ordinance prepared for
16 the Commission of County Commissioners of Collier County, Florida.

17 I have been a consultant to the Bucks County Water and Sewer Authority concerning rates
18 and charges for wholesale contract service with the City of Philadelphia. My municipal consulting
19 experience has also included an assignment for Baltimore County, Maryland, regarding the
20 City/County Water Agreement for Metropolitan District customers (Circuit Court for Baltimore
21 County in Case 34/153/87-CSP-2636).

NATIONAL FUEL STATEMENT NO. 11

SHANNON M. BUFFINGTON

**BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION**

Docket No. R-2022-3035730

**National Fuel Gas Distribution Corporation
Pennsylvania Division**

Statement No. 11

**Direct Testimony of
Shannon Buffington**

**Topics Addressed: Financial Data
 Capital Structure
 Cost of Debt**

Dated: October 28, 2022

1 **I. INTRODUCTION AND QUALIFICATIONS**

2 **Q. Please state your name and business address.**

3 A. My name is Shannon Buffington. My business address is 6363 Main Street,
4 Williamsville, NY 14421.

5 **Q. By whom and in what capacity are you employed?**

6 A. I am employed by National Fuel Gas Distribution Corporation (“NFGDC”) as Manager of
7 Finance.

8 **Q. Please provide your educational background.**

9 A. I graduated from the State University of New York at Buffalo in 2013 in a combined
10 degree program with a Bachelor of Science degree in Business Administration and a
11 Master of Business Administration with a concentration in Finance.

12 **Q. Please provide your professional experience.**

13 A. In June 2013, I began my employment with NFGDC in the MBA Associate rotational
14 program. I joined the Finance Department in June 2015 as a Financial Analyst and have
15 taken on increasing responsibility, most recently being promoted to the role of Manager
16 of Finance in February 2021.

17 **Q. Have you previously testified in other proceedings before the Pennsylvania Public
18 Utility Commission (“PAPUC” or the “Commission”) or any other state or federal
19 agency?**

20 A. No, I have not.

21
22 **II. PURPOSE OF TESTIMONY**

23 **Q. Please describe the purpose of your testimony.**

1 A. My testimony supports the financial information that was provided to Mr. Paul Moul for
2 preparation of his testimony concerning the fair rate of return and recommended capital
3 structure for NFGDC. My testimony also supports the cost of debt used by Mr. Moul.

4 **Q. Are you sponsoring any exhibits or filing requirements in this proceeding?**

5 A. Yes, I am sponsoring National Fuel Exhibit A, Schedule B-6. I am also sponsoring
6 certain responses to the Commission’s regulatory filing requirements that were prepared
7 by me or under my direction. These regulations are indicated on the master list
8 accompanying this filing.

9

10 **III. CORPORATE STRUCTURE**

11 **Q. Please provide an overview of National Fuel Gas Company and its subsidiaries.**

12 A. National Fuel Gas Company (“NFG” or “Parent”) is a holding company that owns
13 directly or indirectly all the outstanding securities of its subsidiaries. Across its four
14 major business segments, NFG operates an integrated natural gas company in New York
15 and Pennsylvania that spans the natural gas value chain from wellhead to burner tip. The
16 common geographic footprint of NFG’s subsidiaries enables it to share management,
17 labor, facilities and support services to cost-effectively develop, gather, transport and
18 store, and ultimately distribute natural gas to end-users.

19 **Q. How do NFG and its subsidiaries raise capital?**

20 A. NFG raises long-term debt, short-term debt, and common equity from external sources
21 and provides capital to its subsidiaries through intercompany debt agreements and capital
22 contributions in exchange for shares of subsidiary common equity.

23 **Q. Does NFGDC raise capital from external sources?**

1 A. No, NFG provides all short-term and long-term debt, as well as common equity.

2 **Q. Does the PA PUC approve NFGDC's short-term and long-term financing strategy?**

3 A. Yes, the PAPUC grants the authority for NFGDC to issue promissory notes to NFG, most
4 recently in 2020 (Docket #S-2020-3020690). The PAPUC also approved NFG's Money
5 Pool Agreement – to which NFGDC is a party – most recently in 2018 (Docket # G-
6 2009-2092081).

7

8

IV. CAPITAL STRUCTURE

9 **Q. How does NFGDC determine an appropriate capital structure?**

10 A. Over the long-term, NFGDC targets a capital structure that optimizes debt and equity
11 relative to the risk of operations and is within the range of capital structures used by other
12 similar utilities.

13 **Q. Is it appropriate to use NFGDC's capital structure for purposes of this proceeding?**

14 A. Yes. NFGDC's capital structure represents the optimal mix of debt and equity given its
15 specific utility risk profile. I further note that NFGDC's common equity ratio is well
16 within the range of the proxy group.

17 It would not be appropriate to use the Parent's equity ratio for the purposes of this
18 proceeding. Given that NFG operates an integrated and complementary mix of businesses
19 across the natural gas value chain, it maintains an equity ratio commensurate with the
20 weighted average equity ratio of each of its subsidiaries. The business activities and
21 different risk profiles of NFG's non-utility subsidiaries necessitates a higher equity ratio
22 at the Parent when compared to NFGDC. At the end of the FPPTY, NFG is projected to

1 have a common equity ratio of 60.5%, which is considerably higher than NFGDC's
2 equity ratio.

3 **Q. Mr. Paul R. Moul has presented direct testimony (Statement No. 10) concerning the**
4 **fair rate of return and capital structure in this proceeding. In preparation of that**
5 **testimony Mr. Moul relied, to a certain degree, on financial information provided to**
6 **him by NFGDC. Was the financial information provided to him by NFGDC prepared**
7 **by you or under your supervision?**

8 A. Yes, the information provided to Mr. Moul for preparation of his testimony was prepared
9 under my supervision.

10 **Q. What is the proposed capital structure for this filing?**

11 A. As stated in Mr. Moul's testimony, the proposed capital structure consists of 54.9%
12 common equity and 45.1% long-term debt.

13 **Q. How was the proposed capital structure determined?**

14 A. The proposed capital structure reflects NFGDC's long-term debt and common equity, as
15 currently projected at the end of the fully projected future test year ending July 31, 2024
16 ("FPFTY"). As Mr. Moul provides in his testimony, the common equity percentage is
17 consistent with other precedent rate filings and falls within the common equity range of
18 the peer or barometer group.

19 **Q. Prior to the HTY, was there any material changes to NFGDC's capital structure?**

20 A. No. NFGDC's capital structure has remained relatively consistent over the past several
21 years. Its debt has increased commensurate with its common equity, while dividends have
22 remained relatively consistent and no new equity has been issued to NFGDC.

23

1 **V. SHORT-TERM DEBT**

2 **Q. Please describe NFG and NFGDC's available sources of short-term borrowings.**

3 A. The Parent has established both uncommitted and committed lines of credit that are
4 available to its subsidiaries, including NFGDC, via its Money Pool Agreement. These
5 facilities have been established for general corporate purposes and are used to primarily
6 finance working capital needs. NFG currently has arrangements to borrow up to \$1.25
7 billion from committed credit facilities, of which \$1 billion is an unsecured revolving
8 credit facility secured through February 2027. This level of short-term liquidity is
9 adequate to meet the needs of all of NFG's subsidiaries. In addition, the \$1 billion credit
10 facility backstops a \$500 million commercial paper program, which provides NFG access
11 to the commercial paper market. Commercial paper typically represents a more cost-
12 effective borrowing option to meet fluctuating working capital needs when compared to
13 the credit facility. While the commercial paper market historically has been a reliable
14 source of short-term funding, market volatility can lead to increased costs as well as
15 difficulty accessing this market from time to time. Periods such as the early months of
16 the COVID-19 pandemic, or more recently, the current macroeconomic environment
17 consisting of high inflation and significant policy actions by the Federal Reserve, are
18 impacting both the cost of, and access to, commercial paper.

19 **Q. How does NFGDC typically utilize short-term debt financing?**

20 A. NFGDC uses short-term debt for two purposes. First, is to support its working capital
21 needs, which are driven primarily by purchases of gas for customers and to finance its
22 capital spending program in the near-term. Over time, as NFGDC builds up a large

1 enough balance of short-term debt that is used to fund its capital program, it looks to term
2 out that more permanent investment with a long-term debt issuance.

3 **Q. What was NFGDC's average short-term debt balance during the HTY?**

4 A. NFGDC's short-term debt averaged \$118 million during the twelve months ended June
5 30, 2022.

6 **Q. What is the expected short-term debt average balance during the FTY and what is
7 driving the change from the HTY?**

8 A. The average short-term debt balance during the FTY is expected to be \$216 million. This
9 is driven by two factors. First, NFGDC's capital program continues to grow and the near-
10 term funding mechanism to finance these investments is via the Money Pool. Second,
11 NFGDC has \$49 million of long-term debt maturing in March 2023. Given the near-term
12 macroeconomic challenge and the strong liquidity position of NFGDC's Parent, it is
13 expected that short-term debt will be used to temporarily redeem those long-term notes.

14 **Q. What short-term debt balance will be outstanding at the end of the FPFTY?**

15 A. NFGDC does not expect to have any short-term debt outstanding at the end of the
16 FPFTY. Given the expected increase in short-term borrowings during the HTY and the
17 FTY, NFGDC expects to permanently finance its growing short-term debt balance at the
18 end of the FTY with a new \$250 million long-term debt issuance, which is discussed in
19 more detail in the next section.

20 **Q. Given that there is no short-term debt included in the proposed capital structure,
21 how are the costs associated with maintaining adequate access to short-term
22 liquidity sources accounted for?**

1 A. To account for the costs of maintaining sufficient liquidity, all upfront and ongoing
2 expenses are incorporated into the cost of long-term debt, which is further discussed in
3 the next section.

4

5 **VI. LONG-TERM DEBT**

6 **Q. What cost rate for long-term debt is most appropriate for use in your cost of capital**
7 **determination?**

8 A. Given the utilization of NFGDC's capital structure, it is appropriate to use the cost of
9 debt that represents the debt allocated to NFGDC. Using this methodology, the proposed
10 long-term debt cost rate at the end of the FPFTY is 5.28% as shown on page 4 of exhibit
11 53.53.II-A-6.

12 **Q. How is long-term debt allocated to NFGDC?**

13 A. The Parent allocates the totality of each debt issuance down to one or more of its
14 subsidiaries based on needs at that time and to ensure capital structures for each of its
15 subsidiaries align with the risk profiles of those businesses over the long-term. For
16 issuances that the Parent allocates to NFGDC, NFGDC in turn issues a promissory note,
17 as approved by the Commission, to NFG that is tied to a specific debt issuance at the
18 Parent.

19 **Q. For purposes of the intercompany promissory notes, how is the cost of long-term**
20 **debt determined?**

21 A. The cost of debt reflects the coupon on that issuance, any premium or discount to par, and
22 any costs related to issuing new securities (e.g. SEC registration costs, underwriting

1 expenses, legal costs, rating agency fees, etc.). This is all reflected in an interest rate such
2 that NFG is made whole over the life of the issuance.

3 **Q. Are there any additional costs that are included in the cost rate for long-term debt?**

4 A. Yes, there are costs associated with maintaining access to liquidity, via the previously
5 discussed short-term liquidity facilities, that need to be recovered. Given that there is no
6 short-term debt in the capital structure at the end of the FPFTY, but there are ongoing
7 costs allocated to NFGDC to maintain access to these liquidity facilities, it is necessary to
8 recover these costs. As a result, the filing proposes recovering these costs through the
9 cost of long-term debt, which is embedded in the 5.28% stated above. Included in these
10 costs are amortized upfront transaction costs, and ongoing annual expenses related to the
11 committed credit facility. Those are just and reasonable costs to maintain an adequate
12 amount of liquidity to preserve financial strength.

13 **Q. Are there any new issuances anticipated between now and the end of the FPFTY?**

14 A. NFG anticipates issuing a new \$300 million 10-year note in August 2023. NFGDC will
15 be allocated \$250 million of the new issuance with the use of proceeds intended to pay
16 down any remaining short-term debt on the balance sheet.

17 **Q. How much long-term debt can NFGDC issue under its currently approved financing
18 authority (Docket #S-2020-3020690)?**

19 A. NFGDC was granted to issue up to \$300 million of new promissory notes under its
20 existing authority. It issued a \$50 million promissory note in February 2021 and has \$250
21 million remaining through December 31, 2023. This remaining authority aligns with the
22 expected proceeds it will receive from a new issuance in the FPFTY.

23 **Q. How has the cost rate of the projected new issuance been determined?**

1 A. Given the volatility in the debt capital markets, I am assuming NFG issues a new 10-year
2 note. This was done to prevent the potential of carrying a higher than historical coupon
3 for longer term debt for an extended period of time. The coupon rate of 5.50% is based
4 upon the yields published in the September 2022 issue of the Mergent Bond Record,
5 representing the average Moody's Public Utility Baa credit rating, adjusted for a 10-year
6 tenor. The effective cost rate included in the calculation of the cost of long-term debt
7 includes projected transaction related costs similar to precedent NFG long-term debt
8 issuances.

9 **Q. Does this conclude your direct testimony at this time?**

10 A. Yes.

NATIONAL FUEL STATEMENT NO. 12

JAMES A. RIZZO

**BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION**

Docket No. R-2022-3035730

**National Fuel Gas Distribution Corporation
Pennsylvania Division**

Statement No. 12

Direct Testimony of James A. Rizzo

Topics Addressed: Income Taxes

Dated: October 28, 2022

1 **I. INTRODUCTION AND QUALIFICATIONS**

2 **Q. Please state your name and business address.**

3 A. My name is James A. Rizzo. My business address is 6363 Main Street, Williamsville, NY
4 14421.

5
6 **Q. By whom and in what capacity are you employed?**

7 A. I am employed by National Fuel Gas Distribution Corporation (“NFGDC”) as Vice
8 President of the Tax, Purchasing and Accounts Payable Departments.

9
10 **Q. Please provide your educational background.**

11 A. I graduated from the State University of New York at Buffalo in 1990 with a Bachelor of
12 Science Degree in Accounting. I was certified by New York State as a Certified Public
13 Accountant in 1993.

14
15 **Q. Please provide your professional experience.**

16 A. From 1990 through 2006, I worked in public accounting, including ten years with
17 PricewaterhouseCoopers. In 2006, I became Tax Director at Greatbatch, Inc. (now known
18 as Integer Holdings Corporation). In 2012, I was hired by NFGDC as General Manager
19 of the Tax Department. In 2016, I was promoted to Assistant Vice President of NFGDC.
20 Beginning in 2020, I was given responsibility of the Purchasing and Accounts Payable
21 Departments. In 2022, I was promoted to Vice President of NFGDC.

1 **Q. Have you previously testified in other proceedings before the Pennsylvania Public**
2 **Utility Commission (“PAPUC” or the “Commission”) or any other state or federal**
3 **agency?**

4 A. Yes. I have prepared responses and exhibits pertaining to income taxes for NFGDC as
5 part of Docket M-2018-2641242 before the PaPUC. I have also submitted prepared
6 testimony and exhibits in Case 16-G-0257 and Case 17-M-0815 for NFGDC NY
7 Division to the New York Public Service Commission (“NYPSC”). Additionally, I have
8 submitted prepared testimony and exhibits on income and property taxes in connection
9 with the National Fuel Gas Supply Corporation Federal Energy Regulatory
10 Commission (“FERC”) proceeding RP19-1426-000 and Empire Pipeline, Inc. FERC
11 proceeding RP18-940-000.

12
13 **II. PURPOSE OF TESTIMONY**

14 **Q. Please describe the purpose of your testimony.**

15 A. I am presenting testimony in support of the NFGDC PA Division’s (“National Fuel” or
16 the “Company”) federal and state income tax claims. I will explain the tax adjustments
17 made to the results of the historic test year ended June 30, 2022 (“HTY”) and future test
18 year ending June 30, 2023 (“FTY”). I will also explain the Company’s *pro forma* tax
19 adjustments to its principal accounting exhibits for the fully projected future test year
20 ending July 31, 2024 (“FPFTY”).

21
22 **Q. Are you sponsoring any exhibits or filing requirements in this proceeding?**

1 A. Yes. I am sponsoring the following Exhibits: JAR-1, JAR-2, JAR-3 and JAR-4. Together
2 with other Company witnesses, I am sponsoring portions of Exhibit A (Fully Projected),
3 Exhibit A (Future) and Exhibit A (Historic) that pertain to tax-related issues. I am also
4 sponsoring certain responses to the Commission’s filing requirements and standard data
5 requests.

6

7 **Q. III. TAX ADJUSTMENTS**

8 **Please provide an overview of National Fuel’s principal accounting exhibits relative**
9 **A. to its proposed tax adjustments.**

10 As explained in the direct testimony of Mr. Donald N. Koch (National Fuel Statement No.
11 2), National Fuel’s principal accounting exhibit is Exhibit A (Fully Projected), which
12 includes a presentation for the FPFTY ending July 31, 2024. Section D of this exhibit
13 presents necessary adjustments to budgeted levels of expense items and revenues. The *pro*
14 *forma* adjustments related to income taxes are summarized in Schedules D-11 and D-12.
15 These adjustments are used to derive National Fuel’s *pro forma* income at present and
16 proposed rates as set forth in Schedule A-1 of the same exhibit.

17 Exhibit A (Historic) and Exhibit A (Future) follow the same format but reflect
18 data for the HTY ended June 30, 2022 and FTY ending June 30, 2023, respectively. This
19 information is provided to comply with the Commission’s filing requirements and
20 provides a basis for comparing National Fuel’s FPFTY claims with actual book results
21 from the HTY and adjusted FTY results.

22

23 **Q. A. TAXES OTHER THAN INCOME TAXES**

24 **How was the provision for taxes-other-than-income taxes (“TOTI”) determined for
the FPFTY?**

1 A. TOTI consists of the Pennsylvania Utility Realty Tax, Pennsylvania and Local Property
2 taxes, Social Security taxes, Federal Unemployment tax, and State Unemployment tax. TOTI
3 amounts were based on the plan year budget, as adjusted for reasonably known and
4 measurable changes to various payroll taxes as supported by the direct testimony of Mr.
5 Donald N. Koch (National Fuel Statement No. 2). These adjustments are shown on Exhibit A
6 (Fully Projected), Schedule D-10. The net adjustment is brought forward to Schedule D-3,
7 page 2.

8
9 **B. INCOME TAXES**

10 **Q. Please describe the Company's claim for income taxes.**

11 A. Income tax expense for the FPFTY at present and proposed rates is set forth in Exhibit A (Fully
12 Projected), Schedule D-11. Income taxes are calculated using the procedures normally
13 followed by the Commission, including the use of debt interest synchronization, the
14 normalization method for accelerated depreciation used in the calculation of federal income
15 taxes, and the flow-through of accelerated depreciation benefits for state tax purposes. The
16 Company continues to flow through the annual repairs tax deduction for federal and state tax
17 purposes. The fully adjusted claim for the FPFTY income tax expense is shown on Exhibit A
18 (Fully Projected), Schedule D-1, Lines 19 and 20.

19
20 **Q. Please explain how the Company's claim for income taxes was calculated.**

21 A. Schedule D-11 shows the calculation of *pro forma* income taxes for the FPFTY at present and
22 proposed rates. Line 1 shows revenue at present and proposed rates, while Line 2 shows
23 operating expenses at present and proposed rates from Schedule D-1. Line 3 reflects operating
24 income before debt interest deduction and is calculated by netting Line 1 from Line 2. Debt

1 interest expense is synchronized using the rate base claim from Schedule C-1, with the cost of
2 debt and the debt component of the Company's capital structure recommended in the direct
3 testimony of Paul R. Moul (National Fuel Statement No. 10) and shown on Schedule B-7. The
4 resulting interest expense on Line 6 is subtracted from net income before debt interest to
5 calculate base taxable income on Line 7.

6 In accordance with established Commission practice, Lines 8 through 10 of Schedule
7 D-11 reduce the base taxable income, for state tax purposes, by the total difference between
8 accelerated tax depreciation shown on Line 8 and the *pro forma* book depreciation shown on
9 Line 9. Line 11 includes a further reduction to state taxable income from other state income
10 tax adjustments as detailed on Exhibit JAR-2, which is explained below. The statutory state
11 corporate net income tax rate (8.99%, further explained below) was then applied to determine
12 the *pro forma* state income tax expense shown on Line 13. Lines 14 through 19 show the federal
13 current income tax expense calculation at current and proposed rates, while Line 20 sums the
14 state and federal current tax expense amounts before application of deferred income taxes.

15 Total federal temporary differences are shown on Line 24. These include differences between
16 accelerated tax depreciation and book depreciation adjusted for book flow through
17 depreciation, shown on Line 22, as well as other deferred adjustments on Line 23, which are
18 detailed on Exhibit JAR-2 and explained below. The statutory federal corporate income tax
19 rate (21%) is applied to the total federal temporary differences to determine the deferred
20 federal income tax benefit on Line 26. As state tax consequences are flowed through, there
21 are no state deferred income taxes on Lines 27 through 29.

22 Other tax adjustments are shown on Lines 31 through 34. These include amortizations
23 for the repairs and maintenance 481(a) adjustment, Medicare subsidy, Average Rate

1 Assumption Method (“ARAM”) and unprotected deficient income taxes. These adjustments
2 are explained in testimony below.

3
4 **Q. Please explain what is represented on Exhibit JAR-2 Other Income Tax**
5 **Adjustments?**

6 A. Exhibit JAR-2 details other income tax adjustments which flow into both the current and
7 deferred income tax calculations on Schedule D-11.

8 Other State and Federal adjustments to current income tax expense total \$4.7
9 million as shown on Lines 5 and 10. These adjustments include the permanent differences
10 resulting from the current year repair and maintenance deduction, the net negative salvage
11 adjustment per Schedule D-12, the non-deductible portion of meals and entertainment, and
12 other temporary differences resulting from contributions in aid of construction (“CIAC”) and
13 uniform capitalization (“UNICAP”) rules per Internal Revenue Code (“IRC”) Section
14 263A. Other adjustments to the federal deferred calculation represent the deferred impact
15 of the temporary differences for CIAC and UNICAP.

16
17 **Q. What is the total FPFTY income tax expense for National Fuel?**

18 A. The *pro forma* tax expense at present and proposed rates is shown on Schedule D-11 at
19 Line 36. As explained below in Section D, this amount is not reduced by a consolidated
20 income tax adjustment.

21
22 **C. ACCUMULATED DEFERRED INCOME TAXES**

23 **Q. How are Accumulated Deferred Income Taxes (“ADIT”) calculated?**

1 A. Schedule C-6 shows the FPFTY ending balance for federal ADIT as of July 31, 2024.
2 This amount is deducted from rate base. The total shown on Line 1 reflects the difference
3 in income tax expense for book and tax purposes attributable to the difference between
4 accelerated tax depreciation and straight-line book depreciation on FPFTY plant
5 balances, net of basis differences associated with CIAC and UNICAP rules per IRC
6 Section 263A. As state tax consequences are flowed through, there is no associated state
7 ADIT balance.

8

9 **Q. What is the amount of the ADIT offset to rate base?**

10 A. As shown on Line 4 of Schedule C-6 and on Line 6 of Schedule A-1, the ADIT offset is
11 \$70.4 million, which includes the amount related to excess ADIT discussed further in
12 Section F.

13

14 **Q. Has the Company's ADIT rate base deduction been calculated in compliance with**
15 **the normalization requirements of the IRC?**

16 A. Yes. The Company's calculation accurately reflects the proration methodology of the
17 ADIT rate base component in accordance with Treasury Regulation 1.167(l)-1(h)(6)(ii).
18 The proration methodology is a specific method promulgated by the Internal Revenue
19 Service ("IRS") for calculating ADIT, for any rate filing that includes a future test period,
20 which must be followed for ratemaking purposes to comply with IRS normalization
21 requirements. Compliance with the normalization rules is necessary for a company to
22 claim accelerated depreciation for tax filing purposes. Accelerated tax depreciation,
23 versus straight-line depreciation, provides a cash-flow benefit for a company. The

1 Company receives a cash-flow benefit from accelerated tax depreciation (via a reduction
2 in current income taxes payable) and ratepayers receive a benefit via a rate base reduction
3 resulting from netting ADIT against rate base. The methodology is designed to account
4 for the period of time the Company has received the ADIT and provide the appropriate
5 limit on the amount of ADIT that can be excluded from rate base as determined by the
6 IRS. See Exhibit JAR-1, Page 2 for the calculation of the pro-rata adjustment.

7
8 **D. CONSOLIDATED TAX ADJUSTMENT**

9 **Q. Does the Company's proposed revenue requirement reflect a federal consolidated**
10 **tax adjustment?**

11 A. No. The Company's revenue requirement is established based on its stand-alone federal
12 income tax attributes. It is my understanding that Act 40 of 2016, which added 66 Pa. C.S
13 § 1301.1 to the Public Utility Code, eliminates the need to show a consolidated tax
14 adjustment for ratemaking purposes. However, Section 1301.1(b) requires a public utility
15 to demonstrate that it shall use at least 50 percent of what would have been a consolidated
16 tax expense adjustment under the law prior to Act 40 for reliability or infrastructure
17 related capital investment and the other 50 percent shall be used for general corporate
18 purposes. The consolidated tax adjustment of \$3.4 million was calculated using the
19 modified effective tax rate methodology, traditionally used by the Commission prior to
20 the enactment of Act 40, and is included as Exhibit VI.II.RR.55.

21 Included in Schedule C-2, and as discussed in the direct testimony of Tracy
22 Wesoloski (National Fuel Statement No. 6), the Company's *pro forma* capital additions
23 for reliability or infrastructure projects in the FTY are \$42.2 million and for the FPFTY
24 are \$53.0 million. This expenditure level is greater than 50% of the amount (\$1.7 million)

1 of what would have been the consolidated tax savings adjustment under prior ratemaking
2 principles. The Company's general corporate purpose expense will also exceed 50% of the
3 tax benefit resulting from elimination of the consolidated tax adjustment. The Company
4 anticipated an operating expense budget of more than \$284.3 million in operating
5 expenditures to be used to render gas distribution service, as shown on FPFTY Schedule D-2.
6 This expenditure level is greater than 50% of the amount (\$1.7 million) of what would
7 have been the consolidated tax savings adjustment under prior ratemaking principles.
8

9 **E. IRS AUDIT UPDATE**

10 **Q. Does National Fuel have any unresolved tax issues related to any IRS audits?**

11 A. Yes. The only unresolved tax issue relates to the tentative settlement of the IRS proposed
12 disallowance of the Company's change in accounting method for determining whether
13 expenditures relating to utility network property are capital or deductible as a repair for
14 tax purposes.

15 In 2009, the Company filed an application with the IRS National Office to change
16 its tax accounting method for utility network property. The proposed method sought to
17 treat certain expenditures, which were capitalized for book purposes, as deductible
18 repairs for tax purposes. By doing so, the additional repair deductions (for tax purposes
19 only) would reduce the income tax liability of the Company. It is to be noted that the
20 change in accounting method related solely to the Company's tax filings and has no
21 effect on the capitalization policies followed for book purposes. The IRS National Office
22 approved the request, subject to review by local IRS examiners.

23 The federal tax return filed for Fiscal 2009 included an additional tax deduction
24 for the Company of \$6.9 million relating to the change in method for fiscal 2009, and an

1 Internal Revenue Code Section 481(a) “catch-up” amount of \$79.6 million relating to
2 prior years. The local IRS examiners, citing a lack of guidance from their technical
3 advisors and other factors, disallowed most of the claimed deduction. The Company filed
4 a formal protest and requested a conference with the IRS Appeals division. A conference
5 was held on July 14, 2011, but the Appeals officer chose not to make a decision until the
6 release of guidance from the National Office, which is discussed below. The local IRS
7 examiners also disallowed deductions under the new accounting method claimed in fiscal
8 2010 and fiscal 2011.

9 Because several gas utility companies were experiencing difficulties with the IRS
10 over this issue, the industry sought to have the property capitalization issue accepted into
11 the IRS “Industry Issue Resolution” (“IIR”) program. Under this program, IRS technical
12 advisors and industry personnel attempt to reach a mutually acceptable resolution of a
13 contentious tax issue which affects an entire industry. The capitalization issue was
14 accepted by the IRS into the IIR program, and National Fuel was one of the industry
15 representatives chosen to participate. The IRS and the industry group held several
16 meetings and conference calls beginning in May 2011, and ending its work in March
17 2012, having developed a draft revenue procedure that was acceptable to both the IRS
18 team and the gas industry representatives. A revised revenue procedure was presented by
19 the IRS team to the gas industry representatives on July 22, 2014, at which time the
20 industry representatives expressed their agreement. The draft revenue procedure is
21 presently being reviewed by officials in the IRS and Treasury Department. A specific
22 release date has not been announced.

1 In March 2013, the local IRS examiners withdrew their proposed disallowance.
2 The IRS indicated in their Notice of Proposed Adjustment that “until guidance is issued,
3 Exam will not audit this issue and is not expressing an opinion regarding this issue at this
4 time. The IRS neither accepts nor rejects the position taken in the tax return(s) related to
5 the proper method of accounting for expenditures related to natural gas transmission and
6 distribution property. This issue may be examined further at another time.” This “stand
7 down” policy applies to fiscal years 2009 through the current year.

8 The Section 481(a) adjustment represents the remaining tax basis of certain utility
9 property placed in service during fiscal years 1990 – 2008 and has been treated as fully
10 normalized depreciable property. The current year deductions for repairs, since 2009,
11 have been treated as flow through tax deductions consistent with the Pennsylvania flow
12 through treatment of basis difference reductions.

13 In 2009, the Company recorded a regulatory liability (currently \$41.4 million, as
14 adjusted for the 2017 Tax Cuts and Jobs Act (“TCJA”)) representing the federal and state
15 tax benefit of the Section 481(a) deduction, grossed-up for ratemaking purposes. As
16 detailed on Exhibit JAR-3, an offsetting regulatory asset was also recorded. Additionally,
17 the Company normalized the state tax benefit of the Section 481(a) adjustment and
18 recorded a Pennsylvania deferred tax liability (net of federal benefit) of \$4.3 million.
19 These accounting entries were made due to the uncertainty of the treatment of the federal
20 tax deduction and the state regulatory treatment (due to a lack of statutory guidance noted
21 above). The Company proposes to reverse both the regulatory asset and liability. The
22 Company proposes to pass back the state deferred tax liability over the remaining book
23 life of the assets (approximately 20 years). See Exhibit D-11.

F. EXCESS ACCUMULATED DEFERRED INCOME TAXES

Q. Has the Company reflected the amortization of Excess Accumulated Deferred Income Taxes (“excess ADIT”), as a result of the TCJA, as part of its income tax calculation?

A. Yes, the Company has calculated the amount of the excess ADIT that will be amortized and flowed back to ratepayers in its FPFTY. This amount of amortization of protected excess ADIT is included in the overall federal deferred tax expense calculated on Schedule D-11. The FPFTY amortization is \$1.1 million, calculated using the ARAM as required by tax normalization rules. The Company utilizes the PowerTax software to calculate and maintain the ADIT balances on the ARAM. The Company has calculated the amount of the deficient unprotected ADIT that will be amortized and recovered from the ratepayers over a ten-year period (2018-2027) on a straight-line basis. The amortization for unprotected deficient ADIT is \$1.0 million and is included in the overall federal deferred tax expense calculated on Schedule D-11. Both amounts were previously documented and explained in Dockets M-2018-2641242 and R-2018-3000527. Also, the Company files annually in compliance with the May 17, 2018, Commission Orders in Docket Nos. M-2018-2641242 and R-2018-3000527. The most recent filing on August 31, 2022, updates the negative surcharge that was established on October 1, 2021, to implement the effects of TCJA.

G. PENNSYLVANIA CORPORATE TAX RATE DECREASE

Q. How does the Company plan to account for the recent Pennsylvania corporate tax rate decrease?

1 A. On July 8, 2022, House Bill 1342 was signed into law in Pennsylvania. The law reduces
2 the corporate income tax rate from 9.99% to 8.99% for the Company’s fiscal 2024 tax
3 year. Since the FPFTY includes the Company’s fiscal 2024 tax year, the tax rate of
4 8.99% has been utilized on Schedule D-11. Starting with the fiscal 2025 tax year, the rate
5 is reduced by 0.5% annually until it reaches 4.99% for the fiscal 2032 tax year. Future
6 decreases in the state corporate income tax rate will be reflected in the State Tax
7 Adjustment Surcharge.

8

9

H. MEDICARE SUBSIDY

10 **Q. How does the Company plan to account for the deferred tax asset and related**
11 **regulatory liability established for the Medicare subsidy?**

12 A. The Medicare Prescription Drug Improvement and Modernization Act of 2003
13 established a tax-free subsidy for a portion of an employer’s annual prescription drug
14 costs. The Patient Protection and Affordable Care Act of 2010 eliminated the “tax-free”
15 nature of these subsidies for tax years beginning after December 31, 2012. During this
16 period, the Company received the tax benefit of the tax-free subsidies and recorded a
17 deferred tax asset and regulatory liability to preserve this benefit for the ratepayers, as
18 detailed on Schedule JAR-4. The Company proposes to pass back the benefit to
19 ratepayers over a 3-year straight-line amortization period.

20

21 **Q. Does this conclude your direct testimony at this time?**

22 A. Yes.

NATIONAL FUEL STATEMENT NO. 13

GREGORY D. HARTS

**BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION**

Docket No. R-2022-3035730

**National Fuel Gas Distribution Corporation
Pennsylvania Division**

Statement No. 13

**Direct Testimony of
Gregory D. Harts**

Topics Addressed: Test Year Sales Volumes and Accounts

Dated: October 28, 2022

1 **I. INTRODUCTION AND QUALIFICATIONS**

2 **Q. Please state your name and business address.**

3 A. My name is Gregory Harts. My business address is 6363 Main Street, Williamsville, NY
4 14421.

5
6 **Q. By whom and in what capacity are you employed?**

7 A. I am employed as a Rate Analyst III, by National Fuel Gas Distribution Corporation
8 (“National Fuel” or the “Company”). National Fuel is a regulated gas distribution
9 company operating in western Pennsylvania.

10
11 **Q. Please provide your educational background.**

12 A. Please see my resume, National Fuel Exhibit GDH-1, which is attached to my testimony.

13
14 **Q. Please provide your professional experience.**

15 A. I have worked for National Fuel Gas Supply Corporation within the Engineering Services
16 department as an Associate Engineer, Engineer I, and Engineer II from 2014 to 2021 and
17 for NFGDC within my current role (Rate Analyst III) from 2021 to date. Please see my
18 resume, Exhibit GDH-1, for my full employment history.

19
20 **Q. Have you previously testified in other proceedings before the Pennsylvania Public
21 Utility Commission (“PUC” or the “Commission”) or any other state or federal
22 agency?**

1 A. I have not previously testified in other proceedings before the Commission, or any other
2 state or federal agency.

3

4

II. PURPOSE OF TESTIMONY

5 **Q. Please describe the purpose of your testimony.**

6 A. I will address: the development of National Fuel’s Sales and Account forecasting process
7 for the historic test year ended June 30, 2022 (“HTY”), future test year ending July 31,
8 2023 (“FTY”), and fully projected future test year ending July 31, 2024 (“FPFTY”).

9

10 **Q. Are any other witnesses providing testimony on the areas you identified above?**

11 A. Yes. Company witnesses Jeremy Barber and Erik Solomon are also providing testimony
12 related to these topics in National Fuel Statement Nos. 14 and No. 18, respectively.

13

14 **Q. Are you sponsoring any exhibits or filing requirements in this proceeding?**

15 A. Yes, I am sponsoring the following exhibits: National Fuel Exhibit GDH-1 (Resume),
16 National Fuel Exhibit GDH-2 (15 year Normal Heating Degree Days), National Fuel
17 Exhibit GDH-3 (Peak Day results & methodology), National Fuel Exhibit GDH-4
18 (Forecast Methodology), National Fuel Exhibit GDH-5 (FTY & FPFTY Accounts), and
19 National Fuel Exhibit GDH-6 (Leap Day Allocation 2024). I am also sponsoring certain
20 responses to the Commission’s standard filing requirements, as listed below, which were
21 prepared by me or under my direction.

22 Revenue Requirements: SDR-RR-2, SDR-RR-3, SDR-RR-4, SDR-RR-5, SDR-RR-6,
23 SDR-RR-7, SDR-RR-8, SDR-RR-9, SDR-RR-10, SDR-RR-11, SDR-RR-12,

1 SDR-RR-13
2 Cost of Service: SDR-COS-10, SDR-COS-13, SDR-COS-16f, SDR-COS-17,
3 SDR-COS-18
4 Regulation Requirements: 53.53 III.E.3, 53.53 III.E.12, 53.53 III.E.19, 53.53.III.E.22,
5 53.53.III.38, 53.53.III.E.39, 53.53.IV.B.4, 53.53.IV.B.13, 53.53.IV.B.14
6

7 **I. SALES AND ACCOUNT FORECASTING PROCESS**

8 **Q. Please provide a general overview of the Company’s throughput forecast.**

9 A. Each year, for system planning purposes, the Company prepares a five-year Master
10 Estimate to forecast natural gas consumption of its sales and transportation customers.
11 The Company has based the forecast of sales and transportation volumes and the number
12 of customers used in this proceeding on its most recently completed Master Estimate. The
13 Company’s Master Estimate segments its market into residential, commercial, public
14 authority and industrial categories. The Master Estimate provides monthly sales and
15 transportation volumes and the number of customers on a fiscal year (12 months ended
16 September) time frame. The industrial category is further segregated into small and large
17 volume categories using a throughput limit of 50,000 Mcf/year. Although the volumetric
18 requirements for transportation service have been relaxed over the years, the 50,000 Mcf
19 /year breakpoint remains a legitimate segmentation between large and small volume
20 industrial customers.

21
22 **Q. Please describe the Residential, Commercial, Small Industrial, and Public Authority**
23 **sales forecast.**

1 A. The Company Residential, Commercial, Small Industrial, and Public Authority
2 sales forecast is the product of separate econometric forecasts for usage per account and
3 the number of accounts. The sources of data, methodology, dependent, and independent
4 variables used in the forecast are detailed in Exhibit GDH-4. Customer usage for the
5 HTY and the prior periods used to generate the FTY and FPFTY has been normalized
6 using the most recent published NOAA heating degree day average for the Erie, 4 PA
7 Station (ERIE INTL AP, PA US USW00014860). The results of the volumetric FTY and
8 FPFTY forecasts are detailed in SDR-COS-18 and the results of the account FTY and
9 FPFTY forecasts are detailed in Exhibit GDH-5.

10
11 **Q. Why have you chosen econometric modeling to forecast use-per-account?**

12 A. The word "econo-metric" means measuring economic relationships. The technique of
13 econometric modeling incorporates hypotheses from economic theory and statistical tests
14 of those hypotheses. The economic theory of consumer behavior, for example, postulates
15 that the price of natural gas, weather, and historical usage trends independent of weather
16 (e.g., consumer preference) are major determinants of household natural gas usage.

17
18 **Q. Please explain why separate forecasts are specified for use-per-account and the
19 number of accounts.**

20 A. Each of these components of total consumption is influenced by different factors, which
21 requires independent and dependent variables to be applied and analyzed separately.
22 Total consumption for a customer class is the summation of the products of average use-
23 per-account and the number-of-accounts for each summarized tariff service class.

1 **Q. Please continue.**

2 A. The greater structure afforded by separate analyses of use-per-account and number-of-
3 accounts is desirable for both model specification and forecast validation purposes. This
4 is true for the residential, commercial, small industrial, and public authority customer
5 categories. Large volume industrial customers (accounts consuming greater than 50,000
6 Mcf per year) usage per account and number of accounts are forecasted separately within
7 the Large Volume Forecast process detailed below in this testimony.

8

9 **Q. Why were industrial accounts in the greater-than-50,000 Mcf per year category**
10 **forecasted individually, as opposed to an econometric derivation?**

11 A. The lack of homogeneity in this group renders it unsuitable for econometric forecasting.
12 These larger accounts have different natural gas requirements, applications, and alternate
13 fuel-burning capabilities. Consequently, an individual customer forecast approach has
14 been, and continues to be, the most appropriate.

15

16 **Q. How was the Large Volume Forecast prepared for industrial accounts consuming**
17 **greater-than-50,000 Mcf per year?**

18 A. The large volume industrial category consists of Large Volume Industrial Service
19 (“LVIS”), industrial customers consuming between 50,000 and 200,000 Mcf per year,
20 Large Industrial Service (“LIS”), which consists of industrial customers consuming
21 between 200,000 and 1,000,000 Mcf per year, and Daily Metered Large manufacturing
22 Transportation Service (“DMLMTS”), which consists of customers consuming greater
23 than 1,000,000 Mcf per year. Each customer was contacted by the Company’s

1 appropriate major account representative of the Energy Services department, who is the
2 primary liaison between the Company and the customer and is the individual most
3 familiar with each customer's energy decisions. The customers were asked to estimate
4 their monthly and annual usage, paying particular attention to any events that may alter
5 their estimated future consumption levels.

6
7 **Q. What level of annual degree days were used to develop the projected sales volumes?**

8 A. The level of degree days used to project weather impacted customers in this proceeding is
9 5,771. Normal degree day values are based on the period 2006 – 2020 as calculated and
10 published by the National Oceanic and Atmospheric Administration (“NOAA”), for the
11 first-order National Weather Service Office located at the Erie, Pennsylvania
12 International Airport. National Fuel Exhibit GDH-2 details the forecasted degree days on
13 a monthly and daily basis as projected by NOAA.

14
15 **Q. Is the use of average temperature data as provided by NOAA for the Erie, PA
16 Station (ERIE INTL AP, PA US USW00014860) consistent with the methodology
17 used for calculating normal heating degree days in previous National Fuel base rate
18 cases?**

19 A. Yes. National Fuel has consistently used the Normal Heating Degree Day averages as
20 provided by NOAA in previous base rate cases.

21

1 **Q. Is the use of average temperature data for a 15-year period consistent with the**
2 **methodology used for calculating normal heating degree days of other gas utilities in**
3 **Pennsylvania?**

4 A. Yes. Other Pennsylvania regulated utilities have utilized a 10, 15, or 20-year normal
5 heating degree day average during their rate cases including, UGI Utilities, Inc. (Docket
6 No. R-2021-3030218), Philadelphia Gas Works (Docket No. R-2017-2586783), Valley
7 Energy, Inc. (Docket No. P-2018-3006500), and Columbia Gas of Pennsylvania, Inc.
8 (Docket No. R-2021-3024296). The Company believes that a 15-year normal heating
9 degree day average is appropriate based on industry trends, recent weather patterns, and
10 guidance from consultants.

11
12 **Q. Why did National Fuel utilize a multi-year regression period?**

13 A. The Company decided to use a multi-year regression periods because it provided a larger
14 sample size of data to smooth out short-term variations and capture underlying long-term
15 usage per account trends. Historically, this method has provided a more accurate usage
16 per customer during periods where rates are in effect.

17
18 **Q. Would you please summarize the volumetric results of your forecast?**

19 A. The Company's Pennsylvania Division volumetric forecast is shown on SDR-RR-07 and
20 SDR-COS-18. These data requests detail the projected volumetric usage by Revenue
21 Class Type and by Service Class Type for the FTY and the FPFTY. In addition, the
22 accounts and Mcf per account forecast regression methodology is detailed in Exhibit
23 GDH-4 and the results detailed in SDR-RR-11.

1 **Q. Please explain SDR-COS-18.**

2 A. National Fuel Exhibit SDR-COS-18 pages 2 and 3 summarize by month and in total the
3 projected sales and transportation volumes for the FTY and the FPFTY. National Fuel
4 Exhibit GDH-5 summarizes by month and in total the projected number of sales and
5 transportation accounts for the FTY and the FPFTY. The Commercial and Public
6 Authority classes are segmented into residential sales service customers (places of
7 worship or gas supplied to commercial businesses that also include private residences),
8 customers consuming less than 250 Mcf per year (Lower Limit), customers consuming
9 between 250 and 1,000 Mcf per year (Upper Limit), and customers consuming greater
10 than 1,000 Mcf per year (Large).

11

12 **Q. Please explain Exhibit GDH-5.**

13 Exhibit GDH-5 summarizes by month and in total the projected number of sales and
14 transportation accounts for the FTY and the FPFTY. For purposes of the forecasting
15 process, the Company interprets the historical customer counts as the customer monthly
16 cycle bills plus 50% of the final and 50% of the initial bills issued to customers. The
17 commercial, and public authority classes are segmented into four tariff groups, residential
18 sales service customers (places of worship or gas supplied to commercial businesses with
19 residential customers), customers consuming less than 250 Mcf per year (Lower Limit
20 (LL)), customers consuming between 250 and 1,000 Mcf per year (Upper Limit (UL)),
21 and customers consuming greater than 1,000 Mcf per year (Large).

22

23 **Q. How were normalized sales determined for the HTY?**

1 A. The actual historic usage per customer serves as the starting point for the development of
2 the normalized sales for the HTY. The usage per customer is then normalized using the
3 actual degree days observed versus the anticipated 15-year normalized heating degree
4 days as shown in Exhibit GDH-2.

5
6 **Q. How were normalized sales determined for the FTY?**

7 A. The actual historic usage per customer and customer accounts serves as the starting point
8 for the development of the normalized FTY sales, as shown in SDR-COS 18. All the
9 adjustments made in the development of the FPFTY sales forecast were also made in the
10 development of the FTY sales forecast.

11

12 **Q. Are there any adjustments being proposed for Rate Year calculations?**

13 A. Yes, the volumetric consumption associated with the 2024 leap day (02/29/2024) has
14 been included within the rate year file. The forecasted leap day consumption can be
15 found on Exhibit GDH-6.

16

17 **II. Peak Day Volume Forecast Methodology Overview**

18 **Q. Please provide a description of how the Peak Day Volume Forecasts were created
19 for the Future Test Year.**

20 A. The Company's method for forecasting Peak Day usage is detailed in 1307(f) (Docket
21 No. R-2022-303235), within the direct testimony of Janine Ward, detailed in Exhibit
22 GDH-3.

23

1 Q. Does this conclude your direct testimony at this time?

2 A. Yes, it does.

Distribution PGC Statement No. 8

TESTIMONY OF
JANINE M. WARD
ON BEHALF OF
NATIONAL FUEL GAS DISTRIBUTION CORPORATION

PENNSYLVANIA PUBLIC UTILITY COMMISSION
v.
NATIONAL FUEL GAS DISTRIBUTION CORPORATION
(PURCHASED GAS COSTS -- 66 PA.C.S. SECTION 1307(f)),
DOCKET NO. R-2022-3030235

DIRECT TESTIMONY OF JANINE WARD
PGC R-2022-3030235

1 Q. Please state your name and business address.

2 A. My name is Janine M. Ward and my business
3 address is 6363 Main Street, Williamsville, New York
4 14221.

5 Q. By whom are you employed and in what capacity?

6 A. I am employed by National Fuel Gas Distribution
7 Corporation ("Distribution" or the "Company") as a
8 Manager in the Rates and Regulatory Affairs
9 Department.

10 Q. Please state briefly your educational and
11 professional experience.

12 A. I graduated from The State University of New
13 York at Geneseo, in May 2005, with a Bachelor of
14 Science degree in Accounting. Additionally, I
15 obtained a Master of Science degree in Accounting
16 from The State University of New York at Binghamton
17 in May 2006. I became a Certified Public Accountant
18 (CPA) in 2012.

19 In September 2006, I began my employment at
20 Ernst and Young, LLP as a Staff Auditor and was
21 promoted to a Senior Auditor October 2008. In
22 October 2011 I was promoted to Audit Manager and

DIRECT TESTIMONY OF JANINE WARD
PGC R-2022-3030235

1 continued in that capacity through October 2014.
2 In November 2014, I began my career with the
3 Company, as a Senior Internal Auditor. In August
4 2018, I was promoted to Manager of Financial Audits.
5 In March 2021, I transferred to the Rates and
6 Regulatory Affairs Department as a Manager, which is
7 my current position.

8 Q. Have you previously testified before the
9 Pennsylvania Public Utility Commission
10 ("Commission")?

11 A. No, I have not testified before the Commission.

12 Q. Have you previously testified before any other
13 regulatory commissions?

14 A. No, I have not previously testified before any other
15 regulatory commissions.

16 Q. What is the subject of your direct testimony?

17 A. I am testifying with regard to PGC Exhibit Nos. 7-A,
18 14, 15, and 26-A.

19 Q. Were these exhibits prepared by you or prepared
20 under your supervision and direction?

21 A. Yes, they were.

22 Q. Is the content of these exhibits true and correct to

DIRECT TESTIMONY OF JANINE WARD
PGC R-2022-3030235

1 the best of your knowledge, information and belief?

2 A. Yes, it is.

3 Q. Please explain PGC Exhibit No. 7-A.

4 A. PGC Exhibit No. 7-A is Distribution's work product
5 for the Pennsylvania Public Utility Commission's
6 ("Commission") filing requirement at 52 Pa. Code
7 §53.64 (c) (5), which requires a listing and updating
8 of any gas supply and demand projections provided to
9 the Commission. Page 2 of PGC Exhibit No. 7-A
10 provides a copy of Distribution's Form-IRP-GAS-1A:
11 Annual Gas Demand Requirements, which has been filed
12 pursuant to 52 Pa. Code §59.81-84.

13 Q. Please explain PGC Exhibit No. 14.

14 A. PGC Exhibit No. 14 is a schedule showing, for the
15 most recent five years (i.e., November 2016 -
16 October 2017 through November 2020 - October 2021),
17 consecutive three-day peak throughput data (retail
18 sales and end-user transportation service), by
19 customer class (residential, commercial, industrial,
20 and public authority) for Distribution's
21 Pennsylvania Division. It also shows the high, low,
22 and average temperature for each of the consecutive

DIRECT TESTIMONY OF JANINE WARD
PGC R-2022-3030235

1 three days. February 7, 2021 - February 9, 2021 is
2 the most recent consecutive three-day peak.

3 February 9, 2021 is the most recent peak day within
4 the three day peak specified in PGC Exhibit No. 14.

5 Q. Please explain PGC Exhibit No. 15.

6 A. PGC Exhibit No. 15 identifies and supports
7 Distribution's projected design peak day
8 requirements for the twelve months ending October
9 31, 2023. Page 3 shows the projected peak day
10 requirement. Data based on 74 degree days is
11 provided because this level of degree days was used
12 for peak day planning purposes, as further described
13 in Exhibit 24. Pages 4 through 12 establish the base
14 case peak day. For the heat sensitive classes (both
15 retail sales and transportation service) such as
16 residential, commercial, and public authority,
17 Distribution utilizes a method of extracting a base
18 load volume and computing a daily heating volume for
19 74 heating degree days. The daily base load volume
20 is added to the daily heating volume to determine the
21 base case peak day sales. Gas usage of customers in
22 the industrial classes, Small Volume Industrial

DIRECT TESTIMONY OF JANINE WARD
PGC R-2022-3030235

1 Service ("SVIS"), Intermediate Volume Industrial
2 Service ("IVIS"), Large Volume Industrial Service
3 ("LVIS"), Large Industrial Service ("LIS"), and Daily
4 Metered Large Manufacturing Transportation Service
5 ("DMLMTS"), is computed based on an operating
6 schedule. For the SVIS and IVIS classes,
7 Distribution utilizes an operating schedule of 21
8 working days in a month to calculate peak day sales.
9 For the LVIS, LIS and DMLMTS classes, Distribution
10 utilizes customer operating schedules, as shown on
11 Pages 11 and 12, to calculate peak day sales. Pages
12 13 through 16 show the residential model variables,
13 pages 17 through 20 show the commercial model
14 variables, and pages 21 through 24 show the public
15 authority model variables used in the econometric
16 models for each of the respective revenue classes.
17 Page 25 provides the number of extreme degree days,
18 including the mean temperature, for the most recent
19 heating seasons over the previous 30 years.

20 Q. Please explain PGC Exhibit No. 26-A.

21 A. PGC Exhibit No. 26-A, page 2, provides
22 Distribution's estimate of the 2023 design peak day

DIRECT TESTIMONY OF JANINE WARD
PGC R-2022-3030235

1 requirements based on 74 heating degree days. The
2 term "design peak day" refers to the practice that
3 is standard in the natural gas industry under which
4 pipeline capacity planning, storage capacity
5 planning, and natural gas supply planning are based
6 on customers' requirements on the coldest winter day
7 reasonably expected to be experienced. An
8 explanation of the design peak day requirements of
9 Distribution, including the requirements of
10 transportation service customers, is provided in PGC
11 Exhibit No. 15.

12 Q. Why was 74 heating degree days used in the
13 calculation of design peak day requirements?

14 A. After a review of the coldest days experienced
15 during several winter heating seasons, as well as a
16 review of what design peak days other local
17 distribution companies ("LDCs") prepare for,
18 Distribution determined that the most appropriate
19 level of degree days for peak day planning in its
20 service territory was 74 heating degree days. In
21 Distribution's 2000 1307(f) proceeding, the
22 Commission concluded that this was a reasonable

DIRECT TESTIMONY OF JANINE WARD
PGC R-2022-3030235

1 level of heating degree days to use for system
2 planning purposes.

3 "Upon our careful review of the recommendation of
4 the ALJ and the position of the Parties, we find
5 that the ALJ's recommendation of approval of
6 NFGD's proposal to use 74 heating degree days for
7 purposes of both planning the necessary levels of
8 pipeline and storage capacity on interstate
9 pipeline companies and for allocating costs of
10 capacity among classes of customers is
11 reasonable." (Opinion and Order, R-994898,
12 Adopted: August 17, 2000, pg. 17.)

13
14 Q. Does this conclude your direct testimony?

15 A. Yes, it does at this time.

National Fuel Gas Distribution Corporation - Pennsylvania Division
2022 Long-Range Requirements
Fiscal Years 2023 – 2027

Profile

The Pennsylvania Division of National Fuel Gas Distribution Corporation (National Fuel or the Company), is a gas only public utility, which provides service in counties located in Western Pennsylvania. The service area covers the counties of Armstrong, Butler, Erie, Crawford, Mercer, Venango, Clarion, Forest, Warren, McKean, Elk, Jefferson, Clearfield, and Cameron County including but not limited to the cities and townships of Erie, Clarion, Franklin, Meadville, Mercer, Millcreek, Oil City, Smethport, and Warren.

Forecast Methodology

For forecasting purposes, the Company segments its market into the following classes, residential, commercial, public authority, and industrial. The industrial class is further segmented into small and large volume categories using a throughput threshold of 50,000 Mcf/year.

The residential, commercial, and public authority classes are segregated into two forecasts: usage per account and number of accounts. The usage per account forecast is determined using econometric models, which describe average annual usage as a function of one or more econometric variables. The forecasted number of accounts is also determined using econometric models, which describe the number of accounts as a function of one or more econometric variables. Projected throughput for each of the classes is the product of monthly usage per account and the number of accounts.

The large volume industrial sector (greater than 50,000 Mcf/year) consists of 46 customers for the 2022 master estimate. The customers within this group are contacted by the appropriate major account representatives of the Company's Energy Services Department ("Energy Services") to determine their monthly and annual usage, on a throughput basis, over a six-year horizon. The customers are asked to estimate their usage, paying particular attention to any events that may alter their estimated future consumption levels. Customers with usage over 50,000 Mcf/year who do not respond to the request have their monthly usage forecasted based on their historical consumptions. There are 9 Monthly Metered Transportation (MMT) customers and 37 Daily Metered Transportation (DMT) customers who are projected to be classified as a Large Volume Industrial Service (LVIS), Large Industrial Service (LIS), or Daily Metered Large Manufacturing Transportation Service (DMLMTS), with volumes over 50,000 Mcf/year. Additional surveys are sent to customers who had consumptions just below 50,000 Mcf/year in the prior calendar year, in order to see if their consumption may exceed 50,000 Mcf/year for the upcoming fiscal year. The large volume forecasting process includes an assessment of significant load changes, which is based on input and data provided to the Company's Rates and Regulatory Affairs Department ("Rates"), by both the Company's Engineering Services Department (Engineering) and Energy Services. The forecasted volumes for the small industrial sector are projected based on the historical consumption per account.

A summarization of the aforementioned forecast methodology by customer category is shown below:

Residential

Segregated between usage/account and number of accounts. Usage/account is based upon a regression analysis by summarized tariff class for 11 years (January 2011 - December 2021). Number of accounts is based upon a regression by summarized tariff class for 10 years (January 2012 – December 2021). Data includes both retail and transportation (throughput and accounts) in order to maintain an intact data stream.

Usage Per Account

Dependent Variable: **Residential Gas Throughput (Mcf/Account)**

Independent Variables:

Constant (intercept of the regression), **Monthly Degree Days** (NOAA normals 2006-2020), **Monthly Real Residential Gas Price** (lagged 12 periods), **Historical Monthly Gas Usage (Normalized), and Trend (Linear with Seasonality and Exponential Smoothing)**

Number of Accounts

Dependent Variable: **Residential Number of Accounts**

Independent Variables:

Constant (intercept of the regression), **Trend (Linear with Seasonality and Exponential Smoothing), and Historical Monthly Accounts**

Commercial

Segregated between usage/account and number of accounts. Usage/account is based upon regression analyses by summarized tariff class for the periods of 5 and 9 years (January 2013 – December 2021). Number of accounts is based upon a regression analysis for 11 years (January 2011 – December 2021). Data includes both retail and transportation (throughput and accounts) in order to maintain an intact data stream.

Usage Per Account

Dependent Variable: **Commercial Gas Throughput (Mcf/Account)**

Independent Variables:

Constant (intercept of the regression), **Monthly Degree Days** (NOAA normals 2006-2020), **Historical Monthly Gas Usage (Normalized), Trend (Linear with Seasonality and Exponential Smoothing)**

Number of Accounts

Dependent Variable: **Commercial Number of Accounts**

Independent Variables:

Constant (intercept of the regression), **Trend (Linear with Seasonality and Exponential Smoothing)**, and **Historical Monthly Accounts**,

Public Authority

Segregated between usage/account and number of accounts. Usage/account is based upon a regression analysis by summarized tariff class for the period of 10 years (January 2012 - December 2021). Number of accounts is based upon a regression analysis for 9 years (January 2013 – December 2021). Data includes both retail and transportation (throughput) in order to maintain an intact data stream.

Usage Per Account

Dependent Variable: **Public Authority Gas Throughput (Mcf/Account)**

Independent Variables:

Constant (intercept of the regression), **Trend (Linear with Seasonality and Exponential Smoothing)**, and **Historical Monthly Accounts**

Number of Accounts

Dependent Variable: **Public Authority Number of Accounts**

Independent Variables:

Constant (intercept of the regression), **Trend (Linear with Seasonality and Exponential Smoothing)**, and **Historical Monthly Accounts**

Small Volume Industrial (Customers <50,000 Mcf/year)

The starting point for Small Volume Industrial throughput is to deduct the Large Volume Industrial Customer (>50,000 Mcf/year) actual volumes, that are tracked separately, from the Total Industrial throughput observed by the billing data for the twelve months ended December 2021. The usage/account and number of accounts are then segregated. Usage/account is based upon regression analyses by summarized tariff class for the periods of 5 and 9 years (January 2013 – December 2021). Number of accounts is based upon regression analyses for 5 to 8 years (January 2014 – December 2021). Data includes both retail and transportation (throughput and accounts) in order to maintain an intact data stream.

Usage Per Account

Dependent Variable: **Small Industrial Gas Throughput (Mcf/Account)**

Independent Variables:

Constant (intercept of the regression), **Trend (Linear with Seasonality and Exponential Smoothing)**, and **Historical Monthly Accounts**

Number of Accounts

Dependent Variable: **Small Industrial Number of Accounts**

Independent Variables:

Constant (intercept of the regression), **Trend (Linear with Seasonality and Exponential Smoothing)**, and **Historical Monthly Accounts**

Large Volume Industrial Customers (>50,000 Mcf/year)

The large volume industrial customers consist of 46 customers who are forecasted through a joint effort between Energy Services and the individual customers via usage surveys and historical consumption data.

Company Use

Actual volumes, based on the twelve months ended December 2021.

Unaccounted For (retail and transportation service)

0.15% of total throughput – LAUF target in National Fuel’s System Performance Adjustment Mechanism (SPAM).

Capacity Planning Peak Day Requirements

There are no methodology changes for capacity planning peak day requirements, when comparing the 2021 Long-Range Requirements process to the 2022 Long-Range Requirements process. Capacity planning for peak day requirements continues to utilize a methodology of allocations based on Send out data in order to allocate annual requirements into a calendar month.

**NATIONAL FUEL GAS DISTRIBUTION CORPORATION
GAS - PA P.U.C. NO. 9
SUPPLEMENT NO. 248**

DOCKET NO. R-2022-3035730

Issued: October 28, 2022

Effective: December 27, 2022

NATIONAL FUEL STATEMENT NO. 14

JEREMY R. BARBER

**BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION**

Docket No. R-2022-3035730

**National Fuel Gas Distribution Corporation
Pennsylvania Division**

Statement No. 14

**Direct Testimony of
Jeremy R. Barber**

**Topics Addressed: Fully Projected Future Test Year Revenues
Future Test Year Revenues
Historic Test Year Revenues**

Dated: October 28, 2022

1 **I. INTRODUCTION AND QUALIFICATIONS**

2 **Q. Please state your name and business address.**

3 A. My name is Jeremy R. Barber. My business address is 6363 Main Street, Williamsville,
4 NY 14421.

5
6 **Q. By whom and in what capacity are you employed?**

7 A. I am employed as an Assistant Manager in the Rates & Regulatory Affairs department of
8 National Fuel Gas Distribution Corporation (“NFGDC”). My primary responsibility is
9 the oversight of tariff and rate administration for NFGDC’s New York Division
10 (“National Fuel – NY”). I also support certain rate matters pertinent to the Pennsylvania
11 Division (“National Fuel” or the “Company”). I manage a team of analysts that perform
12 rate and regulatory duties on behalf of both Divisions, including the preparation of an
13 annual five-year revenue forecast.

14
15 **Q. Please provide your educational background.**

16 A. In 2008, I graduated from the State University of New York at Brockport with a Bachelor
17 of Science degree in Business Administration. In 2009, I received a Master of Business
18 Administration degree from the Rochester Institute of Technology, with a concentration
19 in Operations Management.

20
21 **Q. Please provide your professional experience.**

22 A. From 2010 to 2014, I was employed by Citigroup as a Foreign Exchange Analyst. In
23 2014, I began my employment with NFGDC as a Rate Analyst I. In March 2017, I was

1 promoted to the position of Rate Analyst II. In March 2020, I was promoted to Rate
2 Analyst III. In February 2022, I was promoted to my current position as an Assistant
3 Manager.

4
5 **Q. Have you previously testified in other proceedings before the Pennsylvania Public**
6 **Utility Commission (“PAPUC” or the “Commission”) or any other state or federal**
7 **agency?**

8 A. Yes, I testified before this Commission on behalf of National Fuel in Docket No. A-2018-
9 3005258. My testimony in that case explained why the Company’s application to
10 abandon a pipeline and discontinue gas service was economically justified. I have also
11 testified before the New York State Public Service Commission (“NYPSC”) on behalf of
12 National Fuel – NY in Case 16-G-0257. My testimony in that case covered Revenues,
13 the Operations and Maintenance expense elements of Labor and Benefits, and Taxes
14 Other Than Income.

15
16 **Q. Please describe the purpose of your testimony.**

17 A. I will address the development of revenue for the fully projected future test year ending
18 July 31, 2024 (“FPFTY”), the future test year ending June 30, 2023 (“FTY”), and for the
19 historic test year ended June 30, 2022 (“HTY”).

20
21 **Q. Are any other witnesses providing testimony on the areas you identified above?**

22 A. Yes. Company witness Gregory Harts is providing testimony on the demand forecast
23 methodology in National Fuel Statement No. 13. The demand forecast provides the

1 customer counts and usage that serve as the basis for my revenue projections. Company
2 witness John D. Taylor of Atrium Economics (National Fuel Statement No. 19) is
3 sponsoring National Fuel Exhibit D – Cost of Service Study, which supports the
4 Company’s proposed rate design. Mr. Taylor also sponsors National Fuel Exhibit JDT-3,
5 which presents the proposed rate design. The proposed rates were utilized in the
6 calculation of FPFTY, FTY, and HTY revenue projections at proposed rates.
7

8 II. DESCRIPTION OF EXHIBITS

9 **Q. Are you sponsoring any exhibits or filing requirements in this proceeding?**

10 A. Yes, I am sponsoring the following Exhibits:

- 11 • National Fuel Exhibit E (Proof of Revenue)
- 12 • National Fuel Exhibit JRB-1 (FPFTY at Current Rates)
- 13 • National Fuel Exhibit JRB-2 (FPFTY at Proposed Rates)
- 14 • National Fuel Exhibit JRB-3 (FTY at Current Rates)
- 15 • National Fuel Exhibit JRB-4 (FTY at Proposed Rates)
- 16 • National Fuel Exhibit JRB-5 (HTY at Current Rates)
- 17 • National Fuel Exhibit JRB-6 (Normalized HTY at Current Rates)
- 18 • National Fuel Exhibit JRB-7 (Normalized HTY at Proposed Rates)

19 Each of these exhibits contains several schedules, which are described later in this section
20 of testimony. I am also sponsoring certain responses to the Commission’s standard filing
21 requirements, as indicated on the master list accompanying this filing, which were
22 prepared by me or under my direction.
23

24 **Q. Please describe National Fuel Exhibit E.**

25 A. Exhibit E is National Fuel’s Proof of Revenue. It summarizes revenue by service class at
26 current and proposed rates. The total difference (proposed revenues less current
27 revenues) ties to the Company’s revenue requirement shown in National Fuel Exhibit A

1 (FPFTY). Page 1 of Exhibit E shows total revenues including revenues for purchased gas
2 costs (“PGC”). Page 2 of Exhibit E excludes revenue for PGC and is therefore presenting
3 delivery revenues only.

4
5 **Q. Please describe National Fuel Exhibit JRB-1.**

6 A. Exhibit JRB-1 consists of five schedules supporting FPFTY revenues at current rates.

7 The schedules are as follows:

- 8 • Schedule 1 – Summary of Revenues
- 9 • Schedule 2 – Summary of Revenues by Service Class
- 10 • Schedule 3 – Billed Delivery Revenues by Rate Type
- 11 • Schedule 4 – Detailed Billed Revenue Workpapers
- 12 • Schedule 5 – Forfeited Discounts Workpapers

13 The schedules are progressively more detailed. Schedule 1 summarizes revenue by

14 FERC account and includes columns for total revenue, gas cost, and delivery revenue.

15 Schedule 2 supports Schedule 1 and provides more granularity by service class. Schedule

16 3 provides a breakdown of billed delivery revenues by rate type, with the total supporting

17 the delivery revenue column of Schedule 2. Schedule 4 is a detailed workpaper showing

18 a price out of revenues at current rates, including customer counts, usage, and the

19 revenues produced by multiplication of applicable units by current rates. Schedule 5

20 supports the Company’s forfeited discount revenue forecast included in Other Operating

21 Revenues.

22
23 **Q. Do National Fuel Exhibits JRB-2 through JRB-7 follow a similar format?**

24 A. Yes, the subsequent exhibits have a nearly identical structure to National Fuel Exhibit

25 JRB-1. The difference is the period to which the exhibit applies and whether it is

1 presented at current or proposed rates. These variables are indicated in the listing of
2 exhibits provided at the beginning of Section II of this testimony. For example, National
3 Fuel Exhibit JRB-2 is identical to JRB-1 in terms of structure, consisting of five
4 schedules supporting FPFTY revenues. However, it shows revenues at proposed rates
5 instead of at current rates. I note that the exhibits applicable to the HTY, National Fuel
6 Exhibits JRB-5 through JRB-7, do not include Schedule 5 for forfeited discounts.

7
8 **III. FORECASTED TEST YEAR REVENUE**

9 **Q. Please explain the process for developing the Company's forecasted FPFTY and**
10 **FTY revenues.**

11 A. The Company prepares an annual five-year econometric and revenue forecast. The
12 forecast is developed on a revenue month basis and includes detail for all billed revenue
13 line items by service class, including delivery revenues, gas costs and taxes. The revenue
14 forecast relies on customer and usage projections provided by Market Planning, a
15 subgroup within NFGDC's Rates & Regulatory Affairs department. Company witness
16 Gregory Harts provides a thorough overview of Market Planning's forecasting
17 methodology in his testimony (National Fuel Statement No. 13). The FPFTY and FTY
18 exhibits at current rates are built around the monthly information contained in National
19 Fuel's annual forecast.

20
21 **Q. Describe "current rates" in the context of your testimony and exhibits.**

22 A. Current rates refer to rates that have been previously approved by the PAPUC.
23 Generally, these will be the rates in effect at the time the forecast was prepared.

1 **Q. Describe “proposed rates” in the context of your testimony and exhibits.**

2 A. Proposed rates refer to rates that the Company has filed for in this proceeding. These
3 rates are supported by testimony and exhibits around revenue requirement, cost of
4 service, and rate design. The proposed rates used in my exhibits were provided by
5 Company Witness John D. Taylor in National Fuel Exhibit JDT-3 and are discussed
6 further in Mr. Taylor’s Direct Testimony (National Fuel Statement No. 19).

7
8 **Q. Is the process of forecasting revenues at proposed rates different than forecasting
9 revenues at current rates?**

10 A. No. The process and exhibits are identical. The current and proposed exhibits for the
11 FPFTY and FTY use the same customer and usage forecasts. The only difference is the
12 rates that are applied.

13
14 **Q. How does the Company forecast revenue for basic service charges?**

15 A. For each month in the forecast period, the projected number of customers in each service
16 class is multiplied by the applicable basic service charge.

17
18 **Q. Please describe distribution charges.**

19 A. Distribution charges are the volumetric component of rate design, dependent on customer
20 usage. These charges can be priced on a tiered basis, with rates declining as usage
21 increases. For example, customers served under the Residential Service Rate Schedule
22 currently pay a rate per cubic foot of gas usage for the first 5,000 cubic feet (5 Mcf) each
23 month, and then pay a lower rate for any gas usage exceeding 5 Mcf. Many service

1 classes, particularly those under Monthly Metered Transportation and Daily Metered
2 Transportation service, currently do not have a tiered rate structure and only have a single
3 rate that applies to all usage. As discussed in National Fuel Statement No. 19, the
4 Company's proposed rate design would eliminate all tiered rate structures and all usage
5 would be billed at a single rate for each service class.

6
7 **Q. How does the Company forecast revenue for distribution charges or "block rates" at**
8 **current rates?**

9 A. For each month in the forecast period at current rates, the total projected usage by service
10 class is allocated into usage blocks established in the Company's tariff. The allocation is
11 done by a statistical program in the Company's billing system. The program uses
12 historical customer billing data to develop bill frequency curves, often referred to as
13 "Ogives." In statistics, Ogives are graphs that are used to estimate how many numbers
14 lie above or below a particular variable or value in data. The Ogive is a graph of a
15 cumulative distribution, which explains data values on the horizontal plane axis and
16 either the cumulative relative frequencies, the cumulative frequencies or cumulative
17 percent frequencies on the vertical axis. An Ogive curve can help to find the likelihood
18 of data falling within a certain frequency range. In this case, the data behind the curve is
19 the number of customers that were billed for gas usage within specified consumption
20 ranges. For residential customers, these ranges can be one hundred cubic feet (ccf)
21 increments. Monthly forecasted customer counts and usage by service class are uploaded
22 to the program. Based on historical bill frequency curves for the latest twelve-month
23 period, the program calculates an output of the most probable allocation of total

1 forecasted usage into each usage block. Revenues are calculated by multiplying each
2 block's usage amount by the appropriate distribution charge rate. For service classes that
3 only have one usage block, this allocation process is not necessary and total forecasted
4 usage is simply multiplied by the distribution charge.

5
6 **Q. How does the Company forecast revenue for distribution charges at proposed rates?**

7 A. For each month in the forecast period at proposed rates, the total projected usage by
8 service class is multiplied by the proposed distribution charge.

9
10 **Q. How does the Company calculate forecasted revenues for the various riders in its**
11 **tariff?**

12 A. Rider B, or the State Tax Adjustment ("STA") Surcharge, is a percentage that applies to
13 all charges for service. As such, total revenues by service class are multiplied by the
14 STA percentage. Since the *current* STA rate is negative, Rider B reduces the customer's
15 bill and the Company's revenues. The STA percentage will be reset to zero as part of
16 National Fuel's proposed rate design. The Direct Testimony of Company witness John
17 D. Taylor (National Fuel Statement No. 19) discusses proposed rate design in further
18 detail. All other tariff riders are volumetric rates, which are multiplied by the total usage
19 by service class to produce forecasted revenues. Rider E (Customer Education), Rider F
20 (LIRA Discount Charge), Rider G (Merchant Function Charge) and Rider H (Gas
21 Procurement Charge) are considered base delivery revenues for the purpose of
22 calculating revenue requirement. Rider A includes the Distribution Charge (not to be
23 confused with the base delivery rate discussed on page 4 of this testimony), Natural Gas

1 Supply Charge, and Gas Adjustment Charge. Rider A and Rider I (OPEB Surcredit) are
2 considered gas cost revenue in the forecast and do not factor into the calculation of
3 revenue requirement.
4

5 **Q. How are customers with negotiated rate contracts reflected in the forecast?**

6 A. The Company has negotiated rate contracts with several large industrial customers that
7 are bypass threats. As discussed by Company witness Erik M. Solomon in National Fuel
8 Statement No. 18, many customers in the Company's service territory have an
9 opportunity to bypass National Fuel by connecting directly to an interstate pipeline, local
10 producer, or gathering system at a lower cost. To retain these customers, the Company
11 negotiates a competitive delivery rate that is lower than the tariff rate for the applicable
12 service class. This group of customers is forecasted separately from customers receiving
13 tariff rates. Each negotiated customer's usage is multiplied by the projected negotiated
14 rate, which may increase annually due to inflation escalators specified in the contract.
15 The exhibit rolls up the total usage for all negotiated customers within a service class
16 (e.g., Large Industrial Service) and multiplies that usage by the weighted average
17 negotiated rate for that service class.
18

19 **Q. What is the Company including in its forecast of Other Operating Revenues?**

20 A. Other Operating Revenues are comprised of Forfeited Discounts, Rent from Gas
21 Property, and Other Gas Revenues. Forfeited discounts are commonly referred to as Late
22 Payment Charges and account for most of the forecasted Other Operating Revenues.
23 Rent from Gas Property include rents received for the use by others of land, buildings,

1 and other property devoted to gas operations by the utility. Other Gas Revenues include
2 any revenues derived from gas operations not includible in any other revenue accounts.
3

4 **Q. How did the Company forecast Forfeited Discounts?**

5 A. Forfeited Discounts are forecasted by applying a percentage to total forecasted revenues
6 by month. The percentage applied varies by month, since the forecast is comprised of
7 monthly data and late payment charges fluctuate throughout the year. The percentages
8 are based on historical late payment charges experienced by the Company prior to
9 COVID-19. Late payment charges were unusually high during COVID-19 due to a lack
10 of customer disconnections for non-payment, and this time period is not an appropriate
11 baseline for the FTY or FPFTY.
12

13 **Q. How did the Company forecast Rent from Gas Property and Other Gas Revenues?**

14 A. Revenues were assumed to remain at the same level as reported HTY revenues, with one
15 exception. Distribution's HTY Other Gas Revenues includes a refund provision for the
16 2017 Tax Cuts & Jobs Act of \$4.0 million. This item was removed from the FPFTY.
17

18 **IV. HISTORIC TEST YEAR REVENUE**

19 **Q. Describe the Company's process for developing HTY revenues.**

20 A. HTY revenues are based on actual billed revenue as reported by the Company's SAP
21 billing system. SAP reports provide detailed billed revenue and usage data by service
22 class and billing line item. On a monthly basis, this data is reconciled to the Company's
23 financial statements. Actual revenues for the HTY (i.e., those seen in National Fuel

1 Exhibit JRB-5, before normalization) are not based on a price out of units multiplied by
2 rates. Additionally, rates are not presented in the detailed revenue workpapers provided
3 in Schedule 4 of National Fuel Exhibit JRB-5. In practice, multiplying the effective rates
4 for a given month by customer counts and volumes reported by SAP would not yield the
5 exact billed revenue. This is primarily due to prorated bills and prior period bill
6 adjustments.

7
8 **Q. What is a prorated bill?**

9 A. If the length of a customer's billing period is between 26 to 35 days, the customer will be
10 billed the full tariff rate. If the billing period is shorter than 26 days or longer than 35
11 days, the bill will be prorated. The most common reason for a prorated bill is a
12 residential customer moving out of their residence during the billing period. If a
13 customer moved out 15 days into their bill cycle, the current basic service charge of \$12
14 would be prorated:

15
$$\$12 \times (15 \text{ days} / (365 \text{ days} / 12 \text{ months})) = \$5.92$$

16 Longer bill periods are sometimes the result of holidays that extend the typical meter
17 reading and/or billing schedules. Due to the wide variety of prorated billing charges, the
18 number of customers cannot simply be multiplied by the tariff rate to produce an accurate
19 revenue amount.

20
21 **Q. How do prior period bill adjustments factor into HTY revenues?**

22 A. Prior period bill adjustments are typically the result of estimated meter reads and can
23 span several months. The reported usage for the revenue month is the net of the current

1 month's usage and any prior period adjustments. The reported revenues will include the
2 net of current charges and any adjustments, each billed at the appropriate rates in effect
3 for the prior period.

4 **Q. How does weather impact the HTY revenues in National Fuel Exhibit JRB-5?**

5 A. Erie, Pennsylvania temperatures were 8% warmer than normal for the HTY. This
6 percentage is based on the difference between actual degree days and normal degree days
7 during the period. Normal degree days are based on a 15-year average (2006-2020) as
8 reported by the National Oceanic and Atmospheric Administration. Warmer weather
9 results in lower gas usage, which leads to lower revenue.

10
11 **Q. National Fuel Exhibits JRB-6 and JRB-7 present normalized HTY revenues.**

12 **Explain the normalization methodology.**

13 A. Since the HTY revenues presented in National Fuel Exhibit JRB-5 are impacted by
14 weather, they are not necessarily comparable to the FTY and FPFTY revenues based on
15 forecasted normalized usage. To develop HTY exhibits that are comparable, the
16 Company utilized an application to perform load normalization calculations by service
17 class. The application contains a database of historical customer billing information. It
18 calculates base and heating loads by month for each applicable service class and
19 determines a heating degree day factor based on the heating load per actual degree day.
20 It then applies that factor to normal degree days for the month to establish a normalized
21 heating load. The normalized heating load is added to the base load to determine
22 normalized usage per account. The normalized usage per account is multiplied by the
23 number of customers to produce normalized usage by month for the service class. The

1 normalized usage is then allocated into usage blocks for each service class using the same
2 methodology described on Page 7 of this testimony.

3

4 **Q. Were all customer revenues adjusted for usage at normal weather?**

5 A. No, industrial customers are not considered weather sensitive. Only usage for residential,
6 commercial, and public authority customers has been normalized for weather.

7

8 **Q. Does this conclude your direct testimony at this time?**

9 A. Yes.
