TAKE THE WORLD ON THE ROAD

WORLDWIDE RECEIVERS FROM ICOM

IC-R1 HANDHELD RECEIVER

The smallest wideband handheld available today, the IC-R1 continuously covers 100kHz-1300MHz with AM, FM and wide-band FM modes. This tiny receiver goes anywhere you go, measuring just 1.9"W x 4.0"H x 1.4"D.

Easy operation is a snap with the IC-R1's Dual Frequency Selection (direct keyboard and rotary tuning). 100 memories and a 24-hour clock complete the world's smallest full-featured handheld receiver.

IC-R100 MOBILE RECEIVER

Whether you're at home or in your car, the IC-R100 gives you continuous coverage from 100kHz-1856MHz in AM, FM and wide-band FM modes. Monitor VHF air and marine bands, emergency services, government and amateur stations. 121 fully programmable memory channels, multiple scanning systems and a built-in backup lithium battery.

IC-R72 BASE RECEIVER

The IC-R72 continuously receives 100kHz-30MHz in SSB, AM and CW modes with exceptionally high sensitivity. An optional U-E provides FM reception. The IC-R72 incorporates a noise blander, five scanning systems, internal backup battery and built-in clock with Icom's DDS System. The IC-R72 boasts a 100dB wide dynamic range while an easy to access keyboard provides convenient programming versatility... superb for shortwave listeners!

See our complete line of quality receivers at your local authorized ICOM dealer.

HAPPY HOLIDAYS from Electronic Equipment Bank

SONY ICF5W77

From the genius of Sony, the world's most advanced portable Receiver. Factory programmed, 100 of the most popular SWL stations which you can reprogram yourself.

- 15-30MHz AM/CW/SSB
 - 76-108MHz FM (Stereo)
 - Station Name Tuning
 - 160 Memory Pre-set
 - Synchronous Detection
 - Wide-Narrow Filters
 - Multi Function Scan
 - Multi Function Clock/Alarm
 - 120VAC Adapter Incl.
 - 10.8x6.8x1.8 in. Wt. 52oz.
- List \$624.95 **EEB \$499.00** - sh.

It's Time To Upgrade!

SONY ICF2010

Big Receiver performance in a portable, take with you package. Thousands of satisfied users make the ICF2010 Sony's Biggest Seller!

- 15-30MHz AM/CW/SSB
 - 76-108MHz FM Band
 - 116-136MHz Air Band
 - Synchronous Detection
 - 32 Program Memories
 - Direct Keyboard Entry
 - Multi Scan Functions
 - Multi Clock Functions
 - 4.5 VDC (3D) & (2) AA not incl.
 - 120VAC Adapter Incl.
 - 6.25x11.3x2.2 Wt 48 oz.
- List \$429.95 **EEB \$349.95** + sh.

A True Classic!

SONY ICF5W7600

This is our number one selling mid-sized portable. Explorers and travelers will love the versatility of the ICF SW7600.

- 15-30MHz AM/CW/SSB
 - 76-108MHz FM Band
 - 10 Station Memory
 - Full SW Coverage .1-30mhz
 - Dual Conversion
 - AN61 Antenna Incl.
 - Clock, Timer, Alarm
 - AM/SSB/FM/FM Stereo
 - Direct Keyboard Entry
 - Power (4) AA Not Incl. AC adptr. incl.
 - 7 1/4 x 4 3/4 x 1 1/4 wt. 22 oz.
- List \$399.95 **EEB \$219.95** + sh.

#1 Compact Portable!

SONY TCM38V

Turns your scanner into a logging receiver. Let the TCM38V run unattended. Play back later. You won't miss any action.

- Logging cassette recorder
 - CH1 audio. ch 2, time date
 - Records date, time & play back to LCD readout
 - Ideal for scanner monitorin
 - VOR voice audio auto start
 - Auto record level
 - Built in microphone or Ext.
 - Power (2) AA not incl.
 - Opt. AC adapter PA3N 13 \$9.95
 - 3 1/2 x 5 1/4 x 1 1/4 wt. 10 oz.
- List \$129.95 **EEB \$99.95** + sh.

NEW Innovative Recorder!

JRC NRD535D

The NRD515 then 525 now 535D. Each generation has introduced state-of-the-art features to satisfy the most discerning listener.

- 1-30MHz AM/CW/SSB/FM
 - New Exalted Carrier
 - New Selectable Sidaband (ESS)
 - Phase Lock Detection
 - Variable Bandwidth Control (BWC)
 - Tuning Steps 1Hz DDS (10Hz readout)
 - 100dB Dynamic Range
 - 200 station memory
 - RTTY Demod Option
 - 4 Filter Position 3 Supplied .1, 2.6kHz
 - 13x5x11 in. Wt. 20lbs.
- List \$1999 **EEB \$1599** + sh.

ICOM R71A

Setting World Standards! Versatile, Reliable, Rugged. Our Top Selling Desktop Receiver!

- 1-30MHz AM/CW/SSB Opt. FM
 - Pass Band Tuning
 - 100dB Dynamic Range
 - Filters 6 & 2.4kHz Opt. CW 500Hz
 - 120/240 VAC Opt. 12VDC
 - 32 Programmable memories
 - Dual VFO
 - Multi Scan Functions
 - IR. Remote Option
 - Computer Control Option
 - Many EEB Filters & other Options
 - 11.3x4.3x10.9 in. Wt. 16.5 lbs.
- List \$999 **EEB \$849.95** + sh.

DRAKE R8

Getting Rave Reviews From The Experts! EEB welcomes Drake back to the shortwave market. The R8 promises to be a big hit with the serious listeners.

- 1-30MHz AM/CW/SSB
 - VHF Opt. 35-55/108-174MHz
 - 100 Memory Channels
 - Synchronous Detection
 - 5 filters .5, 1.8, 2.3, 4, 6 kHz
 - All Mode AM, CW, SSB, RTTY, FM
 - Band Pass Tuning
 - RS232 Serial Interface
 - Dual Antenna Inputs
 - 13.2x13x5.25 in. Wt. 13lbs.
- EEB \$979.00** + sh.

MULTI-MODE CONVERTERS

Universal M-7000

The Universal M-7000 will permit you to intercept and decode Morse code, various forms of RTTY, FDM and FAX. Simple connections to your receiver and video monitor will enable you to monitor with the most sophisticated surveillance decoder available. No computer is required. **See** the world of shortwave excitement you have been missing. Requires 115/230 AC 50/60 Hz. With video fax and real time clock only \$1159.00 **Please write for full details.**

- ◆ Morse Code (CW)
- ◆ Regular Baudot RTTY
- ◆ Bit Inverted & Var. Baudot
- ◆ ASCII Low & High Speed
- ◆ Sitor Mode A & B
- ◆ ARQ-M2 & M4 (TDM)
- ◆ ARQ-E and ARQ-E3
- ◆ FEC-A and FEC-S
- ◆ SWED-ARQ and ARQ-S
- ◆ VFT Modes (TDM)
- ◆ Russian 3rd Shift Cyrillic
- ◆ Facsimile (FAX) AM/FM
- ◆ Packet 300 & 1200 AX.25
- ◆ Remote Terminal
- ◆ Literal & Databit Modes
- ◆ Variable & Standard Shift
- ◆ Automatic Tuning
- ◆ Diversity Reception

MULTI-MODE CONVERTERS

Universal M-900

Here is a compact, easy to use decoder that copies all the most important shortwave transmission modes. The M-900 covers Morse code for monitoring hams, ships and coastal stations. Baudot RTTY is included for decoding weather and international press broadcasts. Both Sitor A and Sitor B are supported for monitoring the extensive maritime and diplomatic traffic. Facsimile (to the printer only) lets you receive maps and pictures from around the world. Requires 12 VDC @.8A Text output to video monitor. \$499.95 (+\$8)

- ◆ Morse Code (CW)
- ◆ Regular Baudot RTTY
- ◆ Sitor Mode A (ARQ)
- ◆ Sitor Mode B (FEC)
- ◆ FEC-A
- ◆ Facsimile (FAX) FM
- ◆ Variable & Standard Shift

M-900 System Components

A complete M-900 system would require:

- ▶ Universal M-900
 - ▶ 12 VDC Power Supply
 - ▶ Your SW Receiver
 - ▶ Video Monitor
 - ▶ Parallel Printer
 - ▶ Cables for above
- Please write to Universal for full information on the M-900 and the above optional items.

At Long Last, My Time Of The Year To Shine

The last time I heard from G.L., a neighbor who lives down the road, was this past June when he and the dog warden brought home Fuzzyface, my large, shaggy mixed breed mutt. I remember it was the day we gave Fuzzyface his annual scrub down. We had let him out so he could run around to dry off. A half hour later, the dog catcher showed up to say that G.L. summoned him to complain that Fuzzyface hadn't wasted any time in making a beeline for his place to convince Mademoiselle Yvette, his prize show poodle, to embark upon a life of sin, shame and degradation.

My cousin Woody hasn't been seen since he showed up one day last summer to borrow my set of socket wrenches. The loan was supposed to have been for only a day or two. Woody is one sandwich short of being a complete picnic. When the Dept. of Motor Vehicles sent out organ donor cards, without hesitation Woody generously signed up to offer the carburetor, transmission, and engine block.

I never refuse Woody because he's so good natured. He works at a nearby airport as the baggage manager there for an airline. When I told him I was taking his airline on a combo DX'pedition and vacation, he insisted on personally attending to my radio gear and luggage. Meaning well, he was thoughtful enough to promptly dispatch all of my stuff to a deluxe tourist paradise far more expensive than the remote place I went.

But Christmas is upon us. That means G.L. and Woody, and many others, will be seeking an audience with me very soon. Guaranteed. There's no escaping it. As the sun grows dimmer and reaches its weakest point at the winter solstice, I'll be riding the crest of my yearly popularity.

It's because of VCR's, CD players, CB radios, FAX machines, fancy stereos, answering machines, home security systems, cordless phones, room monitors, cellulars, satellite TV systems, three-band radar detectors, deluxe scanners, world band radios, pocket computers, and other electronics gifts people so often receive or give themselves for the holidays. Nobody wants to take the time to plow through an owner's manual to learn how to program or operate them. It's easier just to ask someone else to explain it all.

I'm the only one with a ham ticket that my friends, neighbors, and relatives know. In their minds, this definitely qualifies me as

"It was the day we gave Fuzzyface his annual scrub down."

"To the delight of all, myself included, I sat there holding court . . . there was no end to the useful information I had available to dispense to the befuddled masses."

someone who can glance at any piece of electronics equipment and give them the lowdown, including a complete course of instructions in every aspect of its use. Moreover, they are certain that I can easily analyze every malfunction just from hearing their vague description, then instantly correct the problem with a few pencil taps at the right spot on the cabinet. I have always encouraged these gross misconceptions.

OK, I can bluff and wing it through the operation of any kind of radio gear. This is because of the fortunate combination of instinct and many years of experience, and most especially plenty of dumb luck. But, without going over the instruction manuals, all other modern high tech consumer products are as baffling to me as they are to

(Continued on page 50)

Now, You Can Eavesdrop On The World. Introducing the new Drake R8 Communications Receiver. It's world class, world band radio, made in the U.S.A. From Perth to the Persian Gulf, Moscow to Mozambique, local or global, you hear events *as they happen* with amazing clarity. Since 1943, Drake

has been setting the standards in electronic communications . . . and then raising them. Today, there's no better shortwave receiver than the Drake R8. **Out-Of-This-World Performance.** The new Drake R8 has more standard features than other shortwave radios. You get wide frequency range (100 KHz to 30,000 KHz), coverage of all world and local bands, and excellent dynamic range. But you also get important features you won't find on receivers costing hundreds of dollars more. A multi-voltage power supply. Pre-amp and attenuator. Five bandwidth filters and synchronous detector. Dual mode noise blanker and passband offset. Non-volatile 100 channel memory. All designed to give you the best reception with the least distortion. **Down-To-Earth Design.** The ergonomic design of the R8 gives you real ease of operation. You have convenient keypad entry, with large, legible controls. The face is bold. Uncluttered. And the liquid crystal display (LCD) is backlighted for easy reading. **Try The R8 . . . At Our Risk.** If you're not impressed by Drake's quality, performance and ease of operation, return the R8 Receiver within 15 days and we'll refund your money in full, less our original shipping charge. For more information, or to order, call **TOLL-FREE, 1-800-9-DRAKE-8**. Telephone orders may be placed on a major credit card. \$979.00 (Shipping and handling \$10 in continental U.S. Ohio residents add 6½% tax.) Call **TOLL-FREE, 1-800-9-DRAKE-8** today. You can't lose.

CIRCLE 50 ON READER SERVICE CARD

MAILBAG

LETTERS TO THE EDITOR

Better Late . . .

In the August issue, one of your readers was complaining that he had no response from BBC Monitoring when he wrote to us for a sample copy of World Broadcasting Information. You replied that you had also written and been equally unsuccessful. I am

writing to you and your readers to apologize personally for this treatment. We received hundreds of inquiries from people who have seen our advertisements and as a general rule we try to fulfill their requests within two weeks. However, due to staff shortages a backlog of requests had built up at the end

of last year. Unfortunately to compound the problem the Gulf War then started and my department was flooded with visits from journalists from the world's media reporting on and filming the operation at Caversham. Our heightened profile due to the war also meant that even more people knew of our existence and wrote in for information, but during this time all routine work had to be put into abeyance including requests for WBI and other services. We have been trying ever since to clear the backlog of about 400 requests, starting with the oldest first. We are now employing staff to work specifically on sending out sample copies to our expanding market.

Kate Morgan,
Marketing and Sales Manager,

ALPHA DELTA antennas provide world-class reception solutions for our world-wide customers—and here are some of their comments

Murray Ferguson
Owairaka
Auckland
New Zealand

November 10, 1990

Dear Sir,

This is just a short letter, to let you know how pleased I am with my new Alpha Delta (DX-SLOPER 60ft) which I have just received; I bought the antenna from Gilfer Shortwave, 52 Park Avenue, Park Ridge, NJ 07656, USA. They were very helpful to me.

I have put the antenna up, according to the instructions, I was able to get to 20ft without any problems.

The receiver I have, is a JRC NRD-525, and the antenna I had was an active antenna, and the bands it covers are 49, 41, 31, 25, 19, 13 meters, but it does not even come close to the performance of the Alpha Delta Sloper; Frequencies that were very weak or barely readable, in the past, are now loud and clear, and have a very good signal strength, and also the down lead, takes away all of back ground hum, which has always been a problem in the past.

Very sincerely yours,

Murray Ferguson

L.A. Locklear
Gulfport, MS 39501

December 21, 1990

Dear Sirs,

I recently purchased a "DX-EE" antenna from Universal Radio after seeing an advertisement in Popular Communications.

As a long time SWL and DX enthusiast all I can say is WOW!

I've tried them all over the years—nothing I've tried compares to the DX-EE. I have the DX-EE running North and South with an NRD-525 and FRG-8800 with unreal results. Your antenna, the DX-EE is the quietest dipole I've ever used.

Kudos on the DX-EE! Sales should pick up on this one as I have praised it time and again to fellow SWL'ers.

Sincerely,

L.A. Locklear

Alpha Delta Model DX-SWL International Broadcast Band Sloper

CIRCLE 179 ON READER SERVICE CARD

The explanation is appreciated, and the excellent WBI was well worth waiting for! WBI is a weekly publication (about 20 pages) containing late information regarding the world's legit and clandestine broadcast (AM/FM/SW/TV) activities (frequencies, skeds, and stations), satellite broadcasting, and news agencies. It contains data compiled from foreign broadcast sources, foreign press items, and actual monitoring by the BBC. Its price is 350 Pounds Sterling per year, plus 20 Pounds Sterling airmail postage. Based on the present exchange rate of 1 Pound Sterling equaling US \$1.6845, in Yankee greenstamps that roughly equals \$590, plus \$33 postage. Because of its price, its primary appeal is to professional users, such as the news services, governmental agencies, publications, broadcasters, equipment manufacturers, broadcast engineers, and commercial monitoring activities. There are, however, advanced DX'ers who can find \$12 per week in their budgets to save up for the annual subscription tab. — Editor.

The BBC Monitoring Service's WBI is a good publication, but that price of 350 Pounds Sterling! When I received my sample copy and read that price, I thought it was a typo, but it's not! I guess it's safe to assume that the information is not geared toward the hobbyist. For the \$623 cost of a year's subscription to WBI, I can put a down payment on a Drake R8 or Kenwood R-5000. Or I could subscribe to POP'COMM for 31 years!

William Schmitz,
Washington, DC

ALL BAND RECEIVERS

FEATURES:

- Frequency range of 25 to 999.995 MHz
- Frequency & Mode selected via Front panel or Remote control.
- Wireless infrared remote control.
- 200 channel memory (20 channel x 10 groups).
- Scanning speed up to 35 channels per second.
- Programmable indicators & alerts include, Priority, Alarm & ON/OFF timer.
- Multi-color display for viewing ease.
- Specifically designed for Vehicular usage & mounting.

Mediumwave DX'ing In The 1990's

How To Hear Interesting DX On Today's Crowded Broadcast Band

BY KARL D. FORTH

When the medium of AM radio was new in the 1920's, everyone who had a radio was a DX'er. Everyone was interested in the new medium and what it had to offer. In 1991, those familiar frequencies between 540 and 1600 kHz may seem a little outdated when compared to microwave communications and sophisticated satellite systems; but there are still interesting programs to hear and interesting DX to try for.

The radio enthusiast interested in amateur radio or military communications may be surprised to learn that the old mediumwave band is changing. Many new stations are on the air, especially on what used to be the clear channels. Many daytime-only stations have received fulltime licenses, or switched frequencies in order to receive fulltime authorization. Other stations, due to changes in AM radio economics, have left the air. All this means new challenges in DX'ing the AM band.

Why listen to mediumwave in the first place? Talk shows on AM stations cover everything from sports to finance. Most major cities have an all-news outlet that is the best source for breaking news. The play-by-play of your favorite team is probably heard on AM. You can also hear unusual, offbeat programming from stations all over the country. For example, I recall recently tuning to a broadcast of live folk music from a small AM station in the state of Virginia. I could almost picture the band members gathered around a single large microphone.

How can a listener take advantage of changes in the band to hear new and interesting stations?

There are dozens of new stations on such clear channel frequencies as 820, 890, 1120, 1160, and 1200 kHz. Twenty years ago, there was a single station on 1200 kHz, 50,000-watt WOAI in San Antonio, Texas. Once you've heard WOAI, you have logged all of the stations in North America on 1200. The 1991 edition of the *NRC AM Radio Log* shows more than 30 domestic (United States and Canada) stations on the frequency. A number of these new stations, especially from the mid-1980's on, were heard here in Chicago, from such locations as Framingham, Massachusetts, New Castle,

A close-up look at the WSBC-1240 studios and transmitter on Chicago's Northwest Side. Do you think the chap in the house at the right is a DX'er?

Pennsylvania, and Bolivar, Missouri. Everything was fine until the next new station, WOPA, came on the air from right here in Chicago! Now we don't hear San Antonio or anything else. You can see how this is both good and bad for DX'ing.

In addition to new AM stations to hear, the changes in the mediumwave band have also resulted in some states becoming easier to log. Wyoming, for example, is now easier to hear with KUUY-650 from Orchard Valley and KUYO-830 in Evansville. KATL-770 in Miles City has made Montana an easier log for many listeners, and WKZN-870 (now WLAM) from Gorham, Maine, made that difficult-to-hear state a bit easier to log. Sunset, sunrise and the evening hours are all good times to receive many of the new stations on the clear channel frequencies.

On the regional and local channels, the increasing number of stations and transmitter power they use have led to greater congestion which made it more difficult to hear distant stations. On the regional frequencies, many daytime-only stations have been granted low-power "post-sunset" authori-

ties. At first glance, this just adds to the congestion, but like the new stations on the clear channels, this arrangement presents some interesting opportunities.

Many stations were assigned such low post-sunset powers that they don't use them. Others use the new authority for special events. What's a special event in a place like Covington, Georgia? High school football, that's what. Try tuning in to the regional channels on Friday nights this fall and chances are you will hear stations from some unusual locations broadcasting their local high school team in action. Basketball games, track meets, etc. are also subjects for broadcasts, but Friday night football seems especially popular. It's a good opportunity to do some interesting DX'ing.

With more and more stations operating on 24-hour, 7-day-a-week schedules, when you do spot a station off the air it's best to take advantage of it. (Instead of going off the air weekly, fulltime stations may only sign off once or twice a year for maintenance.) Spend as much time as you can on the frequency that your regular dominant

Determining targets with a page from the NRC AM Radio Log and a road atlas. Such homework can dramatically increase the mediumwave DX you hear.

station has left vacant, and on adjacent frequencies if the station off the air is a strong local.

If you don't know when the next silent period of a local station will be, why not ask them? That sounds strange, but they may have a scheduled silent period that they can notify you about (and you in turn can let other DX'ers know about it). If the chief engineer knows only a few days in advance, perhaps you can request that he mail you a postcard that you've provided. Obviously, you're going to have better luck contacting the right person at a local small-town station than you are with WCBS in New York, but it's worth a shot.

There's another type of silent period that's a little more permanent. That's when a radio station goes out of business and off the air. This used to be a rare occurrence, but now happens frequently, all over the country, in large and small cities.

Here in Chicago, one of the largest radio

markets in the United States, WPNT-820 left the air in January when its owner decided to concentrate on its FM outlet. Alert DX'ers not only heard a number of new stations on 820, but also some stations that had come on the air recently on 830 kHz.

In other cities, two stations have swapped frequencies or one station has taken over the facilities of a second that has gone off the air. When this happens, a frequency may be vacant for a few days, providing a rare "window of opportunity" to DX that channel with the local station absent.

Frequency and call letter changes are making station identification more difficult because it's harder to keep an up-to-date station log. It's also tougher to just sit on a frequency and wait for an identification, in part because of the proliferation of network programming such as Talknet. The network announcers mention the call letters of other stations on the network, so don't misidentify the station you are actually tuned to.

With crowded band conditions, it's more important than ever to recognize unusual propagation and act on it. It's equally important to know which frequencies can indicate good conditions. Some frequencies will have a strong local or nothing more than a jumble of weak signals. Others will produce different stations under different conditions. These frequencies deserve special attention, and should be checked first when beginning a DX session.

You'll notice conditions changing from day-to-day. Some days will offer very "live" conditions on mediumwave, other days will be relatively quiet. It's difficult, if not impossible, to predict when conditions will be "good" or "bad." One exception is when unusual solar activity triggers an aurora borealis. A strong aurora can often absorb signals from the north, leaving stations from the south in the clear. It's a phenomenon that's worth watching for, even with today's crowded band conditions.

Conditions are sometimes favorable for reception of foreign mediumwave stations, but the listener's location primarily determines what is heard. European stations are often heard on the East Coast. Eastern and Midwestern DX'ers can expect to hear Latin American and Caribbean stations, and West Coast listeners can receive broadcasts from the Pacific and Asia under the right conditions.

Well, now you know that you should check the clear channels and the regional frequencies at certain times. Other modes of BCB DX'ing, such as sunset skip and sunrise skip, also can produce interesting listening, but the increasing congestion on the AM band and fewer daytime-only stations are making these time periods less productive. It's also worth noting that the fall and winter months are best for both domestic and foreign BCB DX'ing.

A beginning mediumwave listener should also be aware of equipment tests, frequency checks, and DX tests. An equipment test is an unscheduled test of the station's facilities, often requiring the station to go off the air

KATL 770 / *Katl Country*

P.O. BOX 700 • MILES CITY, MT 59301 • 232-7700

KATL-770 is one of the new stations that have come on the air on the clear channels. KATL has made Montana easier to hear for many DX'ers.

To: KARL FORTH

Confirming Reception of
 WADN AM 1120 kHz
 Concord, Massachusetts
 DX Test Conducted on:
 8, Jan. 1900 - 07:00 - 07:30 UTC
 Power - 5 kw, Day Directional Pattern

73 myl, NULL

There are still interesting DX Tests for listeners to try for. The WADN-1120 test from Concord, Massachusetts, was well-heard two seasons ago.

and broadcast open carrier and test tones in the local midnight-to-dawn period. A frequency check is a type of equipment test that is scheduled and publicized in the listener club bulletins so DX'ers can try to hear the special broadcast.

The clubs do publish lists of the few frequency checks still being run, and a persistent listener looking for post-midnight tones may be lucky enough to identify an unscheduled check or other type of equipment test.

The best way to keep current with what's happening between 540 and 1600 kHz is to join the *National Radio Club* or the *International Radio Club of America*. Many listeners are members of both clubs. The NRC's *DX News* and IRCA's *DX Monitor* contain the latest station and call letter changes, loggings and reports from members, receiver reviews and technical articles, stories about radio stations, and information on frequency checks and DX tests.

Contact: National Radio Club, *DX News Magazine*, P.O. Box 5711, Topeka, Kansas 66605; or DX News Subscription Center, Ron Musco, Manager, P.O. Box 118, Poquonock, Connecticut 06064 for inquiries. New subscriptions to NRC's *DX News* are \$24. Or contact: International Radio Club of America, Ralph Sanserino, 11300 Magnolia #43, Riverside, California 92505. Membership dues for IRCA's *DX Monitor* are \$25.

The *NRC AM Radio Log* is the best reference source for station information, and the *IRCA Almanac* contains a great deal of network and other data. Both clubs also publish article reprints and other useful information.

The club bulletins provide a great deal of useful information to the active medium-wave DX'er. Loggings from other members can be used to set up a target list of stations you want to hear. Such a target list is important. You would be surprised how a little research and lot of persistence can lead to loggings considered almost impossible!

If you're new to mediumwave DX'ing, a good quality portable receiver with good selectivity will get you started. Many of the "name brand" receivers that offer the best shortwave reception are also good for mediumwave listening.

What's next for mediumwave? More congestion despite many stations going off the air, and greater DX'ing challenges. Many listeners were hoping that an extension of the AM broadcast band would provide some interesting DX opportunities. (At the 1979 *World Administrative Radio Conference* the upper limit of the AM broadcast band was extended to 1705 kHz.) The first stations were supposed to be on the air on the new channels by mid-1990. That hasn't happened, and the future of this band extension is in doubt.

The mediumwave broadcast band may not be your primary hobby band, but those familiar frequencies still have a lot to offer, and a special appeal that has lasted more than 70 years.

The Best* Just Got Better!

The Eavesdroppers™ now includes our new Zap Trapper™ Electronic Gas Tube Lightning Arrestors. Receive-only design shunts damaging transients to ground at only 1/7th the voltage buildup of the available 200 watt transmit-type arrestors, providing maximum solid state receiver protection.

Protect your investment - combine an excellent shortwave receiving antenna with the best receiver protection money can buy.

- Completely assembled and ready to use
- Only 42" overall length
- E trap circuits permit reception on all shortwave bands, 1.1-90 meters
- All connections soldered and enclosed in ultrasonically-welded, hermetically-sealed trap covers
- Includes 50' of 450 Ohm test mfg. rope

Model T includes 100' twin lead feedline

Model C includes weatherproofed center connector for your coax & coax sealant

- Either model \$79.95
- UPS for lower 48 states \$4.00
- CGD add \$3.00, IL add 7% sales tax
- Foreign shipping quoted

"The best...built like an antenna should be." -Larry Magne in *World Radio TV Handbook*

"Our best seller." -EEB in their recent ads and catalogs

"Now in use in 45 countries." -Gifer Shortwave in 1983

"AND THEY SAID IT COULDN'T BE DONE!"

THE NEW SANGEAN ATS-818CS PLL SYNTHESIZED WORLD BAND RECEIVER WITH PROGRAMMABLE CASSETTE RECORDER.

So hot it's setting the market on fire and burning up the competition.

That's because the ATS-818CS offers more features than most: high priced table top models and delivers a level of performance that blows the other portables away. Without a doubt, this is one receiver you must see and hear to believe.

Backed by our 1 year warranty of quality and workmanship, it's no wonder Sangean has become the choice of short wave enthusiasts.

The Sangean ATS-818CS features:

- All Short Wave Bands •
- Single Side Band & CW Reception •
- 45 Memory Presets •
- AM Wide/Narrow Filter •
- Dual Time Display •
- 5 Tuning Methods and more •

Call or write for more information.

The Secret World Of Scanners

Drug Smugglers, Wireless Microphones, Military Surveillance, Foreign Government – Hear Them Once You Know Where To Listen!

BY CHUCK ROBERTSON

Some people don't play by the rules. They establish their communications systems on strange, unauthorized frequencies. They use non-standard transmission modes. Generally, they run amok on the radio spectrum.

Frequency guides are useful for more orthodox communications systems, but most will do you little good in hunting down these radio anarchists. Their world is hidden to most, but knowing their tricks puts you on their track.

As the old saying goes, if you want to catch a fox, you must think like a fox. Better yet, think like a foxy scannist and capture the entire menagerie. We'll show you how.

After The Fox!

If you enjoy chasing skip stations on your scanner, and you have an ear for the unusual, sooner or later you'll cross paths with a drug runner. He's liable to use any frequency that pleases him, and any transceiver that happens to be at hand. Drug smuggling is big business, and eavesdropping on their comms can mean big excitement.

David Williams, of Birmingham, AL tells us that he was amazed that the audacity of the smugglers he heard on 35.825 MHz. They openly discussed drugs and clandestine docking locations at Bahamas locations such as Inagua and Cat Cay. From their mentions of being at Negril and Mo Bay (Montego Bay), the smuggler signals were probably skipping in from Jamaica.

On 35.465 MHz, David overheard drug runners discussing their "goods" and working out a drop at Devils Bay, which is on Virgin Gorda in the British Virgin Islands. David is a professional travel guide writer, so he knows this particular spot. He tells us that this a remote and undeveloped area with no docking facilities for ten miles. It's ideal for smugglers.!

More narco-pirates were tuned in on 33.27 MHz. These people mentioned Abaco, in the Bahamas. The ones on 33.35 MHz were discussing their destination on Great Inagua, Bahamas.

David also logged some legit Caribbean skip, like a deep sea charter ("Blue Sea") in the Cayman Islands on 35.20 MHz. He also heard a construction company in Aruba, N.W.I., on 34.40 MHz.

Back on terra firma, there are Chicago taxis on several unauthorized frequencies, including 33.14 and 33.18 MHz. The messages consisted almost entirely of X-rated four-letter words.

Other intercepts of interest from David include the Egyptian military on 37.40 MHz; a Soviet repeater on 38.725 MHz; a U.S. mil control tower in the Mideast on 31.375 MHz; an RAF activity in the U.K. on 43.15 MHz; a radiophone in Tampa, FL on 31.24 MHz; a Radio Netherlands link on 43.15 MHz; possibly Trinidad on 44.27 MHz; a taxi in New York City (Queens) on 31.24 MHz; and the Bismarck, AR police on 37.20 MHz.

David uses a Radio Shack Realistic PRO-57 and two horizontal half-wave dipoles cut to 30.50 MHz.

Paging Dr. Feelgood

Having a beeper has become more than a sign of success in street-level drug dealers, it's virtually a necessity these days, especially in metro areas. The symbol of success is the dealer who can afford the most sophisticated pager. In an effort to cut out drug trafficking, many metro high schools have now banned students from bringing beepers into the building.

Beepers have been around for thirty years, and many legitimate business people use them from locksmiths to construction workers, doctors, attorneys, repairmen, salesmen, service technicians, and delivery people. Beepers permit a business enterprise to keep in contact with its customers. This is also what made them so popular with the drug trade.

In Table 1, we list the VHF low band (except all-medical) phone-in paging station allocations used by the general public. Mostly, you'll hear general messages on these frequencies, but you're likely to hear some-

This wireless microphone operates in the 88 to 108 MHz band with WFM mode.

The walls can have ears! What looks like an electrical socket is actually a transmitter with a half-mile range that can broadcast every word spoken in a room. It's from Sheffield Electronics, 7223A Stony Island Ave., Chicago, IL 60649.

*Nationwide Paging Channels

Table 1. Paging frequencies and their channel designators. Sometimes these frequencies offer some rather exotic messages, especially those relating to drug sales. Traffic is sent in voice and non-voice modes.

one calling in for a drug delivery. Be especially suspicious of circumspect or very odd sounding requests, which could be veiled references to drugs.

Hide & Sneak

While search scanning between 29.70 and 35.00 recently, my scanner stopped on 30.28 MHz at a garbled and unintelligible signal. Out of curiosity, I thought I'd switch from NFM mode through to other reception modes. When I went to AM, clear comms materialized out of the chaos. It turned out to be two Aussies extolling the virtues of different brands of local beers.

The use of AM communications on frequencies we normally regard as FM territory isn't limited to Australia. I've also unearthed several US stations that deliberately conceal their comms from casual scanner reception or co-channel users by employing AM transmissions. One is a business operation, possibly in California, that I have heard on 30.00 MHz. Ma was telling Pa, "Did you get any sales? I'm going to lock up."

Some of those New York City "gypsy

cabs" use AM, too. Listen for them on 30.76, 31.08, 31.10, 31.12, and 35.12 MHz.

If your scanner can switch to AM mode, remember to try it when you come upon a signal that sounds bizarre. Besides pirates, you'll also hear AM voice pagers, and HF band harmonics. This time of the year, foreign AM stations from around the world can be heard during daylight hours. A good indicator of VHF low band skip openings to/from South America centers around several AM mode Brazilian voice and non-voice radiopaging stations that operate in the band 35.525 to 35.975 MHz (25 kHz steps).

Sidewinding

Skip traffic is piling up on 31.48 MHz and Harvey Base is having trouble contacting its large fleet of ships at sea. This station has been mentioned here many times before. It's operated from Harvey, LA by the Gulf Fleet Marine Corp.

When Harvey Base begins having trouble contacting its widespread fleet of ships, it

NOW YOU'RE TALKING!

The Code-Free Ham License is Here

Enjoy all Amateur Radio privileges above 30 MHz without having to pass a code test. All you have to do is pass a 55-question exam on basic radio and the FCC regulations. ARRL's new book, **Now You're Talking** makes understanding what is required on the test a snap! And there are exams given all over the country every weekend.

Just think how much fun you'll have communicating through repeaters, enjoy Sporadic E skip and worldwide communications on six meters when conditions are right. There's satellite communication and you can even talk to Astronauts and Cosmonauts in orbit. Enjoy friendly local communication both direct and through repeaters. Help with disaster drills and the real thing! Sound like fun? It is! switches over to AM mode. Sometimes that does the trick. If it doesn't, Harvey will try SSB and that will often make the difference as the contacts are racked up, one after another.

The use of SSB on the scanner bands is uncommon in North America, but that's not throughout the world. In some nations, it's often encountered above 30 MHz. China, for instance, is reported to have plenty of SSB radios in operation on frequencies such as 39.27 MHz. The USSR is also reported using SSB on 32.45 and 37.76 MHz.

The Cuban Connection

Cuba has long been a way station for drug smugglers as well as a port for the Soviet Navy. Our own government has not ignored the activities in the waters surrounding Castro's island paradise.

One means of keeping track of vessels in and under the waters going to and from Cuba is by means of sonar sea buoys dropped from USAF aircraft. These devices send out sonar pulses and transmit pings by radio to US sea, air and land listening posts. By comparing the pings received from several different buoys (operating on different frequencies), it's possible to gather intelligence relating to vessel movement, size, direction, speed, and type.

During one such USAF sonobuoy drop, the frequencies were 25.41, 25.59, 32.45, 36.55, 41.90, 41.95, 48.70 and 51.50 MHz. When scanning for these, listen for the characteristic sonar ping sound, just like in submarine movies!

When the sonobuoy reaches the end of its

The Bahamas are a hot spot for drug smuggling activity, much of which can be heard on your scanner. Here the USCG and Bahamian police check out a suspected smuggler aircraft that crash landed on an isolated cay. (Coast Guard photo)

useful life, it automatically scuttles and sinks to the bottom.

Wireless Microphones: They're Everywhere!

Have you wondered why wireless devices (the kind that people use for eavesdropping) are turning up on just about any frequency in the radio spectrum? Can this be legal?

Well, yes, the wireless microphones are legal. The FCC allows certain very low power devices and equipment to exist like this whether the signals they radiate are unintentional or intentional. Unintentional signals might come from computers, TV sets, scanners, cash registers, word processors,

electric typewriters, industrial welding equipment, diathermy and other scientific and medical devices, etc. Intentional signals come from things like some wireless microphones, baby monitors, wireless intercoms, garage door openers, proximity detectors. Note that some intentional signal devices don't require licenses, but are still restricted to certain frequency bands (cordless phones, and 49 MHz handheld transceivers, for instance).

If you have ever driven around town with your scanner on, then you know that at certain locations a particular frequency may briefly come alive with some kind of strange sound. If you use a computer in the same room as your home scanner you may also notice that the scanner locks up on certain frequencies when the computer is in use. These are unintentional radiations, and they turn up around office buildings, factories, shopping centers, hospitals, etc.

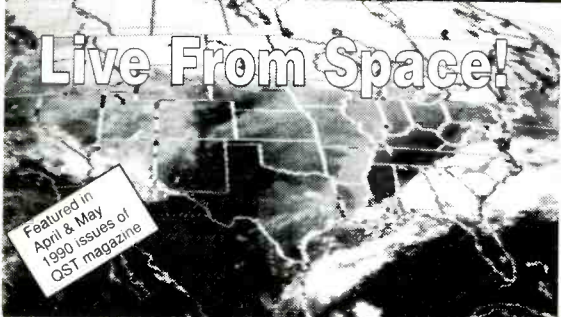

Wireless mics are plentiful these days. Most use wideband FM (WFM) mode, so put your scanner into that mode when listening for these devices.

The Menagerie Is Open

Now that you know about some of the hiding places and odd things that can be heard, it's time to tune on that secret layer of signals that are hiding beneath the top layer of police, fire, business and other more commonplace stations. Search for the unusual and it will be there.

This should be an excellent month for long-haul DX via F2 layer skip. You might want to look through the entire 25 to 76 MHz band for signals from around the world. Starts in at sunrise and keeps on going until a couple of hours after sunset.

This month there will also be a secondary peak in short-hop Sporadic-E skip. Look for these openings at any hour of the day or night, bringing in stations from 450 to 1,300 miles away. The primary periods of the year for Sporadic-E are in late spring and early summer. ■

Imagine a high-resolution, high-tech scan converter that does it all. Plug it into your receiver earphone jack and decode all APT modes — WEFAX, GOES-TAP, polar satellites and HF Marine fax. Capture, enhance, save and print in gray-scale weather facsimile using your IBM-compatible computer. Achieve professional results — often surpassing the capabilities of local TV weather reporting. Latest technology for optimal noise rejection, self-test mode, advanced menu-driven software and help windows assure easy operation.

Factory-assembled and tested — \$370, includes software and user's guide.
Easy-to-assemble kit — \$240 includes software and user's guide.

Psychological Warfare Broadcasts During WWII

*Did They Get Through? Were They Useful?
Here's What A German Intelligence Officer Thought!*

BY ALICE BRANNIGAN

Soon after World War II ended, the American military authorities in Germany came into possession of a manuscript entitled *Kriegsgeheimnisse im Aether* ("War Secrets in The Ether"), written by Wilhelm F. Flicke. Flicke had been a member of German intelligence during WWI, and worked within that structure as a radio expert until the German defeat at the end of WWII. Although his reputed opposition to the Nazi Party after 1939 supposedly got him in hot water with the political power structure during WWII, his expertise nevertheless allowed him to actively participate in monitoring, communications counterintelligence, and cryptanalysis.

Flicke's lengthy manuscript was written in 1945, immediately at the end of WWII. It is a history of the German intercept service based upon his own personal recollections, experiences, observations, and opinions. The original German-language manuscript came into the possession of the National Security Agency, and was translated into English by the NSA prior to the establishment of Executive Order 10501 of November 5, 1953. The material is therefore unclassified.

Flicke's manuscript is of historic interest, although we question and do not vouch for his "facts" (many of which seem to be fudging and pandering to the Allied victors). We certainly don't agree with more than a few of his opinions and conclusions; some are transparently ludicrous. His final summation regarding the effects of foreign broadcasting on the German people during WWII impressed us as pure fantasy. Yet, his views of propaganda broadcasting in general, nevertheless, manage to offer worthy insights from within the camp of those who "wrote the book" on the art. Keep his viewpoint in proper perspective.

Inasmuch as our December writings are always devoted to WWII, we thought that we would present you with excerpts from the chapter containing Flicke's provocative thoughts on radio broadcasting during WWII.

It is important that you keep in mind that these opinions were written soon after the

German defeat 46 years ago. They came from someone who perceived radio broadcasting from the vantage point of an observer who spent 30 years in the communications division of the German military intelligence service—a rare viewpoint for us to encounter.

Here's what Flicke reported:

The word *propaganda* has gotten a bad connotation during the last decade and a half since, unfortunately, we have had to accustom ourselves to its use, not to gain recruits for a good cause but to force upon others against their will ideas which are neither good of themselves nor useful to those upon whom they are imposed. Things have gone so far that there is a general aversion to everything connected with propaganda and an immediate resistance where propaganda is even suspected.

The different countries made use of broadcasting in different ways, and certain developments resulted in all countries on the basis of observations made. If I mention broadcast propaganda, I do so with reference to the role which broadcasting played as a means of psychological warfare.

The use of broadcasting as a means of propaganda by government originated in the Soviet Union. In this federation the enormous possibilities were recognized which centrally controlled broadcasting has for propagating specific ideas. With revolutionary revolution they set to work and created a mighty organization for the use of the government and the Communist party.

The Soviet Propaganda Machine

If we observe the type of Russian broadcast propaganda within the limits of the Soviet Union, we find that it is very primitive. However, we must not forget that Russian internal propaganda is intended for the Russian worker and peasant... and that it is calculated precisely for his concepts and his attitudes. Consequently, it has had its effects in these circles. The extent to which it

Soviet dictator Stalin's speeches were aimed so much at the Russian audiences that they bored German listeners. That's what one German intelligence analyst claimed.

QSL sent out by Moscow's station RAN (9600 kHz) in the late 1930's. This was a major Soviet propaganda broadcaster.

achieves its aim of affecting the entire population was shown clearly during WWII.

When the Russians broadcast in the same manner in German to Germans, then they showed they knew little of the soul of the German people. Only during the course of the war did they learn to take actual conditions into account, both regarding what they

Broadcasting House, London, as it looked just before WWII. The headquarters of the BBC, the building became known throughout the world.

The BBC recorded all of Hitler's many speeches, and then picked apart his lies and contradictions in their own broadcasts to Germany. One German observer felt that this type of programming had a strong impact.

and its practical methods, coupled at times with corrections of National Socialist claims, insofar as they were applied to other countries. But that was enough to make the National Socialists denounce these broadcasts as pure propaganda and atrocious lies.

France Joins In

The British were very reserved in this matter. The French, on the other hand, were somewhat more active, and in time (beginning about 1936) the Strasbourg transmitter became the mouthpiece of liberal democratic ideas.

Indicative of the skepticism with which National Socialist propaganda was secretly viewed in Germany is the fact that the Strasbourg broadcasts were listened to by everyone who had a suitable receiver.

Even at that time people in the Ministry of War and Ministry of Propaganda in Berlin were aware that in any future war a large part of the population would regularly listen to broadcasts of other countries. But since National Socialist propaganda worked chiefly with invaded or distorted arguments, there was serious danger involved in listening to foreign broadcasts, because untruths are only effective when there is no one on the spot to disarm them by a convincing presentation of the truth.

Tuning Out Foreign Broadcasts

An attempt was made to render the German people immune to foreign broadcasts. This was done primarily by shifting the whole German broadcasting program over to wire radio. The instruments were to be so devised that it would be absolutely impossible to hear foreign broadcasts.

This was a gigantic program and considerable time elapsed before it could be realized in full. The preliminary state was represented by the so-called "people's receiver" which was planned to receive only German transmissions. When World War II broke out, wire radio was still in its early stages. It was necessary to find another way of keeping foreign broadcasts from the German people. It was decided—with characteristic National Socialist thoroughness—to use the universal cure of strict prohibition. The death penalty was fixed for listening to foreign broadcasts. They went so far as to include listening to broadcasts of allied countries under the same ban.

It has been claimed that the National Socialists were good psychologists. In general that is true. They knew perfectly well that the broadcasts of other countries would be listened to in spite of all prohibitions. But in order to reduce to a minimum the resulting dangers, they established that the maximum penalty would be for listening and passing on what had been heard. They had no choice. Their system of having everyone spied on by everyone else would see to it that listening to foreign broadcasts did not get out of hand.

must say to the German people and to how they must say it.

But in spite of everything, Russian broadcast propaganda played only a subordinate role during the war. It began to have a certain effectiveness only when captured German generals, officers and enlisted men appeared on Russian broadcasts, and addressed their messages to the German people and soldiers.

Psychological warfare had begun in Europe long before the outbreak of open hostilities. Soon after the assumption of power by

National Socialism (Nazi Party), an ardent effort was made to loudly proclaim to the world the National Socialist doctrine as a panacea for all countries and all peoples. In conjunction with other "cultural accomplishments" of National Socialism (anti-church, anti-union, anti-Semitic, concentration camps, subjugation of the press, etc.), this activity aroused opposition in all foreign broadcasts.

In reality, these were not counterpropaganda transmissions but merely efforts to discuss the validity of National Socialism

BBC transmitters at Rugby during WWII.

Immediately after the outbreak of the war the French started a violent agitation, using transmitters in Strasbourg and Paris. It was directed against the German government and its responsibility for bringing on the war. The management of this propaganda was poor. One attempted to use a clumsy instrument on a clumsy object and in so doing, caused more damage than would be suspected.

When military events turned against the French in 1940, the broadcasts on these stations became a wild scolding and, with that, lost all effectiveness. These broadcasts were listened to only with loathing and shrugging of shoulders.

The BBC Tries For German Audiences

Somewhat more clever were the BBC transmissions, but they revealed such a lack of actual conditions in Germany that the listener often had to shake his head. Had the English been asleep these past six years? Didn't they know what happened in Germany since 1933? What became of their celebrated "Secret Service"? If it hadn't learned more than appeared in the sometimes downright simple propaganda, then the British were indeed badly off. Many of the statements could be checked at once and shown to be incorrect.

There was a basic change when Brandon Bracken took over at the Ministry of Propaganda (in London). The way in which the entire style of broadcasts to foreign countries changed in about four weeks was really striking. From an unsure and tortuous path, one shifted resolutely to the only correct path under the circumstances—to the path of truthful, factual reporting. That alone was so hard and annihilating for National Socialism that any added propaganda terms, any injected propaganda purpose, could only weaken the effect. It was necessary to depict things in such detail and in such fashion that anyone could check their accuracy.

At the very time when the BBC broadcasts were making truthful reporting the foundation of their propaganda, Dr. Goebbels was proclaiming openly in Berlin, "Propaganda is never limited to the truth but is only determined by the purpose."

Truth is the enemy of distortion and the lie. Only when unadulterated truth is used as a weapon can it be effective in the long run. National Socialist propaganda relied upon the "lie of the moment;" that is to say, one boldly asserted anything and thus achieved for the moment the desired effect. If time ultimately revealed the untruth of the statement, one had accumulated meanwhile a number of new "facts" which could be trotted out with much to-do and which would so fully claim public interest that no thought would be left for the former "stupidity."

English propaganda (if we insist on using that term), under Brandon Bracken, could now afford to collect and toss back in wholesale fashion the contradictions in German

speeches, publications, press, and broadcasts. That alone was very effective. For this purpose, they recorded every speech of Hitler, Goering, Goebbels, and others, every military and political lecture, every German broadcast item, and so were able to produce, as it were, a multitude of living witnesses. That was damnably painful for German propaganda, especially as there was nothing to offer in return. Only one course remained for reducing the effectiveness of these broadcasts—that was jamming.

So now the Germans used every available means to make reception of the German language broadcasts from London impossible. They were rarely successful because the English sent out their broadcasts on as many as 10 frequencies and reception was always possible on at least one or two of them. Naturally, this varied from place to place. The jammers did not really interfere everywhere, and anyone seriously intending to hear the BBC generally succeeded (there were, of course, exceptions).

I am not asserting that the English were like lily white angels and limited themselves to 100% fact and no propaganda. By no means! They admitted sending out propaganda broadcasts, only they always separated them from straight reports. Everyone knew these things were invented, but the broadcasts were spiced with so much spirit and humor that the people liked to hear them. They had not been hewn with a broad ax like the output of Berlin's Ministry of Propaganda. They showed a cleverer hand and were well worked out.

While, in Germany, the penalty for listening to foreign broadcasts was death, the British Government did not attempt to limit listening to German broadcasts. The Germans had organized a grandiose program in the English language as an information service for listeners in England, but if anybody ever missed the mark, if any laborious effort ever reached 100% failure, it was here. It even reached the point where the British recommended listening to the German stations because what was offered provoked a shaking of heads or a compassionate smile.

I had remarked that the National Socialists were good psychologists. This was only true in respect to their own people. When dealing with other countries they displayed, without exception, a total inability to enter into the thinking of other people. For that reason, German National Socialist propaganda was usually merely a flash in the pan, unless it was supported by very practical economic interests.

American Broadcasts

The United States set up a German Language broadcast, the "Voice of America, the Voice of One of the United Nations," immediately after the beginning of the war. The broadcasts, however, were difficult to hear and found little following.

Of all of the American broadcasts in the German language, the most interesting were the addresses of the well known au-

thor, Thomas Mann. They were permeated by much spirit and knowledge, were excellent in style, and inspired by a glowing hatred of National Socialism.

Clandestines

Thusfar I have mentioned only broadcast stations which worked openly and without disguise, i.e. could be recognized by the announcer's statement as being in Moscow, London, New York, etc. But there were other transmitters which worked with the most varied disguises. If one watched carefully, however, one could always determine after a while the country in which this or that transmitter was located.

For instance, there was the *Transmitter of the SA-Fronde*. It worked in the Soviet Union and tried to give the impression that it was located in Germany and represented an opposition group within the SA. The *German People's Transmitter* was likewise in Soviet territory. It was usually easy to recognize transmitters working from the Soviet union because of the number of times *Kameraden!* occurred. Almost every second or third sentence began thus.

The so-called *Atlantic Transmitter* was listened to by many Germans. Its offerings were not always well chosen, its information not always dependable. It worked from Algiers and was the U.S.A. propaganda station for the German armed forces. The so-

COMMUNICATIONS ELECTRONICS INC.

Emergency Operations Center

has expanded to our new two acre facility and World Headquarters. Because of our growth, CEI is now your one stop source for emergency response equipment. When you have a command, control or communications need, essential emergency supplies can be rushed to you by CEI. As always, for over twenty three years, we're ready, willing and able to help. For 1992, we're introducing new products from Uniden, Shinwa, ICOM, Ranger Communications Inc., Grundig, Sangean, Magnavox and RELM.

NEW! Shinwa SR001-B

List price \$799.95/CE price \$479.95/SPECIAL
Continuous coverage from 25,000 through 999,995 MHz. If you're looking for an excellent synthesized scanner designed for mobile surveillance use, the new Shinwa SR001 scanner offers features never before offered at such a low price. When you purchase the wide band scanner from CEI, you'll get a free infrared wireless remote control that allows you to control your scanner from over 20 feet away. Selectable frequency steps of 5.0/10.0/12.5/20.0/25.0/50.0 or 100.0 KHz. are available. Dual antenna inputs terminating in an "N-type" and "BNC" connectors are included. Other features include 200 memory channels grouped in 10 banks of 20 channels, easy to read multi color LCD display, lithium battery for memory back-up, 35 channel per second high speed scanning, priority, timer and even an alarm to alert you to transmissions on your choice of one special frequency. We even include a mobile mounting bracket. The SR001 can be used for base station use with the purchase of the ACS-B 12 volt DC power supply for only \$34.95 each. A great sounding external speaker #SPE-B is available for only \$24.95.

SHINWA POCKET PAGERS

The fire department hazardous materials response teams and police department SWAT crews who need a reliable radio alerting system stake their lives on Shinwa. We offer a two-tone pocket pager with monitor feature and even a voice storage option at an affordable price. To order, we need your paging frequency as well as tone reed frequencies. For other configurations or two-way radio information, please fax us your specifications to 313-663-8888 or phone 313-996-8888.

ICOM ICR1-B

List price \$799.95/CE price \$529.95/SPECIAL
Continuous coverage from 100 kHz through 1,300 GHz. The ICOM ICR1 keeps you in touch with the world when you're on the go. The palm-size ICR1 is equipped with AM, FM and wide-FM modes to fully answer your monitoring needs. With 100 memory channels and a dual frequency selection system, you get a top-class communications receiver. Not only can you program scan searches only for signals within a specified frequency range, it's also possible to write frequencies of received stations automatically into memory. In addition, unwanted frequencies can be skipped. Order ICBC72-B battery rapid charger for \$99.95 and a BP84 1,000 ma. battery pack for \$74.95.

ICOM ICR100-B

List price \$799.95/CE price \$579.95/SPECIAL
Continuous coverage from 100 kHz through 1856 Mhz. Now you can bring a wider world of broadcasting, VHF air and marine bands, emergency services and many more communications into your vehicle. Icom's advanced ICR100 fully covers all the stations worth hearing with up to 100 memory channels and a multitude of features.

Bearcat 200XLT-B

List price \$509.95/CE price \$239.95/SPECIAL
12 Band, 200 Channel, Handheld, Search, Limit, Hold, Priority, Lockout Frequency range: 29-54, 118-174, 406-512, 806-956 MHz. Excludes 823,9875-849.0125 and 868,9875-894.0125 MHz. The Bearcat 200XLT sets a new standard for handheld scanners in performance and dependability. This full featured unit has 200 programmable channels with 10 scanning banks and 12 band coverage. If you want a very similar model without the 800 MHz. band and 100 channels, order the BC100XLT-B for only \$179.95. Includes antenna, carrying case belt loop, ni-cad battery pack, AC adapter and earphone. Order your scanner from CEI today.

Bearcat 800XLT-B

List price \$549.95/CE price \$239.95/SPECIAL
12-band, 40 Channel. Nothing excluded in the 800 MHz. band. Bands: 29-54, 116-174, 406-512, 806-956 Mhz. If you do not need the 800 MHz. band, order the Bearcat 210XLT-B for only \$178.95.

Magnavox® Satellite Phone

CE price \$48,880.00/Special order - allow 45 days for delivery. When war broke out in Iraq, you heard all the action because CNN had a satellite telephone. When a disaster such as an earthquake or a hurricane strikes your community and communications are disrupted, you can depend on instant reliable communications, just like CNN did using your Magnavox MagnaPhone. Inmarsat communication satellites are in geostationary orbit along the equator. They beam two-way voice and data transmissions between your satellite phone and fixed earth stations. In most instances, telephone calls are dialed directly once you have selected the satellite serving your location. No matter where you are on the planet, the MagnaPhone automatically selects the Land Earth Station (LES) nearest the destination called. This makes placing a call as easy as using a standard telephone. Dual ID numbers permit a separate Inmarsat telephone number to be used to route calls to one of the external telephone ports which could be used for a fax machine or a computer data line. For telephone, telex, fax and data communications anywhere in the world, the new MX2020P MagnaPhone is the most compact Inmarsat-A, Class 1 terminal available today. Like a cellular phone, airtime will be billed to your account. The new MagnaPhone weighs just 47 lbs (21 kg), including the antenna. Add the optional ruggedized case (only \$950.00) and it can travel as airline baggage on commercial carriers. When you arrive at your destination, installation can be done in less than 5 minutes. For more information call our Emergency Operations Center at 313-996-8888.

New Schedule - W2XAD - March 15th
10 a.m. to 6 p.m. EST.

M. S. Gordon Taylor

We acknowledge with thanks your communication reporting reception of our short-wave program on the above date from station W2XAF-W2XAD.

W2XAF, operating on a frequency of 9530 kilocycles or 31.48 meters, is on the air daily from 4:00 p.m. until 12:00 p.m. Eastern Standard Time.

W2XAD, operating on a frequency of 15,330 kilocycles or 19.56 meters, is on the air daily from 10:00 a.m. until 3:00 p.m. Eastern Standard Time.

Special transmissions, other than the above, will be announced at sign-off periods on both stations.

Regards
E. J. [Signature]

GENERAL ELECTRIC
SCHENECTADY, N. Y., U.S.A.

MAR 8 1942

The American broadcasts to Germany during the war, said a German intelligence officer, were weak and had no impact. This 1937 QSL is from General Electric stations W2XAF (9530 kHz) and W2XAD (15530 kHz), which evolved into station WGEO, used for such broadcasts during the war years.

called *German Freedom Station* was in the same area under the same direction.

For a time, *Gustav Siegfried Eins* made quite a stir. It was located in England and used as its theme song the same melody as the theme song of *Deutschlandsender*. Several times each evening at seven minutes before the hour this transmitter brought a talk by the Chief. The Chief's language was

raw enough to make a hard-boiled soldier at the front turn pale. He gave descriptions of the private lives of the National Socialist bigwigs. Generally these were pure fiction or at least greatly exaggerated. One of the maddest tales was his report on "Schwarze Jutta," the supposed lady friend of a German admiral and the principal heroine of the wildest goings-on. Such wild stories wearied and repelled the listener. These broadcasts did not have the least effect and people asked themselves, "if the Chief uses such language, how will the underlings talk?"

There were a huge number of other transmitters but there importance was slight.

The Importance of Foreign Broadcasts

The importance attributed to foreign broadcasts in official circles and the danger one saw in them is apparent from a decree of the Chief Signal Officer, General Gimmeler, dated 11 October 1944, regarding listening to foreign transmissions. Among other things, he said, "It is a sign of the most pitiful baseness and of the most dangerous weakness when one listens to foreign broadcasts . . . I order ruthless intervention without regard for person or rank whenever this greatest of all crimes is discovered."

Along with the type of broadcasts already described, there was one other—shall we say "active" use of radio, especially by the British. I mean the so-called special messages which were intended for agents employed in Germany. They were short and might read somewhat like, "My mother is at home," or "Vienna is in Austria," or "The first window is lighted, the second window is dark," etc. These were messages agreed upon in advance which had references to parachute drops, agent meetings, changes of frequency, and the like.

Occasionally, pieces of music were played to convey prearranged messages, primarily

in the Polish broadcasts of the BBC which were intended for the Polish resistance movement. They referred chiefly to parachute drops; these were regularly announced melodies, e.g. the soldier song *Es reiten die Ulanen . . .*, or *Oh du Mein Rosmarin, entfalte dich . . .*, or, "Die tausend Tapfern, and so on.

Role of WWII Broadcasts

Summing up the role of broadcasting as a means of psychological warfare, we can describe it as far reaching and significant. But if anyone should get the idea that the German people lost the war because they surrendered to the poison of hostile broadcast propaganda, he would be missing the point entirely. If things had worked this way, England would have had to lose the war because German broadcasts for five years were aimed at breaking down the will of the English people to resist. Or else the German people should have given in late in 1940 when British propaganda was trying to divide and infiltrate. But it merely met with resistance, just as the broadcast propaganda of Dr. Goebbels was rejected in England.

The importance of the English, Russian and other broadcasts seems to me to lie in another quarter; they helped the German people in their search for the truth, in their effort to learn the real relations of things, in its conscious and unconscious urge for spiritual recovery, in its search for a way out of the labyrinth of aberrations. If, after the outward collapse of the National Socialist reign of terror (a collapse which was inevitable), the German people showed that a vast majority had long since broken with that negative system and created conditions favorable to a positive course, then a good part of this cure may be ascribed to the critical searching of the broadcast frequencies. Broadcasting showed that it can only be an effective weapon if it uses the truth. And that is a lesson for the future.

Unquote

Thus we end the excerpts concerning WWII broadcasting contained in Wilhelm F. Flicke's manuscript, written in 1945. Our excerpts were taken directly from the original 322-page NSA translation, dated 1954. For those wishing to read the complete *War Secrets In The Ether*, a version of the Flicke manuscript was published in 1977 by Aegean Park Press. We don't know if the book is still in print, or its price. You might wish to check with Aegean Park Press (P.O. Box 2837, Laguna Hills, CA 92654) for further information.

I'll add that whatever lessons propaganda or truth broadcasting might have taught for the future, they are nothing compared to the horrible lessons Hitler's regime taught—if only they are never forgotten.

Next month we will return with our regular format of bits and pieces from here and there. Best wishes of the season to you and your family. We look forward to your joining us in January. ■

European propaganda broadcasters kept right on going throughout the war. This announcer in Rome didn't let a poison gas practice drill deter him from doing his job.

Outlaws & Hackers On The Computer Frontier

When hacker Bob Morris succeeded in hanging up an important national computer network three years ago, the incident made national headlines. It highlighted just how vulnerable the technology is that controls many of societies functions from national defense to credit reporting to the stock market. Yet, the Morris case was the public's first glimpse into a growing underground of high-tech renegades known as cyberpunks.

Reporters Katie Hafner and John Markoff, in their new book *Cyberpunk: Outlaws and Hackers on the Computer Frontier*, reveal who the cyberpunks are, the tech thrills that motivate them, and the amount of actual threat they pose in an age of complex computer networks.

The authors feel that in the 1960's and 1970's, being a hacker was a badge of honor, signifying to outsiders fanatical dedica-

tion to an exotic technology, but which was a matter of course to the hackers themselves. The inspiration for this book came about when the authors began to see a change in the way computers were being used, with early omens of cyberpunk beginning to appear. These, they say, were young people who became so obsessed with computers that they carried their activities beyond what computer professionals considered acceptable limits of ethics and legality.

This 368-page hardcover book is the first in-depth look at this world, particularly spotlighting three hackers whose exploits have been audacious and potentially damaging.

One is Kevin Mitnick, who was successful at hacking into the top-secret software planning group at a major computer manufacturer. Embarrassed, the manufacturer had managed to limit publicity about the incident — although this book now has the whole story.

Next, Pengo is examined. He was a West German hacker who tried to get military information to sell to the Soviets. It was more of an outlaw fantasy of Pengo and his friends than a political statement, but it caused Pengo to roam through military computer networks worldwide looking for secrets. He was eventually caught because of his persistent break-ins.

Finally, Robert Morris is profiled. As brilliant as he was irresponsible, Morris inserted a potent computer virus into the national Alphanet computer network linking the Pentagon, defense contractors, and research universities.

As the authors explore the cyberpunk culture, they when and why the hacker ethos changed from one of benign intellectual fascination to one that fostered criminal behavior. They examine this preoccupation of thousands of persons whose knowledge of computers coupled with their ulterior motives has kept computer security experts swimming as fast as they can to keep their data safe.

Cyberpunk is an engrossing book; a dispatch from the frontiers of technology relating to an important issue of public concern. For persons interested in computers, communications, technology, and communications, it's doubly fascinating.

Cyberpunk is published by Simon & Schuster. You should be able to buy it at (or order it through) most bookstores. The price is \$22.95. If the bookstore has to order it for you, be sure to tell them the ISBN, which is 0-671-68322-5.

Light Reading

If you're a student, systems engineer, physicist, computer scientist, electronics hobbyist, technician, cable TV operator, or telecommunications manager, you may find it useful to have a complete reference tool or practical applications guide to fiber optic communications. With its high performance and limited space requirements, fiber optic cable is quickly taking over a large number of the jobs that were formerly the exclusive territory of copper cables.

In the 1,178-page hardcover reference entitled, *The Fiber Optics Handbook, 2nd Edition*, you'll find detailed information on the transmission medium; sources and detectors; optical cables and passive devices; optical systems; integrated optics; advanced topics in optical communication.

Eighty percent of the earlier edition has been completely revised, and you'll now find detailed descriptions of the latest advances in fiber optics, including: single-mode fibers; optoelectronic components; polarization aspects; nonlinear aspects; coherent systems; applications in distributed and local area networks; and more.

Also included are chapters on fabrication techniques and photonic communications.

You'll be impressed by the scope and detail of this book's coverage. It's the most up-to-date and fully comprehensive resource available to professionals and students in this rapidly expanding field. Balancing concepts, experiments, and actual hands-on practice, the reader is provided with all of the knowledge and working tools necessary to engage in competently in this exploding technology.

While there are considerable amounts of data and graphs that can be used when working with fiber optic systems, the book will also enable you to understand the fundamentals in the fascinating world of fiber optic technology.

Fiber Optic Communications Handbook, 2nd Edition, is \$89.50 from TAB Professional and Reference Books, Blue Ridge Summit, PA 17294-0850. Order book Number 3201.

The Hidden Meanings Explained

Telephone technology has taken giant strides in the past decade, with enormous expansion in toll-free 800 services, in toll 900 service, and other areas relating to long distance. To a great extent, this has been the result of many companies other than AT&T

National 800/900 Telephone Service Code Book

A Directory of the Hidden Codes in 800 & 900
Long Distance Phone Numbers; Plus a Listing of
Long Distance Carrier Access Codes!
1,641 Listings!

by Kenneth Sperry

entering the business of providing various
long distance and other services.

The first three digits following the "800"
in a toll-free number are actually a hidden
code that specifically identifies the particular
long distance carrier handling that call. Present-
ly there are more than 520 such "800"
codes assigned to more than 155 different
long distance carriers. Most people don't
realize this.

For example, in telephone numbers such
as (800) 321-2121, (800) 874-0981, or
(800) 292-2355, the codes 321, 874, and
292 denote that those using these numbers
are doing so via the services of AT&T. Like-
wise, numbers such as (800) 766-2255 and
(800) 888-8255 have codes that show they
are handled via MCI facilities.

Similarly, the first three digits of each
"900" telephone number are also a con-
cealed code number that identifies and re-
veals the specific carrier handling the call.
Right now, there are more than 320 such
"900" codes assigned to 86 long distance
carriers.

In addition to these codes, and perhaps
even more interesting, are the Carrier Iden-
tification Codes (CIC's). These are three-
digit telephone dial-up numbers used for di-
rectly accessing the facilities and services of
long distance carriers. At the present, there
are well over 750 CIC's assigned to nearly
600 firms.

Interestingly, "private" CIC's are even
held by states, federal agencies, military
switchboards, banks, satellite companies,
data and computer services, emergency
networks, credit card companies, radiopag-
ing services, and businesses (such as Dom-
ino's Pizza, Eastman Kodak, and others) for
their own internal communications.

Imagine if you could obtain the key that

reveals all 800 codes, 900 codes, and CIC's.
It would provide a lot of information on tele-
communications systems you use every single
day. This might effectively be put to
many professional uses, or to add to your
hobby interest in communications, or mere-
ly used to inform you of who operates these
systems.

All of these hidden codes (more than
1,600 in total), with their corresponding
meanings, are now provided in a revealing
and useful new directory called the *National
800/900 Telephone Service Code Book*,
by Kenneth Sperry. This book also has de-
scriptive text discussing and explaining 800
and 900 services, as well as how CIC's are
used to access the telecommunications fa-
cilities of long distance carriers and others.
Listings cover USA, Canada, and the West
Indies.

One example of how access codes can
come in handy was explained in a radio
commercial I heard recently while I was in
New Jersey on business. It said that persons
living in five northern NJ counties who were
calling New York City could save 10% to
30% on the cost of their calls if they dialed
"10-NJB" (10-652) ahead of the number
they were calling. I wondered why. When I
looked up it up in the *National 800/900
Telephone Service Code Book*, I learned
that 652 is the CIC code for gaining access
to "New Jersey Bell - Corridor" facilities,
also that "10" is the CIC prefix used for ac-
complishing this in "equal access" areas.

This was my first clue that there's a lot of
useful information here. Since then, I've
looked up all sorts of "800" and "900"
codes in phone numbers I have come across,
and found out who the carriers really are. I
have also tried a couple of the CIC access
codes in the book and hooked up with sev-
eral people and organizations who were
more than a little surprised to hear from me.
I would suppose that some adventuresome
soul with talent and imagination could em-
bark on many more excellent (or bogus) ad-
ventures than even Bill and Ted did.

In addition to this information, author
Sperry offers a brief discussion on the new
Unix security system designed to thwart cy-
berpunks. There are some toll-free numbers
listed, too, including one that gets a local
weather forecast throughout most of the
USA.

The *800/900 Telephone Service Code
Book*, by Ken Sperry is \$9.95, plus \$3.50
shipping (UPS to USA; 1st Class Mail to
Canada, APO, FPO, AK, HI, GU, PR, and
VI) from CRB Research Books, Inc., P.O.
Box 56, Commack, NY 11725. NY State
residents please add \$1.08 sales tax. This
book is also available from many dealers
carrying CRB's books.

RTTY Press Services

Many who DX on the RTTY bands enjoy
military, diplo, weather, maritime, and
mystery traffic. Yet, among the mainstays
on these bands are those stations around

the world sending news broadcasts and bulletins in various languages. Of particular interest to DX'ers in North America are those with scheduled RTTY news transmissions in English.

RTTY news transmissions chatter away at all hours of the day and night from the USA, France, Cuba, Germany, USSR, Japan, Poland, Argentina, Yugoslavia, Belgium, Vietnam, Philippines, Egypt, Syria, Turkey, Iraq, Libya, Iran, Greece, and many other nations. Some are from official government news agencies, others originate from commercial news services. When you copy these transmissions, you're getting the news while the stories are breaking — just as soon as local and national news media are receiving the same information for use in newspapers and on radio and TV. This gives the RTTY DX'er an advance look at news stories in-progress, even before they come out in the media.

News items include local and world events, sports, trade, and financial data.

The reference guide to these transmissions is *World Press Services Frequencies, 5th Edition*, by Tom Harrington, W8OMV. This newly updated directory lists all RTTY news transmissions according to transmitting time, according to transmission frequency, and according to country and press service. It also includes valuable general information on RTTY monitoring, including selecting equipment and getting started.

This fine information source is published

by Universal Electronics, Inc., 4555 Groves Road, Suite 13, Columbus, OH 43232. The book is \$8.95, plus \$3.00 shipping.

In Addition . . .

The *NCVA Cryptolog* is a wonderful tabloid-size newspaper issued quarterly by a worthy organization called the Naval Cryptologic Veterans Association. It's edited by Graydon A. Lewis, who is a ham and enthusiastic POP'COMM supporter. The NCVA is primarily comprised of USN vets who were involved with crypto and signals intelligence while on active duty.

The latest issue of *The NCVA Cryptolog* is Vol. 12 No. 5, and it's a beaut, being a full

three years in preparation. This is a 48-page edition filled with members' first-person codebreaking and signal intercept experiences while on duty in Alaska during World War II. Loaded with rare photos and maps, as well as stories you haven't heard or read before.

The COMINT articles by Capt. Whitlock (USN) and Capt. McIntire (USMC) alone are worth the \$16.00 price of this special edition, which we highly recommend to anybody interested in reading many exciting communications-related war experiences on the occasion of this 50th anniversary of the start of the war in the Pacific.

The special Alaskan edition can be purchased from the NCVA, 4809 Listra, Road, Rockville, MD 20853. Get your copy while they've still got a supply of them left.

We enjoyed seeing the premier copy of a new newsletter called *Scanning Wisconsin*, edited by Ken Bitter. Its name is self-explanatory, and the first issue was chock full of newsy information and frequencies of interest to Wisconsin scannists, including a product review. We'd say that here's a publication worthy of the support of Wisconsin scannists. They say they publish six times per year for a one year subscription price of \$9, or two years for \$17. Canadian orders add \$3 per year. A sample copy is \$1.50, plus 52 cents shipping/handling. Its put out by AJC Inc., W. 17912 Pearl Dr., Muskego, WI 53150-9608.

The Radio Animal: Still Hiking Up the Jolly Roger

The Public Just Loves This Pirate, The FCC Doesn't

BY ANDREW YODER

Ask the average guy on the street, "Where's the best city in America to find the pirates?" More often than not, he'll say "Pittsburgh"—especially if you are talking to a baseball fan. Check the sports section and you will find that the Bucs had a great year in 1990.

On the other hand, if you ask the FCC the same question, they will say "Pittsburgh". But if you ask them, "Who is the leader of the Pittsburgh pirates?", they probably won't say Barry Bonds, Bobby Bonilla, or even Doug Drabek. They'll go with the Radio Animal.

The Radio Animal is not yet a "household name," but he is beginning to emerge from amongst the ranks of the pirate radio underground. Aside from being mentioned in *Popular Communications*, and other hobby radio magazines and newsletters, his pirate station has been featured in several national and regional magazines, on the evening news of a major television station in Pittsburgh, and in the limelight of a "behind-the-scenes" videotape on pirate radio.

Beginnings

Although it might appear that the Radio Animal has just broken into the scene, his pirate experience actually dates back to around 1980. Then, his love for radio drove him into experimental broadcasting. "I used to sit by the radio late at night with the lights turned off for atmosphere and listen to distant stations on the AM broadcast band. Actually, I still do," said the Radio Animal.

Gradually, the Radio Animal began to experiment with low-power hobby broadcasting. Over the years, he constructed various homemade transmitters with scrapped electronics; he added second-hand audio equipment and record albums that were either bought at yard sales or salvaged from the dumpster of the local FM rock station. "Some of my equipment was crude, but it worked," said the Radio Animal pointing to a silver, aluminum-foil covered box that served as a mixer. "I used it (the mixer) until I had the money to buy one from Radio Shack. It still works, though."

With powers as high as 60 watts output,

his local stations covered Pittsburgh even though he set the frequencies in the middle of the standard AM broadcast band. Unfortunately, the combination of unresponsive listeners and the lack of a maildrop (although he occasionally announced his home telephone number for requests) restricted the Radio Animal from receiving much feedback.

The 1987 ship-board broadcasts from Radio Newyork International (RNI) forever changed the hobby for the Radio Animal. For the first time, he learned that other radio hobbyists were experimenting with broadcasting without a license—pirating. The RNI crew inspired him to consider regional and/or national-coverage pirating.

WKND, Weekend Radio

After being persuaded by a friend, the Radio Animal initiated plans for a new station to operate on 1620 kHz and 6240 kHz, two

The Radio Animal strikes a pose in the WKND basement studio.

of the frequencies formerly used by RNI. For its initial broadcast, WKND operated on Halloween evening 1988 on 1620 kHz. The AM transmitter was home-brewed and adjustable for up to 60 watts of peak output power. In order to "push" the low-wattage

A special QSL from WKND's Halloween "Horror Jam" in 1989.

WKND

WEEKEND RADIO

Dear Free Radio Listener,

Thank you for listening, and taking the time to write to, WKND--Weekend Radio. It's always great to hear from those who listen - after all, there are more ways to communicate than just radio!

THE CONCEPT

Although WKND is mostly a hobby effort at this point, there are other reasons for our broadcasts, for example: to act on what we believe is our (and everyone's) right to use the airwaves; to be an outlet for so-called "underground" programs, or anything we would wish to transmit; to work and experiment with the technology of radio systems, just for the thrill of it, etc. Above all the idea is communication - to present our thoughts and ideas to you.

A BRIEF HISTORY

The thought that something has to be done about the state of radio has probably been with the 'Animal since the late 70's, but it took the shipboard broadcasts of Radio Newyork International in late 1987, to give us direction. After listening to their tests on 1620 KHz., WKND was born. We put the station together throughout the Summer of 1988, and made some tests. Our 'official' debut was on Halloween of '88 with a 4 hour "Horror Jam" of music, skits, and ID's. Power was 60 watts on 1620 only. Even so, the broadcast was widely heard. Early in 1989 we began transmitting on shortwave at 6240 KHz. with 25 watts output. Even though the station's range was increased, we didn't want to abandon 1620 completely, so recently we've been simulcasting on both frequencies at once!

STATION EQUIPMENT AND OPERATION

WKND is made up of both bought and built equipment. Most of the studio is bought; turntables, tape decks, mixer board, microphone, etc. However, the audio processing chain is hand built because the units were either too expensive, or not available when we needed them. Both the 25 watt and the 60 watt 1620 transmitters are homebrew. The shortwave unit is a Heathkit HX-11 CW ham transmitter that was bought at a flea market for \$10. We built and installed a regulator modulator to convert it to AM. Both lowband and highband transmitters are modulated by a home stereo used as a power amp. With this crazy array of equipment, it's no wonder we've been called a mongrel station!

WKND programs are pre-recorded or live. I personally like live better because of the spontaneity, so we've been doing more of these lately.

Well, free radio listener, I, Radio Animal THANK YOU for writing in to WKND. We wish you the best that pirate DXing has to offer, in the 90's and beyond! Tune us in again!

Yours Very Truly in the Power of Free Radio,

Radio Animal
Radio Animal

A promo sheet from WKND.

signal as far as it would go, 290 feet of aluminum wire (from a television degaussing coil) was hoisted into the air with 10 helium balloons. Amazingly, WKND was heard across the entire Northeast for this test broadcast.

During the early stage of WKND, the station operated mysteriously. Most of the broadcasts were aired around midnight Eastern time, and featured a variety of progressive/space music by Pink Floyd, Moody Blues, Count V, etc. Clashing greatly with the "regular format," songs by Michael Jackson, Rigor Mortis, Weird Al Yankovic, and others were occasionally thrown into the pot. Adding to the strange atmosphere, WKND signed on and off with the theme from *Dr. Who* (a British science fiction television program) and the announcers opted for brief IDs, rather than the long discussions that sometimes dominate pirate programming. "We felt a bit uncomfortable about saying much at that point, and besides, it added to the overall effect," said the Radio Animal.

Early in 1989, WKND suddenly flipped formats from almost no-talk space music to a strange combination of rap, heavy metal, pop, and disco music with frequent "chatter" from the announcers. The new format and the fact that the frequency was shifted to 6240 kHz (from 1621.3 kHz) fooled a number of listeners into believing that the broadcasts emanated from separate stations.

By March 1989, some of the mysteries that surrounded WKND began to dissipate when the station linked up with a maildrop in Beaver Falls, Pennsylvania (now in Blue Ridge Summit, PA). After this point, the Radio Animal responded to listeners with promo sheets and lengthy letters about the station.

In order to answer the backlog of mail and also to work on plans, equipment, and programming for the station, the Radio Animal was rarely active in the summer of 1989. "I like to take things slow and think about a situation before I just jump into it." On the bench for the summer were plans for a first anniversary Halloween show and for a high-

MFJ SHORTWAVE ACCESSORIES REMOTE ACTIVE ANTENNA

MFJ-1024 Receive strong clear signals from all over-the-world with this 54 inch active antenna that rivals long wires hundreds of feet long.

\$129.95 "World Radio TV Handbook" rates the MFJ-1024 as "a first rate easy-to-operate active antenna ... Quiet with excellent dynamic range and good gain ... Very low noise factor ... Broad frequency coverage ... the MFJ-1024 is an excellent choice in an active antenna."

Remote unit mounts outdoors away from electrical noise for maximum signal and minimum noise pickup. Mount it anywhere - atop houses, apartments, ships, buildings, balconies.

Covers 50 KHz to 30 MHz. High dynamic range eliminates intermodulation. Control unit has 20 dB attenuator, gain control. Lets you switch

2 receivers and auxiliary or active antenna. 'On' LED. 6x2x5 inches. Remote has 50 ft. coax and connector. 3x2x4 in. 12 VDC or 110 VAC with MFJ-1312, \$12.95

INDOOR ACTIVE ANTENNA

MFJ-1020A Now you'll rival or exceed the reception of outside long wires with this tuned indoor active antenna.

\$79.95 "World Radio TV Handbook" says MFJ-1020 is a "fine value ... fair price ... best offering to date ... performs very well indeed."

Its unique tuned circuitry minimizes intermod, improves selectivity, reduces noise outside the tuned band. Functions as a preselector with external antenna. 0.3-30 MHz. Telescoping antenna.

Controls are Tune, Band, Gain, On-Off/Bypass. 6x2x6 in. Use 9 Volt battery 9-18 VDC or 110 VAC with MFJ-1312, \$12.95

ANTENNA TUNER/PREAMP

MFJ-959B Don't miss rare DX because of signal power loss between your antenna and receiver.

\$89.95 The MFJ-959B provides proper impedance matching so you transfer maximum signal from your antenna to your receiver from 1.6 to 30 MHz. You'll be surprised by significant increases in signal strength.

20 dB preamp with gain control boosts weak stations. 20 dB attenuator prevents overload. Select from 2 antennas, 2 receivers. 9x2x6 inches. Use 9-18 VDC or 110 VAC with optional AC adapter, MFJ-1312, \$12.95

For your nearest dealer or to order:

800-647-1800

Order from MFJ and try it. If not satisfied return within 30 days for refund (less s/h). Add \$5.00 s/h. One year unconditional guarantee. Free catalog.

MFJ ... making quality affordable

CIRCLE 156 ON READER SERVICE CARD

fidelity 1620 kHz transmitter with separate equalizers on each audio frequency band.

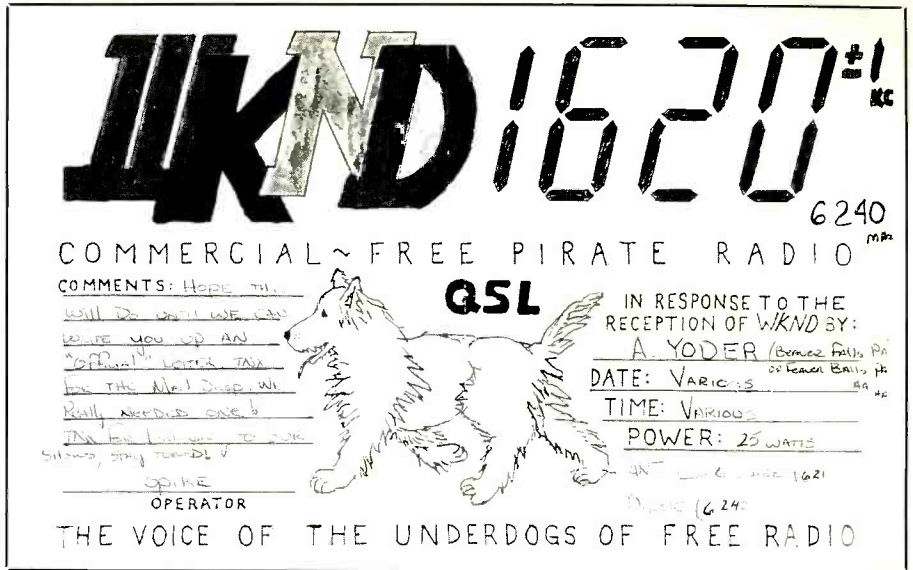

WKND rolled on the end of 1989 with high points as the first anniversary "horror jam" and a 1621 kHz broadcast that netted reports from as far away as Wisconsin, with only 25 watts output. Featuring a slick mix of songs (such as "Please Mr. Gravedigger," "Riders on the Storm," and "Sympathy for the Devil"), layered seasonal sound effects, public service announcements, and light talk, the Halloween WKND broadcast was also one of the station's most memorable.

Unfortunately, the Halloween broadcast was also WKND's last regular program (not including a handful of odd-frequency and 1621 kHz broadcasts that were only heard by a few listeners). Although none of the regular listeners realized it, the Radio Animal picked up a nasty habit of testing his 1620 kHz transmitters on two weeknights, back-to-back.

The FCC did spot this flaw in operations and field agents from offices in Philadelphia, Pennsylvania and Buffalo, New York were sent out to locate the station. On February 7, 1990, WKND was testing the transmitter for the second night in a row on 1620 kHz. Around midnight (local time), the Radio Animal heard a knock at the window of his basement studio. Instead of finding one of his friends at the window, the Radio Animal found John Rahtes, an agent from the FCC field office in Philadelphia.

"I was surprised," said the Radio Animal. "I didn't expect that the FCC would be at the door, especially at midnight." In the end, the bust went without incident: the Radio Animal showed the agents around the station studio, and he was fined for his activities (the fine was later reduced in light of WKND's cooperation).

At the time, the bust appeared to be the death of WKND and the end of the Radio Animal's broadcasting career. The March and April 1990 newsletters from ACE featured interviews about the WKND bust. The Radio Animal even announced his retire-

An early WKND QSL signed by Spike.

ment from the "free radio scene" and expressed his desire to find an announcing and/or production job at a commercial broadcaster. Meanwhile, other pirate activities rolled on, nearly as active as ever.

Even though the WLIS program was just a tape of the "real" pirate, the Radio Animal was served up with another reduced fine for re-airing the broadcast. Additionally, the FCC confiscated a transmitter, a mixer, a few turntables, cassettes, and other miscellaneous station materials. This bust brought WKND even more exposure. An article appeared in the *Pittsburgh Business News*, a magazine article featured the station, and the Radio Animal was interviewed for the prime time news on TV channel 11, WPXI, from Pittsburgh. "I was at a concert the next night," said the Animal, "some people recognized me and said, 'it's the guy who had the radio station.' I never had that happen to me before."

The Present And The Future

Unlike most pirate operators who drop their activities at the first hints of FCC pressure, the Radio Animal is still hiking up the jolly roger. Now, however, he avoids transmitting and instead is regularly heard as a guest on other stations. Lately, the Animal has appeared on WKZP, Action Radio, and Radio Flattus. But his two most important projects have been with the powerful Hope Radio and with Radio Wolf International.

On Hope Radio, the Radio Animal regularly presents a pirate news program that has been heard from Hawaii to Germany. "Ever since we started getting help from the Radio Animal and Phil Muzik (from KNBS), our programming has improved," said MJ, operator of Hope Radio. "Last year, we were voted as one of the worst stations in the ACE pirate poll. This year, I hope we'll be voted as the best."

The most recent project, Radio Wolf International, lumped the Radio Animal with Sparky (WKZP) and Harry A. Ness (Radio Flattus). On September 8, 1990, the group formed for a broadcast that was videotaped by the Franklin Video Group. Broadcasting from the field with a generator to power a mid-50's Johnson Viking II transmitter, the station received 50 letters from as far west as Idaho and New Mexico.

Radio Wolf International will not be returning via the transmitters of the Radio Animal, but the station will continue with a little help from friends. Likewise, his segments on the most active pirate of 1990, Hope Radio, will also continue. So, if you actively tune the shortwave "pirate bands," chances are that you will eventually run across the Radio Animal. After all, as he said, "Would ya even think someone who's been into free radio for nearly seven years could just quit like that?" Nah.

The New JRC NRD-535 Communications Receiver

The Japan Radio Co., Ltd. of Tokyo, Japan has been producing quality communications products since 1915. Historically, most of the company's marketing efforts were concentrated in the commercial and marine markets. But, some years ago the company started producing equipment for the serious shortwave listener and ham. This effort brought us the NRD-505, 515 and the 525. And, now the latest, the JRC NRD-535 receiver.

An Overview

First, the basics: The NRD-535 covers 100 kHz to 30 MHz, AM, SSB(USB/LSB), CW, RTTY, FM and FAX. The receiver operates from 100, 120, 220, or 240 VAC, 50/60 Hz, 35VA or less or 13.8VDC (nominal), 25W or less. The NRD-535's dimensions are: 13" wide x 5.5" high x 12.75" deep; weight is 20 lbs.

There is a built-in clock/timer, a line/recorder output and a built-in speaker; an optional external speaker, NVA-319, is also available. Other available options include: CMH-530 RTTY Demodulator Unit, CGD-135 High Stability Crystal Oscillator Unit, various IF Crystal Filters, and an RS-232C cable for computer control.

Sensitivity for SSB/CW/RTTY/FAX (10 dB S + N/N) is rated less than .3 uV from 1600 kHz to 30 MHz. AM sensitivity (10 dB S + N/N) is 6.3 uV below 1600 kHz, 2 uV between 1600 kHz 30 MHz. FM sensitivity is 0.5 uV above 1600 kHz. Frequency stability w/o the optional CGD-135 ± 0.5 ppm unit is ± 10 ppm short-term, ± 2 ppm long-term.

The NRD-535 is a triple-conversion design with the first IF at 70.455 MHz, second IF at 455 kHz, and the third IF at 97 kHz. The third IF is not used in the FM mode. IF and image rejection is 70 dB or better. Two-tone dynamic range is rated at 106 dB and measured at an IF bandwidth of 300 Hz. FM selectivity is rated at 12 kHz at -6 dB. In all other modes, there are a total of four filter bandwidths available: 12 kHz at -6dB, (no spec given at -60 dB); 6 kHz at -6 dB, less than 15 kHz at -60 dB; 2 kHz at -6 dB, less than 6 kHz at -60 dB; 1 kHz at -6 dB, less than 3 kHz at -60 dB.

Optional crystal filters include: CFL-231 (330 Hz at -6 dB), CFL-232 (500 Hz at -6 dB), CFL-218A (1.8 kHz at -6 dB), and CFL-251 (2.4 kHz at -6 dB).

The AGC has two selectable release times. The built-in IF notch filter attenuation is at least 40 dB.

The HF antenna inputs will accept either a 50 ohm coax or a high-impedance long-wire.

Other Features

The NRD-535 has just about everything one could ask for in a shortwave receiver. Its quiet direct digital synthesis PLL circuit eliminates much of the phase-noise complaints of earlier synthesized receivers. And, its use of the latest RF and mixer designs ensures excellent strong signal handling capability.

The PBS (passband shift) control allows for changing the center frequency of the selected IF filter by approximately ± 1 kHz without changing the bandwidth of filter. The BWC (bandwidth control) allows for continuous adjustment of the passband from 500 Hz to 2.4 kHz. These two features make this receiver a real QRM fighter!

The ECSS (exalted carrier selectable sideband) control selects a sideband, either upper or lower, which is the most immune to adjacent channel interference. This feature works only in the AM mode.

A front panel user-selectable dual-mode noise blanker, with adjustable threshold level, effectively reduces the problem of impulse ignition noise as well as longer dura-

tion pulses, such as OTHR (over the horizon radar).

Operation

It is a good idea to read the instruction manual quite well as the NRD-535 is quite a complex receiver. But, it shouldn't take you too long to get accustomed to its operation as the receiver is blessed with excellent ergonomics. The front panel control layout is very easy to use, including larger than normal control knobs. This is one receiver you don't have to have "munchkin-sized" fingers to operate.

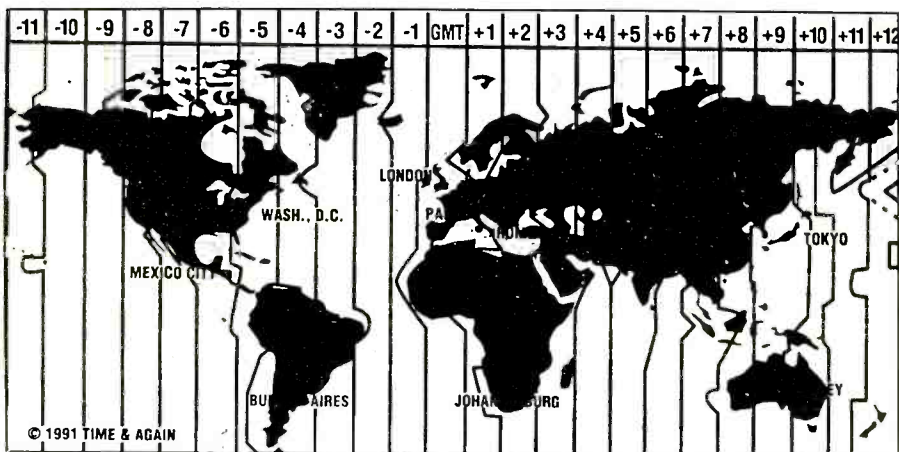

Frequencies can be selected by four methods: 1) the main tuning knob. The tuning rate is front-panel selectable in 1 Hz, 10 Hz, or 100 Hz steps; 2) the front-panel "up-down" switch; 3) direct frequency input with front-panel keypad; and 4) the two-hundred memory channels. Each of the two-hundred memory locations permit the storage of mode, bandwidth, on/off state of the attenuator, state of the AGC, as well as the frequency of the station. The memory is non-volatile, so that even if the power fails, the memories will be retained.

You can also scan between designated memory channels or sweep between specific frequencies. The NRD-535 will scan all 200 memory channels or between only those you select. It will also sweep between two frequencies you designate. Quite a versatile tuning system. Bandwidth selection is independent of mode, as well as the AGC

REVIEW OF NEW AND INTERESTING PRODUCTS

World Time Zone Map Decal

Time & Again Co. is the distributor of the World Time Zone Map decal, which can be placed on a shortwave receiver or any other object to reference international time zones at a glance. Since many shortwave receivers and other amateur radio equipment are lacking a time zone map imprinted on the case, the decal ideally fills the need.

These decals are made of a high quality

polyester and are self-adhesive for easy application to any surface. They are attractively toned with silver continents and blue oceans. The two sizes available provide for accommodation on small areas.

The prices per size are: 2¼ x 4¾ inches - \$2.00; 1½ x 3¾ inches - \$1.50, or both for \$3.00. Prices include tax. Send SASE and payment to: Time & Again, PO Box 306, Dickinson, TX 77539.

Compact HF Transceiver And A Compact HF Plus 6 Meter Transceiver!

Introducing two new HF transceivers—the all-new TS-450S HF transceiver which replaces the incredible TS-440S and the TS-690S, which will replace the TS-680S. We took TS-440S and added a whole list of new features.

Here is a list of new and different TS-450S/TS-690S features:

Direct Digital Synthesizer (DDS); fine tuning function, like the TS-850S; receiver dynamic range of 108 dB; RF power output control for all modes; choice of either with built-in automatic antenna tuner (80-10M) or without on the TS-450S; internal 80-10 M antenna tuner AT-450 optional for the TS-690S; all band, all mode operation, with general coverage receiver; 100 watts nominal output on TS-450S and TS-690S (50 W on 6 M); External Digital Signal Processor DSP-100 option/external antenna tuner AT-300 option; advanced intercept point

(AIP) which allows you to select either enhanced selectivity or reduced noise floor level; 100 memory channels, which can store everything you need for your HF operations; master/slave function, which allows you to transfer data from one radio to another. (This feature is compatible with the TS-850S) digital bar meter, and dual noise blankers.

With all these new features, this new HF radio surely looks like another Kenwood HF Winner!

For more information, contact your nearest Authorized Kenwood Amateur Radio Dealer!

Suggested retail price: TS-450S with tuner - \$1549.95, TS-450S - \$1349.95, TS-690S - \$1549.95.

PC Memory Keyer

MFJ Enterprises, Inc. announces the re-

lease of the MFJ-1268 PC Memory Keyer—a combination of IBM compatible software and hardware that turns your computer into a powerful memory keyer for \$49.95.

MFJ-1268 PC Memory Keyer hooks easily between your computer and radio. You get a total of 100 function key macros that you can easily set to send any messages or characters. You can set a macro to send a second macro at any point. Also, you can set a macro to pause a pre-set period for you to key in characters (or use paddle). You can also set them to send some characters faster or slower than others.

Many useful messages come pre-set in the macros. However, you can easily change them to say whatever you want.

Other features include incrementing serial numbering, speeds from 5-40 words per minute, variable speaker tone (or speaker off), weight adjustment, and instant access to on-line help, common CW abbreviations, Q-signals and official ARRL NTS Traffic codes.

Plus you get a full featured CW Tutor with Test Administrator that lets you give a code test on screen or printed out.

It comes with MFJ's one year guarantee.

For more information contact any MFJ dealer or MFJ Enterprises, Inc., PO Box 494, Mississippi State, MS 39762, or call (601) 323-5869, FAX (601) 323-6551, or order at 800-647-1800.

Prevents Unauthorized Use Of Equipment

The Plugbugger, available from Direct Safety Company, is a unique power cord lock for use on any two or three prong plug. It is designed to prevent unauthorized, or unwanted use of PC's, copiers and other equipment for safety or security reasons. The Plugbugger locks onto an electrical outlet plug and requires a key to release. (Price: \$9.50)

More information on the Plugbugger and other electrical safety and security devices is available in a new Master Catalog from Direct Safety Co. For a free copy, write: Direct Safety Company, 7815 S. 46th St., Phoenix, AZ 85044.

THE JAPAN RADIO CO. **NRD-535**

THE NEXT GENERATION IN HIGH-PERFORMANCE HF RECEIVERS

Once again JRC breaks new ground in shortwave receiver design. The new NRD-535 has all the features SWLs and amateurs have been waiting for. General coverage from 0.1 to 30 MHz in AM, USB, LSB, CW, RTTY, FAX and Narrow FM modes. Advanced ECSS operation for phase-lock AM reception. Variable bandwidth control (BWC). Tuning accuracy to 1 Hz possible with direct digital synthesis. 200 memory channels with scan and sweep operation. Triple Superheterodyne receiving

system. Superb sensitivity, selectivity and image rejection. Dual-width noise blanker eliminates impulse noise. Squelch, RF Gain, Attenuator, AGC and Tone controls. Optional RTTY demodulator available. 24 hour clock/timer. Easy to read vacuum fluorescent display with digital S-meter. AC and DC operation. Plus the most comprehensive computer interface found on any radio to date. Call or write today for a full color brochure, price list and dealer information.

Build A DF Antenna

A Simple Receiving Antenna With Directionality For HF

BY HANK OLSON, W6GXN

Are you "bugged" by a local source of RFI when you're trying to listen to Radio Australia on the BBC overseas service to get an "outside—USA" perspective of how things are going in the middle-east? Short of the laborious tracking down of an offending power-pole (and then convincing the local power company that you know what you're doing, so they'll fix the problem), a simpler solution could be at hand: null out the RFI with an antenna that is so simple that it almost doesn't appear to qualify as an electronic device!

The directional antenna was described in an SRI International report "Antenna For Reducing Shortwave Interference" by O.G. Villard, Jr. (W6QYT) and was prepared for VOA (January 1991). The report is user-oriented and describes how to build such an antenna and how to use it; that is, it is an operations manual as is appropriate for such a report.

Building the antenna is very simple; it is nothing but a small piece of aluminum sheet, with a 90° bent-up tab to which is screwed a short transistor-radio replacement-type telescoping whip. The antenna plate is made the same size as the small battery-operated SW receiver with which it is used to operate (see Figure 1).

My own SW battery-operated receiver is a Sony ICF-SW1 $4\frac{3}{8}'' \times 2\frac{3}{4}'' \times 1''$, so my aluminum plate is about $4\frac{3}{8}'' \times 2\frac{3}{4}''$. The plate is normally connected to the "ground" or "shell" of the radio; but even if only capacitively-coupled to the radio (with the ICF-SW1 sitting on the plate), the coupling is good enough. For convenience, the radio and its plate/whip accessory can be placed on a small plastic "lazy Susan" for ease of rotation. Then the whole integrated antenna receiver system can be placed on wooden table or bench. This allows one to easily rotate the system without actually having one's hands on it and thereby affecting the null by body capacity.

Does such a simple addition to a battery-operated SW receiver actually work, and if so, why? It is quite apparent in the use of it that it does null out interfering stations that are not in the same direction as the desired signal. The null can be as deep as 20 dB, although my particular receiver has no S-meter, and checks on an uninterfered-with SW

Figure 1- Perspective view.

station are hard to make because of the receiver AGC. The principle way of seeing the null is by noting the background noise increase when nulling a single signal. In the case of nulling an interfering signal, of course, the desired signal will control the AGC.

As to why this antenna works, my own interpretation of its operation is that it is one of a class of receiving antennas that have been known for many decades called "Adcock" antennas.

Traditional "Adcock" antennas are pairs of vertical balanced dipoles with equal-length balanced transmission lines between them so as to avoid azimuth errors incurred by a number of effects, most of which have to do with proximity of the earth and/or the transmission line used to feed the receiver. A really good treatise on Adcocks is given in *The Radio Engineers Handbook* by F.E. Terman, First Edition, 1943 by McGraw-

Hill (p. 880-884). Obviously this material was written when all shortwave receivers were tube-type, line-operated, and big enough to require one or two men to lift them into or out of an equipment rack. I doubt if the author could have envisioned my Sony ICS-SW1, the size of a pack of cigarettes, with no power cord, and even containing a digital synthesizer. It is precisely the new small size and freedom from external cables that allows this simple but technically elegant directional antenna to work as well as it does. Nonetheless, reference to Terman's *Radio Engineers Handbook* (if one can find a copy) is a worthwhile task, and one will note the references contained therein have names like Watson-Watt and date well back into the early 1930s.

The tiny shortwave receivers of today are only about 5 inches in their maximum dimension (about 13 cm); this is only 1/80 of the shortest wavelength in the HF band. So

our receiver is 2 or 3 orders of magnitude smaller than the wavelengths to be received, and can be considered a "point" which interferes very little with the waves received.

Because the receiver is so small compared to a wavelength, it really matters very little whether the antenna is "balanced" or not. The main point is that the voltage delivered between its antenna terminal and its "chassis" reference, are from two vertical whips with a spatial phase difference. This phase difference will contrast for each wavelength, and be less than $\lambda/2$, so the Adcock antenna principles will be in effect.

No claim is made for this antenna as a calibrated azimuth sensing device; it is simply capable of nulls that may be used to cancel interference from co-channel HF stations or noise sources. The plate should be made no larger than the radio with which it's used, and the extra whip should extend out about 6" longer than the one on the receiver. Care should be taken not to use the receiver/antenna system on or near metallic tables or benches. The system works best out-of-doors where home wiring does not interfere by causing re-radiation. Of course, no AC supply, earphones, or other external wires may be used with the radio.

In short, this easily built, simple accessory to your small battery-operated shortwave receiver can be a real help to "clear up" interference while not causing any modifications to that receiver. It is really worth a try.

SECRET FREQUENCIES

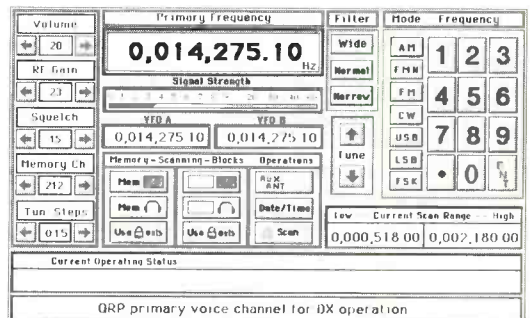

Why waste valuable time manually twisting that frequency dial looking for interesting transmissions when your computer can do it for you with RCSS™?

RCSS™ (Remote Computer Scanning System) takes full control of your radio and automatically scans the airwaves in search of those interesting "secret" transmissions. When a signal is found, RCSS™ automatically logs an entry in the database that includes the frequency, date, time of day, and the length of transmission. Other information may also be added to the record such as class of service, type of unit, call-sign, city, and other comments.

RCSS™ can run automatically while you work, sleep, or watch the game on TV. When you return, RCSS™ reports on all receiver activity that was found while you were away, enabling you to choose from among those interesting frequencies for listening. Or, if you prefer, add any standard tape recorder to automatically record the transmissions that RCSS™ finds.

RCSS™ connects to ICOM's R71A, R7000, R9000 and SASI's Seeker-301 receivers for operation. Software, interface and all required cables are included. RCSS™ is fully Microsoft Windows compatible and is the oldest software available of its type (4-years old). It's currently in use in 15 countries and being used by individuals, private corporations and Government agencies.

Watch for SASI's new Seeker 301 miniature broad band receiver and their new Spectrum-100 professional PAN adapter which is adaptable to most receivers.

RCSS™ enables full computer control of receiver functions through the graphic user interface shown above. RCSS™ runs on IBM compatible and Macintosh computers. The NEW IBM version R9000 is shown above. Upgrades are available to registered users. A demo disk is also available for purchase. Call or Fax for more information.

SYSTEMS & SOFTWARE INTERNATIONAL LTD.

Systems & Software International is a small business and manufactures all equipment in the USA. Please contact us at: 4639 Timber Ridge Drive, Dumfries, Virginia, 22026-1059, USA, (703) 680-3559, Fax (703) 878-1460, Compuserve 74065, 1140

OEMs, Distributors and Government Agencies Take Note: RCSS™ can be customized, modified or re-engineered for special applications. Special projects are welcome.

CIRCLE 145 ON READER SERVICE CARD

27 MHz COMMUNICATIONS ACTIVITIES

There's nothing quite as vexing as facing up to the job of trying to wedge a CB installation into a vehicle when it's quite apparent that there's a severe shortage of space for the job. The very first action, in such an instance, is to look around for compact CB rigs that were intended for just such occasions.

One we kind of like is Radio Shack's Realistic TRC-415 because they packed a lot of performance into a good looking little box. The TRC-415 measures only 2 inches high, about 4½ inches across, and 6½ inches deep.

Still, within this space they've put a receiver that includes ceramic filters for increased selectivity. An ANL cuts down on noise. There's a bright LED channel display, and a 4-step LED signal/RF power meter, plus jacks for plug in mike and optional remote speaker.

The TRC-415 costs less than \$70. Check it out at any of Radio Shack's stores.

Where Have They Gone

Many readers always ask us where all of the wide assortment of CB transceiver, antenna, and accessory manufacturers have gone.

Certainly there are not as many in CB as there were fifteen years ago, but there is a dedicated group of manufacturers still furnishing equipment for CB. We publicize this equipment when the manufacturers request us to do so.

We regularly receive product information from leading manufacturers like Radio Shack, Cobra, Midland, Joe Gunn, Wilson, and Antenna Specialists. Obviously, there are other quality transceiver and antenna manufacturers in the CB field (Uniden, K-40, Valor, US Antenna, Wintenna, and Firestik just to mention a few). But we don't hear from every company with information to pass along to you. At such time as they may decide to furnish us with data on what they've got, we'll gladly tell you about their products.

CB First Deluxe Transceiver

Nothing in the world was quite as ugly as the Courier 1, made by E.C.I., of Mount Vernon, NY. On the other hand, it was the first of CB's more spectacular performers. The earliest versions of the Courier 1 probably appeared in late 1960 or early 1961, selling for about \$190.

The Courier 1 had 12 transmit channels and a 23-channel tunable receiver, plus 4 fixed-tuned channels. The triple conversion receiver had 12 tubes and 5 diodes performing 17 tube functions offering 0.1 uv sensitivity with a 6 dB noise figure. The receiver

The Realistic TRC-415 was designed for installations where space is at a premium.

had a switchable noise limiter, and adjustable RF gain. A front panel meter functioned as an S-meter and also displayed RF output in watts. The transmitter ran a 6EM5 in the final (minimum 3.4 watts output) with a 6BQ5 modulator. A universal power supply operated from 117 VAC, also 6 and 12 VDC.

Later versions, like the 1962 Courier 1AM, added extras like the ability to receive the AM broadcast band.

The Courier 1 had a unitized chassis (five separate cadmium plated units) that slid out of its all-chrome cabinet on tracks.

At a time when most CB sets offered only 3 channels and single conversion receivers or worse, this precision equipment was truly awesome in every respect. Granted, it wasn't too pleasing to the eye.

The original company owners made a fortune and sold the company many years ago. The present owners of the company that once made this equipment is Fanon-Courier Co., of California.

From Our Readers

We heard from Elie Homsy, LBN-102, one of the founders of the Lebanese DX Group. Elie tells us that the group made a DX'pedition to Cyprus recently and made many new friends over the air via their FT-747-GX and dipole. The club has about 33 members at the present, and they always enjoy reading our column.

Any readers who would like to get in touch with the LBN are invited to do so, but are requested to enclose an International Reply Coupon (IRC) for return postage. The address is: LBN DX Group, P.O. Box 166137, Beirut, Lebanon. The club suggests that letters sent to Lebanon be sent via Registered Mail to ensure delivery.

Remember Last Summer?

Now that it's cold, let's start planning for things to do when the good weather rolls around. We were reminded of this when we

What a rig the Courier 1 was! Thirty years ago it had a triple conversion receiver in an era when other CB rigs were either super-regens or single conversion.

Rocky Mountain Radio Club members set up this display of communications equipment at their picnic.

The Lebanon DX Group sends out this QSL card, which is orange, green, and white.

heard about last summer's camp out and pot luck picnic held by the Rocky Mountain Radio Club International, of Alberta.

They had a display of radio equipment for the general public to view, and it included VHF two-way radios, handhelds, and CB radios both new and from earlier years. All who attended, members and non-members alike, had a fine time and another outing will take place next summer, probably around mid-June.

If you're within visiting distance of Alberta, you might wish to consider making plans to be a part of this friendly event. For more

Chow time at the Rocky Mountain Radio Club's picnic.

Members of the Rocky Mountain Radio Club strike a pose at their picnic last summer. Maybe next time you can join them.

information, contact the Rocky Mountain Radio Club International, 1010 8th Street S.E., Calgary, Alberta, Canada T2G 1Z4.

And, if you're too far to attend this event, you can plan something similar right in your own area. Now's the time to put on your thinking cap if you expect it to actually happen this coming summer.

In Other Mail

Douglas Stingley, of Salem, OR tells us that he's moving to Hawaii and taking along

his Cobra 2000GTL base station. He hopes that we can reassure him that there's sufficient CB activity there to make it worth bringing along the CB rig. Also, he asks about the present status of FCC enforcement of anti-skip CB regulations.

There is no shortage of local CB activity in Hawaii, and the skip rolls in on a non-stop basis. At this time the FCC doesn't appear to be working very hard at trying to enforce its anti-skip CB regulations so long as the stations stay on the authorized channels and

appear to be running legal power. Still, it's a violation of FCC Part 95 to work skip stations, even though many operators participate in the practice.

George Bandorf, KC4OUK, of Port Orange, FL wrote to tell us of a concept he has for what amounts to a restructured CB service. Although he took four pages to explain the idea, we'll see if we can skip through some of its high points for you.

The new band he would like to see extends from 26.950 to 27.950 MHz, and

Improve Your Scanning Coverage!

GRE America is proud to introduce a new family of products to enhance your scanning pleasure! First, GRE has designed the new **Super Converter 9001** for base model scanners. The 9001 converts 810 MHz - 950 MHz down to 410 MHz - 550 MHz. The 9001 is the perfect alternative to buying a new, expensive scanner covering the 800 MHz band. Next, GRE announces the new **Super Amplifier 3001** for base model scanners. The 3001 will increase gain by as much as 20 dB, and is engineered to help scanners with low sensitivity pull in weak signals. Both products use BNC connectors, (1) 9 volt battery and have an off/pass switch for returning to normal operation.

Super Converter 9001 & Super Amplifier 3001

Here's how to tune up a long wire antenna for CB use.

would be open to operators who could pass a written exam similar to the Novice Class Amateur test. There would be a \$50 license fee. Hams could also operate in this band, and would have to pay the \$50 fee although would not need to pass the exam.

Operations would be 30 watts PEP, upper sideband. A sub-band for CW would be allowed. AM would be eliminated completely. No limits on skip operation. Antennas would be limited to 60 feet with unlimited gain.

This certainly is an interesting idea, even if it stands little chance of ever becoming a reality. Would we like to see it happen? Sure! Why not?

Things to Build

Every month we try to bring readers one or more small projects or things to do, and it's turned out that these are becoming very popular. Happy to oblige with more!

Norm Schnessel, of Florida, wonders if it's possible to load up a long piece of wire as a CB antenna. Why not? While it's more convenient to use a commercially made antenna, there's no reason why a wire can't be used if you want to experiment with one.

With a small tuning device (as shown in the diagram), you should be able to tune your CB rig into just about any length of wire.

The coil (L1) is 3 turns of No. 12 bus wire, 2-1/2 inch diameter, with the turns spaced a quarter-inch apart. The alligator clip attachment is located on L1 by trial and error, which is also true for the setting for the capacitor (C1), which is a 151-pf variable.

With a Field Strength Meter nearby, or an in-line Field Strength Meter, try different combinations until you eventually hit the best one for the length of wire you are using. Take your finger off the mike button while relocating the alligator clip, then press the mike button to check the reading after you have removed your hand from the clip.

Some CB rigs are just plain noise producers, picking up all sorts of outside interference and then bashing you over the head with it to the point of drowning out the other guy talking. This is especially true in mobile units.

We can't guarantee that this little trick will work for you, or on every CB rig. But it is a very old trick, and it has proven to be an effective "quick and dirty" approach to noise limiting that does work with some types of noise, at least on some CB rigs.

The CB dipole is a handy emergency antenna that does a reasonably good job.

All it consists of is placing a type NE-2 neon bulb across the speaker terminals of the CB rig. That's all there is to the job. If you don't like the way it works for you, take it out. The NE-2 is a cheap item and it was worth the try anyway.

Lastly, we mentioned the DX'pedition that used the CB dipole, so we thought it might be a good time to let you know how to put one together. They're good to know how to build in a pinch, like if you need a quick antenna when you least expected to.

For most purposes, consider it to be omnidirectional. Mount it as far as possible in the clear of metal objects, trees, down spouts and rain gutters, TV antennas, and any other RF absorbers that could distort the signal pattern.

Hope you have a bright Holiday. We look forward to hearing from you. Pass along your CB QSL cards (your own and/or DX cards), shack photos, CB events and news items, questions, thoughts, squawks, and ideas.

COMMUNICATIONS GUIDE

The most up-to-date buyer's guide for communications equipment—from communications receivers and scanners, to CB radio and amateur transceivers is finally here!

Complete with articles by experts in the communications field, including Dexter, Kneitel, Helms, Gysi, Orr, Zeller, Margolis and many more, the 1992 Communications Guide is the book you've been waiting for—Here's what's inside:

An introduction to the fascinating world of communications monitoring with: illustrated articles on scanning, utility monitoring, antenna selection and construction, pirate radio, QSLing and much MORE!

AS AN ADDED BONUS, noted ham Fred Maia, W5YI tells just how easy it is to get your HAM LICENSE. In plain English, Maia explains ham radio and how YOU can become a licensed ham. In addition, a product listing with PHOTOS of amateur radio transceivers for use by Technician class licensed hams is included.

Are you interested in Citizens Band radio? An interesting article on CB radio and COMPLETE product listing with PHOTOS is included at NO EXTRA CHARGE!

The Brand NEW 1992 Communications Guide includes the latest communications products on the market with detailed specifications and photos to make your buying decision easier. We've included shortwave receivers, scanners (both base and handheld) and accessories to make your monitoring post complete.

DX At The Top Of The Dial

The 1600 to 1800 kHz is one of the more interesting frequency ranges around. It's home to a big grab-bag of different radio services and activities, and winter nights are the best time for DX there. It's also a place which will soon see a major change that will create multiple new DX opportunities. So what's the story?

Pirates, Parking, and Preachers

The first stop above the upper limit of the standard AM broadcast band is 1610 kHz. In the United States and Canada, many traveler's information service (TIS) stations can be heard. You're probably familiar with these; they are low-powered stations giving recorded announcements at airports, parks, tourist attractions, highways, etc. The power of these is usually five watts or less and antennas are just short whips. However, these stations can be heard over surprising distances when conditions are right. Some have been heard over 500 miles away! To have a chance for such DX, you'll need to have no TIS stations nearby, a quiet receiving location, and good receiving equipment.

If you don't hear a distant TIS signal on 1610 kHz, you'll probably nab the country of Anguilla instead. That island is home to "The Caribbean Beacon," a 50 kilowatt religious station that often puts powerful signals into all parts of North America during the evening hours. If you don't hear a station identification, you might think this is a domestic station operating off its assigned frequency, since many of its programs are the pre-recorded types heard on domestic religious broadcasters. If you do hear them, you can send your report to Box 690, Anguilla, British West Indies.

Pirate radio operators have been hanging out around 1620 kHz since the mid-1970's. This frequency is particularly favored by operators in the northeastern United States. Several of the most famous pirates of all time, such as New York's WCPR, WFAT, and WGOR as well as Pirate Radio Central of Massachusetts, have operated on 1620 kHz. If you're located along the east coast and listen late at night on weekends and holidays, you'll eventually hear a pirate or two on 1620 kHz!

Crickets, Chirpers, and Other Strange Critters

In the 1600 to 1800 kHz range you'll hear

1645	1690	1735
1650	1695	1740
1665	1705	1750
1675	1710	1765
1680	1725	1770

some signals unlike anything you can hear on the rest of shortwave. Many SWL's describe these as "crickets" because they often sound much like electronically synthesized cricket chirps. Others are a series of tones, or weird CW markers consisting of nothing more than a letter followed by some numbers. What are they?

These are actually low-powered radiolocation beacons. The "crickets" belong to radio beacons using the "Cubic Argo" radio-navigation system. Unlike other radiolocation beacons, these are not used to permanently mark an area; they are frequently moved about and seldom stay in one place for long. Cubic Argo systems are often used to mark the location of oil exploration sites or where salvage efforts are underway for sunken ships. The series of tones that are often heard are produced by a competing radiolocation system known as Decca Hi-Fix. The CW beacons with markers consisting of a single letter followed by numbers are beacons used by fishing vessels to mark the location of fishing spots.

Naturally, the closer you are to the Pacific Ocean, Atlantic Ocean, the Gulf of Mexico, or the Great Lakes, the more of these beacons you'll hear and the stronger they'll be. Forget about trying to QSL these, though, trying to find out just who is operating what and where is almost an impossible task!

Get To Know Your Neighbors Better

The area just above the AM broadcast band was the first one assigned for use by cordless phones. A decade ago, it was a lot of fun to put a multimode receiver in the FM mode and listen in on these conversations. A few years later, the FCC authorized new cordless telephone frequencies around 46 and 49 MHz, putting the 1600 to 1800 kHz range out of business for this sort of listening. Right? Wrong!!!

Freq.	Call	Location
1615	OR	Ohura, New Zealand
1620	CEP	Concepcion, Bolivia
1635	LMC	Lomincocha, Ecuador
1640	SJV	San Javier, Bolivia
1650	SOT	Reyes, Bolivia
1685	MER	Mercaderes, Colombia
1689	MH	Mount Hagan, New Guinea

It's surprising how much activity is still being heard in the old range, apparently, people haven't been upgrading to new units quite as fast as you might expect. In addition, there's quite a bit of "gray market" equipment using old frequencies still being marketed and used in larger urban areas. Gray market equipment is generally illegal for use in the U.S., often because of excessive transmitter power or unauthorized frequencies. However, a lot of it gets smuggled into the United States or is marketed as "for export only," presumably for foreign visitors to buy and take home with them. But, as a practical matter, most of it is used illegally in the United States. (Not that companies selling to the gray market are exactly shy about what they're doing; a couple have impressive displays each year at the Consumer Electronics Show in Las Vegas!)

Table 1 shows some frequencies where you can find old legal and new illegal cordless phones. From my monitoring, southern California seems to be swarming with high-power illegal units brought back by weekend shoppers in Tijuana and Calexico; I hear a great deal of Spanish and various Asian immigrant languages (such as Vietnamese) on these channels. If you're located in or near a large city, these frequencies might be worth a listen.

Grand Opening Coming Soon!

One reason you should DX the 1600 to 1800 kHz range now is because you won't have much more time to do it. In a few years, this range will be populated by AM broadcast stations as the upper end of the band is expanded to 1700 kHz.

Exactly how this new part of the AM broadcast band will be utilized isn't clear yet, although it seems likely that the FCC will opt to place regional broadcast stations (directional antennas and transmitter pow-

POP'COMM'S World Band Tuning Tips

December - 1991

This PopComm feature is designed to help you hear more shortwave stations. Each month, this handy, pull-out guide shows you when and where to tune to hear a wide variety of local and international broadcasts on shortwave.

The list includes broadcasts in many languages besides English. Most of the transmissions are not beamed to North America. Keep in mind that stations make frequent changes in their broadcast times and frequencies. Changes in propagation conditions may also make some stations difficult or impossible to receive. Your own equipment and receiving location will also have a bearing on what stations you are able to hear.

Note: EE, SS, FF, etc. are abbreviations for English, Spanish, French and so on. Some frequencies may vary slightly. All times are in UTC.

HOW I GOT STARTED

POP'COMM invites readers to submit, in approximately 150 words (more or less), how they got started in the communications hobby. Each month, we'll look through our file and select one to run here in the magazine.

Entries will be accepted (preferably) type-written, or otherwise clearly legible. If you have a photo of yourself taken recently, or when you got started, please include it and it will increase the chances of your letter being selected. We can't return or acknowledge material, whether or not it is used. Your story need be submitted only once, we'll keep it on file and consider it for future issues. All submissions become the property of *Popular Communications*.

Entries will be judged taking into consideration if the story they tell is interesting, amusing, or unusual. We reserve the right to make any necessary editorial changes to improve style or grammar.

Each month's winner will receive a 1-year gift subscription to (or subscription exten-

James Nelson, WB7QAP, of Yakima, Washington. Nifty array of equipment on display there.

sion if already a subscriber) to *Popular Communications*.

Address all entries to: How I Got Started, Popular Communications, 76 North Broadway, Hicksville, NY 11801.

Our Winner For December

The winner for December is James Nelson, of Yakima, Washington. James told us:

"In 1952, at age 7, I was given an old military receiver. That started my interest in SWL'ing. From 1964 to 1967, I attended the Army's S.E. Signal School at Fort Gordon, GA (MOS 293, later 31M20, Radio Relay and Carrier Operator - Microwave Equipment). After Ft. Gordon, I was stationed in Germany with the 7th Sig. Spt. 7th Army and later 32nd ADCOM.

"When I got out of military service, I drifted into CB radio, and later learned CW. I received my Novice ham ticket in 1977, and later that same year my Advanced Class. My Amateur callsign is WB7QAP, and you can find me on 15 meters CW and SSB. Hope to QSO some POP'COMM readers there!

"My equipment includes a Collins R-390A, Yaesu FT-101-E and EE, ICOM 751A, Kenwood 7730, also CB gear." ■

THE FUTURE OF AMATEUR COMMUNICATIONS

Once in a lifetime, a transceiver is introduced that's so extraordinary and innovative that it opens a totally new era in HF communications. ICOM's pacesetter IC-781 proudly exhibits that hallmark achievement with futuristic designs and features of true legendary proportions. Whether DX'ing, contesting, pioneering new interests or enjoying unquestionable top-of-the-line performance, the IC-781 is indeed today's standard of excellence!

Multi-Function Five Incht CRT. Displays frequencies, modes, memory contents, operating notes, RTT, two menu screens, plus a panoramic view of all signals in a selected range. A portion of the screen also serves as a display for data modes like RTTY, AMTOR, and PACKET.

Dual Width Noise Blanker includes MCF filter plus **level and width controls** to eliminate pulse and woodpecker noise with minimum adjacent-signal interference.

Unique Spectrum Scope. Continuously indicates all signal activities and DX pileups with your operating frequency in the center. Selectable horizontal frequency spans of 50, 100, and 200KHz for each side of the frequency you're listening to. Vertical range indicates relative signal strengths. A contesteer's dream!

Incomparable Filter Flexibility. Independent selection of wide and narrow SSB filters plus CW filters. Second and third CW IF filters are independently selectable!

Dual Watch. Simultaneously **receives two frequencies in the same band!** Balance control adjusts VFO A/B receive strength levels. You can check additional band activity, even tune in your next contact, while in QSO without missing a single word!

DX Rated! 150 watts of exceptionally clean RF output. Easily drives big amplifiers to maximum power.

Twin Passband Tuning with **separate controls for second and third IF stages!** Increases selectivity and narrows bandwidth, independently varies low and high frequency response, or functions as IF shift. **It's DX'ing Dynamite!**

A Total Communications System! Includes built-in 100% duty AC supply, high speed automatic antenna tuner, iambic keyer, semi-automatic or full QSK CW break-in to 60 wpm, Audio Peaking Filter (APF), RF speech processor, multiscanning, 105dB dynamic range, all-band/all-mode receiver with general coverage, and much more!

ICOM Dependability. The phenomenal IC-781 is built for action and backed with the most extensive warranty in the industry.

See the IC-781 at your local ICOM dealer.

Mobile Command Post Battery Chargers

Most emergency command post vehicles run several batteries in parallel to keep their communications equipment on the air. There is usually a third or fourth battery specifically for engine starting. All of these need to be charged when the vehicle is not use, or when the vehicle is in prolonged use with available outside AC.

The size of the battery charger is one of the most important considerations when selecting equipment for your command post. The output amperage capability of the charger should be at least 15 percent to 25 percent of the total amp-hour capacity of all the batteries. Too often we see a 20-amp charger trying to maintain a charge on a bank of batteries when the total amp-hour capacity equals 315 amps (i.e., 3 each F-27 size batteries, 105 amp-hour battery size).

Sized correctly for this application of 3 batteries, the charger should be capable of producing between 47.25 amps to 78.75 amps which would give at least 15 amps to each battery rated at 105 amp-hour capacity.

A charger sized too small for the job will take forever to fully charge all the batteries up, and may not convert all the lead sulphate back to lead dioxide. This will seriously reduce the storage capacity of the battery.

For 3 big batteries, a good 75 amp charger will recharge the batteries much quicker, run cooler, and actually be better for the batteries. Beware of the common practice of some manufacturers to list a "double rating" for their units, such as "Model 30/20," or "Model 60/40." Reading the manuals usually interprets this to mean that the first number is an intermittent output rating, and the second number is the continuous output rating. I strongly recommend using the continuous output rating when making your choice, as this is the "real world" usage. Remember, charging a battery takes time and the continuous amperage is the thing that does the job.

Years ago, you could tell the quality of a charger by its weight, if it weighed a ton, it could probably charge up several batteries in parallel. Now there is the switching charger; a relative newcomer to the scene that is extremely lightweight.

The switching charger can offer good output regulations over a broad input range, and offers high efficiency. Some switching chargers also offer a sensed output mode that delivers full rated output current until the battery is charged to a certain voltage.

Battery charger with triple isolated outputs.

Remember to check fluid levels once a month.

The switcher then goes into a special trickle mode that will float or maintain the battery in the charge cycle. This allows the batteries to be replenished quickly, and then prevents them from being overcharged.

The switching charger raises the frequency of the line AC voltage from 60 Hz to

Make sure all your battery posts are clean from corrosion.

Six pounds for 10 amps per battery for 3 batteries in parallel.

20,000 to 200,000 Hz. This signal is commonly referred to as "pulse width modulated." The average of this pulse is what produces the desired output.

The AC line is isolated from the DC output for most of these chargers to prevent a source of electrolysis. This is especially important on boats. On the older linear-type of chargers, this isolation was accomplished by the input transformer. To fully isolate the AC line voltage from the DC output in a switching charger, opto-couplers are often used. These normally control the pulse width modulator circuit by light waves, thus eliminating the physical connection and accomplishing the desired isolation.

The pulse signal is then filtered to reduce
(Continued on page 74)

THE EXCITING WORLD OF RADIOTELETYPE MONITORING

POP'COMM's chief scribe, Tom Kneitel, and I were recently discussing the current situation with RTTY stations found on HF Radio. The shortwave bands seemed to have become eerily silent of RTTY signals and the poor propagation conditions of the past year were only a partial cause.

"I have also noted far fewer RTTY stations than two or three years ago running plaintext press and RY's," Tom observed. "There's lots more stuff in 850 Hz crypto than there used to be, and less stations running VFT than there were."

Pondering over his comment, I realized what he said was true. In the eight years I've been monitoring RTTY stations, I've seen the disappearance from the shortwave bands of many news agencies, including UPI, AP, AFP, DPA, Reuters and some lesser known ones, including DIPLO, which was operated by the French MFA. What ever became of ADN, which was in East Germany before the German unification?

Some weather stations have become silent, including the ones in New York City and Miami, Florida; Paris, France and Vienna, Austria. Remember coastal station WSL, Amagansett Radio, New York? It's been off the air for several years now. And the same with a station in Argentina that was seen quite often with banking deposits and withdrawals statements.

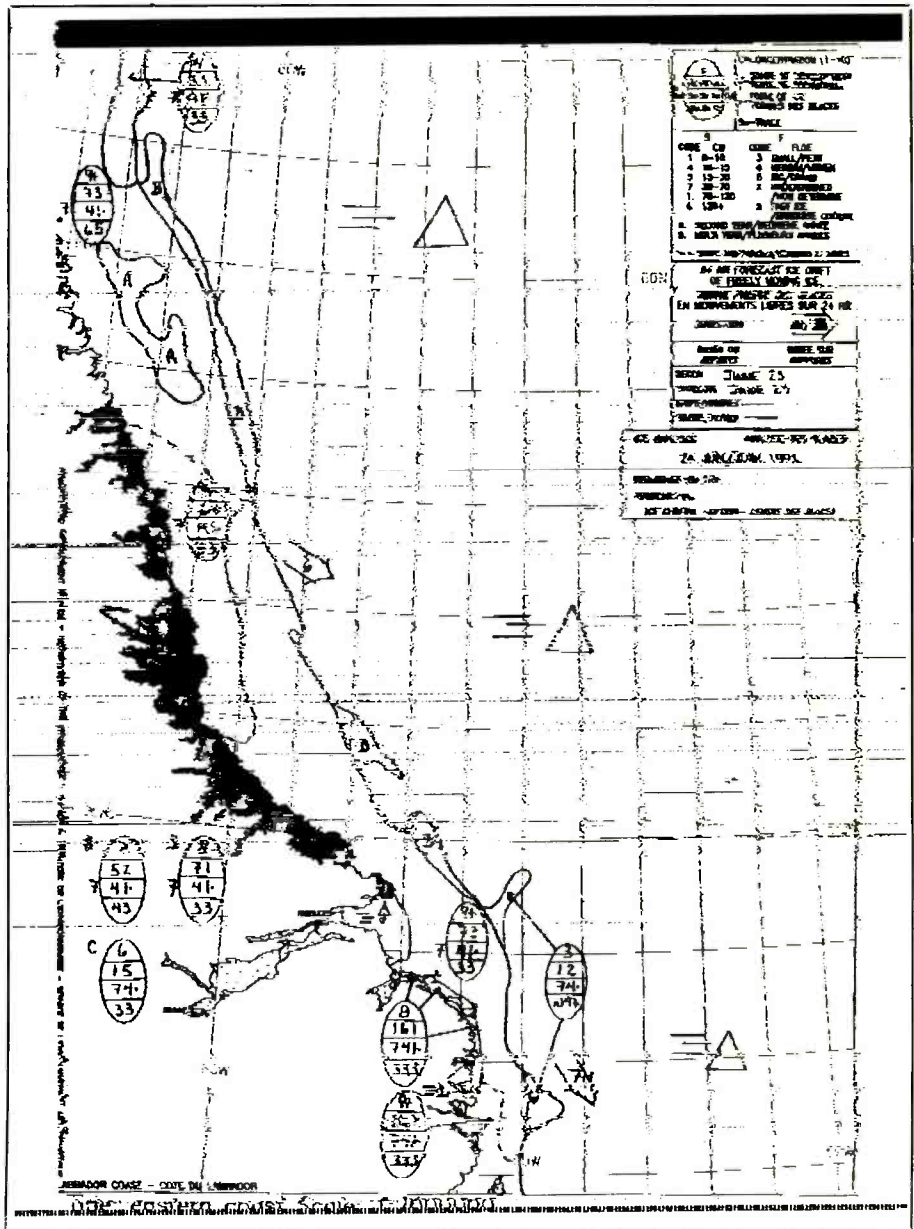

A civil war in Liberia a couple of years ago forced the shutdown of the U.S. - Liberia Radio Corp., which had a RTTY link between the Harbel, Liberia, rubber plantation, and the Firestone Tire and Rubber Co. in Akron, Ohio.

I haven't heard a thing for quite a long time from the RTTY circuit between Kitt Peak National Observatory, Tucson, Arizona, and Cerro Tololo Observatory in Chile. I guess it's gone for good, too, as well as the Smithsonian Institution circuit to Peru, Brazil and Australia.

It also seems that a number of government RTTY stations in the former Warsaw Pact nations have been shut down as those countries develop market economies. I may be wrong, but I haven't heard the weather station in Bucharest, Romania, for a long time now. What happened to it?

Yes, a lot of RTTY stations have disappeared this past decade. Some have gone to satellite transmissions, some could no longer afford operating a RTTY station, and some, such as WSL, have closed their doors forever.

And that abundance of 850 Hz crypto you mentioned? There'll be less and less of that in the next few years as many of our military bases at home and abroad are closed for good.

Ice chart issued by CFH, Canadian Forces Meteorological Center, Halifax, NS. (Submitted by Geoff Malta of New Jersey.)

I don't believe this to be a swan song for utility RTTY stations, especially for the diplomatic services. The newer modes of TTY transmissions, such as FEC-A, ARQ-E(3), and SI-ARQ, serve to improve long-distance communications. The more improvements that are made, the longer we'll have utility RTTY stations around to monitor.

TACC Телеграфное Агентство Советского Союза

Москва, Тверской бульвар, 10

25. April 1991.

Hugh M. Hawkins

U.S.A.

Dear Mr. Hugh M. Hawkins,

In answer your letter of February 12 1991: TASS really beams radio teleprinter broadcasts at the frequency 16348 kc and the time you mentioned.

We wish you further successes in your amateur radio activities.

Main Communications
Department TASS

Hugh Hawkins of Mississippi received this QSL letter from Tass, Moscow, USSR, for a news broadcast he monitored on 16348 kHz at 1800 UTC, 50 baud.

- 7720.7:** U.S. Army MARS sta AAT6USW w MARS-grams in ARQ at 1415, and in FEC at 1430. (Ed.)

IMPROVE RECEPTION

ANTENNA PLUS
Only \$90

Make your receiver spring to life! Receives like the large antennas yet sits on your table! Models for ALL BANDS, SCANNER or SHORTWAVE. Strong internal 15-22db amp! 115VAC pwr. Cable to receiver. INCLUDED!
ANTENNA PLUS-1 0.5-1300MHz "All Bands" (for wide coverage rxv.)
ANTENNA PLUS-2 0.3-30MHz "Short-Wave" (peaked for SWL's)
ANTENNA PLUS-3 30-2000MHz "Scanner" (peaked for VHF-UHF)

SUPER SCANNER STICK

Only \$80
Get great scanner reception with our SUPER SCANNER STICK. Covers all scanner bands (25-1000MHz) Only 35" long. Powerful 15db booster amplifier. 25' of coax cable supplied with connector for your scanner.

SCANNER STICK Same as above but without booster amplifier \$40

SHORTWAVE ANTENNA

Brings in signals as only a large antenna can. 130' long and with four wire elements for optimum reception on all SWL bands. 0.3-30MHz. Comes with 50' coax feedline, 100' rope and a Static Bleed. MULTIWIRES-4 \$100

SIGNAL INTENSIFIER

SUPERCHARGE YOUR RECEPTION with our RFP-40! STRONGER SIGNALS for scanners, shortwave, AM-FM-TV, cable and more. 115VAC pwr. Choice of BNC, UHF or F connectors. RFP-40 \$70

LISTEN TO HOURS OF SCANNING IN MINUTES!

Our TAPE SAVER interface makes your recorder operate only when there's action on your scanner. Tape Saver TS-1 \$60

Continous US Shipping/Handling \$5, Canada, AK, HI, PR \$8 NY and MI add sales tax.

THE HAM COLUMN

GETTING STARTED AS A RADIO AMATEUR

Special Ham QSL Card To Commemorate HCJB's 60th Anniversary

If you'd like to add a rare QSL card to your collection, then be sure to take part in HCJB's amateur radio special event this month. Operators who make contact with hams from HCJB in Quito, Ecuador, will receive a one-of-a-kind QSL card, issued to coincide with HCJB's 60th anniversary. The pioneer missionary radio broadcaster has been operating since Christmas Day, 1931.

Ham operators in Quito will be on the air, making contacts worldwide for 30 hours from 4 p.m. EST (2100 UTC) Friday, Dec. 6 to 10 p.m. Saturday, Dec 7 (0300 UTC Sunday, Dec. 8). The special call sign for this event is expected to be HC60JB, and HCJB will be transmitting on 14225, 21300 and 28500 kHz (plus or minus a few kilohertz for receiving). To obtain your special QSL card, send a reception report to HCJB, Casilla 17-01-00691, Quito, Ecuador.

One of the most unusual aspects of the event is that HCJB hams will have access to some of the world's most powerful short-wave antennas, located at HCJB's international transmission site in nearby Pifo.

Keith Clukey (KC6SMW/HC1), an HCJB machinist and ham operator coordinating the event, explains: "We plan to have two hams working simultaneously on two different bands, depending on conditions. They will receive contacts in their homes in Quito and use the telephone to tap into HCJB's microwave system. The signal will then be beamed 18 miles to Pifo for broadcast around the world via our Siemens SSB transmitters.

"The reason for this elaborate system is that we can't actually receive other stations in Pifo due to interference from all the transmissions there. We have 12 high-power transmitters operating at different times and frequencies.

"The Seimens transmitters, which first went on the air in the summer of 1990, are capable of putting out 30 kW, but they will be detuned to amateur limits (1.5 kW)," Clukey continues. "However, our antennas will boost the signal strength considerably. The amount of gain will range from 18 to 25 dBI, depending on which frequency and antenna we're using at the time."

HCJB engineers have 31 antennas in Pifo at their disposal, making this one of the largest radio transmission sites in the world, and the biggest facility of its kind among religious broadcasters.

HCJB's curtain antenna array for Europe and the South Pacific overlooks HCJB's transmitter building in Pifo.

Keith Clukey, an HCJB machinist and ham radio operator, stands next to HCJB's Siemens SSB transmitters in Pifo.

Antennas to be used for the event range from a large rhombic unit (8 to 13 dBI) to 30-story-high curtain antennas with eight parallel-fed dipoles. HCJB's unique steerable antenna, capable of carrying 500 kW transmissions, will also be utilized during the event. But perhaps the most interesting antenna to be used is the cubical quad. This popular antenna design was invented by former HCJB engineer Clarence Moore in

1939. Moore came up with the innovative design to overcome problems with high-power broadcasting in the rarefied air of Quito—9,300 feet high in the +Andes. HCJB's quad antenna has 24 elements with four parallel-fed arrays, each six elements deep.

"I think there will be a good response to this special event," Clukey says. "The main thrust of the event is that ham radio opera-

HCJB's bi-directional antenna in Pifo sends shortwave signals to Europe and the South Pacific.

HCJB's 24-element cubical quad antenna dwarfs a pair of llamas at HCJB's international transmission site in Pifo.

tors are helping to celebrate HCJB's 60th anniversary. But we'd also like to encourage ham operators to listen to HCJB and increase their interest in the station.

"Many ham radio operators first got interested in amateur radio by listening to distant shortwave radio stations such as HCJB."

HCJB International Radio Director John Beck (HC1QH) says the event provides "yet another opportunity to make personal contact with people who are interested in our station."

He adds that numerous hams have written the station, asking how they can get into contact with ham operators at HCJB. This event answers their request as more than 18 HCJB hams are expected to take part in the special event at different times.

This will only be the second amateur radio event to be held during HCJB's 60-year history. The first took place June 11-12, 1983 during World Radio Communication Year.

Clukey adds that, "We're primarily a religious broadcaster, but we have a lot of DX programs as well as news and cultural information of general interest to all listeners."

HCJB is a ministry of World Radio Missionary Fellowship, Inc., an evangelical, interdenominational organization involved mainly in broadcasting. HCJB broadcasts around the world in more than 18 languages and 22 dialects.

WEFAX To The Max

PC GOES/WEFAX 3.0 \$250

PC GOES/WEFAX 3.0 is a professional wefax image reception and analysis system for the IBM PC and compatibles. The product includes a demodulator that handles both AM and FM fax signals, advanced signal processing software, tutorial cassette, and complete 325 page reference manual. The software includes the following advance features:

Menu Driven
Start/Stop Tone Recognition
Unattended Operation
Tuning Oscilloscope
Resolution up to 1280x800x256
Programmable Colorization
Brightness and Contrast Control
Pixel Photometry and Histograms
Image Zoom, Scroll, Pan, Rotation

CGA,HGA,EGA,VGA & Super VGA
Orbital Prediction and Display
Time Lapse Frame Looping
Slide Shows
Export to PCX & GIF Files
Grayscale on all Popular Printers
Programmable IOC & Line Rates
Infrared Thermal Analysis
APT Latitude & Longitude Grids

PC HF FACSIMILE 5.0 \$99

PC HF Facsimile 5.0 is a complete reception system for shortwave FSK facsimile on the IBM PC and compatibles. The product includes an FSK demodulator, tutorial audio cassette, 250 page manual and signal processing software. The product includes many of the advanced features of PC GOES/WEFAX 3.0 but at a fraction of the price. Call or write for a complete catalog of products.

THE MONITORING MAGAZINE

Computer Aided Scanning

a new dimension in communications from Datametrics

Now you can enhance your ICOM communications receiver through a powerful computer controlled system by Datametrics, the leader in Computer Aided Scanning. The system is as significant as the digital scanner was five years ago and is changing the way people think about radio communications.

The Datametrics Communications Manager provides computer control over the ICOM R7000 or R71A receiver.

Powerful menu driven software includes full monitoring display, digital spectrum analyzer and system editor.

Innovative hardware design requires no internal connections.

Comprehensive manual includes step by step instructions, screen displays, and reference information.

Extends ICOM capabilities including autolog recording facilities, 1000 channel capacity per file, and much more.

Overcomes ICOM limitations such as ineffective scan delay.

Datametrics, Inc

R7000 system \$349
R71A system \$349
Manual and demo disk \$15

Requires ICOM receiver and IBM PC with \$12K and serial port. The R71A version also requires an ICOM UX-14.

Send check or money order to Datametrics, Inc, 2575 South Bayshore Dr, Suite 8A, Coconut Grove, FL 33133. 30 return privileges apply.

Beaming In

(from page 4)

everybody else. Sure, I've read the manuals for the equipment I own. But that doesn't always help, either. For example, even when it's working, no matter how many times I have attempted to program my Korean Son of Sam VCR, I never fail to screw up everything.

Regardless of which late-night movie I try to record at any time on any channel, I end up with the same commercial program showing some idiot polishing a Rolls Royce and then setting fire to its hood with lighter fluid. Alternately, I get the local educational channel running a selection from their library of films, most of which cover topics like making party decorations out of fish heads. Lucky for me my VCR has spent more time in the shop being repaired than hooked to my TV set. Otherwise, I'd have the world's largest private collection of stupid cassette tapes.

The VCR's instruction book has been as useful in operating the machine as an out of town telephone directory would be. My XYL insists that, in fact, it actually is a Seoul telephone directory.

Challenges like this don't bother me in the slightest when people seek me out for tech advice. Bewildered though I may be, it's still scary to think that I'm nevertheless better at any of this than those who come around beseeching me for information. I know it's shameful of me, but it's so totally flattering that I just can't help myself.

At 9:30 on Christmas morning, the phone begins ringing with people excitedly gushing about their new electronics gifts, asking when they could drop by so they can show off the stuff, and suggesting that maybe I could also give them a few pointers on its use. The message is they don't have the slightest intention of dealing with the instruction manual. They're hoping that I will come by and explain everything off the top of my head in a five minute run-through, after which they'll be experts.

Traditionally, I have accumulated a dozen or so of these calls until 3 p.m., and then the XYL becomes the designated driver for my house calls. Everybody wants me to share their holiday feast and a bit of eggnog at each stop along the way. Anything I have to say about their equipment is on the level of my proclaiming that the "power" switch may possibly be what turns the thing on. For these paltry crumbs of information, I have the heady pleasure of basking in their profound gratitude. It's as if I had just clarified Einstein's space-time continuum. At times, my explanation has been presented to the accompaniment of so much holiday noise and commotion, so many interruptions and distractions, phones ringing and howling kids, that I figure I could have sung *Louie*, *Louie* and still received the same accolades.

Of course, the problem is that at 9 p.m. I'm only on the fourth or fifth stop of my rounds. I've already put on five pounds and don't realize that I'm attempting to fit CD's into the slots of VCR's.

One time, the house guest of a friend was a visiting dignitary from the Yamaha motorcycle works, of Tokyo. Despite a couple of futile attempts at shutting me up, I recall being inspired to provide the visitor with a lengthy, impromptu, and practically logical explanation of how to convert kilocycles into motorcycles. He was busily transcribing every word in his little notebook. Hope he was merely being courteous and didn't decide to present that brainstorm at the next Yamaha staff meeting. If he did, he's now parking Yamahas instead of being concerned with their distribution and worldwide market share.

During house calls, by the time it turns 9 p.m., I have reached the pinnacle of my joviality. Unfortunately, by then, my XYL has long since stranded me in order to return home to entertain the company we invited to arrive at 8:30.

It's why physicians no longer make house calls. A doctor can't go on a workable diet or see all of his patients until he finally stops with the house calls.

So, starting last Christmas, I stopped making house calls. Friends, neighbors and relatives who called were told to show up at our place at 3 p.m., bringing along any equipment they wanted to discuss or have explained. This time, surrounded by decorated tree and roaring hearth, we served a buffet to accompany the parade of CD's, CB's cellualars, VCR's, scanners and other wonderful gizmos. G.L., the poodle man, was there, so was Woody.

To the delight of all, myself included, I sat there holding court. I was really in my glory. As usual, there was no end to useful information I had available to dispense to the befuddled masses. The XYL claims everybody was only humoring me. For all I know, they've been doing that for years. Along with those who couldn't figure out how to use their newly-received high tech gifts, a few folks obviously showed up for no other reason than to avoid spending the holidays alone. No problem!

An old school chum who holds a sensitive position at Western Union tantalized me with the promise of coming over to offer a peek at a couple of highly classified wires he had gotten his hands on. I was to learn that one wire he had was classified as 3 inches of 14 gauge 7-strand copper antenna wire, also he showed me a strip he classified as 4 inches of 18 gauge solid conductor hookup wire. A lady from town appeared carrying a bunch of floppies in a red plastic isolation bag. She was wondering how to get a cure for their computer virus.

Another unforgettable guest was a friend who has managed to become a prominent surgeon, despite his sense of humor. He was seeking advice on his almost-com-

pleted Nobel Prize caliber medical invention, which he had brought along. This was a heart Pacemaker wired up to one of those *Clapper* gadgets that turns off electric appliances with a clap of the hands. He said its future use is guaranteed to end problems getting patients to pay past due bills sent them for his services. Some who know him figure this guy may have attended the medical school that advertises on matchbook covers.

Certainly a holiday to remember. It makes up for the other side of the year—the summer solstice, when the sun is at its strongest. That's actually the lowest point on my annual calendar, when friendly neighbors bring my dog up on morals charges, and good-natured relatives weasel me out of tools. It must be the result of an old family curse or some malevolent astrological influence.

Nobody knows what this year's holidays will bring, but I'm anxiously awaiting their arrival. The poodle guy's wife called to ask for ideas about buying G.L. an electronics gift, so I know he'll be back again. Fuzzyface always singles this fellow out of any crowd to receive his unceasing attention, and with as much gusto as provided Mademoiselle Yvette.

Cousin Woody will come around, too. He isn't beneath asking for instructions on using a flashlight or digital wrist-watch now that he knows where there's a working buffet table. Woody graduated from the Evelyn Wolf School of Speed Eating.

My hope is that your holiday will be happy, and you can also spend it in the comforting warmth of those whose company you enjoy.

There may be no better time than this holiday season to demonstrate that our cold and battered world is warmed, healed, and renewed when we reach out and share a smile with others. Seeing the humor in at least some of the many frailties of our human condition is the first step in the process.

New Age Revisited

In the September issue we showed and discussed New Age electronics products, and mentioned that they came from the catalog of Super Science, Dayton, OH. A number of readers have asked how to get in touch with Super Science.

Super Science is at PO Box 392, Dayton, OH 45409. The telephone number is (513) 298-7116.

CLANDESTINE COMMUNIQUE

WHAT'S NEW WITH THE CLANDESTINES

The resolution of the Ethiopian civil war, coupled with the end of the Mengistu government has resulted in the disappearance of several Ethiopian clandestine stations. Gone from the airwaves are *The Voice of the Ethiopian People for Peace, Democracy and Freedom*, *The Voice of the Broad Omoro Masses* and *Radio of the Ethiopian Democratic Officer's Revolutionary Movement*. *The Voice of the Broad Masses of Eritrea*, perhaps the oldest of the Ethiopian clandestines, continues its operation and now announces that it broadcasts from Asmara, Eritrea. It announces its current frequencies as 3940, 7020 and 7490. *The Voice of the Tigre Revolution* also continues to operate, announcing its location as Mekele, capital of Tigre province. North American DX'ers would seem to have a slight chance to hear this one now, at 0400-0500 on 6940 and 7820, in the Tigrigna language.

Radio SPLA, voice of the Sudan People's Liberation Movement/Army which clandestine watchers believed to be transmitting from Ethiopian facilities, apparently is, or was. Once the new regime took over in Addis Ababa *Radio SPLA* fell silent. The same is true for a lesser known anti-Sudan station, *Radio Sudan*. It's anyone's guess whether these will return, it's likely both are looking for a sympathetic host country or the means to put their own facilities on the air.

The FMLN's *Radio Venceremos* continues to be active on 6399v after a long silence on shortwave. The station is being heard around 0200 with the usual Spanish programming. You may also hear the morning transmission scheduled for 1300.

It's still not certain just who operates the replacement program for the anti-Beijing *Voice of June 4th*, which discontinued its efforts last spring. Appearing in its place is *The Voice of China*, via the facilities of the Broadcasting Corporation of China, Taiwan. The *Voice of China* now airs a 60 minute program at 2100-2200 on 15280. Supposedly, the program is produced by Chinese ex-patriots.

Here are yet more anti-Castro voices being carried on WWCR's Nashville shortwave outlet: *La Voz de la Junta Patriotica Cubana* airs at 2230-2300 and *La Voz de la Tribuna Libre* runs from 2300-2330, both on 15690. The *Patriotica Cubana* program may be from the same group which operated a station with a similar name many years back. Letters to this broadcast may be sent to Box 526852, Miami, FL 33125. The *Tribuna Libre* program has an address of PO Box 11304, Miami, FL 33111.

R. C. Watts in Kentucky reports reception

A rare clandestine QSL, especially for DX'ers in North America, Al-Quds Radio calls for a Palestinian state. Thanks to Ivan Cholakov of Bulgaria.

of *Esperanza - La Voz de los Municipios de Cuba in Exilio* between 2306 and 2356 via WWCR on 15690. This one airs Monday through Friday and is produced by the group *Municipios de Cuba*, 4600 NW 7th St., Miami, FL 33126.

UNITA's anti-Angolan *A Voz do Resistencia do Gaio Negro* continues to be heard by various clandestine hunters. It's reported on 7100 at around 2330 or later, 4880 to sign off at 2325. Programming is in Portuguese.

Watts in Kentucky reports *Croatian Radio*, Zagreb (Yugoslavia) via WHRI-7315 beginning at 0003 with news and current affairs. R. C. heard an announcement in English saying the program also airs Saturdays and Sundays on 9475. The program ended with identification in English and Croatian at 0055, then anthem to 0100 closing. First we've heard of this R. C. From your description it apparently wasn't *Radio Libertas*, the Croatian liberation program which WWRI has been running for sometime now.

The Palestine Liberation Organization's station, *Al-Quds Radio* (see illustration) is now reported to be operating on 5910 between 0600-1100 and 1300-1730. It airs a program in Hebrew at 0800, Russian at

0845 and English at 0915, otherwise all programming is in Arabic. We don't know of any loggings by North American listeners, but Ivan Cholakov in Plovdivska, Bulgaria has heard and verified the station.

The anti-Iranian station *Voice of the Mojahed* has been observed by a couple of North American monitors on 6540 with an 0130 sign on and programs in Farsi. This station is believed to be an operation of the government in Baghdad.

The CIA-affiliated, anti-Saddam *Voice of the Iraqi Opposition*, formerly the *Voice of Free Iraq*, is still on the air. Active frequencies continue to be 9570, 15605 and 17950, ex-17960. The schedule is listed as starting at 1400 and the station has been logged as late as 2230. One DX'er has had a QSL for this station, received for a report sent to the Ministry of Information in Riyadh, Saudi Arabia.

That does it for this time. Your loggings of clandestine stations, QSL information, schedules, background information and news clippings related to clandestine radio are always very welcome. Your name can be kept confidential if you wish.

Thanks for your help and, until next month, good hunting!

WHAT'S HAPPENING: INTERNATIONAL SHORTWAVE BROADCASTING BANDS

There are times when it's difficult to decide which piece of news to use as a lead item each month but this isn't one of those occasions. The choice is easy when there's a new country on the air! Radio Bahrain began shortwave broadcasts in mid-summer and is operating a 60 kW transmitter at Abu Hayan, using 6010 with programs mostly in Arabic. The schedule is a bit uncertain at this writing but may run from 1400 to 0500. Some English is also reported, ending at 2100. A couple of years ago Radio Bahrain aired a program via Radio Kuwait, but the Iraqi invasion put an end to that. Perhaps after testing the waters Bahrain decided they should have their own facility. Radio Bahrain's address is PO Box 702, Manama, Bahrain.

Incidentally, Kuwait's shortwave transmitters were destroyed by bombing during the war. New units have now been ordered and a partial shortwave service is expected to be back on in about eight months—probably spring '92, but full service isn't expected to be restored until the summer of 1993.

Another country is a step closer to getting on shortwave. Evangelist Dr. Gene Scott has announced that the government of Anguila has approved sale of the Caribbean Beacon to his University Network for \$782,187.04. That buys him 99,999 shares of stock in Caribbean Beacon (one share will remain in Anguila). At least one shortwave transmitter will be on the air from Anguila. No target date for shortwave from Anguila is known.

How's this for a bit of the unusual? Swiss Radio International has added radioteletype to their services. And, rather than being intended for reception by newspapers, radio or TV stations, this one is aimed at the general public. News and schedule information is aired on the RTTY service at 1830-1930 to Africa on 17531, 2000-2100 to Asia, 0030-0130 to South America and 0200-0300 to North America, all on 10515.

Longtime Argentine shortwave broadcaster Radio Belgrano used to be heard often in North America. More recently a days only schedule made catching this one a rare event. The company of which Radio Belgrano is a part has been sold to a private firm and now has a new name—Voces en Libertad (Voice of Liberty). It continues operating on 11781, relaying 950 kHz mediumwave between 1400-2000. So the schedule continues to make this one hard to hear in much of North America. There's some question as to whether the new owners will continue the shortwave for very long, too.

Spanish National Radio has instituted a 24 hour Spanish language world service, of which about two-thirds will be news and related programming. Although the schedule

is too involved to include here, check these frequencies, as several are in use at any given hour: 7105, 9580, 9620, 9630, 9650, 9685, 11790, 11815, 11920, 12035, 15110, 15240, 15325, 15365, 15395, 17715, 17755, 17845, 17890, 21495, 21555, 21570, 21595.

Republic of Yemen Radio has added some English to its schedule. This is scheduled at 1600-1630 on 5970 and 7190—time and frequency combos which don't do much for us here in North America.

A month or two back we told you of the demise of the USSR's long-running Radio Station Peace and Progress. It seems that wasn't the only Soviet broadcaster to meet its end. Radiostansiya Rodina, or Radio Homeland, the all-Russian language relay of various home service networks has also been discontinued on shortwave.

Guam is a no-go for High Adventure Ministries. It seems that all the wrangling over land titles and such has caused George Otis and company to give up on putting their KHBN shortwave station on Guam. They still hope to put KHBN on the air from somewhere in the Pacific, though. Perhaps in Northern Australia or one of the Pacific Islands.

Meantime, the "Hope" organization is adding a new 25 kW transmitter for the King of Hope station in Lebanon and should be active by the time you read this. The new unit is tentatively scheduled to use 11530 and simulcast the 6280 frequency.

Radio Beijing has plans to build a new "Radio Beijing Center" which will cost 'em 200 million yuan, says the Radio Beijing newsletter. It's to be located in the western suburbs of Beijing and construction should begin in about a year. They won't be ready for occupancy and broadcasting until 1995-96. Radio Beijing's current headquarters was built in 1958.

NOTES FROM THE MAIL: Bill Moser of New Cumberland, Pennsylvania says he's still teaching his "Radio World" class. The latest had 15 students, including Bill's son.

David Gasque in Orangeburg, South Carolina recommends tuning with upper or lower sideband controls engaged. He points out that it's easy to scan through a band, listening for oscillation when carriers are hit. "Using USB," says David, "I simply tune lower in frequency to the 'bottom' of the oscillation. I then switch to a narrow filter and listen or wait for the signal to improve. If using LSB, the opposite technique is used." Good advice, David. Many DX'ers tune in sideband almost exclusively.

Mrs. Robin Verhose in Spring Lake Heights, New Jersey wonders "how on earth you get an address from a station that's new." Often, Mrs. Verhose, the sta-

One in a series of Swiss Radio International's QSL cards which picture Swiss scenes. Thanks, J.K. Todd, Sacramento, CA.

Switzerland's other station is the Red Cross Broadcasting Service. R.C. Watts, Louisville, KY, logged this while in Europe.

tion will announce an address. Or another DX'er will hear it or otherwise come across it and report it to this column or one of the club bulletins. Often you can "make up" an address that'll work just by using the station name plus the city and country in which it's located.

Mike Hawk in Omaha, Nebraska says he's been an SWL "off and on" since he was seven! Mike does a lot of mediumwave lis-

Here's the shack of Thomas H. Schlaeger, Hamburg, Germany. Featured receivers are an NRD-525 and Minix MR-73B.

tening, as well as FM and shortwave and he also has technician's ham license. Mike is interested in getting in touch with other SWL's in the area and you can reach him at 10212 P Street, Omaha, NE 68127.

James P. Ernst in Decatur, Georgia started "the first time I turned it on and discovered that the airwaves were filled with music and voices from around the world." He left the hobby in the late 70's, but the bug has bitten again and he now operates with a Kenwood R-5000, "recording devices" and an Eavesdropper trapped dipole antenna. Good to have you back in the fold, James. Keep those nice reports coming.

That goes for everyone, in fact. We need your logs each month, plus news about shortwave stations, spare QSLs we can use as illustrations as well as shack photos, station photos, schedules and what-have-you. Remember that logs should be arranged by country (alphabetical order isn't necessary) with some cutting room in between and your last name and state abbreviation after each item. We say that every month and every month several don't do it. Those are

James P. Ernst of Decatur, GA does his DX'ing from this neatly arranged shack. Looks like he's picked up some awards along the way.

the reports which are least likely to be used. Thanks for your help and your cooperation!

Here are this month's logs. Broadcast language is assumed to be English (EE) unless otherwise noted as SS (Spanish), FF (French), etc. All times are in UTC.

SWBC Loggings

Alaska: KNLS on 7365 at 0825 with religious program. (Moser, PA) 11715 at 0841 with music, ID, religious messages. (Ernst, GA)

Antigua: Deutsche Welle relay, 6040 at 0146 with German by Radio. (Moser, PA)

BBC relay on 5975 at 2243 (Moser, PA) 0539 (Carson, OK)

Argentina: RAE, 11710 at 0120 with news. (Rocker, NY)

Ascension Island: BBC relay, 7105 at 0632 with English/French lesson. (Carson, OK)

Australia: ABC Northern Territory Service (VL8K, Katherine) on 2485 at 1030 with local commentary. Weak. (Story, TX)

ABC Brisbane, 4920 at 1312 with pops, DJ, ID, weather. (Zamora, CA)

VNG time station on 12984 LSB with CW ID at 1028. (Rocker, NY)

Radio Australia, 9580 at 0957. (Vaage, CA) 15160 at 1036 to SE Asia. (Ernst, GA) 17795 at 0530. (Carson, OK)

Austria: Radio Austria International, 6015, via Canada, at 0530. (Pellicciari, CT) 9870//9875//13730 in GG to abrupt close at 0159. (Moser, PA)

Benin: Rdf. du Benin at 0500 on 4870 with national anthem and discussion in local language. (Story, TX)

Botswana: Radio Botswana with sign on at 0258 on 7255—JS, anthem, ID. (Moser, PA)

Brazil: Radio Brazil Central, 4985 with excited announcer (probably a sports event) in PP. (No time given but presume it was during local evening, editor)

Swiss: Radio International, via Brazilia, 17730 at 0201 with news. (Moser, PA)

Bulgaria: Radio Sofia, 11660//15330 at 2244 with letter program. (Moser, PA) 11865 at 1910 in AA, brief IS and ID in AA at 1930. (Zamora, CA)

Canada: Radio Canada International, 5960 at 0020 and 9755 at 2300 (Cavanaugh, TX) 9535 at 0257 with frequencies. (Moser, PA) 15325 at 1930. (Shumaker, MI)

CHNX, Halifax, 6130 at 1000 with rock. (Story, TX)

CFRX with CFRB relay on 6070 at 1120; traffic report. (Moser, PA)

CKZN, St. John's, 6160 at 1109 with CBC news. (Foss, AK)

Chad: Radiodif. National on 4904 at 0430 with national anthem, mixed regional discussions and modern African music. (Story, TX) Presume all in French, editor)

China: Radio Beijing, 9440 at 1215 in unidentified language. (Northrup, MO) 11750 at 0915. (Moser, PA) 11855 at 1409 news and "News About China." (Zamora, CA) 17705 at 0006. (Shumaker, MI)

People's Broadcasting Station, Kunming, 15670 at 1024 with instrumental music, CC. (Foss, AK)

Haixa 1 (aka Voice of the Strait, editor) 6115 at 1225 in CC but no ID heard. (Northrup, MO)

Colombia: Radio Nacional, 11823 at 2221 with news in SS. (Reyes, Mexico)

La Voz del Llano, 6115.8, announcer in SS, easy listening music at 0651. (Carson, OK)

Caracol Bogota, 6075 in SS at 0805 with news, commercials, music. (Story, TX)

Congo: RTV Congolaise with 0400 sign in FF on 4765. ID in FF followed by news. (Gasque, SC)

Costa Rica: Radio For Peace International, 7375USB at 0625. (Rocker, NY) 13630 at 0130 with ID and interview. (Ernst, GA) 15030 at 0257 with the "Other American Radio" program. ID. (Zamora, CA)

Faro del Caribe, 9645 at 0024 with religious program in SS. (Reyes, Mexico)

Adventist World Radio, religious programming on 9725 at 2301. (Moser, PA) 0455. (Rocker, NY)

Cuba: Radio Havana Cuba, 5965SSB with FF sign on at 0300 after IS. (Watts, KY) 11760 at 0100 and 11835 in SS at 0610. (Cavanaugh, TX) 11950 at 0200. (Shumaker, MI) 15230 at 1326 in SS. (Moser, PA)

Czechoslovakia: Radio Prague International, 5930//7375 at 0101 with news. (Moser, PA)

TELEPHONES ENROUTE

BY TOM KNEITEL, K2AES

WHAT'S HAPPENING WITH CELLULAR, MARINE & MOBILE PHONES

We have all become only too aware of the results provided by numerous surveys and polls telling us how well various sitcoms, movies, foods and politicians have managed to get through to the public. But, until now, we never had a really clear picture of the relationship between the public and cellular phones.

A new Gallup study of Americans who use cellars reveals they believe the device has dramatically enhanced their business success and personal lives. You thought it was the Ferrari you bought, but it was just the car phone. You could have bought a Hyundai and installed the same car phone!

Seventy percent of the 650 cellular owners who responded to the survey Gallup took on behalf of Motorola believe they are more successful at business because of their cellular. Better than ninety percent feel they have increased their efficiency and productivity by about 36 percent.

The survey showed that cellars help in reducing job-related stress, and that's why eighty-four percent of the users told Gallup they use their cellars to call people when they realize they're going to be late for a meeting or appointment, or they call people to schedule last minute appointments.

Nearly eighty percent of the users told Gallup that they felt that cellars added about an hour of time to their day. One quarter of those polled thought that the cellular added two more hours to their day.

Fifty-six percent of those who responded said that using cellars has increased their own (or their company's) revenues by approximately 20 percent. In addition, sixty-seven percent felt that use of a cellular saved their company money. More than half reported using the cellular to close a business deal.

About eighty-percent thought cellars strengthened their business relationships with their customers, and more than sixty percent reported that it improved their relationships with their employers.

Three-quarters of cellular users report that the device has let them make the most of their home and leisure time, and therefore made life less stressful. About eight percent mentioned that the phones offer safety uses, and can be used to keep family members informed as to their whereabouts.

Eighty-four percent of cellular users say that having a phone at hand has made traveling less stressful, and about the same percentage felt that they are more willing to travel for business or pleasure because they can always keep in touch.

Motorola reported that there are well over 5-million cellular phones in use in the USA

Angel Rodriguez, an officer with New York State Correctional Services, uses a cellular in conjunction with the rejuvenation of Downing Park, Newburgh, NY.

Cellular technology has helped the expanding custom baking business of Joanne Boris, Buffalo, NY.

at this time, with 33-million projected to be in use by the end of the decade.

Speaking Of Traveling . . .

If you're a guest at the Jefferson Hotel in Washington, DC, you can rent a pocket-sized cellular for \$10 per day, plus air time. It's the first hotel in Washington to offer cellars to-go.

Drivers on the busy Pennsylvania Turnpike are reminded that they can quickly contact the Pennsylvania Turnpike Commission via cellular by dialing-up *11 (STAR-1-1). This is a toll-free call and is good anywhere on the Pike to report accidents, incidents, or calls for assistance. "Incidents" include reports of erratic driving, speeding vehicles, hit-and-run accidents, emergency or dangerous situations or conditions, disabled vehicles and stranded vehicles in need of assistance.

Microcells & Stuff

BellSouth Mobility has been testing out low-power PCN microcells in Miami, FL. Microcells can enhance an established cellular system either by filling a coverage gap or adding additional capacity to a high-traffic area. In the Miami trial, one microcell is being used to fill a coverage gap in an area where a full-sized cell-site isn't feasible. The other is installed on a billboard at the intersection of two major highways where the existing site needs additional capacity.

In the United Kingdom, Unitel and Mercury PCN are working together to develop and develop a new technique known as Parallel Network Architecture (PNA) in the design and construction of transmission networks for competing PCN's. sign and construction of transmission networks for competing PCN's.

This will permit the design and construction of a physically co-existence PCN network, but logically separate transmission networks. As a result, each operator is able to invest in the development and support of competing services over its network, benefiting from the capital and cost-sharing arrangements in the construction of the network.

More Overseas News

The new Moscow cellular system is being provided by US WEST International Holdings, Inc., Millicom Incorporated, and a Soviet partner, plus half-ownership by the Soviet Ministry of Posts and Telecommuni-

Say, just who is that chatting on the Motorola MicroTAC Lite Digital Personal Communicator phone?

The new Motorola MicroTAC weighs in at only 7.7 ounces.

ications. In the USSR, this is a 450 MHz band service. Other systems are in Kiev and Leningrad.

Millicom Incorporated is also putting a cellular system on the air in Asuncion, Paraguay. This is an AMPS 800 MHz system with 50 cell sites and a 2,000 subscriber capacity. Operations should commence within the first quarter of 1992.

Millicom Incorporated is located at 153 East 53rd Street, Suite 5500, New York, NY 10022. US WEST is located at 7800 East Orchard Road, Englewood, CO 80111.

The FCC Said It's Fine With Them

The Victoria Cellular Corp., of Victoria, TX was fined \$15,000 by the FCC for "fail-

ure to file notification of construction of a new cell" for its cellular system.

In May of 1988, Victoria had received FCC authority to construct a new cell and increase power. The authorization stated that it had to be operational within a year. Victoria put the cell into operation within the required time.

The FCC was unhappy, though, that Victoria had failed to "timely notify" the agency that the cell site was in operation by the filing of an FCC Form 489.

Victoria filed a request for temporary authority to operate the cell site pending FCC action on reinstating the expired authorization. The temporary authorization was granted in September of 1990, and a request for extension of the temporary authorization was filed in December, 1990.

Still, the FCC didn't like that Victoria's authority to construct and operate a new cell site had automatically expired in May of 1989 when it failed to mail in the FCC Form 489. Hence the \$15,000 fine.

You can think what you will. My own personal opinion is that a \$15,000 fine for something as piddling as this is unconscionable highway robbery of honest American business firms. I suppose it's as good a way as any to finance those fat pay raises for our Congressional representatives.

Applications Notes

Downing Park, in Newburgh, NY was built more than a hundred years ago by two very talented architects. For the past thirty years, the park has been deteriorating. In an attempt to save this once-scenic park, a master plan has been put into action with the intention of rejuvenating the 35-acre site.

Part of this plan calls for cleanup, maintenance, and restoration of eighteen inmates on a work release program from Camp Beacon, a corrections facility oper-

ated by New York State.

NYNEX Mobile's Newburgh office donated a cellular phone to the Downing Park Planning Committee so that cleanup supervisors can maintain communications from all areas of the park.

Four years ago, Buffalo, NY's Joanne Boris put her baking talents to work and converted her basement into a professional bakery. Calling her company *The Cookie Cupboard*, she began making and fresh-delivering customized cookie gift baskets for local residents.

It wasn't long before she began receiving orders from businesses and large corporations from throughout several counties. As her business expanded, and the phone kept ringing, Joanne found that an answering machine didn't provide the type of personal service she was hoping to provide. Last January, she purchased a cellular and found that at least fifteen orders per week come in over the cellular while she's away from her office.

Her success has permitted the opening of a retail shop at the Forestream Village Plaza, Lancaster, NY. And, she still makes her own deliveries. No matter where Joanne is, no order goes unanswered.

Getting Smaller

Motorola keeps pushing down the size and weight of cellulars. The company's new MicroTAC Lite Digital Personal Communicator weighs a mere 7.7 ounces and measures 11.6 cubic inches. Yet, you can chat for 45 minutes, or let it run on eight hours of standby with the standard battery. Or, with the Talk PAK XT battery, you get two and a half hours of talk-time and a full 24-hours of standby.

Some of the useful features include a 9-1-1 override for use even when the phone is locked, storage of 99 numbers (32 digits each), an alphanumeric directory for phone number storage by name and/or number, auto answer and a menu mode that allows the selection of features from a user-friendly list.

This cellular was designed with a flip-open mouthpiece, like Captain Kirk's communicator on the old *Star Trek*. It looks just great. When you take this out in public, you owe it to everyone within earshot to announce, "Beam me up, Scotty!"

You can get more information on this good looking cellular from Motorola, Inc., Pan American Subscriber Group, 1475 West Shure Drive, Room N232, Arlington Heights, IL 60004.

And we hope to ring you up next issue. If you have any thoughts, ideas, questions on cellulars, paging, IMTS, marine radio, PCN, or related fields we hope you send us a letter or card. And we always like to hear from manufacturers with product information, as well as information from service suppliers on what they are doing. ■

FOCUS ON FREE RADIO BROADCASTING

The Voice of Bono's newsletter notes that they are phasing out their Baltimore mail drop and replacing it with the Wellsville drop: PO Box 452, Wellsville, NY 14895. You can have the occasional Voice of Bono newsletter sent to you free by writing to the station at the above address, but please include three units of first class postage.

Now let's get into the loggings. Robert Ross of Canada reports reception of **Omega Radio** on 7416.5 at 0407-0418 sign off carrying religious programming and anti-war messages. Apparently this was a joint broadcast with **Radio USA**. The Blue Ridge Summit and Wellsville addresses were announced. The duo 'cast was also picked up by Damon Cassell in Massachusetts who had them at 0050-0125 and music from an album by a group called Plan B. Hosted by "Dick Tator."

The **Chicago Tunnel Company** was picked up by Bill Morse of Elgin, Illinois on 7415 from 0439 to 0526 with a tell broadcast. Music ranged from big band things to organ music to the Beatles. Bill says he thought an address was announced but reception was very poor so he was unable to copy it.

Pat Murphy in Virginia heard **He Man Radio** on 7412 upper sideband from 0135 to 0149 with music by Paul Revere and the Raiders and a baseball routine. Damon Cassell had this one at 0140 to 0205, mostly with music and a talk with Herman's son, Roy. PO Box 109, Blue Ridge Summit, PA 17214 was given for reports.

Radio USA was spotted by Ken Bailey of Madisonville, Kentucky on 7414-7415 at 0020-0030 with late '60's and '70's rock. Pat Murphy heard the station with the usual Mr. Blue Sky on 7415 at 0125-0204 with James Bond music, a "Sununu Travel Club" routine and rock music. Cassell had this one on 7416 at 0126-0240 with ID's by young children, editorial, "DX Party Lane," and fake commercials. Also included was a tribute to pirates of the past, complete with taped IDs. Announces the Wellsville drop. Cassell heard them again at 2258 with a claimed test and complaint about poor conditions. That show was repeated twice more that evening, says Damon. He also heard the station on 7416.6 airing a program called the "Great Atlantic Radio Conspiracy."

Skip Harwood in California reports **KLOG** on 7406 at 0355-0418 with Hawaiian music and fake commercials.

Harwood had **Radio Free America** on 7415 USB at 0340-0510 with rock music and a statement that it was a free radio broadcaster and not a pirate. Also heard by

PIRATE RADIO STATION QSL No. 0082

WJDI 1620

THIS WILL VERIFY THE RECEPTION OF PIRATE RADIO STATION WJDI 1620 KHZ ON A DATE AND TIME OF DEC 24, 1990 8:45 PM EST BY SHORT WAVE LISTENER PAT MURPHY LOCATED IN THE TOWN AND STATE OF CHESAPEAKE, VA WJDI AT THE TIME OF YOUR RECEPTION WAS OPERATING WITH AN OUTPUT POWER OF 5.1 KILOWATTS.

COVERING MORE THAN 40 STATES IN AMERICA FROM NEW YORK STATE WJDI "THE PIRATE KING" HAS RECEIVED HUNDREDS OF LETTERS FROM OUR LISTENERS IN SUPPORT OF FREE RADIO IN AMERICA. WJDI OPERATES FOR THE MEDIUM AND SHORT WAVE LISTENER TO LOG AMERICA'S MOST POWERFUL PIRATE RADIO STATION... AND THE BEST IS YET TO COME! WJDI HAS BEEN UNDER CONSTANT FIRE FROM THE FEDERAL COMMUNICATIONS COMMISSION WHO WOULD LIKE TO SEE ALL FREE RADIO DESTROYED IN AMERICA.....

FORTUNATELY FOR ALL OF US INVOLVED IN RADIO THEIR FIGHTING A LOSING BATTLE! THANKS FOR THE LETTERS AND SUPPORT...

KEEP LISTENING

George Donahue
CHIEF ENGINEER

Cassell at 0355-0510 with mostly hard rock music and a message to the FCC "wishing them luck" finding the station. They gave 1-800-555-5555 as a request line and claimed 1500 watts output to a vertical antenna. No address announcement heard.

Patrick Brown of Kentucky had **WORK** on 7415 at 0420 with songs about working, "top ten reasons for staying home from a job," fake interview about working in the USSR compared to the US. This one uses the Wellsville address. Pat Murphy had this one from 0247 to 0351 with songs relating to work, "Workers Game Show" and ID as "the workers station." "The Working Man" was the announcer. Cassell heard them at 0400-0440 with talks about beer and work, songs about work, skits and fake commercials. Off abruptly.

Cassell had **Radio Comedy Club International** at 2335-0005, relayed by Radio USA on 7416.6. ID as "RCCI." The station plays comedy songs, stand-up comedy, funny commercials, etc., says Damon. Reports requested via the columns of the A*C*E* bulletins. Pat Murphy had this one, too, at 2337-2355 with a rap music routine, "Ahab the Arab," "You Drive Me Crazy" song and ID "Remember, we're the fun one—RCCI."

Murphy reports **Mega Radio** on 7415 at 0109-0123 with rock music and a jive rou-

tine. I have to wonder if this wasn't actually Omega Radio, Pat. I haven't seen any reports for a "Mega Radio."

Cassell had **WHO** at 0126, ID'ing as "Free Radio on Galifry" and playing funny songs and skits. Claimed 100 watts output and gave the Wellsville address. Damon says that, after sign off, several station operators came on and commented on how professional the broadcast was.

Harwood reports **Radio Freedom** on 7415 at 0540 to 0650 with music of Pink Floyd and the Fine Young Cannibals.

Skip also heard KPN-36 on 7407 at 0345-0445, billing itself as classic golden age radio for the Pacific Basin. It featured classic music from 1936. Suffered from technical problems.

Robert Ross in Canada reports QSL's received from WJDI-1620, Radio Fax (Ireland) on 6205 and 12255, Radio Blandex on 7416.5 and He Man Radio on 7415.

That brings us to the bottom of the pile. Don't forget that pirate loggings are always wanted, along with information on QSL's, including copies for use here, plus news clips and other info about pirates. Special to pirate broadcasters: we are eager to hear from you with news about your stations—format, activities, equipment, future plans and all that kind of thing.

See you again next month!

COMMUNICATIONS CONFIDENTIAL

YOUR GUIDE TO SHORTWAVE "UTILITY" STATIONS

An article in the *Washington Post* indicated that the manned DEW line stations of the US/Canadian North American Aerospace Defense Command (NORAD) will be phased out over a three year period.

Some of the DEW line sites will be upgraded with solid-state radar equipment. The new unmanned stations will be fully automated with the radar tracking data automatically fed to NORAD Headquarters at Cheyenne Mountain in Colorado Springs, CO and North Bay, Ontario, Canada for analysis.

Servicing of the equipment will be accomplished by maintenance teams flown in periodically to the stations.

Radio Officer Jon S. VanAllen aboard the S.S. Buyer referred to the logging by Andy Gordon, CT of the USS California in contact with Midway Island. "I was Radio Officer on the S.S. California, A C-4 Break-bulk Freighter re-activated by MSC for Desert Storm. We also stopped at Midway with a bad fuel transfer service pump. We also called on 2716 kHz, and as a matter of fact, we were 100 miles away when we called. They didn't respond so we called NOJ-Kodiak, AK and they got Midway on the Auto-von phone and told them we were calling and needed priority assistance. Kodiak is well over a thousand miles from our location. 2 MHz propagation was in good shape that evening."

Jon offered some remarks concerning the Ready Reserve Fleet. "As a matter that your readers might enjoy, very little was said about the Ready Reserve Fleet ships and their crews during Desert Storm. 78 ships were activated for the sealift to Saudi and many Merchant Mariners like myself played an important role in the effort including wading through mine fields in the Gulf, issuance and full military instruction on the use of gas-masks, suits, antidote procedures, and survival techniques. We went through several Scud missile alerts, one of which landed about 6 miles from us in Dharan. Besides all that, we had 12 Army personnel on board assigned to escort the equipment from Oakland to Saudi and after we left Singapore through the Straits of Malacca, we had armed "Pirate guard" around the clock because of the frequent pirate attacks in that area."

Jon concluded his letter by indicating that he believed the majority of Radio Officers would be more than happy to QSL any reception reports received. He commented "The frequency shuffle just enacted may spark some interest in the new SSB frequencies that are so frequently used between ships. All RRF ships have SITOR on board (even though a few old timers refused

These photos show the front and rear of the Poste E Telecomunicazioni building at Piazza Garibaldi in Ravenna, Italy. Although difficult to see in the front view, there are numerous antennas on the roof. Photos courtesy of R. C. Watts, KY.

to learn it). Although most official traffic was sent by INMARSAT, we still send a lot of traffic, such as, telegrams by SITOR."

Our thanks to Jon for the foregoing information and hope to receive some loggings from him in the near future as he sails to various locations in the world.

Edward Safir, GA wrote "I am a college student. I just recently took an active interest in SWL and started reading *POP' COMM*."

Shortwave radio has interested me as far back as I can remember; my family has always had at least one radio capable of receiving the HF bands. Several years ago, I acquired a Sony ICF-7600D for Christmas. This has since been my main receiver. At home in Georgia I have a Sony AN-1 active antenna atop a 25 foot mast on top of my roof. I also have a 100 foot longwire antenna. I have added a MFJ 1278 multi-mode decoder to my shack in order to monitor

This building which is adjacent to the Poste E Telecomunicazioni building also has antennas on the roof. Photo courtesy of R. C. Watts, KY.

 2776.4 - 2770.5

Russ Hill, MI sent in this PFC.

This photo shows the layout of Registered Monitoring station KOH8LX, operated by Schon Garcia, OH.

FAX, RTTY, and CW (I know, it's sheer laziness for me not to learn code!).

With my growing interest, especially in the field of data communications, I feel that I have outgrown my little radio and hope to purchase a better model.

In my dormitory room at Harvard, I am limited with just my radio and my bedframe serving as an antenna. Despite the conditions, I have been able to intercept some rather interesting transmissions here in Cambridge in the evenings after my classes."

Geoff Malta, NY advised, "Finally I can send in loggings now that I have a new receiver with digital readout (ATS-803A). No more frustrating guessing-games of what I was hearing and where!

My equipment now includes: ATS-803A, Tempo 2020 tx, HK-232 TNC, DX-160 SW rx, PRO-2004+, MFJ Versa Tuner II, and a 40m dipole antenna. I use an Apple IIE for the digital stuff."

From Finland we heard from Reino Multanen who indicated he was interested in the "Spy Numbers" stations and in VLF stations. "Some weeks ago I built a converter, 10-100 kHz, and have heard many stations from Germany, England, and, of course, from the USSR. Radio has been my hobby and profession for about 50 years."

First time contributor Schon Garcia, Registered Monitor KOH8LX, of OH said he was Texas born, transplanted to Ohio and he is an avid SWL'er. "I started as a kid listening to the shortwave radio in my mother's bedroom after she finished listening to "The Shadow" and all the other greats. I remember using the SW portion of the Philco radio and listened to the world. Some police calls came through also. Living so close to the border in San Benito, Texas, I listened to Mexican stations across the border.

I was mainly interested in the police, military, and naval frequencies. I also listened to ships coming in and going out of Port Brownsville. This particular radio did not have a BFO control so I went to a local shop and found a Hallicrafters S-40A and paid for it on a dollar a week plan. I must have been about 8 years of age and it was hard paying for that radio. I later acquired a Lafayette HE-10 general coverage receiver and recently took it out of the moth balls and am now listening to SW again. A friend passed on an old Lafayette HA-350 HAM receiver and said I could use it until I upgrade to better equipment.

I am a retired law enforcement officer so I have time for monitoring and hope to send in more reports in the future."

And from Dwight M. Brown, Jr in Louisiana, "The enclosed tape was made over a period of a year or so and the newest addition was made just recently. I have been hearing what sounds like outband stuff, possibly Vietnamese fishermen in the Gulf of Mexico. I had both Chinese and Japanese friends listen to the tape, but they were unable to identify the language."

Dwight, I listened to the tape and thought there were a couple of words that sounded like some Vietnamese words that I have on a language reference tape. Your guess that the communications were those of Vietnamese fishermen in the Gulf of Mexico seems quite probable. I thought I detected several mentions of the word "Panama" as might be said by an Oriental speaker pronouncing the word.

In his letter, Dwight also mentioned that his dad started in radio in 1914 as a kid and so Dwight grew up with either home-brew equipment or in the later years, commercial receivers, in the home. "My first was a regenerative receiver when I was in the 5th grade. I have now graduated to the R-1000, S-line, KWM-2, TS440, etc and never have time for as much listening as I would like."

Well, that wraps up the mailbag for this month. Keep those cards and letters coming and remember that photos of communications installations are always welcome.

Dear Sir,

We had the great pleasure of receiving your letter with details of our transmission. Thank you for your report, it is very interesting to us.

Our equipment is made by ROHDE & SCHWARZ in Germany, and it is composed of:

- Receivers mod VLF-HF EX-070, Control Unit GB-170

- Transmitters, Control Unit GB=853 CI (1Kw Power)

- Active antenna System HE-005, mounted outdoors at about 12 m. above ground, vertically and horizontally polarized. It is located at 275740N 0152411W.

We also work on frequencies:

2.854 Khz	Sunset to Sunrise	South Atlantic
3.452 Khz	" "	" "
5.565 Khz	24 hours	" "
6.535 Khz	" "	" "
8.861 Khz	" "	" "
11.291 Khz	" "	" "
13.315 Khz	Sunrise to Sunset	" "
13.357 Khz	24 hours	" "
17.955 Khz	Sunrise to Sunset	" "
3.016 Khz	Sunset to Sunrise	North Atlantic
5.598 Khz	24 hours	" "
8.825 Khz	" "	" "
13.306 Khz	Sunrise to Sunset	" "
17.946 Khz	" "	" "

Yours sincerely,

(CARLOS RODRIGUEZ)

OPERATOR AT CANARIAS RADIO AERONAUTIC STATION

With the return of his PFC, Dave Sabo, CA also received this letter containing technical details regarding the Las Palmas station.

w/5F grps for 3 addressees. On this particular occasion tfc was for 72906/12345 and 19703. (Mason, England)

5505: Shannon Volmet w/Airport wx forecasts in USB at various times. The usual Irish voices have been replaced w/the same OM/EE automatic voice machine that is used on the RAF Volmet forecasts on 4722/11200 kHz. It will make listening less interesting especially during the evenings when the Irishmen could be heard getting pretty bored with their job at times. (Mason, England)

6200: NLPM, USCGC Chase WHEC718 wkg USCG Comsta Portsmouth at 0030 re position report given as vessel entering Boston Harbor; NRPI, USCGC Gentian WLB290 wkg USCG Comsta Portsmouth (NMN) at 0045 re arrangements to bring this circuit up early next AM. (Stuart, DE)

6380: UQB, Kholmok, USSR in CW at 1950 wkg MV Ermak (UKMN). (Boender, Netherlands)

6650: EE/OM at New York rdo wkg various aircraft. P/p w/flight 202. Plane had engine trouble, one gallon of fuel remaining. Flight control advises 202 to return to Philadelphia per Company orders. USB at 2345. (Garcia, OH)

6720: A31 contacted F6X (I couldn't hear him) at 0944 for rdo check & then answered call from U2G. At 0943, A31 came back up again w/OVERWORK bcst. All USB. (Sabo, CA)

7318: MARS tfc net. AAR2USB, AAR2TM, AAR2GT hrd at 1720 in USB. (Malta, NJ)

7375: YL/GG here every Sat at 1700. On this occasion YL rptd 104 104 104 99647 051 until 1705 when

five dashes were sent. Then YL sent 5F grps for 51 groups length. (Mason, England)

7446: YL/EE announcing KPA2 in AM. Signed off at 0220. (Malta, NJ)

7535: These US Navy ships made emitter tests w/Norfolk SESEF; NIH1, USS Opportune ARS41 at 1700. Note: Opportune is presently the only USN ship commanded by a female C.O.; NDIB, USS Briscoe DD977 at 1500; NOUD, USS Inchon LPH12 at 1400; NHJK, USNS Henry J. Kaiser T-AO-187 and NQSI, USNS Rigel T-AF-58 and NZLL, USS Connole FF1056 from 1830 to 2100; NZDN, USS Fairfax County LST1193 at 1630; NAHM, USS Guam "Tech Control" at 1300. (Stuart, DE)

8173: YL/GG rptng Oscar Kilo w/electronic tones at 2000. At 2005 YL had 5F grps for 319 and 812. (Mason, England)

8241.5: S/V Mercy Louise (ZM2121) wkg USCG CAMSPAC (NMC) re crew member suffering from chickenpox. USB mode from 0505-0520. Vessel advised that it due into Seattle in four days; NMC instructed vessel to contact VGS, Puget Sound upon arrival in area. In the meantime to maintain a 12-hour comm sked w/NMC. Du:lex wkg w/8765.4 kHz. (Sabo, CA)

8440: VCS, Halifax CG Radio, NS, Canada w/"QSX 4,6, and 8 MHz, CHNL 11/5/6" in CW at 0205. (Kinsland, GA)

8470: NMN, Portsmouth sending CQ in CW at 0251. (Kinsland, GA)

8511: FFL2/3/4, St. Lys, France in CW at 0300 w/"QSX 6 or 8 MHz. (Malta, NJ)

8630: WCC, Chatham, MA in CW at 1814 w/"QSX 6 8 12 16 22 MHz OBS QMV QRU?" (Malta, NJ)

8687.5: UJRD, Leningrad w/QSX mkr in CW at 2306. (Boender, Netherlands)

8698: 7TF6, Skikda, Algeria in CW at 2020 clg CQ. (Boender, Netherlands)

8710.5: UAH, Tallinn, USSR in CW at 2310 w/call-sign mkr. (Boender, Netherlands)

8719: NZPU, USS Papago ATF160 wkg NQSSJ, USS Grapple ARS53 at 0100. Grapple was relaying msg to COMSUPRON-8 from Papago re crewman on Papago suffering from Angina, and originally thought to be suffering a heart attack. Hrd while monitoring in Baltimore, MD. (Stuart, DE)

8764: NMN, USCG Portsmouth w/marine wx incl Grenada, Bimini. USB at 1136. (Lish, FL)

8722: VIS, Sydney, Australia in USB at 1157 w/tfc to u/i stn. (Lish, FL)

8808.8: WLO, Mobile, AL w/pp for u/i ship on 8805.7 kHz. USB at 0849. (Garcia, OH)

8861: Air Portugal-206 in USB mode at 0248 wkg Dakar Aeradio w/position report, foll by ASCOT-3206 at 0251 to Dakar w/similar tfc. (Sabo, CA)

8903: Japan Air 3086 in USB at 0909 wkg Tokyo Aeradio w/position report. (Sabo, CA)

8993: MacDill called by COPEK 24 at 1255 for rdo check in USB. Foll at 1258 by COPEK 29 and at 1302 by COPEK 25. (Kinsland, GA)

9075: YL/SS w/5F grps in AM at 0711; LARIAT, PROTOCOL, and PROTOCOL-2 (latter two stns not hrd) conducting circuit checks in LSB mode from 1740. Ref's to MIKE-5 being PROTOCOL's receive, circuit designators B5006 and 35, and the MacDill BCS system. Hrd intermittently throughout the afternoon. (Sabo, CA)

9222: YL/SS in AM mode at 0202 rpts 1-0 counts and 396 396 396 until 0210, then ten tones, Grupo 194 x 2 and into 4F grps. Simulcast on 10665 kHz. (Sabo, CA)

9230: YL/SS w/5F grps in AM mode at 0504. (Sabo, CA)

9452: YL/SS grps in AM at 0500. (Mazanec, OH)

9465: YL/GG W/1-0 count and 789 rptng between 20000-2010. After ten tones Gruppe 117 and into 3/2F grps. Simulcast on 7375 kHz. (Mason, England)

10047: 4XZ, Haifa Naval, Israel in CW at 0300 w/5-alphanumeric-groups. (Malta, NJ)

10048: Honolulu ATC clg "890" at 1237 in USB but no reply. (Kinsland, GA)

10069: Berne Radio wkg a/c "756" in USB at 0433 on Swissair LDOC channel. (Sabo, CA)

10740: YL/GG rptng Tango Papa w/electronic tones at 0900. At 0905 YL has 5F msgs for 696 and 738 or 41 and 53 grps. (Mason, England)

10820: UHF3, Moscow, USSR wkg u/i stn in CW at 1640 w/coded msgs. (Boender, Netherlands)

10888: RMP, Navy Kaliningrad, USSR in CW at 0910 clg Narukwica. (Boender, Netherlands)

11176: U/i comms in USB at 0150. (Malta, NJ) This is a USAF Air/Ground freq. (Ed.)

11191: AVALANCHE ALPHA w/FOXTROT TANGO for rdo c heck. USB at 1213. LANCELOT CHARLIE w/UNIFORM FOUR KILO for rdo check, then QSY to Alligator Playground Delta 27 Hot Fox. Then asked "Have you gone seminal?" at 0124. BRIMSTONE ALPHA came up on freq at 0339 clg FOXTROT TANGO. Wanted U4K to come up on Delta 30 Hot Fox and use seminal minus one for width when up on playground. (Woody, NY)

11214: IWR from 2NV requesting go to freq Tango Yankee Golf Whiskey Delta. IWR kept asking 2NV to repeat for about 2 mins saying he could not receive him. IWR finally gave go ahead. (Garcia, OH)

11227: BLUE EYES calling SPACE CAR in USB at 0152 for rdo check. Reply not heard. (Kinsland, GA)

11240: McClellan in USB at 0215 wkg Zero Whiskey 44 to get "ETA of Victor Papa 742." (Kinsland, GA)

11244: COPPERHEAD sends SKYKING bcst in USB at 0219. (Kinsland, GA)

11247: TIN CAN wkg MacDill in USB at 0223 requesting wkg freq for "Space Team." Reply not hrd. (Kinsland, GA)

11268: Zero Lima Yankee wkg Zero Sierra Romeo in USB at 0220 awaiting pp to Marshall Space Flight Center. (Kinsland, GA)

11462: YL/SS in AM mode at 0713 w/5F grps. Diff YL/SS 5F msg on 9075 kHz at same time. (Sabo, CA)

12240: YL/SS in AM mode at 0543 w/5F grps,

each x 2. (Sabo, CA)

12856: XSG, Shanghai, PRC in CW at 1855 w/QSX mkr. (Boender, Netherlands)

12995: YL/EE in JAM at 2250 w/5F grps. (Garcia, OH)

13159.7: SVN5, Athens, Greece in USB at 2029 w/tfc in Greek. (Lish, FL)

13257: Trenton Military (CHR) wkg CRICKET (not hrd). Ref's to stn COBWEB whom Trenton had hrd approx strength 2 on 9006 kHz. USB mode from 0507-0511. (Sabo, CA)

13279: Khabarovsk Volmet in UJSB from 0609-0610. (Sabo, CA)

13374: YL/SS in AM at 0708 w/5F grps. "Final, Final" at 0709. Carrier stayed up for a while after. (Sabo, CA)

13890: YL/GG rptng Juliet Whiskey w/electronic tones from 2100-2105. Then 5F grps for 081 and 521 of 41 and 50 grps. (Mason, England)

14280: YL/EE in AM at 1300 w/5F grps, each grpt rptd twice. This stn came up on the 2nd Monday in May, June and July and each time rptd the Monday msg on Tuesday. (Brown, LA)

14383.5: NIW, USS Midway CV41 (NNN0CQQ) and NMOB, USS Mobile Bay CG53 (NNN0CAC wkg

their home port NNN0NVT, Yokosuka, Japan at 0800. Both ships were evacuating Americans out of the Philippines. (Stuart, DE)

14441.5: AAFR, US Army Vessel Jame McHenry HLS1 (NNNOCEP) asking for any "Stateside MARS stn" at 0045. This vessel is an Army Heavy Lift ship of the 10th Transportation Bn, Ft. Eustis, Va. (Stuart, DE)

15702: OM/RR at 0800, 0900 & 1000 rptng "Null x 5 for five mins then off. Also on 14408 kHz at 1400, 1500 & 1600 w/same routine. (Mason, England)

16036: YL/EE in RCS at 2100 rptng 358 (x3) counts 1-0 until 2110 then into 3/2F grps. (willmer, MI)

16176: RMP, Navy Kaliningrad, USSR clg u/i stn in CW at 1140. (Boender, Netherlands)

16355: STINGRAY and BUDWISER in USB at 2200 w/pp. STINGRAY also asking if AFC3RI coming up. (Willmer, MI)

17242.7: VCS, Halifax CG Radio, NS, Canada in USB at 0010 wkg u/i stn. (Lish, FL)

17464: LEATHERNECK w/extensive EAM's in USB at 1650. (Willmer, MI)

YL/SS: YL/SS rptng 135 (x3) 00000 in AM until 1604 then off. (Willmer, MI)

19380: YL/EE w/5F grps in USB. Odd presentation. At times in a 3/2F format and some nbrs announced so fast as to be unreadable. Hrd at 2113. (Willmer, MI)

ICOM™ R7000 Sweeping 1300 Channels/Min.

DELTA COMM™ 1.04 gives you a custom interface and optimized software that will not just control but will maximize the potential of your R7000. Spectrum log at speeds in excess of 1300 channels/min. while automatically generating a histogram of frequency/activity. Advanced priority channel monitoring and program control, by channel, of remote tape recorders during scanning. Here are a few (there are many more) examples of the advanced features DELTA COMM has to offer:

- Birdie log during frequency search automatically characterizes your R7000, then locks out those frequencies
- Auto histogram and scan file creation during spectrum log
- Scan file channel lock-out feature allows scanning around channels without removing that frequency from database
- Resume scan and maximum monitor values unique on each channel scanned
- Each frequency within a scan file has an area (40 characters wide) for channel information.

- Auto frequency detection and storage during search and spectrum log
- User friendly installation program reduces need for DOS knowledge
- Full support of serial ports COM1-COM4
- On-screen HELP reduces need to refer to user manual
- REQUIREMENTS MS-DOS microcomputer with minimum 512K memory. DELTA COMM's performance is proportional to baud rate setting, style of display card and type of computer used.

\$299 Incl. Ext. Interface & Components for Cabling.

BROADCAST DX'ING

BY ROGER STERCKX, KVT1JH

DX, NEWS AND VIEWS OF AM AND FM BROADCASTING

Trouble In River City: An increasing number of reports are being received relating to air personalities perpetrating pranks and hoaxes over the air. While many view this as fun, there are those who don't see the humor in the approach.

In Salt Lake City, two morning jocks at KBER phoned up a 16-year old girl and identified themselves as police officers. Telling her they were checking out a vandalized car, they said they had found her fingerprints in the vehicle and that she was about to be arrested unless she told them who else was involved in the vandalism. The whole thing was intended as a joke and was suggested by one of the girl's friends.

The girl didn't find the call very funny. Neither did the local police, which were reported to be considering midemeanor charges against the deejays for impersonating police officers. (Thanks to Joseph Bial of Chagrin Falls, OH for telling us about this.)

Police went to Providence (RI) station WALE with their sirens going when after the station announced that a controversial talk-show host had just been shot. The report was a hoax.

Police were deciding about bringing charges. Three station staffers were fired, in any event, including the talk-show host, a newsman, and an engineer. WALE's program director denounced the incident as a "gross error in judgement."

Under the FCC's new schedule of fines, the agency can now deal rather harshly with stations it determines have stepped over the line with the type of material transmitted, including pranks and hoaxes. Among the new fines, misrepresentation or lack of candor rings up \$20,000; false distress broadcasts could cost \$20,000; broadcast of indecent programming might bring about a \$12,500 fine; broadcasting telephone calls without permission charge up at \$5,000 each; failure to identify station on the air is a \$2,500 omission; and even "miscellaneous violations" cost \$1,250.

Direct Approach: WRNJ, a stand-alone AM'er in Washington Township (Morris County), NJ wants an FM outlet. Not long ago, POP'COMM reported that WRNJ's owner, Larry Tighe (a licensed ham) suggested that the FCC reallocate the 6 meter ham band for FM broadcasting purposes.

Thanks to the fact that an FM station in Scranton, PA changed its frequency from 107.1 MHz to 106.9 MHz, it looks as though WRNJ's needs may be satisfied without further threat to the 6 meter ham band. The Scranton move left 107.1 MHz available for allocation in southern NJ. Two parties in southern NJ wanted to use the frequency, WRNJ, and a company wishing to start a new station. WRNJ paid \$25,000 to

The Gorman-Redlich Model CRW is a professional three channel 162 MHz monitor weather receiver intended for broadcast station use.

the other contender to drop out of the running, although WRNJ felt it probably would have won the use of 107.1 MHz, anyway, in an FCC hearing. (Thanks to Peter Murricane, WB2SGT, for this item.)

Typical of how several competing applicants vie for a single spot on the dial is demonstrated by newly begun WBEY/102.9, California (St. Mary's County), MD. The 3.6 kW station (hoping to go to 6 kW soon) had to go before the FCC and plead for the frequency along with other applicants from St. Mary's County and also King George, VA.

The decision to grant the license to the applicant in the community of California was based upon its size and the lack of FM signals being received in that County from elsewhere. (Thanks to J.D. Delancy, K1ZAT/3, Bryantown, MD for this.)

New Powerhouse: Keep checking 530 kHz at night for signs of the new 100 kW religious station opening there. It's called *Radiovision California*, and located on South Caicos Island in the Caribbean. They hope to be on the air in January with their two combined Nautel ND-50 transmitters operated from a former Coast Guard LORAN site. A 500 ft. tower will be used. Daytime coverage is expected into the Gulf states, and up the East Coast to the Carolinas. *Atlantic Beacon*, on 1580 kHz with 25 kW, will also move to this site and begin running 100 kW. There will also be an FM outlet on 100.1 MHz located on site, as well as two more 100 kW stations eventually sharing time on 530 kHz.

VOA Germany Returns: Last summer the VOA/1197 went back on the air after many years of being silent. The station now runs a daily sked.

Weather Receiver: The FCC allows broadcasters to rebroadcast 162 MHz NOAA weather stations provided that commercials run in connection with the weather rebroadcasts don't convey an endorsement by the government. Broadcast stations therefore usually want to have professional grade monitoring equipment for the NOAA weather channels. The type of equipment they use is demonstrated by the rack mount-

This unmarked van drove up one day, raised its antenna, and remained at one location in Oxford, AL for twenty minutes, then left. We were asked if we knew what it was. Looks like a mobile TV news van that stopped long enough to feed a tape back to the studio by microwave. (Submitted by Herb Griffin, N4ZOV)

ed and fully remotable Gorman-Redlich Model CRW receiver, which is crystal controlled on any three weather channels.

The CRW has a set of 600 ohm outputs on the rear terminal block. It has continuous audio, as well as 600 ohm gated audio output that is activated during an alert and can be used for remote alarm (0 dM). An internal relay provides a contact closure across another set of terminals when an alert takes place. The contact closure can be used to start a tape recorder or set off a buzzer or a light at a remote location.

Built in an all metal enclosure, the double conversion receiver can be used with any 50 ohm antenna, and with a yagi for reception in fringe coverage areas. The receiver's sensitivity is 0.28 uv. The current price of the Model CRW is \$540.

For more information on this professional product, contact Jim Gorman, Gorman-

CBC/740, Toronto, Ontario offers this great looking QSL. (Courtesy Scott Kraus, Cleveland, OH.)

Redlich, 257 W. Union Street, Athens, OH 45701. Be sure to mention you read about it here.

Information, Please: Karim Mawji, of 1802 Teakwood Rd., Victoria, BC V8N 5B6 writes with a question. Although he lives in Victoria, British Columbia, he'd like to listen to CFRN/1250, Edmonton, Alberta. This station is 800 miles distant from him. Although he can copy CFRN at night, it's got interference. Karim didn't describe the type of interference (i.e., co-channel or adjacent channel).

He's new at radio and hopes that someone local to him might have some ideas on equipment or antennas that would improve his reception of the station he'd like to hear.

California Calling: San Diego's KGMG-FM/102.1 changed its call letters to KIOZ a few months ago. The station, known as *Rock-102.1* since June of 1990, but had retained its old call letters (KGMG-FM) from its earlier format and *Magic-102* identity.

The call letter change was now made to help eliminate any residual confusion between *Rock-102.1* and its AM sister station, KGMG/1320, the North County's *Lite &*

Easy Station. The new FM call letters were selected because the "IOZ" has a visual resemblance to "102," the abbreviated nickname given to *Rock-102.1* by its loyal fans.

Rock-102.1 is the leading rocker in the growing San Diego "North County" market. (Thanks to Steve Sellers, News Director at *Rock-102.1* for giving us the inside story on this.)

Now, Here's A Format! Last May, WDDQ/92.1 (sister station of gospel WBIT/1470) of Adel, GA came up with a new format. Gone were Kenny Rogers, George Jones, Dolly Parton, Roy Orbison, and the Judds. The day the music stopped, the station began filling the airwaves with continuous commercials—commercials without stop, without end, and with breaks only for station identification.

There are commercials for restaurants, motels, service stations, oil distributorships, a truck stop, and a clothing store. These businesses are all run by the man who owns the radio station. He decided the country music format wasn't as good an idea as the new format.

The idea behind the new format is strictly

to appeal to reaching tourists and truckers traveling through the area to and from Florida on Interstate 75. The station has no other intended audience than as "tourism information radio."

An interesting idea, with as many bad points as good ones. (Thanks to Martin L. Tobias, Westfield, MA for sharing this with us.)

Station Upgrade: KRTS/92.1, the classical music station in Houston, TX is upping its power from 3 kW to 50 kW in a move described as "one of the most complicated upgrades ever handled by the FCC." The complicating factor related to the fact that there are fourteen other broadcasting stations in the region whose operations could be affected by the power increase.

The new transmitter is located in Alvin, TX and has been received as far away as Cleveland, TX. (Thanks go to John Stavinoha, Houston, TX for passing this along.)

TV (LPTV) broadcasters separate and apart from 5,024 TV translators. There are also 1,861 FM translators, but there are no LPFM stations. It has been the FCC's position that such stations should not be allowed to exist, and that FM translators shouldn't be permitted to originate their own programming.

There has long been sporadic grass roots interest in getting an LPFM service off the ground and approved by the FCC. Nothing has ever gotten up enough momentum to make any difference, but we note that there's now an LPFM movement afoot that looks to have a bit more organization and drive than anything else seen of late.

For further information, check in with Bill Dougan, APW, Broadcast Consortium, PO Box 47473, Phoenix, AZ 85068-7473. Although Doug didn't mention it, it would probably help to include a self-addressed, stamped reply envelope for his response to you.

Requests Withdrawn For Call Letter Changes

Now	Wanted	
WPNT	WXRT	Chicago, IL
WOCB-FM	WJIB	W. Yarmouth, MA

System (EBS) was used 634 times between January 1st and the middle of July this year. Some of the reasons included flash floods, tornadoes, severe thunder storms, floods, blizzards, power outages, high winds, chemical explosions, evacuations, small telephone outages, fires and winter storm warnings.

A total of 12,396 EBS activation reports have been received since the voluntary program began in 1976.

The FCC is thinking of initiating technical improvements to EBS, incorporating new technologies that would lead to receivers that are activated only for emergencies of a certain type or in a certain area.

The present EBS alert system consists of a 20 to 25 second two-tone signal. This could

be replaced by different alerting tones that could trigger automatic receivers relevant to particular locations or types of situations.

Our Christmas Story: Station KIEV, Glendale, CA requested the FCC to reduce at \$10,000 forfeiture for violation of rules governing sponsorship identification. The FCC received a complaint that KIEV had broadcast promotional programs without announcing consideration had been paid for the airing of those programs.

KIEV contended that the forfeiture amount was unnecessarily severe for the particular infractions involved. The station argued for a reduction in the instance that their violation was inadvertent.

The FCC replied that they regard inad-

vertence as the same thing as ignorance of the law. Although it did not appear that any listener had been cheated or hurt by the slip, apparently the FCC does not recognize inadvertence or ignorance as being forgivable sins. The agency then dismissed the whole appeal by claiming the KIEV violation wasn't inadvertent, that it was both willful and repeated. The FCC directed KIEV to pay the \$10,000.

On that note, what more can I say other than Merry Christmas to one and all? If you wish to share your bumper stickers, anecdotes, newspapers clippings, recent AM/FM QSL's, station photos, and anything related to AM/FM station activities, we are anxious to hear from you! ■

For 25 years,
our people have
endured long hours
and tough
working conditions
for no pay.

And 9 out of 10 would
do it again.

FCC ACTIONS AFFECTING COMMUNICATIONS

Pennsylvania Pirate Station Shut Down

The FCC's Buffalo Office, in coordination with the Commission's nationwide monitoring network, shut down an unlicensed broadcast station in Pennsylvania. Mark Radecki of Erie, Pennsylvania, was fined \$1,000 for illegally operating on 7415 kHz, a frequency allocated to the International Fixed Public Radio Service. The station had a rock music format.

CB Radio Station Closed; Equipment Seized

U.S. Marshals, with the assistance of Engineers from the FCC's San Juan office, executed an in rem seizure of radio equipment at the home of CB operator Ramon A. Fernandez Camilo of Levittown, Puerto Rico. The seized equipment included linear amplifiers.

This seizure resulted from a lengthy investigation conducted by the FCC's San Juan office as part of a continuing enforcement program to reduce instances of illegal CB operations. Mr. Camilo was fined for unlicensed operation and for failure to allow inspection.

The seizure took place under Federal civil forfeiture provisions initiated by Jose Blanco, Assistant U.S. Attorney for the District of Puerto Rico.

Unlicensed Microwave Station In California Shut Down

Mr. Everett L. Shilts, owner of News/Sports Microwave Rental, Del Mar, California, has been fined \$2,000 for illegal radio operations. The FCC's Los Angeles Office conducted an investigation in Inglewood, California, and found that News/Sports Microwave Rental was operating a microwave radio station in the 17 GHz band, as well as a land mobile station on the frequency 462.7358 MHz, without Commission licenses or authorizations. News/Sports Microwave Rental paid the fine on July 22, 1991. This was News/Sports Microwave Rental's second unlicensed operation. The company previously paid a \$1,000 fine for unlicensed operation in July 1990.

Unlicensed operation of a radio transmitter is a violation of Section 301 of the Communications Act of 1934, as amended. Sanctions may include administrative fines of up to \$10,000 and/or criminal penalties of up to \$100,000 and/or imprisonment for up to one year. Misuse of radio frequencies is a serious offense because of its potential for interfering with safety-of-life services

such as aviation, law enforcement, marine, as well as other licensed stations.

The Commission will continue its vigorous enforcement efforts directed against the operation of unlicensed radio stations and will apply appropriate sanctions against such violators.

New Public Safety Spectrum Available In Mexican Border

Representatives of the Governments of the United States of America and the United Mexican States signed a Memorandum of Understanding (MOU) that permits use of specified channels in the 821-824 MHz and 866-869 MHz bands within 110 km (68.4 miles) of the U.S./Mexican border by entities eligible in the Public Safety and Special Emergency Radio Services. The Chief, Private Radio Bureau, adopted an Order that modified Part 90 of the Commission's Rules to include the terms of the MOU. Specifically, the Order permits public safety and special emergency entities to apply for one or more of the 107 channels set-aside for use by the U.S. In addition, the five nationwide mutual-aid channels are available to licensees in both countries. Applications for channels in the Mexican border area may be submitted after a public safety plan for the relevant geographic region has been filed with the Commission and has been accepted as consistent with both the National Public Safety Plan (General Docket No. 87-112, 3 FCC Rcd 905 1988), and the July 31, 1991 Order.

Use Of 928-929 And 952-953 MHz Bands In the Vicinity Of The United States And Canadian Border

The United States/Canada Radio Technical Liaison Committee (RTLCL) finalized an Arrangement concerning the use of the above bands in the vicinity of the United States/Canada border. The RTLCL is a joint FCC/DOC committee responsible for examining technical issues concerning the use of radio by both countries. This Agreement covers bands allocated principally to Multiple Address Systems under Part 94 of the Rules, but are also used by older, point-to-point systems, and by Public Land Mobile Service users under Part 22 of the Rules. Use of these frequencies by either Canada or the United States between Lines A and B and between Lines C and D requires coordination with the other country. Because use of these frequencies in the border areas was increasing significantly, there was concern in both countries about future access. The

signing of this Arrangement now clears the way for the continued, orderly licensing of facilities in the border areas.

This Arrangement divides the spectrum into three pools: one pool is for primary use by the United States, one pool is for primary use by Canada, and the third pool is to be shared between the two countries on a first-in-time basis. All currently existing stations of both countries in these bands may continue to operate under their current authorizations and are to be grandfathered. The Arrangement also provides for each country to use the channels allotted primarily for use by the other country, subject to meeting specific technical sharing criteria.

For further information concerning this Arrangement contact Edward Jacobs, Deputy Chief, Land Mobile and Microwave Division, Private Radio Bureau, (202) 632-7597. For information pertaining specifically to use of these frequencies by Public Land Mobile Service users under Part 22 of the Rules, contact Michael Pollak, International Staff, Common Carrier Bureau, (202) 632-7834.

Florida Company To Forfeit \$2,000 For Selling Device Not Certified By The Commission

The Commission ordered Discount Discs in Shalimar, FL, to forfeit \$2,000 for willfully violating the Commission's rules by offering to sell on the telephone, a Sierra personal computer that had not been certified by the FCC as required by the rules. J. Mark Brewer, Esq., attorney for Discount, sought review of the monetary forfeiture penalty.

Commission rules prohibits the marketing, including the offering for sale, of radio frequency devices that have not been certified by the FCC. Discount offered to sell the computer to an FCC inspector posing as an individual buyer who wished to purchase a personal computer for use in his home.

Submissions Required Of 20 MHz Applicants

This information is issued to clarify submission requirements under Section 90.713 of the Commission's Rules for applicants for nationwide systems in the 220-222 MHz band.

Section 90.713 of the Rules, adopted in the Report and Order in PR Docket No. 90-552, sets entry requirements for nationwide 220 MHz systems and requires applicants to make specific submissions, including certifications, construction sched-

ules, and financial qualifications. Section 90.713 becomes effective on July 29, 1991, 90 days after publication in the *Federal Register*. See 56 FR 19598 (April 29, 1991). The *Report and Order* stated that after approval of the new information collection requirements by the Office of Management and Budget, we would advise applicants when to make their submissions. No such submissions need be filed at this time. We will apprise nationwide applicants of the procedures for filing Section 90.713 submissions when we determine that it is appropriate to do so.

For further information about this matter, contact Rosalind Allen, Private Radio Bureau, Land Mobile and Microwave Division, Rules Branch at (202)634-2443.

Safety Radio Equipment On All Passenger Boats

The FCC recently conducted a study to determine the condition of marine radio stations on-board small passenger vessels. FCC surveyed 260 vessels and found that 86 percent were in compliance with the safety requirements set forth in Part 80 of the Commission's rules.

The vessels subject to this study were generally small passenger vessels that take paying passengers on fishing and sightseeing day trips in waters off the U.S. coast. Such vessels are required to be equipped with an efficient operational radio station in accordance with FCC rules and U.S. law.

Although most vessels fully complied with the safety requirements for ship radio stations, we are concerned about the vessels that did not. We found that the major reason for a vessel failing to meet the safety requirements was a faulty transmitter. The study also showed that the vessels are more compliant (over 95 percent) within one year of the required FCC inspection. After that time, the compliance rate drops to the 86 percent average.

The FCC is reviewing the results of the study to determine what action should be taken to further improve compliance for these vessels. For additional information, please contact Rockie Patterson, Field Operations Bureau, Enforcement Division, 202-632-6345.

Forfeiture Standards Established

The Commission adopted a policy statement establishing standards for assessing forfeitures. The standards set out a base forfeiture amount as well as upward and downward adjustment criteria for each specific violation.

The Commission has traditionally assessed forfeitures on a case-by-case basis, in light of relevant precedent. In 1989, Congress substantially increased the dollar amounts of FCC forfeiture authority and, as the Commission began implementing the increased forfeiture authority, it decided it

should have more specific standards for assessing these larger forfeitures.

Adoption of these standards will assist the Commission in ensuring that similar violations will be treated the same. The standards will also provide guidance to the public regarding the forfeitures that can be expected in connection with specific violations.

The Commission noted that establishing forfeiture standards was consistent with a recommendation of the Administrative Conference of the United States and is similar to approaches taken by some other independent regulatory agencies.

The Commission also noted that, while it intends to be guided in the future by these standards, it remains free to exercise discretion in specific cases.

Decline To Implement New Personal Locator Transmitter Service For Individuals In Remote Areas

In light of the comments received in response to its rulemaking notice, the FCC declined to amend its rules to establish a Personal Emergency Locator Transmitter Service (PELTS).

The proposal had been made to establish

the service to provide individuals in remote areas with a means to alert others of an emergency situation and to help search and rescue personnel locate those in distress.

The Commission said that while most of the commenters generally agreed that a service such as PELTS could prove valuable in search and rescue work, there was a feeling that the technical requirements of the narrowband technology required would make the equipment too costly to be practical. There was also unwillingness by existing search and rescue organizations to perform the critical monitoring functions that would be required.

The Commission said that while it continued to believe there was a need to improve emergency communications capability in remote areas, there were enough problems with the PELTS system that it would terminate the proceeding and release the channels involved for the private land mobile radio services. It noted that it would continue to work with the search and rescue community, the Interagency Committee for Search and Rescue, and other concerned parties regarding the improvement of emergency communications capabilities in remote areas and the matter of personal locating beacons. ■

JRC Review

(from page 29)

rate. The reviewer applauds JRC for this attention to detail.

After unpacking the receiver and turning it on, the first thing one notices are the beautiful fluorescent frequency display and S-meter. At first, it was thought that the "needle-type" S-meter design would be missed, but this concern was put to rest after a few hours of operation. Tuning with the main tuning knob is very smooth. An electronic tuning lock is selectable from the front-panel as well.

One of the first signals heard was Radio Beijing in the 31 m band. And, this was with just a random length of wire 10 feet long draped over the window sills!

Summary

The new JRC NRD-535 receiver is an improvement over even their earlier highly regarded models. Yes, a few minor carps remain, like the desire to hear audio with more articulation and less bass. But, this is picayune. With a receiver of this class, one looks for areas to complain about, but with the NRD-535 these are very few indeed. The construction quality is commercial-grade, its performance in the "real world" is as close to professional-grade obtainable within consumer market price constraints, and it is operationally very user-friendly. The MSRP of the NRD-535 is \$1995.00. Please contact Japan Radio Co., 430 Park Avenue (2nd floor), New York, NY 10022 for more information. ■

INSIDE THE WORLD OF SATELLITE COMMUNICATIONS

136-174 MHz

If your scanner has the capability of tuning the 136 to 174 MHz band we may have a pleasant surprise for you. Along with the usual occupants of this band, which include aeronautical, fixed, land mobile and maritime mobile among others, you can also hear manned and unmanned spacecraft and search and rescue missions.

Let's start with the 137 to 138 MHz satellite band. This is the place where most of the early satellites started, like the NASA and NOAA experimentals that were the forebears of our current weather and communication satellites. Though new satellites are no longer being allowed to use this band there are still 11 spacecraft using it. Some of the satellites are in geo-stationary orbits while others, like the weather satellites are in a low altitude polar orbit.

By far the most exciting listening between 136 and 174 is the Soviet Manned Space Program. 143.625 MHz is an old standard for followers of the Mir Space Complex. Wideband FM voice communications can be heard here. Other frequencies have been used in the past. These include 142.417 and 121.750 MHz which have been used for voice communications between Mir and approaching Soyuz spacecraft. 143.625 MHz is the primary channel which downlinks Mir voice communications to waiting ships. They in turn relay the signal to Moscow via the Molniya satellite system.

Another easy way to hear your favorite Cosmonaut is to tune 145.550 MHz. The Soviets have operated an Amateur station from Mir since 1988. They are in the process of installing a Packet station. The amateur station uses narrowband FM, just what your scanner likes the most. One additional

One of Gladstone's 210' dish antennas.

frequency you may want to program in your scanner's memory is 166.0 MHz. This is a telemetry channel used by the Soyuz and Progress supply ships.

Between 149.9 and 149.975 the Soviets operate eight military navigation satellites. On 150 MHz the US and USSR have no less than 16 Navsats. The Soviets also use 153.4 to 153.8 MHz for CW beacons on their spysats. However, these can only be heard in Europe.

If your scanner or receiver operates in the SSB mode you will want to pay some attention to the amateur satellite downlinks in the two meter band. US and Soviet satellites use 145.8 to 146.0 MHz for downlink, so hook up that outside antenna, punch in the numbers and let her run.

NASA

SETI - Search for Extra-Terrestrials Intelligence Microwave Project will begin operation in 1992. Specific targets will be

scanned by the world's largest antennas. The one through three GHz frequency range will be searching for frequency and time domain variations that could indicate an artificially generated signal.

In addition, a complete Sky Survey will be conducted over the frequency range of one to 10 GHz. The antennas of the Deep Space Network (see the Sept 90 issue) will be used for this Survey.

GRO - Gamma Ray Observatory collected data on two X-class solar flares, its first since it was launched by STS-37 in April. X-class solar flares disrupt communications and can damage electrical power distributions systems.

ATDRSS - The fifth Tracking and Data Relay Satellite has been completed and will be ready for operation soon. It was deployed from Atlantis in August. The Advanced Tracking and Data Relay Satellite System (ATDRSS) contracts have been awarded. This new class of spacecraft will ensure space communications through the year 2012.

SPACEHAB - NASA has just signed a contract with Spacehab Inc. to provide a new Spacehab mid-deck lab module for the Space Shuttle, the cost - \$184,236,000.

Mt. Pinatubo - NASA is tracking the 5,000 mile long cloud of sulfur dioxide that has erupted from Mt. Pinatubo in the Philippines. The Nimbus 7 satellite, which measures Ozone levels has been monitoring the plumes. This eruption could have negative effects on both the ozone and regional climate. The Soviets recently launched a Meteor 3 weather satellite which is also capable of monitoring the ozone.

CASSINI - NASA and the European

Plot showing the distribution of ozone on October 5, 1989 for the Southern Hemisphere. Photo courtesy NASA.

The Department of Defense lent us this photo of the Space Infrared Telescope Facility (SIRTF).

Here's a look at the surface of Mars up close and personal. Photo courtesy of NASA.

Operational Earth Observation Satellites

Satellite	Frequency	Orbit
ATS-1	137.350 MHz	Polar/LEO
ATS-3	136.370 MHz	GEO/105°W
GOES-1	136.380 MHz	GEO/105°W
KIKU-2	136.110 MHz	GEO/127.1°E
GOES-2	136.380 MHz	GEO/60.3°W
IUE	136.860 MHz	LEO
GOES-3	136.380 MHz	GEO/176°W
METEPSAT 2	137.076 MHz	GEO/10°W
MARECES B2	137.170 MHz	GEO/55.5°W
NOAA 9	137.620 MHz	Polar
METEOSAT	137.080 MHz	GEO/3°W

Search and Rescue Civil Air Patrol - 143.90 MHz, 148.15 MHz

Space Agency (ESA) have signed an agreement to cooperate in a joint Saturn mission. ESA will build probe called Cassini and NASA will provide the Titan IV launch vehicle. The flight trajectory requires 7 years for the probe to reach Saturn.

Sixty-seven percent of all astronauts suffer from space sickness during shuttle flights. This form of motion sickness is caused

when the otoliths (small stone-like particles in the inner ear) no longer have weight. This causes the visual and inner ear balance information to confuse the brain's perceptions, causing the illness.

Dinosaur's Demise - NASA researchers have discovered what they believe to be evidence of the largest meteor ever to hit the Earth. Located in Mexico's Yucatan state

the 125 mile diameter crater is more than 65 million years old and that would make it the most likely candidate for the planet wide extinction of the dinosaurs.

Tired of chuck holes? DOD's Navstar Global Positioning Satellite System (GPS) is coming to the rescue. This satellite system is used in conjunction with a pair of video cameras mounted on a van. This allows precise location & identification of street, bridges railways equipment and road hazards as well as locations of fatal accidents for future reference and safety considerations. It can even mark road construction areas. It is estimated that we (in the US) spend (or loose) \$16 billion a year in wasted fuel for detours and vehicle repairs. This information would be made available on car computer terminals after the system is perfected and turned over to commercial interest (isn't that Corporate welfare?)

One final note. Dr. M. Patrick McCormick, a Langley Researcher (NASA), has discovered that the Polar Stratospheric Clouds (PSC's) play an important role in the depletion of the Ozone layer. These unique clouds which hover over the poles are central to the chemical chain reaction that depletes the earth's protective layer. When fluorocarbons reach the surface of the PSC's they release active chlorine which attacks ozone.

Well, that does it for this month. Remember, questions, letters, photos, etc are always welcome.

SCANNING VHF/UHF

MONITORING THE 30 TO 900 MHz "ACTION" BANDS

BY CHUCK GYSI, N2DUP

If things go as usual, there will be a bunch of scanners given as gifts this month. That means there will be a lot of folks starting a new hobby when they get their radios. There's plenty to hear on the scanner bands, so after you start tuning around, be sure to send some of your catches to this column to share with others.

From my own files, the Second Coast Guard District has changed the times of its regular scheduled broadcasts. Coast Guard marine information broadcasts are transmitted on VHF marine channel 22A, 157.100 MHz. Group Upper Mississippi River has scheduled broadcasts and river stages broadcasts at 2 and 8 p.m. daily and consolidated broadcasts at 2 a.m. and 9 a.m. daily. Group Lower Mississippi River transmits scheduled broadcasts and river stages broadcasts at 1 and 7 p.m. daily and consolidated broadcasts at 1 and 8 a.m. daily. Meanwhile, Group Ohio Valley transmits scheduled broadcasts and river stages broadcasts at 10 a.m. and 3 p.m. daily and consolidated broadcasts at 3 a.m. and 9 p.m. daily.

From Amherst, New York, Joe Galante writes to say that he has a Realistic PRO-34 scanner and he was wondering whether it could be modified to receive the 174-380 MHz band that the scanner eliminates. No, we haven't heard of any possible tricks to have this unit operate out of band. My usual recommendation in this situation is that if this band is of interest to you for a particular reason (such as listening to military aircraft in this instance, for example), then you should purchase a receiver that is capable of doing what you want which would be the AOR AR1000XLT or the Icom R1.

Joe also inquired as to whether there is a guide on the market that lists addresses of police and fire departments across the United States so he may obtain QSL's for skip activity heard. This information would be available on microfiche for those who have access to FCC offices and want to look through license information. However, there is no known directory that I know of that would be detailed enough to list addresses for police departments from What Cheer, Iowa, to Seattle, Washington. My recommendation would be to write to the chief of police or chief dispatcher in care of the name of the police department in the town in which it is located. In case the police department is in a township, checking a scanner directory such as Police Call would show the name of the town where the police department has its HQ. Address your inquiry for a QSL as follows: Chief of Police,

Here's the compact ham shack/listening post of Jack E. McGeorge, N7MWW of Las Vegas, Nevada. Scanning equipment consists of a Realistic PRO-34 and PRO-2005.

Pennsylvania Police Department, Pennsylvania, Iowa 52600. Mail will reach its destination such as a police or fire department without a street address, however, it would be recommended to call your local post office for the zip code.

Paul Loveday of Kasson, Minnesota, says he read here in POP'COMM that the Realistic PRO-2006 would search the cellular bands from 879-894 MHz in the appropriate 30 kHz steps. He went out and bought such a radio, but says he hasn't heard a peep and that he can search only in 5, 12.5 and 50 kHz steps. He wonders what gives. First of all, the PRO-2006 has to be modified to work in the cellular bands. If you are searching other than the band limits mentioned above, you won't hear cellular conversations. Also, when the Realistic PRO-2004, 2005 and 2006 are modified, the radio automatically searches the cellular bands in 30 kHz steps. Unless you make this modification, the sets won't receive cellular bands. To make this modification, check Bill Cheek's *Scanner Modification Handbooks* which offer simple instructions.

Rick Calles of Jackson, Ohio, says he really enjoys Scanning VHF/UHF in POP'COMM. He's a career firefighter-paramedic in Liberty Township near Columbus, Ohio, and he passes along some updates for central Ohio. Columbus fire is scheduled to switch to a 800 MHz trunked radio system

(Continued on page 74)

AEA is the...

Shortwave Solution

The **IsoLoop 10-30 HF antenna** is designed to work in limited space applications — apartments, condos, etc. Don't be deceived by its compact size (43" diameter) — it really works! Features include: Continuous coverage from 10 to 30 MHz; narrow bandwidth to suppress out-of-band signals; comes fully assembled (no mechanical joints); much more.

For complete information on these or any other AEA products, call the toll-free Infoline at (800)432-8873.

The **PK-232MBX** is a must for the digital Shortwave Listener. By far the most popular multi-mode controller ever, it can receive seven different types of data signals including Morse code, Baudot, ASCII, TDM (Time Division Multiplex), WEFAX, NAVTEX and Packet. It also features: The indispensable SIAM which automatically identifies many types of digital signals; superior software support for PC compatible, Macintosh and Commodore 64 and 128 computers.

AEA-FAX is simply the best way to demodulate multi-level grey scale fax images received by your general coverage receiver. All necessary hardware and software is included in the package which also features: On-screen tuning "scope"; Autolist feature for unattended image capture and save-to-disk; "Daisy-chain" external RS-232 input allows AEA-FAX to share a COM port with a PK-232MBX or other Hayes-compatible device; up to 16 grey levels (VGA); also supports EGA, CGA and Hercules formats; prints to HP LaserJet or Epson compatible printers.

PICKS UP A WHISPER 50 FEET AWAY!

NEW! High-power
miniature transmitter
on a single chip
assembles in
only 5 minutes!

Simply attach the **VT-75** microtransmitter to any 3V to 12V battery and you can hear every sound in an entire house over 1 mile away! Super-sensitive circuit on a single chip even picks up footsteps from across a large room. Tunable from 80 to 130 MHz. Hear everything on any FM radio or wideband scanner tuned to the "secret" frequency you select. Unlimited uses for security, baby monitor, remote mic, etc. **Not a toy.** The **VT-75** meets many U.S. Gov't Military Specs and with **100mW RF output**, it is the smallest, most powerful miniature transmitter you can buy. Easily assembled even by a youngster in only 5 minutes and performs so well that it is the only miniature transmitter available *anywhere* that comes with a **full unconditional moneyback guarantee!** Dealers welcome. Law Enforcement inquiries invited. **VT-75** microtransmitter chip with miniature microphone, 9V battery connector and instructions - **\$49.98 + \$1.50 S&H** or save - buy 2 for \$45.00 each with free S&H! Call us toll free or send money order, Visa, or Mastercard for immediate shipping by U.S. Mail. COD's add \$4. Personal checks allow 21 days.

Scanning VHF/UHF

(from page 72)

within a year and all dispatches will be simulcast on 154.310 MHz for a three-year period. When the switch to 800 MHz occurs, the 154.340 and 154.400 MHz fire-ground channels will go off the air. Meanwhile, Liberty Township's new fire repeater on 154.415 MHz should be operational by the end of this year, with all radio traffic on the 33.86 MHz "county band" to cease when the new system is up and running. New mobile extenders (to low-band radios) on 154.385 MHz will be added for mutual aid communications.

Meanwhile, Rick adds, Delaware County in Ohio is installing a "high-profile" repeater system for volunteer departments. A tentative frequency, 154.190 MHz, has been assigned. Many departments will continue to use 33.86 MHz (dispatch) and 33.82 MHz (fireground) until the new equipment is purchased and installed. Perry Township (northwest Columbus and the city of Dublin) was to leave 33.80 MHz and erect a repeater on 154.205 MHz this past fall. Some other updates in Delaware County, Ohio: The City of Powell is using 155.100 MHz; Liberty Township park rangers and road crews are using 154.995 MHz; Concord

Emergency

(from page 43)

ripple, which is important to keep noise out of your radio equipment when the sets are turned on, and the charger is doing its thing.

Some of the best switching chargers have dual output regulation which allows the unit to sense the output voltage level, and as the battery tries to draw more power than the charger can provide, the charger switches to the constant current mode allowing the voltage output to drop to a predetermined level. As the battery charges, its power requirements diminish, allowing the voltage to rise. When the battery voltage reaches the "predetermined" level, charger operation switches to a constant voltage mode, and current tapers off.

Best of all, for your command post, the switchers run relatively cool. However, they must have good ventilation and must never be mounted near any ignition source, such as fumes from a gas tank. They must be well-bonded to the frame of the vehicle to reduce RFI. On rare occasions, you may find a switching charger that might produce a wandering heterodyne that might get into some of your radio equipment. The charger could ultimately be modified so the errant heterodyne is no longer within the bandpass of your particular radio receiver.

All in all, look to the new switchers as the latest technology in battery chargers as well as AC to DC voltage converters. ■

Township road crews are using 151.085 MHz.

Jay Eger, WB2ZHP, from Sandy Lake, Pennsylvania, faxed some frequencies on Pittsburgh. Public safety administration in the city uses 453.950 MHz. Meanwhile there are six police zones, with dispatch broken up as follows: Zones 1-2, north side, Hill District, downtown - 453.100; Zones 3-4, south side, Mount Washington - 453.250; Zones 5-6, East Liberty, Squirrel Hill - 453.550; citywide dispatch and responding units are switched to 453.850 for fireground and fire command communications. Pittsburgh's 160 paramedics operate medic command on 462.950 and medic tactical on 462.975. River rescue and heavy rescue also operate on the medic channels. Some additional frequencies of interest for Pittsburgh are: 155.235, Allegheny General Hospital Life Flight helicopter; 170.150, WPXI-TV news; 166.250, KDKA-TV news; 161.670, WTAE-TV news.

What are you hearing on your scanners? Do you have a question about the hobby, but don't know who to ask? Send your comments, questions, frequency lists and updates, as well as photos of monitoring stations, antenna farms, dispatch points, etc., to: Chuck Gysi, N2DUP, Scanning VHF/UHF, Popular Communications, 76 North Broadway, Hicksville, NY 11801-2909. ■

You Should Know

(from page 38)

ers of 5 kW or less) on these frequencies. It is also felt the existing AM broadcasters suffering from heavy interference will be given first crack at these new channels (although, contrary to what you might have read in another publication, there have been no firm decisions yet by the FCC on which stations will be allowed to move to this new range.)

This expansion offers two distinct DX opportunities. When the first stations begin operations in this segment, frequencies will be relatively clear and some remarkable receptions will be possible until the band becomes more heavily used. Prior to the official opening on the new band, there will be equipment tests by the new station and facilities. Some testing of this sort is already going on. For example, several DX'ers last year managed to snag KZ2XXB, operated by the National Association of Broadcasters from Beltsville, MD, on 1660 kHz. This station is used to test antenna systems for the new range, and other experimental stations will doubtlessly be authorized for this range in the years ahead.

When the AM band expands, the chirpers, pirates, beacons and other stations will be cleared out. The 1600 to 1800 kHz range will sound very different in a few years compared to what it sounds like today. The DX you hear today in that range will one day be the subject of an article by Alice Brannigan!

AMIGA & ICOM

create the Ultimate Scanning Combination!

The ONLY system that can directly generate speech! The Amiga may directly control a
tape recorder. Over 1000 channels per file. By channel control lockout, mode, tone,
frequency, say the time, say the frequency, even say the users comment! Range scan
may generate custom scan files. Automatic time and date stamping of hits. Auto lockout
mode. Scan by comment (ie infinite banks) High resolution graphics show all hit activity
Scans at over 1300 channels per minute on ANY speed Amiga. Generates ASCII scan
files. Programmable delays fix all of Icom's scan delay problems. Built in mouse driven
editor for all channel information. No radio modifications required, does not need Icom's
CI-V or speech options. Includes the custom hardware interface for the radio and
cassette player, software, manual, example scan files and shipping in the U.S.

R7000 or R71A (needs UIC-14) \$149 (check / money order / VISA / M-C)
or Multi-radio (\$199) Future Scanning Systems Manual + Demo Disk
Ph. 918-333-7474 PO BOX 654 Bartlesville, OK 74005 \$15

Advertising Rates: POP/COMM subscribers are entitled to one FREE 30-word, non-commercial classified ad per year. Enclose subscription name label with ad copy. For those people not in the previously mentioned group, non-commercial ads are 30 cents per word, including abbreviations and addresses; minimum charge \$6.00 per issue. Ads from firms offering commercial products or services are \$1.00 per word; minimum charge \$20.00 per issue. Boldface words are \$1.20 each (specify which words). Leading key words set in all caps at no additional charge. All ads must be prepaid in full at time of insertion; a 5% discount is offered for prepaid 6 time insertions. All ads must be typewritten double spaced.

Approval: All ad copy is subject to Publisher's approval and may be modified to eliminate references to equipment and practices which are either illegal or otherwise not within the spirit or coverage scope of the magazine.

Closing Date: The 10th day in the third month preceding date of publication. Because the advertisers and equipment contained in Communications Shop have not been investigated, the Publisher of Popular Communications cannot vouch for the merchandise listed therein. Direct all correspondence and ad copy to: PC Communications Shop, 76 N. Broadway, Hicksville, NY 11801.

The (shortwave) bible just got better.

A year of turmoil. In 1991, the cold war thawed, hot war broke out, and the world's shortwave broadcasters shifted languages, frequencies, times, and targets more than ever before.

Passport to World Band Radio, your bible for shortwave listening worldwide, has kept up with the changes, and then some. In the 1992 edition, you'll find up-to-the-minute information to delight program listeners and DXers alike:

- **The world's best frequency guide**—*Passport's* famous Blue Pages—thoroughly updated to reflect the changing airwaves: 9,700 of 15,630 entries contain new information.
- **A brand new 18-page reference** to stations that respond to inquiries. Here's who to contact, where, toll-free numbers, and other helpful information.

■ **Larry Magne's no-holds-barred reviews** of portable and tabletop receivers sort the diamonds from the turkeys. Find out the inside scoop on the new top guns, including the Drake R8 and the Japan Radio NRD-535.

■ **What's On Tonight?** An hour-by-hour guide to world band shows guides you through the

best of the best and the worst of the worst.

■ **Country-by-country references**, including "Worldwide Broadcasts in English" and "Voices From Home." Newly formatted to make it easy to find the station you want at the time you want.

At your dealer or bookstore now. See why *Passport* has become the largest-selling shortwave publication in North America. For further information, write *Passport to World Band Radio*, Box 300A, Penn's Park, PA 18943 or call (24 hours) 215/794-8252.

KENWOOD

Hear it All!

R-5000
R-2000
High performance receivers.

Scan the world bands with Kenwood's R-5000, R-2000 and RZ-1. Listen in on foreign music, news, and commentary. Monitor local police, fire, and other public safety services, as well as the Marine channels, and the many other services.

(The VHF converter options must be used in the R-5000 and R-2000.)

R-5000

The R-5000 is a high performance, top-of-the-line receiver, with 100 memory channels, and direct keyboard or main dial tuning—makes station selection

R-2000

The R-2000 is an all band, all mode receiver with 10 memory channels and many deluxe features such as programmable scanning, dual 24-hour clocks with timer, all-mode squelch and noise blankers, a large, front-mounted speaker, 110 volt AC or 12 volt DC operation (with the DCK-1 cable kit), and 118-174 MHz VHF capability with VC-10 option.

Optional Accessories R-2000:

- VC-10 VHF converter
- DCK-1 DC cable kit for 12 volt DC use.

R-5000:

- VC-20 VHF converter
- VS-1 Voice module
- DCK-2 for 12 volt DC operation
- YK-88A-1 AM filter
- YK-88SN SSB filter
- YK-88C CW filter
- MB-430 Mounting bracket.

Other Accessories:

- SP-430 External speaker
- SP-41 Compact mobile speaker
- SP-50B Mobile speaker
- HS-5 Deluxe headphones
- HS-6 Lightweight headphones

super easy! Other useful features include programmable scanning, large, built-in speaker, 110 volt AC or 12 volt DC operation (with optional DCK-2 cable), VHF capability (108-174 MHz) with the VC-20 option, dual 24-hour clocks with timer, and even voice frequency readout with the VS-1 option.

RZ-1

Wide-band scanning receiver

The RZ-1 wide-band, scanning receiver covers 500 kHz-905 MHz, in AM, and narrow or wideband FM. The automatic mode selection function makes listening

easier. One hundred memory channels with message and band marker, direct keyboard or VFO frequency entry, and versatile scanning functions, such as memory channel and band scan, with four types of scan stop. The RZ-1 is a 12 volt DC operated, compact unit, with built-in speaker, front-mounted phones jack, squelch for narrow FM, illuminated keys, and a "beeper" to confirm keyboard operation.

- Optional Accessory
- PG-2N Extra DC cable
